FOREWORD

The Federal Power Act was originally enacted as the Federal Water Power Act, approved June 10, 1920 (41 Stat. 1063, 16 U.S.C. 791–823). The Federal Power Commission was reorganized January 1, 1931, as an independent Commission under the act approved June 23, 1930 (46 Stat. 797). By title II of the Public Utility Act of 1935, approved August 26, 1935 (49 Stat. 838), the original Federal Water Power Act was made part I of the "Federal Power Act" and parts II and III were added. The Federal Power Act was amended May 28, 1948 (62 Stat. 275), August 7, 1953 (67 Stat. 461), August 15, 1953 (67 Stat. 587), June 4, 1956 (70 Stat. 226), and August 28, 1958 (72 Stat. 941 at 947). The Commission also administers the Natural Gas Act, approved June 21, 1938 (52 Stat. 821, 15 U.S.C. 717–717w), as amended February 7, 1942 (56 Stat. 83, 15 U.S.C. 717f), July 25, 1947 (61 Stat. 459, 15 U.S.C. 717f), March 27, 1954 (68 Stat. 36, 15 U.SC. 717(c)), and August 28, 1958 (72 Stat. 941 at 947; 15 U.S.C. 717r), and has certain duties under the Tennessee Valley Authority Act, approved May 18, 1933 (48 Stat. 1075), and amendments thereto; the Bonneville Act, approved August 20, 1937 (50 Stat. 731); the Fort Peck Act, approved May 18, 1938 (52 Stat. 403); and under various Flood Control and River and Harbor Acts (notably the Flood Control Act of 1944, approved December 22, 1944 (58 Stat. 887)), and other statutes, as well as Executive Orders.

This volume, the thirtieth of a series, contains all the formal opinions and accompanying orders of the Federal Power Commission rendered, July 1, 1963 to December 31, 1963, inclusive. In addition to the formal opinions, there have been included intermediate decisions which have become final and selected orders of the Commission issued during such period.

Before Commissioners: Joseph C. Swidler, L. J. O'Connor, Jr., and Harold C. Woodward.

IOWA SOUTHERN UTILITIES COMPANY, DOCKET NO. E-7103

ORDER AUTHORIZING THE ISSUANCE OF COMMON STOCK

(Issued July 1, 1963)

Iowa Southern Utilities Company (Applicant), a corporation organized under the laws of the State of Delaware, qualified to do business as a foreign corporation in the States of Iowa and Illinois, and doing business in the State of Iowa, with its principal place of business at Centerville, Iowa, filed an application on May 27, 1963, for authority pursuant to Section 204 of the Federal Power Act, authorizing the issuance of two shares of its Common Stock par value $10 per share in exchange for one share of its Common Stock par value $15 per share, presently outstanding.

Applicant proposes to issue 1,858,928.2 shares of Common Stock, par value $10 per share in exchange for 920,378.1 shares of Common Stock par value $15 per share, presently outstanding and 9,086 shares of such Common Stock reserved for conversion of 4,543 shares of $1.76 Series Cumulative Convertible Preferred Stock presently outstanding. Applicant proposes to give thirty days notice of redemption to holders of the $1.76 Series Preferred Stock on or about June 3, 1963, said shares being redeemable at $32.25 per share plus an amount equal to full cumulative dividends to the redemption date. The right of conversion will cease and terminate on the business day next preceding the redemption date. Applicant also proposes to issue two shares of Common Stock, par value $10 per share, for each additional one share of Common Stock, par value $15 per share, which may be issued prior to July 24, 1963 under the Employee Stock Purchase Plan. Applicant anticipates that approximately 350 additional shares of Common Stock par value $15 per share, will be issued under the Employee Stock Purchase Plan prior to July 24, 1963.

Applicant proposes to transfer an amount of $3,046,790.50 from Premium on Capital Stock Account to Common Stock Capital Account, and to transfer an amount of $1,600,530 from Unappropriated Earned Surplus to Common Stock Capital Account. The amount of $1,600,530 shall be increased $5 for each one share of Common Stock (par value $15 per share) which may be issued prior to July 24, 1963 under Applicant's Employee Stock Purchase Plan, and reduced $10 for each one share of $1.76 Series Cumulative Convertible Preferred Stock redeemed on July 3, 1963. Applicant has agreed to write-off to Earned Surplus the amount for the complete elimination of stock expense applicable to the Common Stock, $15 par value, which presently amounts to $615,731.

Applicant states that the stock-split will result in a wider distribution of the Common Stock which will be in the public interest and that it is appropriate for the Company to capitalize premium on Captial Stock and a portion of Retained Earnings at this time.

Written notice of the application has been given to the Illinois Commerce Commission and the Iowa State Commerce Commission, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on June 7, 1963 (28 F.R. 5623), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before June 21, 1963 with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued May 31, 1961, *Iowa Power and Light Company, et al.*, Docket No. E-6974 (25 FPC 1063).

(2) The proposed issuance of Common Stock, as described above will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of securities is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock, as described above, is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of paragraph 34.1a(a)(1) thereof.

(5) The proposed issuance of Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

(6) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Common Stock, as described above, upon the terms and conditions and for the purposes specified in the application, is hereby authorized, subject to the provisions of this order.

(B) The Applicant shall record the proposed transaction described above as provided in the Commission's Uniform System of Accounts prescribed for Public Utilities and Licensees and the capital stock expense applicable to the Common Stock, $15 par value, which presently amounts to $615,731 shall be eliminated by a charge to Unappropriated Earned Surplus.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

NORTHERN STATES POWER COMPANY (WISCONSIN), DOCKET NO. E-7101

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued July 1, 1963)

Northern States Power Company (Applicant) a corporation organized under the laws of the State of Wisconsin and doing business in that State, with its principal business office in Eau Claire, Wisconsin, filed an application on May 27,

1963, for authorization pursuant to Section 204 of the Federal Power Act, to issue from time to time, unsecured short term promissory notes in an aggregate principal amount not to exceed $12,000,000, outstanding at any one time.

The proposed notes, payable to such commercial bank or banks from which the Applicant may borrow funds, will be issued for periods not exceeding 12 months from the date of original issue or renewal thereof, and will have maturity dates not later than December 31, 1964. Applicant will pay no commitment, finders or other fees in connection with the issuance of any of the aforesaid notes or with the borrowings evidenced by said notes. Said notes may be prepaid, in whole or in part without premium, on any legal banking day upon 24 hours' prior notice to the payee.

The interest rate for each borrowing will not exceed the prime loan interest rate at the time and place of making. As of the date of the application that interest rate was 4½%. Applicant states that it will not agree, in connection with obtaining a loan from a bank, to maintain any minimum balance in any of its checking accounts. Applicant further states that said notes will not be resold to the public.

By order issued September 6, 1962, 28 FPC 455, in Docket No. E–7048, the Commission authorized Applicant to issue up to $7,000,000 principal amount of short term promissory notes, the authorization to expire prior to December 31, 1963. As of May 24, 1963 the aggregate principal amount of such promissory notes outstanding was $4,600,000.

The request herein for authorization to issue notes in the maximum principal amount of $12,000,000 will cover the issuance of any renewal notes, including renewal notes for the payment of any notes presently outstanding or to be issued before December 31, 1963, under the above—described authorization in Docket No. E–7048.

Applicant states that the proceeds from the bank borrowings will be used first for the renewal or refunding of outstanding promissory notes. The balance will be added to general funds of Applicant and will be used, to pay in part the expenditures for Applicant's construction program for 1963 and 1964.

The cost of Applicant's construction program for the years 1963 and 1964 is estimated at $5,275,000 and $5,828,000 respectively. Of these amounts $4,197,000 for 1963 and $4,990,000 for 1964 are allocated to the Electric Department and the balance $1,078,000 for 1963 and $838,000 for 1964 are allocated to Gas Distributor Department, Heating Department and General—(All Departments). The program provides for extensive transmission line construction; the major item being the start of 160 mile, 345 kv line. The line is scheduled for completion in 1966 at an estimated cost of $11,000,000 with $900,000 proposed for 1963. It will extend from near Stevens Point, Wisconsin, to Eau Claire, Wisconsin and thence to Newport, Minnesota. It will be part of a proposed extensive 230–345 kv network extending from Garrison, North Dakota to Chicago, Illinois, and from Duluth, Minnesota to St. Louis, Missouri. Other proposed transmission line expenditures include raising the voltage from 115 kv to 161 kv on the 80 mile Eau Claire-La Crosse line and eight new sections of 69 kv line totalling 73.3 miles in length will be constructed.

Written notice of the application has been given to the Wisconsin Public Service Commission and to the Governor of that State. Notice has also been given by publication in the Federal Register on June 11, 1963 (28 F.R. 5689), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before June 24, 1963, with the Federal Power Commission, Washington 25, D.C.

No protest, petition, or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued October 25, 1957, *Northern States Power Company (Minnesota), et al.* Docket No. E-6774 (18 FPC 532).

(2) The proposed issuance of Promissory Notes, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of not to exceed $12,000,000, as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt from the requirements of Section 204(a) of the Act by the virtue of Section 204(e) thereof.

(4) The proposed issuance of Promissory Notes, described above, will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(5) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act; and the proposed issuance is, therefore, not exempt by virtue of that Subsection from the requirements of Section 204 of the Act.

(6) The proposed issuance of securities, as hereinafter authorized will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(7) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Promissory Notes in the aggregate principal amount of not to exceed $12,000,000 outstanding at any one time, upon the terms and conditions and for the purposes set forth in the application, all as described above, is hereby authorized, subject to the provisions of this order.

(B) This authorization is expressly conditioned upon final maturity of all notes, issued pursuant hereto, being on or before December 31, 1964.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., and Harold C. Woodward.

SINCLAIR OIL & GAS COMPANY, DOCKET NOS. G–9291 AND G–9292, ET AL.[1]

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued July 1, 1963)*

There is before us for consideration a Petition for Approval of Settlement Proposal and Termination of Proceedings filed on April 8, 1963, by Sinclair Oil & Gas Company (Sinclair) encompassing the rates for 136 of Sinclair's currently effective gas rate schedules.

Comments have been filed by many parties to these proceedings, all of which have been given due consideration.

In summary, the settlement proposal as submitted by Sinclair provides:

(1) Settlement rates, including tax reimbursement, are equal to or less than the Commission's applicable area ceilings, with two exceptions hereinafter discussed;

(2) Sinclair waives the right to file for contractually authorized increased rates until September 1, 1965. Sinclair reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels determined through area hearings or by amendment of the Commission's Statement of General Policy No. 61–1, or any contractually authorized increase in tax reimbursement.

(3) Amendment of Sinclair's Rate Schedule Nos. 1, 2, 3, 18, 35, 44, 52, 53, 59, 64, 68, 69, 73, 75, 82 and 173 to eliminate any favored nation, price redetermination or periodic price escalation clauses contained therein;

(4) Extension of the make-up periods under the take-or-pay for provisions contained in Rate Schedule Nos. 77 and 78 from the present periods to five years and to the life-of-the-contract, respectively;

(5) Refunds, with interest at the applicable rates, under each rate schedule where collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with January 1, 1962, to April 1, 1963;

(6) Exclusion from the Settlement Proposal of all Permian Basin sales, sales related to previous offers of settlement accepted by the Commission, sales under abandoned properties and five certificate applications covering sales from South Louisiana presently consolidated in the *Union Texas Petroleum, et al.* proceedings, Docket No. G–13221, *et al.*

In support of its proposal, Sinclair states that the settlement rates, refunds, moratorium periods and other provisions thereof, some of which are not specifically noted herein, are in the public interest in that they are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the parties to the settlement conferences have utilized cost-of-service studies and revenues based on contract rates to determine Sinclair's revenue-cost relationship. These studies indicate that it is appropriate that we require that refunds should be computed for sales made on and after

[1] The additional dockets involved herein are set forth in Appendices A, B and C hereto.

*Order issued August 23, 1963, granting rehearing for purposes of reconsideration, 30 FPC 546.

January 1, 1962. Sinclair proposes, as noted above, that refunds should be made only up to April 1, 1963, but we shall require that refunds should be made up to and including the date of issuance of this order, with interest to be paid on the refunds to the date the refunds are made to the purchasers.

Sinclair sets forth three alternative methods by which refunds would be distributed to its purchasers entitled thereto. Under all three methods the total dollars of refund would be the same. Under each of the methods the total dollar refunds calculated from January 1, 1962, would be distributed to purchasers under formulas which would result in refunds for sales made prior to such date. The proposed distribution methods reflects the alleged invalidity of certain favored-nation triggering rates, or utilizes the Commission's guideline increased rate ceilings or settlement rates, and would be calculated on the "excess" revenues regardless of whether such revenues were collected before or after the "cut-off" date of January 1, 1962. We have considered each of the proposed methods, and do not find any one of them to be feasible or proper in a general settlement of producer rate proceedings. Consequently, we shall hereinafter order Sinclair to make refunds in the same manner as we have provided in other of our recent orders approving general producer rate settlements, that is, that Sinclair refund from January 1, 1962, to the date of issuance of this order, all monies collected subject to refund above the settlement rates, with interest to the date of actual refund.

Exceptions to the applicable area ceilings are proposed by Sinclair with respect to two sales in South Louisiana: one a sale to United Gas Pipe Line Company (United), and the second a sale to Transcontinental Gas Pipe Line Corporation (Transco).[2] The sale to United is made under Sinclair's FPC Gas Rate Schedule No. 197 from the Gibson Field, Terrebonne Parish, Louisiana. Prior to June 20, 1960, this sale was made under a ten-year contract, which was to expire in 1960. On June 20, 1960, Sinclair and United entered into a contract for a twenty-year term, and dedicated additional acreage to the sale, which resulted in increased annual deliveries under this contract by approximately forty per cent. The current rate for gas sold under the renegotiated contract is 23.3¢ per Mcf, while the settlement rate is 18.5¢ per Mcf. The proposed settlement rate therefore exceeds the increased rate ceiling but is below the initial rate ceiling. In view of the above circumstances, we find the settlement rate of 18.5¢ per Mcf for this sale to be proper, and approve the same.

The sale to Transco is made under Sinclair's Rate Schedule No. 78 from the Live Oak Field, Vermilion Parish, Louisiana, where the increased rate of 23.55¢ per Mcf. is proposed to be reduced to 17.75¢ per Mcf. The initial rate under such rate schedule was 16¢ per Mcf plus tax reimbursement. Under the tax reimbursement provisions of the rate schedule, the present tax reimbursement is 1.5¢ per Mcf. Therefore we shall condition our approval of this settlement proposal to provide for a total rate of 17.5¢ per Mcf for this sale.

Sinclair proposed to omit from the settlement the rates for five sales of gas presently being made by it in South Louisiana under temporary certificate authorization. For the reasons set forth in our order issued on April 25, 1963, 29 FPC 837, in *Gulf Oil Corporation, et al.* (Docket No. G–9520, *et al.*) we shall condition our approval of this settlement proposal so as to require Sinclair to reduce its rates under its Rate Schedule Nos. 172, 202 and 213 (which rates exceed our initial rate ceiling) effective as of the date of issuance of this order to 21.25¢ per Mcf at 15.025 psia, and to agree that the rates under such rate schedules, along with the rates charged under its Rate Schedule Nos. 235 and

[2] United and Transco representatives attended and participated in the settlement conferences herein.

236, shall be subject to final determination in the Union Texas proceeding.[3] If, by final order in said proceedings, a lower rate is established than that provided for herein under such schedules, Sinclair shall make refund from the date of this order of the difference between the rates provided for herein and the rate ordered in the Union Texas proceedings. The refund requirements imposed as a condition of this settlement order shall not be construed to affect or limit the positions of the parties in the Union Texas proceeding with respect to refund obligation under temporary authorizations.

Included in the settlement is one permanently certificated sale at 17.5¢ per Mcf in Texas Railroad Commission District No. 3 under Sinclair's FPC Gas Rate Schedule No. 201 with a proposed settlement rate of 17¢ per Mcf. The contract for this sale was dated prior to September 28, 1960. We shall condition our approval of this settlement proposal so as to require Sinclair to reduce its rate for this sale to 16¢ per Mcf in accordance with our determination of the "in-line" prices for this area in our Opinion No. 383, *Texaco Seaboard Inc., et al.*, 29 FPC 593, issued March 27, 1963.

We shall not approve the proposed settlement of the rates under Sinclair's FPC Gas Rate Schedule Nos. 15, 16 and 17 since these rates are by contract related to those of the producer purchasers from Sinclair, the purchasers' rates also being subject to suspension proceedings. Therefore, we shall exclude these sales from the Settlement Proposal.

The settlement proposal includes six sales[4] for which issuance of related permanent certificates is pending. The applications in Docket Nos. CI61–1032 and CI62–1070 involve upward Btu price provisions and are presently consolidated for hearing in the proceedings in Sunray DX Oil Company, *et al.*, Docket No. G–4281, *et al.* relating to Btu adjustment provisions. Accordingly, permanent certificates should be issued in such proceedings and not through the abridged hearing procedure. Also consolidated in the Docket No. G–4281, *et al.* proceedings is Sinclair's application in Docket No. CI61–1137. Since, under the proposed settlement, Sinclair has agreed to eliminate the upward Btu price adjustment provision, the application should be severed and set for abridged hearing. We shall sever this proceeding and set it, together with the remaining applications listed in Appendix B, for abridged hearing indicating that the settlement rates shall be the initial rates.

The foregoing has discussed all of the major comments filed by Long Island Lighting Company (Long Island) Philadelphia Gas Works, Brooklyn Union Gas Company, and Philadelphia Electric Company. Comments were also filed by Public Service Electric and Gas Company and Southern Natural Gas Company. These latter companies indicated support and approval of the settlement proposal. We believe the instant settlement proposal, as herein modified, and in other particulars not specifically noted or set forth herein, meets the criteria previously set forth in other of our recent settlement orders and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

Our action herein should not be construed, nor may it be, as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, involving Sinclair's rates and rate schedules.

---

[3] See Appendix C attached hereto.
[4] See Appendix B attached hereto.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal filed on April 8, 1963, as herein modified, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be conditionally approved and conditionally made effective subject to the modifications hereinafter ordered, and good cause exists for approving the settlement rates, for terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The settlement of these proceedings on the basis of the Settlement Proposal filed April 8, 1963, as herein modified, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in Appendices A and B are approved and such rates, together with those shown on Appendix C, shall be effective as of the date of issuance of this order.

(C) The pending certificate proceedings indicated in Appendix B hereto, shall not be terminated on the basis of the approval of the Settlement Proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act.

(D) Sinclair shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order, including specifically the requirement for possible future refunds under its FPC Gas Rate Schedule Nos. 172, 202, 213, 235 and 236.

(E) Within 90 days from the date of this order, Sinclair shall make such filings under its rate schedules as are required to make effective the terms of the Settlement Proposal, as modified herein.

(F) Within 90 days from the date of this order, Sinclair shall (1) refund, with interest as specified in each docket computed to the date of actual refund, the difference between the rates collected subject to refund, on and after January 1, 1962 and the related settlement rates to the date of this order; and (2) report to the Commission, in writing, the amount of refunds made to each of its purchasers, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the Settlement Proposal as modified and approved herein.

(G) Docket No. CI61–1137 is hereby severed from the consolidated proceedings in Sunray DX Oil Company, *et al.*, Docket No. G–4281, *et al.* Docket Nos. G–17725, G–17739, G–19890, RI61–34, RI61–264 and RI62-190 are hereby severed from the consolidated proceedings in Docket No. AR61–2, *et al.* Upon full compliance by Sinclair with all the terms and provisions of this order the Section 4(e) proceedings listed in Appendix A hereof and the Section 5(a) proceedings in Docket Nos. G–9291 and G–9292 shall terminate.

(H) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Sinclair, the Commission staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Sinclair or any other companies, person or parties affected by this order.

**Price required by this order.

FOOTNOTES TO APPENDIXES A, B, AND C

[1] Sinclair agrees to waiver of favored nations, price redetermination and future rate increases for the remaining term of the contract.

[2] In the event the Commission, in the determination of an area rate for Railroad District No. 3, fixes a new rate, the settlement rate herein is subject to adjustment to such area rate effective as of the date of such determination.

[3] Rate subject to Btu adjustment up to a maximum rate of 11.0¢ per Mcf.

[4] Eliminated by condition.

[5] No production since April, 1962. Abandonment and notice of cancellation of rate schedule filed February 8, 1963.

[6] Sinclair agrees to life of contract make up for gas paid for but not received.

[7] Favored nations clause in contract to be deleted.

[8] Rate subject to Btu adjustment up to a maximum rate of 17¢ per Mcf.

[9] The parties agreed on a rate of 17.00¢ per Mcf plus contract Btu adjustment. However, under the arrangement between Sinclair and others and Buyer, a gas products plant was constructed on the main line field lateral of Michigan Wisconsin with the plant owners compensating Michigan Wisconsin for the reduction in Btu and gas volume due to processing. The agreement here is that the net cost to Michigan Wisconsin at the discharge of the plant cannot exceed 17¢ per Mcf.

[10] Subject to 0.75¢ dehydration charge.

[11] Subject to Btu adjustment and 0.75¢ deduction for desulphurization by Buyer which reduces rate to less than the 15¢ ceiling rate.

[12] Same as footnote 9 except as to rate of 15¢.

[13] No sales being made under this rate schedule. It applies only if Sinclair drills and produces gas at a depth below 3400 feet.

[13a] Docket No. G-20082 is hereby terminated only in so far as it pertains to Rate Schedule No. 55.

[14] Subject to full Btu adjustment.

[15] Upward Btu adjustment to be eliminated from the contract.

[16] Property sold November 16, 1960. See Commission order of April 4, 1961.

[17] Application to abandon service filed January 7, 1963.

[18] Filed application to abandon service and cancellation of rate schedule on October 5, 1962.

[19] Omitted.

[20] Eliminated by condition.

[21] Initial contract price 16.80¢ per Mcf. Temporary authorization received December 14, 1962, on condition price be reduced to 15¢ per Mcf at 14.65 psia. Such authorization accepted December 20, 1962.

[22] Tax reimbursement varies.

[23] Kansas-Nebraska Natural Ga Company, Inc., successor in interest to North Central Gas Company.

[24] The rate shown for Rate Schedule 66 is at 16.7# psia which is equivalent of commodity rate of 10¢ per Mcf at 16.7# psia plus tax reimbursement rate of 1.5¢ per Mcf at 15.025# psia.

[25] Certificate applications presently consolidated in *Union Texas Petroleum et al* proceedings, Docket No. G-13221, *et al.*

NOTE: *Unless otherwise indicated, all rates are expressed in cents per Mcf at contract pressure base and includes, where applicable, tax reimbursement.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP62-265; CALIFORNIA-PACIFIC UTILITIES COMPANY, DOCKET NO. CP62-200

ORDER AMENDING ORDER ADOPTING INITIAL DECISION OF PRESIDING EXAMINER

(Issued July 2, 1963)

On June 6, 1963, El Paso Natural Gas Company (El Paso) filed in Docket No. CP62-265 a petition to amend the Commission's Order Adopting Initial Decision of Presiding Examiner, issued May 16, 1963, 29 FPC 984, in the above-captioned dockets to extend until October 1, 1965, the time within which all facilities thereby authorized shall be constructed and placed into operation. Further, El Paso requests that the Presiding Examiner's Decision, issued April 18, 1963, 29 FPC 985 (which granted the certificate as requested) be corrected to state that El Paso proposes to construct 5,200 horsepower of additional compression, all as more fully set forth in the petition to amend on file with the Commission and open to public inspection.

Among the facilities which El Paso proposes to construct in Docket No. CP62-265 are two new compressor stations to be known as the Portland and Albany Compressor Stations. The Portland Compressor Station will consist of three 1,440 horsepower compressor units for a total of 4,320 installed horsepower, and the Albany Compressor Station will consist of one 880 horsepower compressor unit. On page 985 of his initial decision, the Presiding Examiner stated that El Paso's compressor station facilities would consist of approximately 4,400 additional compressor horsepower. El Paso proposes to phase the construction of the foregoing compressor stations so as to match, insofar as possible, the capacity of the pipeline with the market requirements. Thus, the proposed horsepower will be installed in increments during the market build-up period of from two to three years as shown by the record in this proceeding. In view thereof, all of such facilities will not be installed prior to October 18, 1963, the date by which ordering paragraph (C) of the Examiner's initial decision requires completion of construction and placement into operation. El Paso does anticipate, however, that all of the authorized facilities will be constructed and placed into operation prior to October 1, 1965.

The Commission finds:

It is appropriate in carrying out the provisions of the Natural Gas Act that the Order Adopting Initial Decision of the Presiding Examiner issued May 16, 1963, in the above-entitled matters be amended as ordered below.

The Commission orders:

(A) The ordering paragraph of the Order Adopting Initial Decision of Presiding Examiner, issued May 16, 1963, in the above-entitled matters is hereby amended to read as follows:

The initial decision of the Presiding Examiner issued on April 18, 1963, corrected to reflect that El Paso Natural Gas Company proposes to construct compressor facilities totalling 5,200 horsepower, is adopted as the decision of the Commission in these proceedings, effective as of the date of issuance of this order, except that the date when the facilities hereby authorized shall be constructed and placed into operation is hereby fixed as October 1, 1965.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP63-265

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 2, 1963)

On March 25, 1963, Kansas-Nebraska Natural Gas Company, Inc. (Applicant) filed in Docket No. CP63-265 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing:

(1) the replacement of approximately 30 miles of 10-inch pipeline and 20 miles of 12-inch pipeline from the Casper, Wyoming, compressor station to Douglas, Wyoming, with 50 miles of 12-inch pipeline;

(2) the replacement of approximately 33 miles of 10-inch pipeline with 12-inch pipeline between Lingle, Wyoming, and Mitchell, Nebraska;

(3) the installation of approximately 1000 additional horsepower at the Casper compressor station, and,

(4) Applicant to operate as a permanent facility approximately 8 miles of 3-inch existing line temporarily installed for emergency purposes, from Broadwater, Nebraska, southeast.

Applicant's proposals are more fully set forth in the application.

Applicant states that the proposed facilities are required to provide additional capacity to meet the firm peak market requirements of its western Nebraska and Eastern Wyoming service areas and to replace portions of its existing transmission line which are in poor condition. Applicant states further that the existing 3-inch line near Broadwater was installed during an emergency in order to maintain adequate service to the communities of Lisco, Oshkosh and Lewellen, Nebraska; Applicant believes that said line is now required on a permanent basis in order to meet the requirements of these three communities.

The estimated cost of the proposed facilities is $2,357,000, which cost will be financed by current working capital or by interim bank loans.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 20, 1963, respecting the matters involved in and the issues presented by the application herein. On May 27, 1963, Montana-Dakota Utilities Co. filed a petition to intervene in this proceeding; however, on May 31, 1963, said petitioner filed a notice of withdrawal of its petition. No other petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Phillips County, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-259 (3 FPC 966).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to

the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Kansas-Nebraska Natural Gas Company, Inc., to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP62-212

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 2, 1963)

On April 25, 1963, Michigan Wisconsin Pipe Line Company (Applicant) filed in Docket No. CP62-212 pursuant to Section 7(c) of the Natural Gas Act a motion to modify an order granting a certificate of public convenience and necessity issued in this docket on July 25, 1962, 28 FPC 205. Applicant wishes to amend the order by seeking authorization to decrease the number of compressor units previously authorized to be supercharged, and to remove and reinstall in another location a certain compressor unit, all as more fully set forth in Applicant's motion

By its order of July 25, 1962, the Commission authorized, among other things, the supercharging of seven compressor engines at Applicant's Wisconsin Station "A" to provide an increase of 2,210 horsepower. Applicant later was granted an extension of time to complete the authorized facilities.

In the meantime, completion of certain loop line facilities authorized in Docket No. G–20572 resulted in some excess horsepower at Applicant's Station 11, as shown in Exhibit No. 37 in that docket. Accordingly, Applicant now proposes that one 1,550 horsepower unit be removed from Station No. 11 and reinstalled at Wisconsin Station "A". Thus the supercharging of only two units in lieu of seven units as authorized in this proceeding will result in a net horsepower addition to Wisconsin Station "A" of 2,010 as compared to the 2,210 horsepower originally granted.

Applicant states that the cost of supercharging engines has increased substantially from that estimated when Applicant filed its original application in this proceeding. To presently supercharge the seven units originally called for would cost in excess of the original estimate by some $80,000, however, if the Commission modifies its order as herein requested, Applicant believes it will underrun its original estimate of $519,350. Consequently, Applicant now requests specifically that (1) the order issuing a certificate of public convenience and necessity issued July 25, 1962, be amended to authorize in lieu of the supercharging of seven units at its Wisconsin Station "A", the supercharging on only two such units which will increase the horsepower of each unit from 1,320 to 1,550, and (2) the removal of one 1,550 horsepower unit from Applicant's Compressor Station No. 11, and its reinstallation and operation at Applicant's Wisconsin Station "A".

Due notice of the filing of the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 28, 1963 (28 F.R. 5282). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order, issued on July 25, 1962, in Docket No. CP62–212 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued July 25, 1962, in Docket No. CP62–212 be and the same is hereby amended by authorizing Michigan Wisconsin Pipe Line Company to supercharge two compressor units at its Wisconsin Station "A" increasing the horsepower of each such unit from 1,320 to 1,550, and the removal of one 1,550 horsepower compressor unit from Applicant's Station No. 11 and its subsequent reinstallation and operation at the Wisconsin Station "A", all in lieu of the supercharging of seven compressor units at the Wisconsin Station "A" as heretofore authorized by said order, all as hereinbefore described and as set forth in the subject motion to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP62–256

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 2, 1963)

On March 22, 1963, Natural Gas Pipeline Company of America (Applicant) filed in Docket No. CP62–256 an application to amend the Commission's order

THE ARMY LIBRARY
Washington, D.C.

issued February 8, 1963, 29 FPC 278, in the said Docket. The certificate issued authorized Applicant to construct storage facilities providing for a maximum peak hour withdrawal capacity of 43,750 Mcf and increasing the maximum daily withdrawals by 75,000 Mcf to a total of 875,000 Mcf using all three reservoirs at the Herscher and Cooks Mill Fields.

Applicant states that it experienced operational difficulties during January and February 1963 when a number of storage withdrawals wells failed to function at the peak of deliveries and to correct this condition it proposes to construct additional withdrawal facilities as follows:

(1) Eight Galesville injection withdrawal wells in Herscher,

(2) Approximately 2,500 feet of 10-inch and 2,000 feet of 12-inch gathering pipelines.

(3) One additional dehydration unit,

(4) Increase the available turbine horsepower by 1,000 horsepower to a total of 7,500 horsepower at station 201.

The estimated total cost of the proposed facilities is $1,250,000, to be financed upon short term loans.

Due notice of the application has been given with publication in the Federal Register on May 18, 1963 (28 F.R. 5038). No petition to intervene in opposition to the application and no protest to the granting of the same has been received.

The Commission finds:

(1) The certificate heretofore issued by the Commission in this matter on February 8, 1963, should be and hereby is amended by adding to the facilities authorized to be constructed therein the facilities herein before described for the purpose of better service to the public by increasing the peak hour delivery of natural gas from the storage field when needed by the consumers.

The Commission orders:

(A) The Commission's order of February 8, 1963 in Docket No. CP62-256 is amended by adding to the facilities therein authorized and operated, those facilities hereinbefore described.

(B) In all other respects said order of February 8, 1963 in this docket shall remain unchanged and in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-267

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued July 2, 1963)

On March 27, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP63-267 an application pursuant to Section 7 of the Natural Gas Act for: (1) a certificate of public convenience and necessity authorizing (a) the construction and operation of a new 5,940 horsepower station replacing the existing Grayco Compressor Station, Gray County, Texas, (b) the installation of an additional 1,100 horsepower at the Tate Station, Kearny County, Kansas, (c) the installation of an additional 2,000 horsepower at the Holcomb Station, Finney County, Kansas, and (d) the construction and operation of a side tap near the Pembrook Station, Upton County, Texas; and (2) permission

and approval to abandon said Pembrook Compressor Station. Applicant's proposals are more fully set forth in the application.

Applicant states that the obsolescence and inefficiency of the present Grayco Station has resulted in abnormally high operating and maintenance expense and makes the continued operation of the station extremely hazardous. Four of the 1,320 horsepower units presently at the Pembrook Station will be relocated and installed at the new Grayco Station and a new 660 horsepower unit will be installed to make up the total proposed horsepower of 5,940.

The application indicates that the additional horsepower proposed for the Tate and Holcomb Stations will permit Applicant to accept its gas supply requirements and commitments in the Kansas-Hugoton Field and will result in more efficient operations. Applicant will relocate and install two 550 horsepower units presently installed at the Pembrook Station to supply the proposed additional horsepower at Tate. A new 2,000 horsepower unit will be installed at Holcomb.

Applicant states that upon transfer of the horsepower from Pembrook to the Grayco and Tate Stations, Pembrook Station will be retired. Due to depletion of gas supply in the general area of the Pembrook Station, the volumes formerly compressed at said station will be compressed at the Plymouth Compressor Station also located in Upton County.

Applicant's proposed 2-inch side tap near the Pembrook Station will be utilized to furnish compressor fuel to Phillips Petroleum Company at the latter's Pembrook Gasoline Plant.

Applicant states that none of the subject proposals will result in the abandonment or interruption of any service.

The application shows the total estimated cost for all facilities is $2,348,680. However, due to the reuse of materials and sale of salvageable material the total estimated out of pocket cost is $1,456,000, which cost will be financed from cash on hand and retained earnings.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 18, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities to be abandoned, as heretofore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant, as heretofore described, is permitted

by the public convenience and necessity, and an order authorizing and approving same should be issued as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct, operate and install the proposed facilities, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 12 months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same is hereby granted.

(E) Applicant shall advise the Commission of the date of the abandonment within 30 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-278

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 3, 1963)

On April 8, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP63-278, an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities as part of its natural gas transmission system, as more fully set forth in the application, and the sale of natural gas through such facilities to The Gas Service Company (Gas Service) for resale to customers in and about an area adjacent to Forbes Air Force Base.

The estimated cost of the proposed facilities is $3,220, which cost will be financed from treasury cash.

The estimated third year peak day and annual requirements for the area to be served are 2501 Mcf per day and 153,405 Mcf per year.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 20, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in the First National Building, Oklahoma City 1, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and in the construction and operation thereof as well as the sale of natural gas by Applicant, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities as well as the sale of natural gas, both proposed by Applicant, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to construct and operate certain natural gas facilities, and to sell natural gas for resale, as hereinbefore described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. RP64-1

ORDER INSTITUTING INVESTIGATION AND REQUIRING REPORTING OF COST AND REVENUE DATA

(Issued July 3, 1963)

Colorado Interstate Gas Company (Colorado Interstate) is engaged in the transportation of natural gas in interstate commerce and in the sale for resale of natural gas in interstate commerce for ultimate distribution to the public, and therefore is a natural gas company within the Natural Gas Act.

On the basis of data available to the Commission, it appears that the rates, charges, or classifications demanded, observed, charged, or collected in connection with the sales or transportation of natural gas by Colorado Interstate, subject to the jurisdiction of the Commission, and the rules, regulations, practices, and contracts relating thereto, may be unjust, unreasonable, unduly discriminatory or preferential.

Investigations which have been conducted in the past have been characterized by time-consuming and burdensome delays in obtaining cost data. This has proved both costly and inconvenient to all parties concerned. The company itself is most familiar with its own books and records. It is appropriate, therefore, that Colorado Interstate prepare and submit a report of its cost and revenue data for calendar year 1962 as hereinafter prescribed. It is not intended that the submittal of cost and revenue data by the company will be a substitute for the investigative responsibility of the staff nor will it preclude staff examination of the books or records of the company to the extent deemed necessary. It is contemplated that this procedure will obviate in large part the time consumed by the Commission Staff in the investigation of the Company's books and records but should not impose a burden upon the Company since it would make such a study for its own purposes in connection with the investigation.

The Commission finds:

(1) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act, that an investigation be instituted by the Commission, upon its own motion, into and concerning all rates, charges, or classifications demanded, observed, charged, or collected by Colorado Interstate for or in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, and any rules, regulations, practices, or contracts affecting such rates, charges, or classifications.

(2) It is necessary and appropriate, in order to expedite such investigation that Colorado Interstate submit the cost and revenue report hereinafter prescribed.

The Commission orders:

(A) Under authority of Sections 4 (a) and (b), 5, 10, 14, 15 and 16 of the Natural Gas Act an investigation of Colorado Interstate is hereby instituted for the purpose of enabling the Commission to determine whether, with respect to any transportation or sale of natural gas, subject to the jurisdiction of the Commission, made or proposed to be made by Colorado Interstate, any of the rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable, unduly discriminatory, or preferential.

(B) On or before August 15, 1963, Colorado Interstate shall report to the

Commission cost and revenue data conforming with subsection (f) of Section 154.63 of the Commission Regulations under the Natural Gas Act, (except statements N and P). The data shall utilize calendar year 1962 adjusted for changes in revenues and costs which are known and are measurable with reasonable accuracy at the time of filing and which will become effective within nine months after the base period. The 12 months base period shall be adjusted to eliminate nonrecurring items, (except minor amounts so specified) but this shall not preclude Colorado Interstate from including items clearly designated as such, which, on the basis of existing facts, detailed in the report, it can show will be experienced or from including an appropriate normalizing adjustment, in lieu of a specified nonrecurring item. Working papers prepared in conjunction with the cost and revenue data shall be included in the report submitted and all statements, schedules and working papers shall be prepared in accordance with the classifications provided in the Uniform System of Accounts. Ten sets of the cost and revenue data shall be served upon the Commission, and Colorado Interstate shall simultaneously serve copies of such data upon all of its jurisdictional customers and the State commission of each state in which it does business.

(C) Further orders in this proceeding will specify the dates for any formal hearing under Section 5 of the Natural Gas Act which the Commission on further consideration of the matter deems appropriate and will provide an opportunity for intervention in such hearing by interested parties.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

COLORADO WYOMING GAS COMPANY, DOCKET NO. RP64-2

ORDER INSTITUTING INVESTIGATION AND REQUIRING REPORTING OF COST AND REVENUE DATA

(Issued July 3, 1963)

Colorado Wyoming Gas Company (Colorado Wyoming) is engaged in the transportation of natural gas in interstate commerce and in the sale for resale of natural gas in interstate commerce for ultimate distribution to the public, and therefore is a natural gas company within the Natural Gas Act.

On the basis of data available to the Commission, it appears that the rates, charges, or classifications demanded, observed, charged, or collected in connection with the sales or transportation of natural gas by Colorado Wyoming, subject to the jurisdiction of the Commission, and the rules, regulations, practices, and contracts relating thereto, may be unjust, unreasonable, unduly discriminatory or preferential.

Investigations which have been conducted in the past have been characterized by time-consuming and burdensome delays in obtaining cost data. This has proved both costly and inconvenient to all parties concerned. The company itself is most familiar with its own books and records. It is appropriate, therefore, that Colorado Wyoming prepare and submit a report of its cost and revenue data for calendar year 1962 as hereinafter prescribed. It is not intended that the submittal of cost and revenue data by the company will be a substitute for the investigative responsibility of the staff nor will it preclude staff examination of the books or records of the company to the extent deemed necessary. It is contemplated that this procedure will obviate in large part the time consumed by the Commission Staff in the investigation of the Com-

pany's books and records but should not impose a burden upon the company since it would make such a study for its own purposes in connection with the investigation.

The Commission finds:

(1) It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act, that an investigation be instituted by the Commission, upon its own motion, into and concerning all rates, charges, or classifications demanded, observed, charged, or collected by Colorado Wyoming for or in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, and any rules, regulations, practices, or contracts affecting such rates, charges, or classifications.

(2) It is necessary and appropriate, in order to expedite such investigation that Colorado Wyoming submit the cost and revenue report hereinafter prescribed.

The Commission orders:

(A) Under authority of Sections (4) (a) and (b), 5, 10, 14, 15 and 16 of the Natural Gas Act an investigation of Colorado Wyoming is hereby instituted for the purpose of enabling the Commission to determine whether, with respect to any transportation or sale of natural gas, subject to the jurisdiction of the Commission, made or proposed to be made by Colorado Wyoming, any of the rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges or classifications, are unjust, unreasonable, unduly discriminatory, or preferential.

(B) On or before August 15, 1963, Colorado Wyoming shall report to the Commission cost and revenue data conforming with subsection (f) of Section 154.63 of the Commission Regulations under the Natural Gas Act, (except statements N and P). The data shall utilize calendar year 1962 adjusted for changes in revenues and costs which are known and are measurable with reasonable accuracy at the time of filing and which will become effective within nine months after the base period. The 12 months base period shall be adjusted to eliminate nonrecurring items (except minor amounts so specified), but this shall not preclude Colorado Wyoming from including items clearly designated as such, which, on the basis of existing facts, detailed in the report, it can show will be experienced or from including an appropriate normalizing adjustment, in lieu of a specified nonrecurring item. Working papers prepared in conjunction with the cost and revenue data shall be included in the report submitted and all statements, schedules and working papers shall be prepared in accordance with the classifications provided in the Uniform System of Accounts. Ten sets of the cost and revenue data shall be served upon the Commission, and Colorado Wyoming shall simultaneously serve copies of such data upon all of its jurisdictional customers and the State commission of each state in which it does business.

(C) Further orders in this proceeding will specify the dates for any formal hearing under Section 5 of the Natural Gas Act which the Commission on further consideration of the matter deems appropriate and will provide an opportunity for intervention in such hearing by interested parties.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP63-277

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 3, 1963)

On April 9, 1963, Florida Gas Transmission Company (Applicant) filed an application in Docket No. CP63-277 for a certificate of public convenience and necessity to construct and operate two miles of 4½" O.D. transmission pipeline from a point on its 18-inch line near the City of South Miami, Florida, and to sell gas to its affiliate, Florida Gas Transmission Company, for distribution and resale in the city of South Miami. The cost of construction is estimated to be $24,000. The gas purchase will be made under Florida Gas Transmission Company's FPC Tariff, Rate Schedules G and I, which are on file with the Commission.

The estimated gas requirements for the community to be served under the subject application are as follows:

	M³ Btu		
	1st year	2d year	3d year
Peak day	234	471	652
Annual	87,951	104,621	114,594

The total estimated cost of the transmission and distribution facilities to be constructed by Florida Gas Transmission Company is approximately $696,000.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 18, 1963, respecting the matters involved in and the issues presented by the application herein. No petition in intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Florida Gas Transmission Company, a Delaware corporation with its principal place of business at Winter Park, Florida, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, will be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof as well as the sale of natural gas by Applicant, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities as well as the sale of natural gas, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon the Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued authorizing Applicant, Florida Gas Transmission Company, to construct and operate natural gas facilities, and to sell up to 652 M²Btu per day of natural gas for resale, as heretofore described, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 9 months from the date on which this order issues.

VILLAGE OF GREENUP, ILLINOIS, DOCKET NO. CP63–157 AND VILLAGE OF TOLEDO, ILLINOIS, DOCKET NO. CP63–158

ORDER ADOPTING INITIAL DECISION OF PRESIDING EXAMINER

(Issued July 3, 1963)*

Syllabus

1. Commission *directs* Trunkline Gas Company, under Section 7(a) of the Natural Gas Act, to establish physical connection of its facilities with facilities proposed to be constructed by applicants, and sell natural gas to applicants. PP. 29; 33.

Orville N. Foreman, *Wilton A. Carr* and *Glen Neal* for Village of Greenup, Illinois.

Orville N. Foreman and *Glen Neal* for Village of Toledo, Illinois.

J. William Via, Jr., and *Winton Hampton* for Trunkline Gas Company.

Agnes Mae Wilson for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

On June 3, 1963, the presiding examiner issued an initial decision herein ordering and directing Trunkline Gas Company, under the provisions of Section 7(a) of the Natural Gas Act, to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed and operated by the Village of Greenup, and to sell and deliver up to 752 Mcf of natural gas per day to Greenup and to sell up to 511 Mcf of natural gas per day to Toledo and to deliver Toledo's gas to Greenup for transmission and delivery by the latter to Toledo. No exceptions have been filed to said initial decision.

*Initial decision appears on p. 29.

The Commission finds:

Upon consideration of the entire record in this matter, the initial decision of the presiding examiner should be adopted as the decision of the Commission.

The Commission orders:

The initial decision of the presiding examiner issued herein on June 3, 1963, be and the same is hereby adopted and said decision shall become effective as the decision of the Commission as of the date of issuance of this order.

INITIAL DECISION

ON APPLICATION FOR ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND THE SALE OF NATURAL GAS

(Issued June 3, 1963)

SHRIVER, *Presiding Examiner:* This is a proceeding initiated by the Village of Greenup, Illinois, and the Village of Toledo, Illinois, to secure natural gas service. Each village filed an application with the Commission on December 6, 1962, pursuant to Section 7(a) of the Natural Gas Act seeking an order directing the Trunkline Gas Company, an interstate pipeline, to physically connect its transportation facilities with facilities which the Village of Greenup propose to construct, and to sell and deliver to the applicants their natural gas requirements. The Trunkline Gas Company filed an answer to these applications on January 10, 1963. On January 21, 1963, the villages filed a motion for consolidation, and the proceedings came on for hearing before this Examiner on April 8 and 9, 1963, at which the applicants introduced oral testimony and documentary evidence. No witnesses were produced by Trunkline or by the Staff. The applicants' witnesses were cross-examined by counsel for Trunkline and by Staff counsel.

Each applicant is a village incorporated under the laws of the State of Illinois and is authorized to engage in the local distribution of natural gas to the public. Each is located in Cumberland County, Illinois. The Village of Greenup is principally an agricultural marketing and trading center. Its population is 1470 and it has about 1539 persons in its service area. It owns and operates its water and sewage utilities and a municipal electric distribution system. It has a small shoe manufacturing plant and is currently trying to attract other industry. The village has never defaulted on any of its obligations issued for any of its utilities. The Village of Toledo is located about 200 miles south of Chicago and about 50 miles west of Terre Haute, Indiana. It is the county seat of Cumberland County and is approximately four and a half miles west of the Village of Greenup. Toledo is about a half mile north of the transmission lateral to be constructed by Greenup. Toledo's population is about 1050; it was 905 in 1950 and 1005 in 1960. Two small factories are located in the village. Toledo also owns its own water and sewage utilities. It has never defaulted on any of its bond obligations and presently has a surplus in its bond fund.

The Village of Greenup proposes to interconnect a transmission lateral with facilities of Trunkline at a point about fourteen miles west of the village, to construct a 4-inch lateral from the point of connection to run about 10 miles eastward where a connection will be made for Toledo, and then to continue with a 3-inch lateral from the latter connection about 4 miles further eastwards to Greenup. Greenup also proposes to construct a distribution system to serve customers within the village and others who reside in the vicinity or along the transmission line. Greenup plans to transport the gas needed for its own use as well as that of Toledo through this lateral.

The gas transported for the use of Toledo will be effected pursuant to an agreement between the two villages. Toledo also proposes to construct a distribu-

tion system for service of natural gas to customers within its corporate limits and along the lateral to be constructed from Toledo to a point of interconnection with the transmission lateral to be constructed by Greenup.

No natural gas service is presently available to the villages. Many of their residents now use propane gas. There was testimony at the hearing to indicate that natural gas could be furnished cheaper, and that most propane users would become natural gas customers. In October 1962 the residents of Greenup voted more than three to one in favor of an ordinance for the acquisition, construction, ownership and operation of a municipal gas utility and the issuance of $585,000 Gas Public Utility certificates, bearing six percent interest, payable solely from the revenues of said utility. At a similar special election in Toledo the vote was almost three to one. The ordinance approved by the Toledo voters authorized the issuance of certificates in the amount of $205,000.

In order to establish a basis for the construction, operation and financing of the projects, the villages employed an engineering consultant to make a study, among other things, of the proposed distribution in each village, the potential residential and commercial customers, the daily and annual gas sales that could be expected, the cost of gas to the consumers, the cost of the facilities, and the debt service on each project. This witness testified that the systems would be constructed in accordance with the latest accepted practices and standards of the American Gas Association and the A.S.T.M. He testified that he made a field survey of the villages and the surrounding communities. He stated that there were 695 buildings and 555 bottled gas users within the present limits of Greenup or along the proposed transmission line, the latter being excellent prospects for natural gas. The figures for Toledo were 458 and 367 respectively. He also testified that seventy to eighty percent of the first year anticipated customers of each village had signed up for natural gas and had placed a deposit. He estimated Greenup's peak-day requirements for the first, second and third years of operations at 670 Mcf, 710 Mcf and 752 Mcf, respectively; and the annual requirements for the first, second and third year at 78,900 Mcf, 83,100 Mcf and 87,600 Mcf. The first, second and third year peak-day requirements for Toledo were estimated at 426 Mcf, 466 Mcf and 511 Mcf, respectively; and the annual requirements for the first, second and third years at 51,300 Mcf, 55,800 Mcf and 60,700 Mcf.

After having estimated the volume of gas required by the villages, the engineering consultant determined the gross annual revenue for each and the net annual revenue, after deduction of the cost of the gas and the operating expenses. Based upon a thirty year operation and amortization, a third year allocation of gas, and the issuance of $500,000 of five percent (5%) gas revenue bonds he found the Greenup report showed a debt coverage ratio of 1.98; and based upon a twenty year amortization a 1.62 coverage. For the village of Toledo based on a bond issue of $175,000 and a thirty year amortization he estimated the debt coverage ratio to be 2.35; and based on a twenty year amortization a 1.84 coverage ratio. He was of the opinion that both projects were economically feasible.

The financial consultant for the villages testified that in appraising the feasibility of the projects he had assumed a bond issue of $500,000 for Greenup and $175,000 for Toledo, but would recommend a bond issue of $470,000 for Greenup and $165,000 for Toledo. He was of the opinion that the latter figure for Toledo would cover the construction cost, the bond discount, all contingencies and miscellaneous costs. As to Greenup he stated his figure of $470,000 should be more than enough to cover all costs including possible heat plant conversions. His estimate as revealed by his testimony was as follows:

Cost of construction	$328, 921
Land and right of way	2, 000
Engineering and construction supervision	31, 000

Interest during development (on $470,000 for 18 mo. @ 5%)	$35,250
Bond discount of 10% (figure includes cost of election, expenses of FPC hearings, legal fees and printing bonds)	47,000
Miscellaneous and contingent	25,750
	469,921

The witness testified that it would be more realistic to consider the sum of $47,000 to include 5% bond discount and 5% miscellaneous expenses so that the sum of $25,750 probably would not be needed. The witness was a representative of a securities organization which is committed to buy the bonds of the villages. He also testified that in his opinion both projects were financially sound and feasible.

Trunkline, in its answer to the application of Greenup, challenges the claimed need for a delivery pressure of 300 to 400 psig, and challenges the application of Toledo for non-compliance with Section 7(a) of the Natural Gas Act since Toledo does not seek physical connection with the facilities of Trunkline but with a proposed transmission line to be built by Greenup. Trunkline also questions the economic feasibility of each project. Trunkline makes no representation that the services requested would burden its pipeline service or in any way adversely affect its present customers.

Trunkline's first objection is met by evidence and testimony which was presented at the hearing. The applicants' engineering consultant testified that a 400 psig inlet pressure, which was originally requested, was not needed and that an actual delivery pressure of 225 psig would satisfy the applicants' present requirements. Trunkline made no objection to this change either at the hearing or in its brief.

In its answer to Toledo's application Trunkline states that Toledo does not propose making physical connection with Trunkline's facilities and therefore fails to comply with Section 7(a) of the Natural Gas Act. Trunkline does not state therein why Toledo's application is defective. In its brief, however, Trunkline asserts that under these circumstances Section 7(a) does not empower the Commission to direct Trunkline to make a sale of natural gas to Toledo. Section 7(a) contains no express or implied restrictions as contended for by Trunkline. On the contrary it is plausible to conclude from the language used that the Act contemplates that natural gas companies be required to sell or extend their facilities to neighboring communities or villages irrespective of whether each makes a separate physical connection. To hold otherwise would be incongruous and would mean that the supplier must build a lateral to each village or each would be required to build its own separate lateral, otherwise one community might have service and its neighbor have none. Trunkline's contention accordingly is rejected. The result reached herein is supported in *Texas Eastern Transmission Corporation*, 14 FPC 266, 269 in respect to the Cities of Anna and Jonesboro. See also *Berkshire Gas Company, et al.*, 24 FPC 1041, 1047, and the *City of Monroe, Missouri*, Docket No. CP63-90, and the *City of Perry, Missouri*, Docket No. CP63-91.

Trunkline also asserts in its brief that Greenup will be transporting gas for Toledo in interstate commerce and will need certification pursuant to Section 1 of the Natural Gas Act. But Trunkline fails to show how Greenup would come within the provisions of Section 1. Since the gas with which we are here concerned is moved locally, and by the terms of the transportation agreement between the villages, each will contribute to financing the line and will have an interest and firm right of having its share of gas moved through it, Trunkline's contention is without merit.

As has been said, Toledo will receive its gas through the transmission line to be constructed and owned by Greenup. Pursuant to an agreement entered into between the villages dated December 4, 1962, Toledo has agreed to pay Greenup an annual fee until it has paid—estimated to continue for sixteen years—its share of the cost of the transmission line as well as its share of the annual cost of maintenance and operation, after which the transportation charge will be reduced or dropped to the share of the cost of maintenance and operation only. The agreement is to run for thirty years. Trunkline raises several objections to this agreement but since they are the concern primarily of the villages rather than Trunkline, and do not go to the economic feasibility of the projects, they are not well taken.

There remains the question of economic feasibility. Section 7(a) provides, among other things, that the Commission may direct a natural gas company to establish physical connection with and sell natural gas to any person or municipality engaged or legally authorized to engage in the local distribution of natural gas if it finds such action necessary or desirable in the public interest and no undue burden is thereby placed on the natural gas company.

In determining whether such service is necessary or desirable in the public interest, it is the responsibility of the Commission to satisfy itself whether the pipeline company is the applicants' most appropriate source of supply, whether there is a public need for gas service, and a benefit to be derived therefrom in the applicant's community, whether the proposed project can be financed, and whether it is economically sound.

Greenup and Toledo are relatively near Trunkline's 26-inch pipeline so that Trunkline is a normal source of supply. As already said, the electorate of the villages desire natural gas service and desire that it be delivered through their own municipal systems. The applicants presented evidence at the hearing showing that natural gas was competitive, that it was a convenience over propane, and that it could well result in attracting additional small industry to locate in the villages.

The debt-service coverage rate necessarily varies with the length of the maturity schedule of the bond issue. It is generally considered that a debt-coverage ratio of 1.5 is sufficient to meet the requirements of economic feasibility. *Panhandle Eastern Pipe Line Company, et al.*, 15 FPC 1421, 1428. The amortization schedule is based on the report made by the villages' engineering consultant. There is no reason to doubt the soundness of his report. The debt-service coverage both for Greenup and for Toledo on a 30-year or a 20-year amortization schedule is well within the minimum requirements.

Based on the evidence adduced at the hearing it is concluded that both Greenup and Toledo have a need for natural gas service, that they will derive a benefit therefrom, that these projects can be financed and are economically feasible, and that the villages have sustained the burden of proof required under Section 7(a) of the Natural Gas Act.

FINDINGS AND CONCLUSIONS

Upon consideration of the record and the briefs and arguments of counsel, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) The Trunkline Gas Company, a Delaware Corporation, having its principal office in Houston, Texas, is a "natural gas company" within the meaning of the Natural Gas Act, as amended, and as heretofore found by the Commission. 9 FPC 721, 737.

(2) The Applicant, Village of Greenup, Illinois, is a municipal corporation legally authorized to construct, own, and operate a local gas distribution system.

(3) The Applicant, Village of Toledo, Illinois, is a municipal corporation legally authorized to construct, own, and operate a local gas distribution system.

(4) It is necessary and desirable in the public interest that the Commission, by order, direct the Trunkline Gas Company to establish physical connection of its natural gas transmission facilities with the facilities proposed to be constructed and operated by the Village of Greenup, Illinois, and direct the sale and delivery of a maximum volume of 752 Mcf of natural gas per day by Trunkline to Greenup for its requirements and direct the sale of a maximum volume of 511 Mcf of natural gas per day to the Village of Toledo, said volume of gas to be delivered by Trunkline to the Village of Greenup at the connection of Trunkline's facilities with Greenup's facilities, to be transported by Greenup for Toledo.

(5) The requirement that the Trunkline Gas Company serve the Village of Greenup and the Village of Toledo as above set forth will not place any undue burden upon it nor require it to enlarge its facilities, nor impair its ability to render adequate service to its existing customers.

(6) The Village of Greenup and the Village of Toledo should be prepared to receive natural gas from the Trunkline Gas Company within one year from the date of the issuance of the order herein, and Trunkline should be prepared to provide that service within that period of time.

ORDER

Wherefore, it is ordered, subject to review by the Commission on appeal, or review on its own motion, as provided in its Rules of Practice, that:

(A) The Trunkline Gas Company be and it is hereby directed to establish physical connection of its natural gas transmission facilities with the natural gas facilities proposed to be constructed and operated by the Village of Greenup, and to sell and deliver up to 752 Mcf of natural gas per day to Greenup and to sell up to 511 Mcf of natural gas per day to Toledo and to deliver Toledo's gas to Greenup for transmission and delivery by the latter to Toledo, all as hereinbefore described and as more fully set forth in the applications, as amended, in Docket Nos. CP63–157 and CP63–158.

(B) The Village of Greenup and the Village of Toledo shall be prepared to receive natural gas from the Trunkline Gas Company within one year from the date of issuance of this order, in accordance with Section 157.20(b) of the Commission's Regulations.

(C) Trunkline shall report to the Commission in writing the date of commencement of service to the Village of Greenup and the Village of Toledo within ten days thereof.

HARRY C. SHRIVER,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

M. J. MITCHELL, DOCKET NO. G–19999

ORDER CONDITIONALLY ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENT, REQUIRING REFUNDS, AND TERMINATING PROCEEDING

(Issued July 3, 1963)

On May 15, 1963, M. J. Mitchell (Mitchell) submitted an Offer of Settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, in the above-designated proceeding, which relates to the jurisdictional

sale of natural gas by Mitchell, under its FPC Gas Rate Schedule No. 2, to Tennessee Gas Transmission Company (TGT), from the Agua Dulce Field, Nueces County, Texas (Railroad Commission District No. 4). The increased rate of 17.24347¢ per Mcf, at 14.65 psia, became effective subject to refund on April 2, 1960.

Under the terms of the offer, Mitchell proposes to delete the favored-nation, price redetermination and periodic escalation provisions from the rate schedule involved, and to establish a settlement rate of 15.0¢ per Mcf, inclusive of present tax reimbursement for the remaining term of the contract.

In support of its offer, Mitchell cites the deletion of the favored-nation, price redetermination and periodic escalation provisions from its gas purchase contract with TGT, and states that such provisions were important elements of consideration required by Mitchell under the contract for the long-term commitment of its gas reserves to the performance of the contract. TGT has concurred in the offer, and has agreed to execute the contract amendment provided for therein. No answers or protests to the offer have been received.

Since the proposed settlement rate of 15.0¢ per Mcf, including present tax reimbursement, at 14.65 psia, is acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, for jurisdictional sales of natural gas in Texas Railroad Commission District No. 4, it is believed that the public interest will best by served by accepting Mitchell's proposed settlement as hereinafter set forth. As a condition of this order we will require that Mitchell refund all amounts collected in excess of 15.0¢ per Mcf in Docket No. G–19999.

However, we desire to make it clear that acceptance of the offer of settlement shall not be construed as approval of any future increased rate proposed by Mitchell.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Mitchell with the Commission on May 15, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Mitchell with the Commission on May 15, 1963, is hereby approved in accordance with the provisions of this order.

(B) Mitchell shall file, within 30 days from the date of issuance of this order, a notice of change providing for the 15.0¢ per Mcf rate, including present tax reimbursement, specified in its offer of settlement and a contractual amendment to its FPC Gas Rate Schedule No. 2, which Mitchell shall execute with TGT in conformity with Mitchell's offer of settlement in all respects. Both the notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commissions' Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Mitchell shall refund to TGT all amounts collected under its FPC Gas Rate Schedule No. 2 in Docket No. G–19999 in excess of the settlement rate of 15.0¢ per Mcf, together with simple interest at the rate of 7% per annum, from the date of receipt of such excess amounts by Mitchell to the date of refund. Mitchell shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this letter, Mitchell shall report to the Commission in writing the details of its calculations resulting in

refunds ordered pursuant to paragraph (C) above, together with a copy of a release from TGT with respect to such refunds.

(E) Upon notification by the Secretary of the Commission that Mitchell has complied with the terms and conditions of this order, the rate and charge of 15.0¢ per Mcf at 14.65 psia, including present tax reimbursement, specified in the Offer of Settlement, shall be effective as of the date of issuance of this order, the above-designated proceeding shall be deemed terminated, and Mitchell's refund obligation with respect to the above-designated proceeding shall be deemed discharged.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-261

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 3, 1963)

On March 22, 1963, Northern Natural Gas Company (Applicant), filed in Docket No. CP63-261 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of measuring and regulating facilities necessary to make sale and delivery of natural gas from its integrated pipeline system to the City of Iraan, Pecos County, Texas.

The application states that due to depletion of its present gas supply, the City of Iraan has requested Northern to deliver gas from the 6-inch line which runs approximately two miles from the city limits. The City of Iraan proposes to furnish its own line to transport the gas into the city and to reimburse Northern for the construction of its facilities.

Applicant proposes to construct and operate measuring and regulating facilities at an estimated cost of $7,280. It is estimated that the City of Iraan will require third year daily and annual maximum quantities of 640 Mcf and 90,000 Mcf, respectively. Applicant states that such volumes will have a negligible effect on its system capacity and gas supply, and will not significantly effect its operating revenues or operating expenses.

Pursuant to due notice a public hearing was held in Washington, D.C., on June 20, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation having its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G-280 (3 FPC 967).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-262

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July, 3, 1963)

On March 22, 1963, Northern Natural Gas Company (Applicant), filed in Docket No. CP63-262 an application of a "budget-type" nature pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of field compression facilities located on gathering systems during the calendar year 1963, all as more fully set forth in the application

Applicant states that it has numerous gathering systems connecting various sources of gas supply to its mainline system, and from time to time it becomes necessary to install compression facilities on these systems in order to maintain mainline design pressures. Applicant proposes to locate these small field stations between the point where gathering has been completed and prior to delivery into the mainline facilities. Such installations will enable it to reduce upstream gathering system pressures in accordance with its contractual obligations to producers, and also to take into its existing gathering facilities increased volumes

of gas resulting from additional well connections. Such installations will not result in any increase in system salable capacity.

Applicant's request extends only through calendar year 1963, and it estimates that a maximum of $850,000 will be required for these stations and that no single project will cost over $500,000, all of which will be financed from cash on hand and from funds generated from its operations.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 20, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation with its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that the certificate issued hereinafter and the rights granted thereunder be conditioned as follows: (a) construction and expenditures shall be limited to the remainder of the calendar year 1963; (b) total expenditures shall not exceed a maximum of $850,000, with no single project exceeding a cost of $500,000; and (c) Applicant shall file with the Commission within 60 days after expiration of the authorization issued hereinafter, a statement showing the actual installed cost, the description, and the location of each project constructed.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and rights granted thereunder are conditioned upon Applicant's compliance with the following: (a) construction and expenditures shall be limited to the remainder of the calendar year 1963; (b) total expenditures shall not exceed a maximum of $850,000, with no single project exceeding a cost of $500,000; and (c) Applicant shall file with the Commission within 60 days after expiration of the authorization issued herein, a statement showing the actual installed cost, the description, and the location of each project constructed.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are further conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (c)(3), and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–228

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 3, 1963)

On February 18, 1963, Transcontinental Gas Pipe Line Corporation (Applicant) filed an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction of a cryogenic in-ground liquified natural gas (LNG) storage facility, having a capacity of 1,000,000 Mcf and a peak day deliverability of 200,000 Mcf (at 14.7 psia), and for sales of LNG storage service to seven of its existing customers. On April 17, 1963, the Applicant supplemented its application so as to accept four (4) conditions designed to insure protection of its other customers. The storage facility will be located adjacent to Transco's existing main pipeline in the Hackensack Meadows near Carlstadt, New Jersey (about 8 miles west of New York City). The estimated cost of the project is $11,800,000.

The facility will be used to (1) liquify natural gas, (2) store the natural gas in the liquid state during off-peak periods, and (3) vaporize and send out the natural gas during peak periods. Gas from the storage facility will be sold only to customers contracting for LNG storage service. The storage facility gas will actually be delivered at points downstream from the storage facility thereby making available equivalent capacity upstream from the storage facility.

The seven customers to receive this service and the volumes of gas contracted for are as follows:

	Storage capacity volume—Mcf	Peak-day deliverability Mcf	Contracted days' use of demand
Atlanta Gas Light Co	125,000	25,000	5
Delaware Power & Light Co	15,000	2,000	7.5
Elizabethtown Con. Gas Co	84,000	21,000	4
Piedmont Natural Gas Co	72,000	12,000	6
Public Service Electric & Gas Co	600,000	120,000	5
South Jersey Gas Co	10,000	2,000	5
United Gas Improvement Co	50,000	10,000	5
Total	[1] 956,000	[1] 192,000	

[1] Since the delivery capacity is 200,000 Mcf per day and the total storage capacity is 1,000,000 Mcf, 8,000 Mcf of delivery capacity and 44,000 Mcf of storage capacity are available for allocation.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 11, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene in opposition to, or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation with its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (2), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) The conditions set forth in the Applicant's supplement of April 17, 1963, are in the public convenience and necessity and therefor the certificate should be subject to the specific conditions stated in paragraphs (E), (F), (G) and (H) as hereinafter ordered.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate certain natural gas facilities, as hereinbefore described, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (2), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in operation as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 30 months from the date on which this order issues.

(D) Applicant shall submit to the Commission annual reports in a form satisfactory to the Commission showing the pertinent operating data and the

experienced associated costs for each of the three years after the first full injection and withdrawal cycle.

(E) Unless and until the liquified natural gas facility certificated hereby has operated for one full injection and withdrawal cycle (i.e., the injection and withdrawal for any purpose of 1,000,000 Mcf of natural gas), Applicant shall not transfer on its books from construction work in progress to gas plant in service the costs of the said facility; nor shall Applicant claim such costs at rate base or include any revenues under Rate Schedule LG–A in any rate proceeding unless and until the said full cycle is completed.

(F) In any rate proceeding instituted after the liquified natural gas facility certificated hereby has been transferred to gas plant in service, should the "test period" (as presently defined in the Commission's Regulations) or any part thereof fall prior to the commencement of the full service of 192,000 Mcf per day authorized herein, Applicant shall nevertheless reflect revenues and costs based upon such full service.

(G) Applicant shall not in any rate proceeding attempt to assess against any other class of service any deficiency in revenues under Rate Schedule LG–A below the cost of service, associated with the certificated facility, of rendering the service certificated herein, prepared in the manner utilized in Exhibit P (ii) to the application herein.

(H) Applicant shall amend its proposed Rate Schedule LG–A as contained in Exhibit P (i) to its application herein, to restrict the availability of the liquified natural gas service to customers served under other rate schedules contained in Applicant's FPC Gas Tariff Volume No. 1, except ACQ and PS rate schedules. Such an amendment shall not prejudice Applicant's right to propose liquified natural gas service to others in the future.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 178

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 5, 1963)

Pacific Gas & Electric Company, Licensee for Project No. 178,[1] at various times filed statements pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from January 1, 1941 through December 31, 1954, project additions and retirements resulting in (1) a $156,887.88 net increase in project cost over the previously determined amount of actual legitimate cost of the project, $2,113,996.48 as of December 31, 1940,[2] and (2) a resulting total claimed actual legitimate original cost of the project as of December 31, 1954, of $2,270,884.36. The claimed net increase of $156,887.88 results from claimed and recorded project gross additions and retirements totaling $221,763.05 and $64,905.17, respectively, and a debit adjustment of $30.00, and is more specifically shown in the attached schedule.

---

[1] The project is located on the Kern River in Kern County, California, and lands of the United States within Sequoia National Forest. It may be described, generally, as Licensee's Kern Canyon project. Overall, the project includes one hydroelectric generating unit and a number of transmission lines. The license for the project was issued pursuant to Section 4(d) of the Federal Water Power Act and is by its terms effective for a period of 50 years commencing April 30, 1925.

[2] See Commission order issued February 26, 1948 (7 FPC 407).

The Commission's staff completed a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the claimed and recorded project costs.

Staff analysis of Licensee's provisions for project depreciation has not been completed, and the staff recommends that the Commission defer for future consideration and determination the amount of accrued depreciation applicable to inservice project properties for the period subsequent to April 30, 1925, the effective date of the license for Project No. 178. The Commission by order dated March 28, 1932 (Twelfth Annual Report of the Federal Power Commission, page 112) found the project reserve for depreciation to be $71,753.37 as of April 30, 1925.

Following that examination, an agreement, subject to Commission approval was reached between staff and Licensee's representatives with respect to certain proposed adjustments involving a reduction of $13,072.00 in claimed project cost for the period January 1, 1941, through December 31, 1954, and the accounting disposition thereof. The adjustments represent unrecorded retirement of right-of-way and access road outside project boundary in the amounts of $490.00 and $12,582.00, respectively, and are to be disposed of as shown in the following adjusting journal entry:

		Debit	*Credit*
101 (100.1)[3]	Electric plant in service, nonproject	$12,582.00	
121 (110)	Nonutility plant	490.00	
101 (100.1)	Electric plant in service, project No. 178		$13,072.00

[3] Numerical account designations enclosed in parentheses are to the Commission's Uniform System of Accounts effective January 1, 1937.

After giving effect to the above adjustments, the Commission's staff recommends and Licensee, by letter of February 2, 1962, confirming its agreement to the proposed adjustments, accounting disposition and resulting project cost for Project No. 178 (Kern Canyon), concurs that the Commission determine: (1) the net increase or change in the actual legitimate orignal cost of the Kern Canyon project during the period from January 1, 1941, through December 31, 1954, to be $143,815.88, comprised of gross additions $209,181.05, gross retirements of $65,395.17, and a debit adjustment of $30.00; and (2) the resulting actual legitimate original cost of the Kern Canyon project as of December 31, 1954, to be $2,257,812.36, classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees as shown in the attached schedule.

The California Public Utilities Commission was advised by letter of this Commission dated June 27, 1962, of the proposed adjustments, including the accounting disposition and resulting project costs, all as recommended by the Commission's staff and agreed to by the Licensee as set forth above. By letter of July 11, 1962, the California Commission indicated that it had no objection thereto.

The Commission finds:

(1) Licensee, by its tentative agreement to the proposed adjustments including the accounting disposition and the resulting project costs, and its letter dated February 2, 1962, and the California Public Utilities Commission, by its letter dated July 11, 1962, have obviated the necessity for notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting disposition, are reasonable and appropriate for the purposes of the Federal Power Act, and therefore, should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of Project No. 178 (Kern Canyon) from January 1, 1941, through December 31, 1954, is $143,815.88 and the resulting actual legitimate original cost of the project as of December 31, 1954, is $2,257,812.36, all classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees Subject to the Provisions of the Federal Power Act as shown in the attached schedule.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to inservice project properties of Project No. 178 for the period subsequent to April 30, 1925, be reserved for future Commission consideration as hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments including the accounting disposition, as proposed by the staff and agreed to by the Licensee, are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed plant accounts for Project No. 178, showing the debit amount of $143,815.88 as the net increase or change in the project cost for the period January 1, 1941 through December 31, 1954; and the total debit balance of $2,257,812.36 as the actual legitimate original cost of the project as of December 31, 1954, all as more specifically shown in the attached schedule classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) Licensee shall within 90 days from the issuance of this order file with the Commission five certified copies of its adjusting journal entries showing compliance with this order, by submitting three copies to the Commission and two copies to its Regional Accountant in San Francisco.

(E) The matter of Commission determination of the accrued depreciation applicable to inservice project properties of Project No. 178 for the period subsequent to April 30, 1925, is hereby expressly reserved for future Commission consideration and decision.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP63-234

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 5, 1963)

On February 19, 1963 Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP63-234 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities at a new delivery point upon its pipeline system for the purpose of selling a supply of natural gas to Illinois Power Company for resale and delivery for residential and commercial consumption in Boody, Illinois.

The estimated total cost of the proposed facilities which will consist of line taps with metering and regulating station is $14,300, which cost will be financed from funds on hand.

The estimated third year requirements are 105 Mcf on peak days and the rates will be those under the rate schedules presently applicable to sales to Illinois Power Company annually, respectively 8,002 Mcf.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 19, 1963, respecting the matters involved in and issues presented by the application herein. No protest to the granting of the application or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and the Commission render a decision herein pursuant to Section 1.30 (c) (1) of its rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (3 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereby by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued is hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

PUBLIC UTILITY DISTRICT NO. 1 OF COWLITZ COUNTY, WASHINGTON, PROJECT NO. 2213

ORDER APPROVING REVISED PROJECT EXHIBITS AND ADJUSTING ANNUAL CHARGES

(Issued July 5, 1963)

On September 17, 1959, Public Utility District No. 1 of Cowlitz County, Washington, licensee for Project No. 2213, filed for Commission approval revised Exhibit J and K drawings showing the project area and boundary. On September 14, 1959, the licensee filed Exhibit F for the project which does not require Commission approval.

The project, known as the Swift No. 2 Project, is located on the Lewis River, navigable waters of the United States, in Skamania and Cowlitz Counties, Washington.

The effect of approval of the exhibits will be to show in the license, for the first time since its issuance, May 1, 1956, the lands of the United States occupied by the project, totalling 21.97 acres. We shall also at this time fix the annual charge for the use thereof at the amount of $52.73.

The Commission finds:

(1) The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit J (FPC No. 2213–14)—Project Area and Project Boundary—General Map.

Exhibit K, sheets 1 through 4 (FPC Nos. 2213–15 through 18)—Project Area and Project Boundary—Power Canal and Forebay.

(2) The annual charges for recompensing the United States for the occupancy of lands of the United States by the project are reasonable as hereinafter fixed and specified.

The Commission orders:

(A) The revised exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2213.

(B) Article 26 of the license for the project, as amended, is hereby further amended to read as follows:

Article 26. The Licensee shall pay to the United States the following annual charges:

(i) Effective as of January 1, 1959, for the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations, in effect from time to time. The authorized installed capacity for such purpose is 93,300 horsepower.

(ii) For the purpose of recompensing the United States for the use, occupancy, and enjoyment of its lands, exclusive of those used for transmission line right-of-way, $52.73, effective as of May 1, 1956.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act and failure to file such an application shall constitute acceptance of this order. In acknowledgment of the acceptance of this order, it shall be signed for the Licensee and returned to the Commission within 60 days from the date of its issuance.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

SIERRA PACIFIC POWER COMPANY, DOCKET NO. E-7100

ORDER AUTHORIZING THE ISSUANCE OF DEBENTURES AND COMMON STOCK

(Issued July 5, 1963)

Sierra Pacific Power Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of California and Nevada, with its principal business office at Reno, Nevada, filed an application May 27, 1963, as amended June 7, 1963 for an order, pursuant to Section 204 of the Federal Power Act, authorizing it to issue and sell at competitive bidding $8,000,000 principal amount of new Debentures, ——% Series due 1988 and to issue and sell 172,341 additional shares of Common Stock par value $3.75.

Applicant proposes to issue the new Debentures maturing July 1, 1988, under an Indenture, to be dated as of July 1, 1963, with The National Shawmut Bank of Boston as Trustee. The new Debentures will be unsecured, but the Indenture will contain provisions restricting the Company in respect of the creation of specified new liens, and the Company will convenant not to obligate itself with respect to any unsecured funded indebtedness in excess of 65% of total capitalization and unless it meets certain earnings requirements. The Debentures will carry a sinking fund, designed to retire approximately 50% of the Debentures prior to maturity.

On July 11, 1963, Applicant proposes to invite sealed, written bids for the purchase of the Debentures. Copies of the terms and conditions relating to the bids will be made available by Applicant. All bids, must be in writing, in duplicate, on the form of bid furnished by Applicant and are to be for the purchase of the entire issue of Debentures. Each bid is to specify, among other things, (1) the coupon rate of the Debentures, which is to be a multiple of ⅛ of 1%, (2) the price (exclusive of accrued interest) which shall be not less than 100% nor more than 102¾% of the principal amount thereof and (3) that accrued interest from July 1, 1963 to the date of payment will be paid by the Purchasers.

Unless postponed, all bids for the purchase of the proposed issuance of the Debentures are to be delivered to Applicant at 49 Federal Street, Eighth Floor, Boston, Massachusetts, at 11:00 A.M., Eastern Daylight Saving Time, on Wednesday, July 17, 1963. The terms and conditions relating to the bids provide that the Applicant may return or reject all bids on the Debentures or may exclude

individual bids for certain specified reasons. Of those bids not so rejected or excluded, Applicant will accept that bid for the Debentures which provides the lowest "cost of money" to the Applicant, to be determined as provided in the terms and conditions relating to bids for the Debentures. Each bid for the Debentures must be accompanied by a certified or official bank check or checks aggregating $200,000 payable in Boston Clearing House funds to the order of the Company.

Applicant also requests that the bidding requirement of Section 34.1a (b) requiring that there be at least one week between the publishing of the notice of Public Invitation for Bids for the Debentures and the acceptance of a bid be waived to the extent necessary to allow a six day period so that scheduling can be arranged for opening of bids on Wednesday to give maximum selling opportunities to underwriters.

Applicant proposes to offer the additional shares of Common Stock to its Common Stockholders of record at the close of business of July 9, 1963, the offering to expire at 3:30 P.M., Eastern Daylight Saving Time, July 29, 1963. Rights to subscribe for the additional Common Stock will be evidenced by transferable subscription warrants.

The subscription price per share, Applicant states, will be not less than 90% of the average of the bid prices of the Common Stock of the Applicant in the over-the-counter market as published by the National Quotation Bureau, Inc., for the business day next preceding the fixing of said subscription price by Applicant's Board of Directors, and the new shares will be offered pursuant to preemptive rights of the Common Stockholders on the basis of one share for each ten shares of Common Stock held of record, with an over-subscription privilege subject to allotment among those who exercise the additional subscription privilege proportionately to the number of shares subscribed through the exercise of rights.

The application states that no underwriting fees or commissions will be paid in connection with the proposed issuance and sale of Common Stock.

The net proceeds to be received by Applicant from the issuance and sale of the Debentures and Common Stock, an estimated $13,200,000 to $13,400,000, will be used for the following purposes: to redeem $3,340,000 principal amount of Debentures, 5⅝%, 1985, which redemption will require a cash outlay of $3,581,-419; and to reduce outstanding bank loans[1] incurred for construction purposes, which loans are expected to aggregate approximately $12,000,000 at the time of the sale of the new Debentures.

According to the application, expenditures for construction in 1963 will amount to approximately $14,503,300 of which $11,891,800 will be for the Electric Department. Of this amount approximately $4,381,500 will be spent on generating equipment, $1,688,000 on transmission lines and substations, $2,122,100 on extensions and improvement to distribution facilities, $1,959,100 for other distribution and transmission improvements and additions, and $1,741,100 for general plant and equipment.

Written notice of the application has been given to the Public Service Commission of Nevada and the Public Utilities Commission of California, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on June 7, 1963 (28 F.R. 5624) stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before June 24, 1963, with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

---

[1] These notes were issued pursuant to authorization granted by Commission order issued August 16, 1962, Sierra Pacific Power Company Docket E–7042 (28 FPC 335).

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued August 16, 1962, *Sierra Pacific Power Company*, Docket No. E–7042 (28 FPC 335).

(2) The proposed issuance of Debentures and Common Stock, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Federal Power Act; and the proposed issuance of Debentures and Common Stock, as described above is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Common Stock, as described above, is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(1) thereof.

(5) The proposed issuance of Debentures and Common Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(6) The proposed six day period between publication of the Notice of Public Invitation for Bids for the Debentures and the opening of bids is reasonable.

The Commission orders:

(A) The proposed issuance of Debentures and Common Stock as referred to above upon the terms and conditions and for the purposes specified in the application, is authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Debentures at competitive bidding in the manner set forth in the application shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Debentures and the interest rate thereof.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost or any other matter whatsoever now pending or which may come before this Commission.

(D) A six day "period of public invitation for bids" as defined in Section 34.1a(b) of the Regulations under the Federal Power Act is hereby approved.

(E) This authorization shall expire unless the transactions hereby authorized are consumated within 90 days from the date of issuance of this order.

(F) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-92

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 5, 1963)

On October 10, 1962, as supplemented on October 15, 1962, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-92 an application pursuant to Section 7(c) of the Natural Gas Act authorizing the transportation and delivery of natural gas for Texas Eastern Transmission Corporation (Texas Eastern) from Castor to West Monroe, Louisiana, all as more fully set forth in the application, as supplemented.

The application indicates that it is necessary for Texas Eastern to make interim arrangements for the transportation of gas from Castor to West Monroe pending commencement and completion of its proposed line between such points authorized in Docket No. CP61-203. Applicant states that it has available capacity on its existing pipeline facilities between Castor and West Monroe and, therefore, is able to render the proposed service without the construction of any additional facilities.

The transportation service is to be rendered pursuant to an agreement, dated October 4, 1962, between Applicant and Texas Eastern, on file with the Commission as United's Rate Schedule X-14. Said agreement provides for the transportation of a maximum daily quantity of 55,000 Mcf of natural gas; however, upon request from Texas Eastern, Applicant may, at its option, from time to time, transport on a temporary basis gas in excess of such amount. The rate for such service is 36.2¢ per Mcf per month.

By letter dated November 9, 1962, Applicant was issued a temporary certificate authorizing the subject transportation service.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 18, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 10, 1942, in Docket No. G-232 (3 FPC 863).

(2) The subject transportation and delivery of natural gas by Applicant hereinbefore described, as more fully described in the application in this proceeding, will be interstate commerce, subject to the jurisdiction of the Commission, and such transportation and delivery are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereof.

(4) The subject transportation and delivery of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(6) The certificate hereinafter issued to Applicant should be made subject to the following conditions:

That any adjustment in T–1 and T–3 rates resulting from the rate proceedings in Docket Nos. RP61–18 and RP63–1, will be paralleled by a corresponding adjustment in the Texas Eastern rate so that the relationship upon which the Texas Eastern rate has been established will be maintained at all times.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to transport and deliver natural gas to Texas Eastern as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(C) The certificate issued to Applicant by paragraph (A) above is hereby made subject to the following condition:

That any adjustment in T–1 and T–3 rates resulting from the rate proceedings in Docket Nos. RP61–18 and RP63–1, will be paralleled by a corresponding adjustment in the Texas Eastern rate so that the relationship upon which the Texas Eastern rate has been established will be maintained at all times.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

THE WASHINGTON WATER POWER COMPANY, PROJECT NO. 204

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 5, 1963)

Washington Water Power Company, Licensee for Project No. 204 (Grangeville),[1] from time to time filed statements, pursuant to Section 4.1 of the

[1] The project is situated on the South Fork of the Clearwater River, in Idaho County, Idaho, near the town of Grangeville, Idaho, and may be described generally as the Grangeville hydroelectric project. The license, authorizing the construction, operation and maintenance of the project was issued to the Grangeville Electric Light and Power Company for a period of 50 years commencing January 19, 1923. By order issued October 19, 1928, effective January 1, 1928, the Commission authorized the transfer of the license to the

[*Continued on page 51.*]

Commission's Regulations under the Federal Power Act, claiming for the period from January 1, 1937, through December 31, 1960, project additions, retirements, and an adjustment resulting in (1) a net increase in the cost of the project of $71,146.67 over the previously determined amount of actual legitimate original cost of the project, $255,255.02 as of December 31, 1936,[2] and (2) a total claimed actual legitimate original cost of the project of $326,401.69 as of December 31, 1960. The claimed net increase of $71,146.67 results from claimed gross additions of $124,716.29, gross retirements of $53,569.63, and a debit adjustment of $.01, as more specifically shown in the attached schedule.[3]

The Commission's staff made a field examination of the books and records of Licensee and other data for the purpose of ascertaining the correctness of the claimed and recorded project cost changes and resulting project cost as of December 31, 1960.

Following that examination the staff, subject to Commission approval, proposed certain reclassifications within project plant accounts which were concurred in by representatives of the Licensee, by letter of October 9, 1961. These proposed adjustments consist of the reclassification within project plant accounts of $21,811.93 as of December 31, 1936, and of $6,006.23 for the period from January 1, 1937, through December 31, 1960. They would not result in any change in the claimed net increase of $71,146.67 in project cost for the above period nor in the resulting claimed project cost as of December 31, 1960, of $326,401.69.

The items of project cost comprising the proposed reclassifications within project plant accounts as of December 31, 1936, involve: reclassification to water wheels, turbines and generators of overhead costs, $584.77, formerly classified as accessory electric equipment; reclassification to structures and improvement of the cost of a measuring cable, $173.12, formerly classified in the reservoir account; and reclassification from distribution to transmission plant costs of $21,054.04 applicable to a transmission line rebuilt in 1936, a step-up powerhouse substation, and a transmission line from Licensee's Grangeville substation to the powerhouse. The items of project cost comprising the proposed reclassifications within project plant accounts from January 1, 1937, through December 31, 1960, include: reclassification from distribution to production plant, structures and improvements of the cost of $221.77, associated with an electric feeder line to operators' cottages; and reclassification from distribution to transmission plant of costs of $5,427.45 applicable to changes in capacity in Licensee's step-up substation at the powerhouse in 1942 and 1949, and costs of $357.01 in 1937 for clearing right-of-way for the afore-mentioned transmission line rebuilt in 1936.

Staff analysis of Licensee's provisions for project depreciation has not been completed, and the staff recommends that the Commission defer for future consideration and determination the amount of accrued depreciation applicable to inservice project properties of Project No. 204.

The Washington Utilities and Transportation Commission and the Idaho Public Utilities Commission were advised by letters of this Commission dated April 16, 1962, of the staff's proposed adjustments and resulting project cost.

[*Footnote No. 1 Continued from page 50.*]

Inland Power and Light Company, and by order issued June 20, 1930, the Commission authorized the transfer of the license from Inland Power and Light Company to Chelan Electric Company. The Commission authorized the transfer of license from Chelan Electric Company to Washington Water Power Company by order adopted July 20, 1937, effective July 31, 1937.

[2] See Commission order issued December 28, 1949 (8 FPC 1409).

[3] During the period from January 1, 1937 through December 31, 1960, Licensee recorded upon its books of account and reflected in its filed statements of claimed cost changes a credit adjustment of $1,835.06, representing items previously disallowed as project costs by the Commission's order issued December 28, 1949 (8 FPC 1409).

The Washington Utilities and Transportation Commission, by letter dated August 23, 1962, and the Idaho Public Utilities Commission, by letter dated September 4, 1962, have indicated no objection thereto.

The Commission finds:

(1) Licensee, by its agreement to the proposed adjustments, the Washington Utilities and Transportation Commission, by its letter of August 23, 1962, and the Idaho Public Utilities Commission, by its letter of September 4, 1962, have obviated the necessity for the notice and opportunity to protest provided in Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments as proposed by the staff and agreed to by Licensee are reasonable and appropriate for the purposes of the Federal Power Act, and therefore should be approved and directed as hereinafter provided.

(3) The net increase or change in project cost of Licensee's Project No. 204 (Grangeville) for the period from January 1, 1937, through December 31, 1960, is $71,146.67, comprised of gross additions of $124,716.29, gross retirements of $53,569.63, and a debit adjustment of $.01, and the resulting actual legitimate original cost of the project as of December 31, 1960, is $326,401.69; all as more specifically shown in the attached schedule.

(4) It is necessary and appropriate for the purposes of the Federal Power Act that the determination of the accrued depreciation applicable to inservice project properties of Project No. 204 be reserved for future Commission consideration as hereinafter provided.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purposes of this order.

(B) The foregoing adjustments, as proposed by the staff and agreed to by the Licensee are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall establish and maintain control and detailed project plant accounts, showing a debit amount of $71,146.67 as the net increase or change in the actual legitimate original cost of Project No. 204 for the period from January 1, 1937, through December 31, 1960, and the total debit balance of $326,401.69 as the actual legitimate original cost of the project as of December 31, 1960, all as more specifically shown in the attached schedule classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(D) Licensee shall file with the Commission within 90 days from the issuance of this order, five certified copies of the adjusting entries, two of which are to be submitted to the Federal Power Commission, Regional Accountant in San Francisco, showing compliance with this order.

(E) The matter of Commission determination of the accrued depreciation applicable to inservice project properties of Project No. 204 is hereby expressly reserved for future Commission consideration and determination.

WEST TEXAS UTILITIES COMPANY AND COMISION FEDERAL DE ELECTRICIDAD, DOCKET NO. E-6489

ORDER AUTHORIZING TRANSMISSION OF ELECTRIC ENERGY TO MEXICO AND SUPERSEDING PREVIOUS AUTHORIZATION

(Issued July 5, 1963)

West Texas Utilities Company (West Texas), incorporated under the laws of the State of Texas, with its principal place of business at Abilene, Texas, filed an application on April 17, 1963, as supplemented June 3, 1963, requesting authorization, pursuant to Section 202(e) of the Federal Power Act, to transmit electric energy from the United States to Mexico in an amount not to exceed 6,400,000 kwh per year at a maximum transmission rate of 800 kw. The authorization requested above would supersede that previously granted by the Commission's order issued July 2, 1959, 22 FPC 3, in the above-entitled docket. On June 3, 1963, Comision Federal De Electricidad, a corporate entity existing under the laws of the Republic of Mexico and successor corporation to Compania de Luz y Fuerza de Ojinaga (Luz y Fuerza), filed a joinder in the subject application.

West Texas will transmit the electric energy over its transmission lines in Texas to a point on the Texas side of the Rio Grande River opposite Ojinaga, Mexico, from which Comision Federal De Electricidad will transmit such energy to the international boundary between the United States and Mexico over the facilities which Luz y Fuerza is now authorized to operate as permittee under its Presidential Permit signed by the President of the United States on August 26, 1941, and amended on November 10, 1958, by the Chairman of the Federal Power Commission. Comision Federal De Electricidad, as Luz y Fuerza's successor, has applied concurrently for authorization to operate and maintain such facilities by an amendment of the aforesaid Presidential Permit in Docket No. IT-5657, as amended.

By the previously-mentioned order, West Texas and Luz y Fuerza were authorized to transmit from the United States to Mexico electric energy in an amount not exceeding 4,000,000 kwh per year at a rate of not in excess of 500 kw. According to the application, this present authorization is not adequate to meet the present and anticipated electric energy requirements of Comision Federal De Electricidad.

The electric energy hereinafter authorized to be transmitted will be sold in accordance with the terms of a contract between West Texas and Comision Federal De Electricidad, dated January 15, 1963, to provide that such energy may be furnished at any rate of supply desired by Comision Federal De Electricidad up to a maximum contract load of 800 kw.

Written notice of the application has been given to the Railroad Commission of Texas and to the Governor of that State. Notice of the application has also been given by publication in the Federal Register on May 7, 1963 (28 F.R. 4601), stating that any person desiring to be heard or to make any protest with reference to the application should, on or before May 17, 1963, file with the Federal Power Commission, Washington 25, D.C., a petition or protest in accordance with the Commission's Rules of Practice and Procedure. No protest or petition or request to be heard in opposition to the granting of the application has been received.

( ) Denotes credit.

The Commission finds:

The proposed transmission of electric energy from the United States to Mexico as limited herein and as hereinafter authorized will not impair the sufficiency of electric supply within the United States and will not impede the coordination in the public interest of facilities subject to the jurisdiction of the Commission.

The Commission orders:

(A) The Applicants are authorized to transmit electric energy from the United States to Mexico in accordance with the terms and conditions set forth in the application and subject to the provisions of this order.

(B) The electric energy which the Applicants are hereby authorized to transmit from the United States to Mexico shall be in an amount not in excess of 6,400,000 kwh per year at a transmission rate not to exceed 800 kw; the energy to be transmitted over the facilities specified in the Presidential Permit signed by the President of the United States on August 26, 1941, as amended by the Amendment thereto, signed by the Chairman of the Federal Power Commission on November 10, 1958, Docket No. IT-5657.

(C) The authorization herein granted may be modified from time to time or terminated by further order of the Commission, but in no event shall such authorization extend beyond the date of termination or expiration of the Presidential Permit, as amended, referred to in Paragraph (B) above.

(D) The Applicants shall conduct all operations pursuant to the authorization herein granted in accordance with the provisions of the Federal Power Act and pertinent rules, regulations or orders issued by the Commission.

(E) West Texas shall provide for the installation and maintenance of adequate metering equipment to measure the flow of all energy transmitted from the United States to Mexico pursuant to the authority herein granted; and shall make, keep and preserve full and complete records with respect to the movement of such energy; and shall furnish, in triplicate, with respect to such transmission of electric energy, reports annually on or before February 15, showing the kw hours delivered, the maximum kw of transmission, and the consideration received therefor during each month of the preceding calendar year.

(F) This authorization to transmit electric energy from the United States to Mexico shall not be transferable or assignable, but in the event of the involuntary transfer of the facilities used for such transmission by operation of law (including such transfers to receivers, trustees, or purchasers under foreclosure or judicial sale) said authorization shall continue in effect temporarily for a reasonable time thereafter, pending the making of an application for permanent authorization and decision thereon, provided notice is promptly given in writing to the Commission accompanied by a statement that the physical facts relating to sufficiency of supply, rates, and nature of use remain substantially the same as before the transfer.

(G) This authorization shall be without prejudice to the authority of any State, State regulatory commission, or the Republic of Mexico for the exercise of any lawful authority vested in the State, State regulatory commission, or the Republic of Mexico over the Applicants.

(H) This authorization is without prejudice to the authority of this Commission, or any other regulatory body, with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission, or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

(I) Nothing in this order shall be deemed to constitute authorization or approval of any transmission of energy by means of the facilities (covered by the aforesaid Presidential Permit, as amended, and Amendment thereto) by which the exportation herein authorized is accomplished by anyone other than the party designated in such duly issued Permit or Amendment.

(J) Concurrently with the issuance of this order, the Amendment, signed by the Chairman of the Federal Power Commission on July 3, 1963, to the Presidential Permit signed by the President of the United States on August 26, 1941, as amended, all as referred to in Paragraph (B) above, shall be issued and a copy thereof transmitted by the Secretary to Comision Federal De Electricidad.

(K) The authorization herein granted shall supersede that heretofore granted by the aforementioned order of the Commission issued July 2, 1959 in the above docket.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP63–229

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 8, 1963)

On February 15, 1963, Kansas-Nebraska Natural Gas Company, Inc. filed in Docket No. CP63–229, an application for a certificate of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act authorizing the construction and operation of pipelines and other facilities to enable it to purchase and transport natural gas in Syracuse area of Hamilton and Greeley Counties, Kansas, to its Scott City Compressor Station, and to construct and operate pipeline enlargements on its system; in northern Nebraska.

The proposed facilities just mentioned are more particularly described as consisting of a 1,000 horsepower field compressor station and approximately 80 miles of various diameter field lines in the Syracuse Area and 48 miles of pipelines extending to the Scott City Compressor Station where it will connect with Applicant's transmission system. The estimated cost of these facilities is $2,241,000. The facilities proposed in northern Nebraska are to consist of approximately 43.4 miles of 8-inch pipeline, 17.5 miles of 6-inch pipeline, 3.5 miles of 4-inch pipeline and 9.5 miles of 3-inch pipeline at an estimated cost of $826,500.

The purpose of the proposed facilities in the Syracuse, Kansas area is to enable Applicant to gather and to purchase gas supplies in the area from wells which become available as new gas reserves are developed. The purpose of the new facilities in northern Nebraska is to assure adequate pressure and improve service to a number of towns and communities on Applicant's northeastern Nebraska system; all as more fully described in the application.

Applicant was issued a temporary certificate by letter from the Commission dated April 25, 1963 only on that part of the application involving pipeline enlargements and improvements in northern Nebraska.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 18, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene in opposition thereto has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Kansas-Nebraska Natural Gas Company of Phillipsburg, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–259 (3 FPC 966).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Kansas-Nebraska Natural Gas Company, Inc., to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Sections 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G–13221, ET AL.

ORDER DENYING APPEAL FROM PRESIDING EXAMINER'S RULING

(Issued July 8, 1963)

On June 18, 1963, the Presiding Examiner in the above entitled proceeding transmitted to us, pursuant to Section 1.28 of the Commission's Rules of Practice and Procedure, an appeal by all of the producer-applicants in said proceed-

ing from his ruling excluding certain evidence offered by the producers. For the reasons hereinafter set forth we shall deny such appeal.

The appeal is from an interlocutory procedural ruling of the Presiding Examiner excluding as evidence various types of presentations of producer costs, cost-of-service, return, trends in costs, trends in production, value of gas intrinsically and comparatively, industry and individual-company needs, geological, economic, and other factors which were deemed relevant by the producers. The evidence was excluded by the examiner primarily upon the basis of prior Commission and Court decisions cited by him in his transmittal of the appeal. The examiner found that extraordinary circumstances existed justifying the referral of the appeal in that "the producers will be in a state of uncertainty until the conclusion of these proceedings and the Commission's decision thereon, a year or more away, as to the proper interpretation to be given to *Skelly Oil Co.*" He further noted that the progress of the proceeding would not be delayed by the referral and that the net result would be to make another aspect of the "Commission's pricing policy definite and clear to the industry and to the public."

We do not perceive that a decision by the Commission on the limited issue here presented is appropriate at this time. The matter more properly should be included in the decision by the Commission upon the merits in this case; an offer of proof has been made by the producers in the proceeding and a judgment determination upon the propriety of the proffered evidence could properly be made in the ultimate decision of the proceedings.[1]

Questions relating to the admissibility or exclusion of evidence during the course of a hearing must, of course, be determined initially by the presiding officer. These rulings, when properly excepted to, are subject to our review prior to the issuance of a final decision. To examine on appeal every interlocutory ruling made by a presiding officer with respect to the admissibility of proferred evidence would require piece-meal examination of voluminous exhibits and testimony proferred. We are of the opinion that it is a much better practice to review such material at a time when it can be considered in relation to all other evidence in the record to enable us to determine whether, in our opinion, the presiding examiner has ruled correctly in accordance with our previous decisions.

With respect to the instant case, we are of the opinion, that we have set forth in our previous opinions in *Skelly Oil Company, et al.*, Docket No. G–18638, *et al.*,[2] *Texaco Seaboard, Inc., et al.*, Docket No. CI61–118, *et al.*,[3] and *El Paso Natural Gas Company, et al.*, Docket No. G–17849, *et al.*,[4] sufficient guidelines with respect to the types of evidence which will be considered by us in certificate proceedings involving initial price determinations to enable rulings upon the admissibility of evidence.

The Commission orders:

The Appeal by the independent producers in the above entitled proceeding from the rulings, of the Presiding Examiner, excluding certain offered evidence, is hereby denied.

---

[1] It is to be hoped, contrary to the apparent expectation of the Presiding Examiner, that the proceeding will be concluded in a shorter time than "a year or more."

[2] Opinion No. 362, issued August 30, 1962, 28 FPC 401, 411.

[3] Opinion No. 383, issued March 27, 1963, 29 FPC 593.

[4] Opinion No. 390, issued June 19, 1963, 29 FPC 1175.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; GRARIDGE CORPORATION (OPERATOR), ET AL., DOCKET NO. G-19246, ET AL.; HUMBLE OIL & REFINING COMPANY, DOCKET NOS. G-14967, G-15227, G-17349, G-17570, G-17772, G-18547, G-18714, G-18715, G-18716, G-19800, G-20019, CI60-96, CI60-177, CI60-531, CI60-623, CI61-397, CI61-425, CI61-1176, CI62-69, CI63-635, CI62-70, CI63-455, CI63-755

ORDER GRANTING MOTIONS FOR RECONSIDERATION

(Issued July 8, 1963)

Humble Oil & Refining Company (Humble) and certain interested interveners,[1] (Movants), submitted on April 11, 1963 a settlement agreement and a motion for severance of twenty-two of the Humble dockets listed above from the consolidated certificate proceeding, Union Texas Petroleum, *et al.* Docket No. G-13221, *et al.* and one Humble docket (CI63-455) from the consolidated proceeding, Graridge Corporation (Operator), *et al.* Docket No. G-19246, *et al.* The motion also requested the expeditious issuance of permanent certificates of public convenience and necessity according to the applications as modified by the settlement agreement in each of the dockets except Docket No. CI63-635. The agreement proposes that the sale in Docket No. CI63-635 continue under temporary authorization.

Answers in opposition to this motion were filed on April 22, 1963 by the Pennsylvania Public Utility Commission (Pennsylvania), Alabama Gas Corporation (Alabama Gas) and the Memphis Gas, Light and Water Division of the City of Memphis, Tennessee (Memphis). Transcontinental Gas Pipeline Corporation (Transco), a purchaser from Humble, on May 13, 1963, filed a statement objecting to the date on which the proposed moratorium would end and on the same date, the Philadelphia Electric Company filed a letter with the Secretary objecting to the treatment proposed for Docket No. CI63-635. The Public Service Commission of New York, on April 26, 1963, filed a response to the motion. Because of the opposition by parties and without passing on the merits of the settlement proposal, on May 21, 1963, we issued an order denying the motion.[2]

On May 31, 1963, Memphis filed a withdrawal of objection and on June 6, 1963, Pennsylvania filed an "Amended Answer" to the Humble, *et al.* motion withdrawing its objection. Alabama Gas, on June 10, 1963, filed a letter with the Secretary requesting that its Answer of April 22, 1963, be considered a statement of position and not be considered an objection to the settlement proposal of Humble, *et al.*

On June 7, 1963, Humble filed an application for rehearing and reconsideration of our order of May 21, 1963,[3] and on June 12, 1963, the Eastern Seaboard Interveners[4] filed a motion for reconsideration of the same order.

---

[1] The Brooklyn Union Gas Company, Consolidated Edison Company of New York, Inc., Long Island Lighting Company, Philadelphia Gas Works Division of the United Gas Improvement Company, Public Service Electric and Gas Company, South Jersey Gas Company, The United Gas Improvement Company, the New England Distributors group, the East Ohio Gas Company, Hope Natural Gas Company, Lake Shore Pipe Line Company, New York State Natural Gas Corporation, The Peoples Natural Gas Company, and The River Gas Company.

[2] *Humble Oil & Refining Company, et al.*, Docket No. G-14967, *et al., Order Denying Motion For Severance, For Approval Of Settlement Agreement and For Issuance of Permanent Certificates and Request for Prompt Determination.* [Not reported.]

[3] This application is treated as a motion for reconsideration. Our Order of May 21, 1963, *supra*, was not a final order.

[4] See footnote 1.

The settlement agreement provides the following:

(1) In respect to the Humble Rate Schedules listed in paragraphs (2), (3), (4), and (5) below, a moratorium on rate increase filings from April 1, 1963 through March 31, 1968; except that such filings may be made (1) prior to April 1, 1968 to the extent that the maximum statutory suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such suspension period, and (2) at any time for reimbursement of one-half the amount of increased State or Federal taxes or payments in lieu of taxes, provided that such increase does not exceed the reimbursement to which Humble is entitled by contract.

(2) Permanent certification at settlement rates of 20.625¢ per Mcf [5] inclusive of tax reimbursement, for gas delivered pursuant to Humble's Rate Schedules Nos. 136 (G–15227), 148 (G–17349), 152 (G–17772), 158 (G–18547), 163 (G–18714), 164 (G–18715), 165 (G–18716), 168 (G–19800), 169 (G–20019), 234 (CI60–177), 238 (CI60–623), 246 (CI61–397), 247 (CI61–425), 269 (CI61–1176), 274 (CI60–531), and 280 (CI62–70).

(3) Permanent certification at settlement rates of 19¢ per Mcf, inclusive of reimbursement for payments under Section 6(a)(9) of the Outer Continental Shelf Lands Act,[6] for gas delivered pursuant to Humble's Rate Schedule Nos. 241 (CI60–96) and 304 (CI62–69).

(4) Permanent certification at a rate of 19.5¢ per Mcf inclusive of tax reimbursement for gas delivered pursuant to Humble's FPC Gas Rate Schedule No. 323 (CI63–755).

(5) Permanent certification at contractual initial rates of 18.70¢, 20.25¢ and 14.25¢ per Mcf, inclusive of tax reimbursement, for gas delivered pursuant to Humble's Rate Schedules Nos. 135 (G–14967), 149 (G–17570) and 314 (CI63–455), respectively.

(6) Prospective upward or downward adjustment of settlement rates according to any applicable area rate or rates determined in Area Rate Proceeding, Docket No. AR61–2.

(7) Collection of the increased rates now in effect subject to refund in Docket Nos. RI62–82,[7] RI62–393,[8] RI63–94,[9] to be continued and the increased rate filed for but under suspension in Docket No. RI63–172 [10] to be collected, subject to further orders of the Commission in those suspension dockets.

(8) Extension of the make-up period for gas paid for but not taken in any case (except Docket No. CI63–635) where the contract provides a lesser make-up period.

(9) Full refunds to be paid on all amounts collected by Humble in excess of the proposed settlement rate of 20.625¢ per Mcf for gas purchased under Humble's Rate Schedules Nos. 274 and 269. In both instances sales are being made under temporary authorizations subject to refund of amounts above the rate required by public convenience and necessity down to a floor of 20¢.

(10) Interest on the refundable amounts at 7% per annum to accrue through March 31, 1963.

(11) Continuance of the temporary authorization issued in Docket No. CI63–635 at the 21.25¢ per Mcf conditioned rate pending the determination of a just and reasonable rate for such sale, either in Docket No. AR61–2 or in any other

[10] Related to Supplement No. 6 to Humble's FPC Gas Rate Schedule No. 314.

proceeding under Sections 4 or 5 of the Natural Gas Act in which a just and reasonable rate determination applicable to such sales may be made. The 21.25¢ price shall not be changed prior to January 1, 1967, except for changes in tax reimbursement to which Humble is contractually entitled.

In general, we agree with Movants that the settlement would serve the public interest. However, we have reservations with regard to certain aspects of this package settlement. We cannot approve of the provisions described in paragraph (11) above concerning Docket No. CI63–635. As we said in our order issued April 10, 1963, rejecting the MCN proposal[11] in this proceeding, "The public interest requires that permanent certificates be issued as soon as is administratively feasible after hearing."[12] The hearing has commenced as to all of these Humble dockets and it would not be proper to postpone indefinitely the issuance of a permanent certificate in Docket No. CI63–635. Alabama Gas in its filings concerning this proposed settlement and our staff in the earlier MCN proposal both took the position that indefinite postponement of permanent certification is undesirable. Staff also stated its position on the record in the Union Texas Petroleum proceedings. While New York does not oppose this treatment in states in its response [page 3]:

> * * * the New York Commission does not object to this treatment of CI63–635, as part of a package under which Humble's rates will be immediately reduced by over $1,300,000 annually and a five year rate filing moratorium will be effected. This is not to say that New York *endorses* the treatment proposed for this sale, or that it would withhold opposition were similar treatment proposed outside of a package arrangement of such import. [Emphasis in original.]

New York then states that a permanent certificate at a rate above 20.625¢ per Mcf with moratorium and make-up or 20¢ per Mcf without moratorium and make-up would be "totally unacceptable" and "would necessitate our vigorous objection". The Philadelphia Electric Company, in its letter to the Secretary *supra*, also objects to the treatment proposed for Docket No. CI63–635.

Accordingly, we must reject that part of the package settlement proposal insofar as it fails to dispose of the application in Docket No. CI63–635. We recognize, however, that a settlement of all of these Humble applications would be in the public interest. A package settlement which would be acceptable to us would include the issuance of a permanent certificate in Docket No. CI63–635 upon terms similar to those accorded to the majority of the other Humble applications, *i.e.* a total initial rate of 20.625¢ per Mcf, subject to the moratorium provisions of section 1 of the settlement agreement and the take or pay make-up provisions of section 4 of the settlement agreement.

Since, as noted above, we approve of most of the proposal but we cannot approve of the entire settlement as proposed it would serve no useful purpose to sever these Humble dockets from the Union Texas Petroleum, *et al.* proceeding at this time. Any order approving this settlement proposal must be conditioned to provide for issuance to Humble of a permanent certificate of public convenience and necessity in Docket No. CI63–635 under the terms set forth above.

Any such order must also be conditioned to provide for interest on the amounts to be refunded to accrue through the last day of the month in which the proposal was filed (April 30, 1963).

---

[11] *Socony Mobil Oil Company, Inc., Continental Oil Co. and Newmont Oil Company*, Dockets Nos. G–17625, G–17649 and G–17765, respectively.

[12] *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al. Order Denying Motions to Sever and Rejecting Settlement Proposal*, 29 FPC 734 at page 736.

We recognize that the settlement as herein conditioned may not be acceptable to the parties. Accordingly, we shall afford the parties an opportunity to respond within fifteen days of the date of this order in the event they may find the conditioned proposal unacceptable. If Humble and the other parties do not object to the proposed conditions, we shall, by further action, sever the above-captioned Humble Dockets from the Union Texas Petroleum, *et al.* and Graridge Corporation (Operator), *et al.* proceedings and issue certificates as described above after the required statutory hearing. By using this procedure, should Humble or any other party decline to accept the settlement as modified, the Union Texas Petroleum, *et al.* proceeding will not be delayed and Humble's 22 dockets will remain a part thereof.

Transco, as noted above, objects to the date of the end of the moratorium period because it fears that since the moratoria in other settlement agreements concerning its suppliers end less than six months prior to the date proposed by Humble, *et al.*, Transco may not be in a position to pass on Humble's prospective rate increases immediately. We feel that an otherwise acceptable settlement agreement should not be rejected because of these circumstances. First of all, Transco's fears are based upon speculation as to circumstances 5 years in the future. Secondly, and more importantly, Section 154.66 of the Commission's Regulations provides for changes in tariff during a suspension period *for good cause shown.* Should the circumstances which Transco fears actually occur it would be free to make such application for special permission at that time.

The Commission finds:

(1) The Settlement Agreement filed by Humble Oil & Refining Company, *et al.* on April 11, 1963, as proposed to be modified above, would be in the public interest.

(2) Parties to the above-captioned Humble dockets should be allowed 15 days from the date of this order to object in writing to the above-proposed disposition of these Humble proceedings.

The Commission orders:

The motions for reconsideration of the Commission's order of May 21, 1963, in *Humble Oil & Refining Company,* et al., Docket No. G–14967, *et al.*, filed by Humble on June 7, 1963, and the Eastern Seaboard Intervenors on June 12, 1963, are hereby granted for the limited purpose of affording the parties to these Humble dockets an opportunity to file objections to our proposed disposition of these proceedings.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

UTAH POWER & LIGHT COMPANY, PROJECT NOS. 20, 472, 486, 597, 665, 671, 696, 703, 713, AND 1744

ORDER DETERMINING AND DIRECTING ESTABLISHMENT AND MAINTENANCE OF AMORTIZATION RESERVES

(Issued July 8, 1963)

This is an amortization reserve proceeding pursuant to Section 10(d) of the Federal Power Act[1] involving ten hydroelectric projects owned and operated

[1] Section 10(d) provides "[t]hat after the first twenty years of operation, out of surplus earned thereafter, if any, accumulated in excess of a specified reasonable rate of return

[*Continued on page 64.*]

by Utah Power & Light Company; specifically licensed Project Nos. 20 (Soda), 472 (Oneida), 486 (Logan), 597 (Stairs), 665 (Santaquin), 671 (Alpine), 696 (Upper American Fork), 703 (Paris), 713 (Upper Mill Creek), and 1744 (Weber). It was initiated by the staff through a comprehensive field examination of the books, records and other data of the licensee, Utah Power & Light Company.

Staff proposes that the Commission, pursuant to Section 10(d) of the Act and Article 17 of the license for Project No. 20, as amended, Article 18 of the respective licenses for Projects Nos. 472, 486, 597, 665, 671, 696, 703, and 713, as amended, and Article 22 of the license for Project No. 1744 determine: the amount of Licensee's "surplus earnings" from Project No. 20 for the period from October 31, 1944 through December 31, 1958, to be credited to Account 264, Amortization Reserve-Federal,[2] to be $171,346.79; the amounts of Licensee's "surplus earnings" from Project Nos. 472, 486, 597, 665, 671, 696, 703, and 713 for the period from June 1, 1947 through December 31, 1958, to be credited to Account 264 to be $76,157.97, $5,789.80, $4,988.26, $2,877.64, $3,303.00, $9,265.91, $2,008.91, and $2.053.39, respectively; and the amount of Licensee's "surplus earnings" from Project No. 1744 for the period from January 1, 1958 through December 31, 1958, to be credited to Account 264 to be $898.30.

Article 18 of the respective licenses for Project Nos. 472, 486, 597, 665, 671, 696, 703, and 713, as amended by Commission order issued June 12, 1961, *Utah Power & Light Company*, 25 FPC 1131, provides as follows:

> After the first twenty (20) years of operation of said project under this license, namely, after May 31, 1947, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings of the project for the establishment and maintenance of amortization reserves, pursuant to Section 10(d) of the Act; one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) per cent per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year, provided that, if and to the extent that there is a deficiency of project earnings below six (6) per cent per annum for any fiscal year or years after the first twenty years of operation under the license, the amount of such deficiency shall be deducted from the amount of any surplus earnings accumulated thereafter until absorbed, and one-half of the remaining surplus earnings, if any, thus cumulatively computed, shall be set aside in the project amortization reserve account; and the amounts thus established in the project amortization reserve account shall be maintained therein until further order of the Commission.

Article 17 of the license for Project No. 20, as amended by Commission order issued June 12, 1961, incorporates the same provision as Article 18 of the respective licenses for Project No. 472, *et al.*, as amended, with one exception. Article 17 specifies the date of October 30, 1944 as the date after which Project No. 20 is to enter its amortization reserve period.

[*Footnote No. 1 Continued from page 63.*]

upon the net investment of a licensee in any project or projects under license, the licensee shall establish and maintain amortization reserves, which reserves shall, in the discretion of the Commission, be held until the termination of the license or be applied from time to time in reduction of the net investment. Such specified rate of return and the proportion of such surplus earnings to be paid into and held in such reserves shall be set forth in the license."

[2] Account references are to account numbers and titles prescribed in the Commission's revised Uniform System of Accounts for Public Utilities and Licensees effective January 1, 1961.

Article 22 of the license for Project No. 1744 provides as follows:

> After the first twenty (20) years of operation of the project under this license, namely, after December 31, 1957, six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings in accordance with the provisions of Section 10(d) of the Act, for the establishment and maintenance of amortization reserves to be held until the termination of the license, or, in the discretion of the Commission, to be applied from time to time in reduction of the net investment in the project, and one-half of all surplus earnings in excess of six (6) percent per annum received in any calendar year shall be paid into and held in such amortization reserves.

Project No. 20 was placed in commercial operation on October 31, 1924, and therefore entered the amortization reserve at the beginning of its twenty-first year of operation, October 31, 1944. Operation of Project Nos. 472, 486, 597, 665, 671, 696, 703, and 713 commenced under license as of June 1, 1927, making the initial dates of the respective amortization reserve periods for those projects June 1, 1947. Project No. 1744 began operation under license as of January 1, 1938 and entered its amortization reserve period on January 1, 1958.[3]

Project Nos. 20, 472, and 703 are located within the State of Idaho. Project Nos. 486, 597, 665, 671, 696, 713, and 1744 are located within the State of Utah. Licensee operates the foregoing ten projects as an integral part of its interconnected electric utility system which includes other hydroelectric generating plants not under Commission license, steam electric generating plants, an internal combustion generating plant, and a network of transmission and distribution facilities. Licensee also receives a portion of its electric energy requirements through purchase arrangements and power pooling or interchange arrangements with other utility systems. The electric energy generated by Licensee's projects is transmitted and distributed in Licensee's system with energy from its other sources of supply. Licensee's utility operations are conducted in southeastern Idaho, northern, central, and southeastern Utah, and western Wyoming.

Consistent with Licensee's method of physical operation of the above projects, its accounts, books and records do not show any particular earnings specifically associated therewith or derived thereform. The same is true of Licensee's other generating or purchased power resources. In these circumstances, staff proposes that the Commission determine Licensee's respective "surplus earnings" from Project Nos. 20, 472, 486, 597, 665, 671, 696, 703, 713, and 1744 as follows:

(1) Impute to the project during the respective fiscal periods concerned herein the particular earned rate of return which Licensee derived from its electric department utility operations as a whole during that period when computed in accordance with applicable precedents of this Commission;

(2) In the given fiscal period, determine the dollar excess, if any, of the project earnings, computed by applying the particular imputed earned rate of return to the average project net investment during the same period, over the project

[3] The license for Project No. 20 was issued pursuant to Section 4(d) of The Federal Water Power Act and became effective as of July 5, 1923 for a period of 50 years. The licenses for Project Nos. 472, 486, 597, 665, 671, 696, 703 and 713 were issued pursuant to Section 4(d) of the Water Power Act and each became effective June 1, 1927 for a period terminating June 30, 1970. The license for Project No. 597 was issued originally to Utah Light and Traction Company and was subsequently transferred to the present licensee, Utah Power & Light Company. The license for Project No. 1744 was issued pursuant to Section 4(e) of the Federal Power Act and became effective January 1, 1938 for a period terminating June 30, 1970. Project No. 20 was unconstructed when licensed, whereas Project Nos. 472, 486, 597, 665, 671, 696, 703, 713, and 1744 were in operation when licensed.

specified return, computed by applying the 6% specified rate of return to the average project net investment for the same period; such excess to be considered Licensee's "surplus earnings" during the particular period.

The following tabulations show the "surplus earnings" of the ten projects during the amortization reserve periods covered by the staff's examination computed in this manner, and the portions of such earnings to be credited to the respective amortization reserves for the various projects:

PROJECT NO. 20 (SODA)

Period	Surplus earnings	Credits to account 264
Oct. 31, 1944 to Dec. 31, 1944	$8,488.94	$4,244.47
1945	36,555.81	18,277.91

PROJECT NO. 713 (UPPER MILL CREEK)[5]

Period	Surplus earnings	Credits to account 264
June 1, 1947 to Dec. 31, 1947	$1,459.73	$729.87
1948	1,165.13	582.57
1949	332.47	166.24
1950	370.36	185.18
1951	21.68	10.84
1952	35.73	17.87
1953	61.78	30.89
1954	91.09	45.55
1955	147.83	73.92
1956	183.61	91.81
1957	178.02	89.01
1958	59.28	29.64
Total	4,106.71	2,053.39

[5] The Lower Mill Creek power plant of Project No. 713 was shut down and abandoned on April 6, 1949 and dismantled and retired in 1953 and 1954. The net investment in this plant was excluded from the staff's study for the year 1950, and thereafter. The plant was excluded from the project by Commission order, effective September 1, 1954, *Utah Power & Light Company*, 13 FPC 1421.

PROJECT NO. 1744 (WEBER)

Period	Surplus earnings	Credits to account 264
1958	$1,796.59	$898.30

In developing Licensee's yearly actual earned rate of return, the staff derived earnings base for the Company's entire electric department operations for any given year is based upon average of beginning and end-of-year balances of electric plant in service (original cost), less related book reserves for depreciation and for amortization of limited-term electric investments, less customers' advances for construction, and less contributions in aid of construction, similarly averaged, plus an allowance for working capital; the last being computed on the basis of a cash allowance equal to one-eighth of cash operating expenses (exclusive of purchased power and net interchange power expenses) for the particular year concerned, plus average balances of materials and supplies and prepayments, less average available advance collections of Federal and State income taxes exclusive of tax accruals attributable to Licensee's rapid expensing of certain of its utility plant investment for Federal and State income tax purposes.

Following this procedure, the staff also excluded for earnings base purposes the balance in Licensee's Account 114, Electric Plant Acquisition Adjustments.

In determining net electric department operating income, the staff excluded, as a revenue deduction, all annual charges for amortization of Licensee's investment classified in Account 114.

Staff treatment of Licensee's Federal income taxes reflects a normalization of the amounts of income taxes deferred by Licensee pursuant to Section 168 of the Internal Revenue Code of 1954, for the years for which such deferrals were recorded, in determining Licensee's net electric department operating income. Deferred State income taxes were treated in the same manner as deferred Federal income taxes.[6]

Upon the conclusion of the staff examination, conferences were held between the staff and representatives of Licensee at which agreement, subject to Commission approval, was reached as to the respective amounts of the "surplus earnings" of the ten projects, as well as the portions of such earnings to be credited to Licensee's Account 264, as indicated above. Licensee, by letter dated April 4, 1962, confirmed its agreement in the above matter and concurs that the Commission determine the amounts of "surplus earnings" to be credited to Account 264, as set forth above.

The Public Utilities Commission of Idaho and the Public Service Commission of Utah were separately advised by letters of this Commission dated December 7, 1962, of the staff recommendations herein. By letters dated December 19, 1962 and December 31, 1962, the foregoing respective Commissions indicated their lack of objection to those recommendations.

As presented, the staff recommendations herein include the recommendation that any Commission determination of Licensee's "surplus earnings" as set forth above be made conditionally subject to revision in the event that certain charges by Electric Bond and Share Company and/or its affiliated service companies entered in Licensee's Plant accounts during the years 1937 through 1958 and in Licensee's operating expense accounts during the period from October 31, 1944 through December 31, 1958 are determined hereafter to violate the Commission's "no profits to affiliates" rule. The staff analysis of Licensee's operations and earnings did not include a complete examination of the facts underlying the charges by Electric Bond and Share Company and/or its service company affiliates, as to whether such charges include as a part thereof a profit element or whether Electric Bond and Share Company and/or its service company affiliates and Licensee are "associated companies" within the meaning of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

While the treatment herein of deferrals of income taxes conforms to our Uniform System of Accounts and certain prior Commission precedents and is accepted for the purposes of this determination of surplus earnings, we do not necessarily endorse such treatment in principle and reserve the right to reexamine such treatment in future determination of project surplus earnings. We approve the instant determination for past periods inasmuch as any change in Commission policy would not be made retrospectively.

The Commission finds:

(1) The Federal Power Act [Section 10(d)] and more specifically Article 17 of the license for Project No. 20, as amended, and Article 18 of the respective licenses for Project Nos. 472, 486, 597, 665, 671, 696, 703, and 713, as amended, require that Licensee establish and maintain amortization reserves with respect to those projects wherein

> one-half of the project surplus earnings, if any, accumulated after the first twenty years of operation under the license, in excess of six (6) percent

[6] Licensee does not claim or record deferred income taxes arising from liberalized depreciation permitted under Section 167 of the Internal Revenue Code.

per annum on the net investment, shall be set aside in a project amortization reserve account as of the end of each fiscal year * * * and the amounts thus established * * * shall be maintained * * * until further order of the Commission.

(2) The Federal Power Act [Section 10(d)] and more specifically Article 22 of the license for Project No. 1744 require that Licensee establish and maintain amortization reserves with respect to that project wherein

> [A]fter the first twenty (20) years of operation of the project under this license . . . six (6) percent per annum shall be the specified rate of return on the net investment in the project for determining surplus earnings * * * for the establishment and maintenance of amortization reserves to be held until the termination of the license, or, in the discretion of the Commission, to be applied * * * in reduction of the net investment * * * and one-half of all surplus earnings in excess of six (6) percent per annum received in any calendar year shall be paid into * * * such amortization reserves.

(3) The first twenty years of operation of Project Nos. 20 and 1744 under license ended as of October 30, 1944 and December 31, 1957, respectively; and the first twenty years of operation of Project Nos. 472, 486, 597, 665, 671, 696, 703, and 713 under license ended as of May 31, 1947.

(4) The computation of Licensee's respective "surplus earnings" from Project Nos. 20, 472, 486, 597, 665, 671, 696, 703, 713, and 1744, subsequent to those dates, and the portions thereof to be credited to Account 264, in the manner as proposed by the staff, all as described above, is reasonable and appropriate for the purposes of the Federal Power Act and the Commission licenses here concerned.

(5) For the periods commencing October 31, 1944, June 1, 1947, and January 1, 1958, all ending as of December 31, 1958, Licensee's respective surplus earnings for the above projects, on an annual basis, are as set forth in tabular form in the recitals above, as well as the portions thereof required to be set aside for the projects in Account 264, Amortization Reserve-Federal.

(6) As of December 31, 1958, the credit balances required to be maintained by Licensee in Account 264, Amortization Reserve-Federal, for the ten projects are as follows: Project No. 20—$171,346.79; Project No. 472—$76,157.97; Project No. 486—$5,789.80; Project No. 597—$4,988.26; Project No. 665—$2,877.64; Project No. 671—$3,303.00; Project No. 696—$9,265.91; Project No. 703—$2,008.91; Project No. 713—$2,053.39, and Project No. 1744—$898.30.

(7) Licensee's concurrence in the staff recommendations herein, and the lack of objection thereto by the Public Utilities Commission of Idaho and the Public Service Commission of Utah, obviate the necessity for any public hearings in this matter prior to Commission action in accordance with those recommendations, as hereinafter provided.

(8) It is necessary and appropriate for the purposes of the Federal Power Act and the Commission licenses here concerned that the Commission reserve for future consideration the matter of revision of the respective amounts of Licensee's "surplus earnings" and the portions thereof required to be credited to Account 264 to reflect such adjustments therein as may be necessary: (a) if Licensee's payments to Electric Bond and Share Company and/or the latter's service company affiliates as described above are determined to include a profit element; and (b) if Licensee and Electric Bond and Share Company and/or the latter's service company affiliates are determined to be associated companies within the meaning of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

The Commission orders:

(A) Licensee shall credit to Account 264, Amortization Reserve-Federal, by charge to Account 216, Unappropriated Earned Surplus, the amount of $171,346.79

for the period from October 31, 1944 through December 31, 1958, for Project No. 20; the amounts of $76,157.97, $5,789.80, $4,988.26, $2,877.64, $3,303.00, $9,265.91, $2,008.91, and $2,053.39 for the period from June 1, 1947 through December 31, 1958, for Project Nos. 472, 486, 597, 665, 671, 696, 703, and 713, respectively; and the amount of $898.30 for the period from January 1, 1958 through December 31, 1958, for Project No. 1744, all as shown in the above tabulations.

(B) Licensee shall, within 90 days from the issuance of this order, file three certified copies of its journal entries recording the above credits.

(C) The respective amounts of Licensee's "surplus earnings" from Project Nos. 20, 472, 486, 597, 665, 671, 696, 703, 713, and 1744 and the portions thereof required to be credited to Account 264 as determined herein are expressly subject to revision as set forth in finding (8) above.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

COMMUNITY PUBLIC SERVICE COMPANY, DOCKET NO. E-7102

ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued July 11, 1963)

Community Public Service Company (Applicant), incorporated under the laws of the State of Texas and doing business as a qualified foreign corporation in the State of New Mexico, with its principal place of business at Forth Worth, Texas, filed an application on May 27, 1963, as amended on June 19 and 28, 1963, for an order, pursuant to Section 204 of the Federal Power Act, authorizing the issuance of $13,000,000 maximum principal amount of First Mortgage Bonds, Series G, due 1993, to be sold at competitive bidding.

Applicant proposes to issue the Bonds under an Indenture of Mortgage and Deed of Trust, dated as of November 1, 1944, from Applicant's predecessor, Community Public Service Company, a Delaware corporation (Community Delaware),[1] to City National Bank and Trust Company of Chicago, Trustee, as heretofore supplemented and as to be further supplemented by a proposed Eighth Supplemental Indenture, to be dated as of July 1, 1963, from Applicant to Continental Illinois National Bank and Trust Company of Chicago, successor Trustee.

On or about July 16, 1963, Applicant proposes to invite sealed, written bids for the purchase of the Bonds by newspaper publication and by distribution of a Public Invitation for Bids, which will set forth the terms and conditions relating to bids, together with a Form of Bid and a form of Purchase Contract. Each bid, whether by a single bidder or by a group of bidders, must be on the Form of Bid furnished by Applicant and must be for the purchase of all the Bonds. Each bid shall specify, among other things, (1) the coupon rate of the Bonds, which shall be a multiple of ⅛ of 1%; (2) the price, exclusive of accrued interest, to be paid to Applicant for the Bonds, which shall not be less than 100% or more than 102¾% of the principal amount of the Bonds; and (3) that accrued interest on the Bonds from July 1, 1963, to the date of payment therefor and delivery thereof will be paid to Applicant.

---

[1] The merger of Community Delaware into Applicant was authorized by Commission order issued April 24, 1963, *Community Public Service Company*, Docket No. E-7084, 29 FPC 829. Under the terms of the merger, Applicant acquired all the assets and assumed all the liabilities of Community Delaware.

Unless postponed, each bid for the purchase of the Bonds, whether by a single bidder or a group of bidders, must be presented to Applicant at 90 Broad Street, 19th Floor, New York, New York, before 11 a.m., New York Time, on July 23, 1963. Unless Applicant shall reject all bids, which it reserves the privilege to do, or shall exclude the bid of any bidder or any group of bidders for reasons specified in the statement of terms and conditions set forth in the Public Invitation for Bids, Applicant will accept the bid which shall result in the lowest annual cost of money to Applicant.

Each bid for the purchase of the Bonds must be accompanied by a certified or official bank check or checks in the aggregate amount of $400,000, payable in New York Clearing House funds.

Applicant will apply the proceeds, estimated to be in the net amount of $12,939,136, to be obtained from the proposed issuance and sale of Series G Bonds to (1) redeem two series of its First Mortgage Bonds now outstanding, namely, $2,850,000 principal amount of Series E Bonds, 5⅜%, due 1987, and $4,950,000 principal amount of Series F Bonds, 5¼% due 1991[2]; (2) retire its bank loans now outstanding in the principal amount of $2,500,000[3]; and (3) pay, in part, for its 1963 construction program. Applicant proposes to redeem its Series E and Series F Bonds as of August 30, 1963, and estimates that as of that date the aggregate redemption costs of these two series of Bonds, including principal, accrued interest, and premium, will be $8,301,135. Applicant also anticipates that as of July 23, 1963, the date of the proposed sale of the Series G Bonds, the aggregate principal amount of its outstanding bank loans will be $3,500,000. The 1963 construction program of Applicant is expected to require $5,739,000, of which amount $5,645,000 will be allocated to electric plant and $94,000 to gas plant. The major item of that program is $4,802,000 for electric transmission and distribution facilities, which are needed to meet substantial increases in the electric requirements of Applicant's customers, particularly in the residential and commercial classifications, and to serve several industrial customers recently added to Applicant's electric system.

Applicant represents that if the best bid received by it for the purchase of $13 million principal amount of the proposed Series G Bonds would result in a cost of money so high that there would be no economic justification for refunding Applicant's Series E and Series F Bonds, then in that event Applicant will not redeem its Series E and Series F Bonds and will issue and sell $5 million principal amount only of the proposed Series G Bonds and will apply the proceeds from such sale to retire its bank loans and to pay, in part, for its 1963 construction program, all as referred to above.

Written notice of the application has been given to the Texas Railroad Commission and to the New Mexico Public Service Commission and to the Governor of each of those States. Notice of the application was also published in the Federal Register on June 11, 1963 (28 F.R. 5695), stating that any person desiring to be heard or to make any protest with reference to the application should on or before June 24, 1963, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

---

[2] The Commission authorized Community Delaware to issue the Series E Bonds by orders issued May 16 and 28, 1957, *Community Public Service Company*, 17 FPC 718, 767, and the Series F Bonds by orders issued May 17 and June 7, 1961, *Community Public Service Company*, 25 FPC 970, 1108.

[3] The bank loans are evidenced by short-term unsecured promissory notes which Community Delaware was authorized to issue, to provide funds for utility plant construction, by Commission order issued December 14, 1962, *Community Public Service Company*, Docket No. E-7071, 28 FPC 1019.

The New Mexico Public Service Commission, by order issued June 14, 1963, authorized Applicant to issue and sell $13 million maximum principal amount of Bonds in the manner and for the purposes as indicated in the recital above.

The Commission finds:

(1) Applicant, a Texas corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued April 24, 1963, *Community Public Service Company*, Docket No. E–7084. (28 FPC 829).

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

(5) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed issuance of Bonds, upon the terms and conditions and for the purposes specified in the application, as described above, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of these Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegram as contemplated by Section 34.9 of the Regulations;

(ii) The Commission shall have approved the price to be received by Applicant for the Bonds and the coupon rate thereof, by a further order.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of costs, or any other matter whatsoever which is now pending or which hereafter may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MONTANA-DAKOTA UTILITIES CO., DOCKET NO. E-7105

ORDER AUTHORIZING THE ISSUANCE OF PROMISSORY NOTES

(Issued July 11, 1963)

Montana-Dakota Utilities Co. (Applicant) incorporated under the laws of the State of Delaware and doing business in the States of Minnesota, Montana, North Dakota, South Dakota and Wyoming, with its principal business office at Minneapolis, Minnesota, filed an application on June 10, 1963, as supplemented on June 17, 1963, for authority, pursuant to Section 204 of the Federal Power Act, to issue unsecured Promissory Notes in the aggregate principal amount of $10,000,000, outstanding at any one time. Each of the proposed Notes will be dated as of the dates of their respective issue, which will be not later than December 31, 1963; will mature not more than one year after their respective dates of issue and not later than December 31, 1964; and, will bear interest at the prime commercial bank rate in effect in New York City at the time of each borrowing.

Applicant proposes to issue the Notes to the First National City Bank of New York. Through separate agreements between this bank and the Northwestern National Bank of Minneapolis and the First National Bank of Minneapolis, the two Minneapolis banks will each have a 25% participation in each note. The application indicates that none of the Notes proposed to be issued will be resold to the general public and no finder's fee or other negotiation fee, commission or remuneration will be paid in connection therewith to any third person.

Applicant states that the proceeds to be obtained from the proposed issuance of Notes will be used to provide temporary financing for part of the cost of Applicant's 1963 construction program, estimated at $15,000,000, which is divided between additions to Applicant's electric facilities in the amount of $6,700,000 and additions to Applicant's gas facilities amounting to $7,800,000, with approximately $500,000 in facilities common to both gas and electric departments. The principal item in the electrical program is $2,082,000 for the completion of the 66,000 kw generating unit addition to the R.M. Heskett station near Mandan, North Dakota, scheduled to be completed in late 1963 at a total cost of $10,298,000. The principal items in Applicant's gas program are 100.5 miles of 12-inch transmission main from Riverton Dome oil field in Fremont County, Wyoming to the Rairdon Junction near Worland, Wyoming compressor station, estimated cost $3,267,100; 5.4 miles of 6-inch transmission lateral to Worland, Wyoming from the Riverton transmission main, estimated to cost $128,900; 11.7 miles of 3-inch and 2-inch transmission lateral from Underwood, North Dakota lateral to Riverdale, North Dakota estimated to cost $127,000; and a 2,640 hsp compressor station at Lovell, Wyoming to transport Riverton Dome gas to market or storage estimated to cost $951,600. Applications for certification of these gas items are now pending before this Commission in Docket Nos. CP63-110 and CP63-310.

Written notice of the application has been given to the Minnesota Railroad and Warehouse Commission, the Montana Board of Railroad Commissioners, the North Dakota Public Service Commission, the South Dakota Public Utilities Commission, and the Wyoming Public Service Commission, and to the Governor of each of those States. Notice of the application was also published in the Federal Register on June 22, 1963 (28 F.R. 6472), stating that any person desiring to be heard or to make any protest with reference to said application

should file a petition or protest, on or before July 8, 1963, with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore described and set forth in the Commission's order issued April 26, 1962, *Montana-Dakota Utilities Co.*, Docket No. E-7027, 27 FPC 844.

(2) The proposed issuance of Promissory Notes, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuance of Promissory Notes, as described above, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance of Promissory Notes in the aggregate principal amount of $10,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) of the Act from the requirements of Section 204(a) of the Act.

(5) The proposed issuance of Promissory Notes, described above, will be exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of Promissory Notes, as hereinafter authorized, will be for a lawful object, within the corporate purposes of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Promissory Notes by the Applicant, in an aggregate principal amount of not to exceed $10,000,000, at any one time outstanding, upon the terms and conditions and for the purposes set forth in the application, is hereby authorized, subject to the provisions of this order.

(B) None of the proposed Notes shall be issued to obtain funds for the payment of the cost of construction for the gas facilities described in applications in Docket Nos. CP63-110 and CP63-310 prior to the issuance of certificates of convenience and necessity in accordance with the Natural Gas Act.

(C) This authorization is expressly conditioned upon the final maturity of all Notes to be issued pursuant thereto, being not later than December 31, 1964.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect to any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

AMERICAN LOUISIANA PIPE LINE COMPANY, DOCKET NO. G–18419; MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NOS. G–12292, G–17512 AND RP60–9

ORDER DENYING APPLICATIONS FOR REHEARING AND ORAL ARGUMENT, AND GRANTING MOTION

(Issued July 12, 1963)

On June 14, 1963, applications for rehearing of the Commission's Opinion No. 387 and accompanying order issued May 16, 1963, 29 FPC 932, in this proceeding, were filed jointly by American Louisiana Pipe Line Company (American Louisiana), Michigan Wisconsin Pipe Line Company (Michigan Wisconsin), and Michigan Consolidated Gas Company (Michigan Consolidated), who also request oral argument; and by North Central Public Service Co. (North Central). On June 17, 1963, an application for rehearing of the said Opinion was filed by Michigan Gas and Electric Company (Michigan Gas).

Michigan Wisconsin also filed a separate motion requesting the deletion of paragraph (K) of the order of the aforesaid Opinion No. 387, or in the alternative, for rehearing. We shall dispose of this motion by this order.

We conclude that, as set forth more fully hereinafter, the applications for rehearing and request for oral argument should be denied. The aforesaid motion, however, should be granted, for the reasons stated subsequently.

American Louisiana, *et al.* in their joint application object solely to our requiring American Louisiana to revert to a cost-of-service form of rate in lieu of the demand-commodity rate it filed in this proceeding. The numerous arguments advanced to support this objection are sufficiently answered by Opinion No. 387, and need not be repeated.

North Central's application objects solely to the Commission's approving the examiner's OS–1 (overrun service) rate of 30 cents per Mcf in lieu of the 26-cent OS–1 rate proposed by Michigan Wisconsin. North Central requests that we approve, without further hearing, an OS–1 rate of 27.85 cents per Mcf, the level of the commodity component of Michigan Wisconsin's approved ACQ–1 rate. However, as we point out in Opinion No. 387, Michigan Wisconsin's OS–1 and other rates represent our considered opinion of a reasonable accommodation of the conflicting interests presented in this case. The particular interests advanced by North Central are not sufficiently weighty to warrant disturbing the rate pattern which we have found proper and which all the other parties now seemingly accept.

Michigan Gas in its application advances two objections. First, it requests that we require Michigan Wisconsin to reduce its rates to reflect any reductions in American Louisiana's rates that may result from American Louisiana's use of the cost-of-service form of rate required by Opinion No. 387, as described above. Second, Michigan Gas contends that our allowing Michigan Wisconsin to increase its billing demand units for the off-peak months permits Michigan Wisconsin an unjustified $1,700,000 rate increase.

Michigan Gas' request described first above is without merit. Our requiring Michigan Wisconsin to reduce its rates to reflect reductions in American Louisiana's rates resulting from American Louisiana's employing a cost-of-service form of rate would amount to putting Michigan Wisconsin also on a modified form of cost-of-service rate. This would not be justified in principle, as the discussion in Opinion No. 387 shows, nor would it be warranted as a practical matter. For

if we were to provide for such possible reductions in Michigan Wisconsin's rates, we would in fairness also have to provide for possible increases therein, and the consequent uncertainty in Michigan Wisconsin's rates to its numerous customers would be incompatible with the intended, definite character of the demand-commodity and other rates its tariff presently prescribes.

The basic fallacies underlying Michigan Gas' second objection above are detailed in Opinion No. 387, and the immaterial variations to its arguments appearing in the company's application warrant neither discussion, nor any change in our conclusions rejecting this objection.

Michigan Wisconsin's motion that we delete paragraph (K) of the order accompanying Opinion No. 387 should be granted. Paragraph (K) requires Michigan Wisconsin to "pass on to its customers all refunds received from American Louisiana in Docket No. G–18419 prior to the issuance" of Opinion No. 387. But as Michigan Wisconsin correctly points out, the Commission's staff, in arriving at Michigan Wisconsin's costs of service on which the rates approved in this proceeding were based, computed the cost of American Louisiana's gas to Michigan Wisconsin on the basis of American Louisiana's reduced cost of service which in turn was agreed to by the parties and approved by the Commission. The reduced cost of gas from American Louisiana, therefore, is already reflected in the refunds which Michigan Wisconsin has made and will make to its customers. Paragraph (K) is thus redundant and should be deleted.

The Commission further finds:

(1) The assignments of error and grounds for rehearing set forth in the above-described applications present no factual or legal considerations which were not considered by the Commission when it issued its Opinion No. 387, or which having now been considered, warrant any change in or modification of the said Opinion. Nor do they justify granting Michigan Wisconsin's request for oral argument.

(2) Michigan Wisconsin's above-described motion to delete paragraph (K) of the order accompanying Opinion No. 387 should be granted.

The Commission orders:

(A) The applications for rehearing of American Louisiana Pipe Line Company, *et al.* and North Central Public Service Co., filed herein on June 14, 1963, and of Michigan Gas and Electric Company filed herein on June 17, 1963, are hereby denied. American Louisiana's request for oral argument is also denied.

(B) In accordance with Michigan Wisconsin's motion filed June 14, 1963, paragraph (K) of the order accompanying Opinion No. 387 is hereby deleted and has no force or effect.

OPINION NO. 393

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–16235; PACIFIC NORTHWEST PIPELINE CORPORATION, DOCKET NO. G–16237 AND COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G–16904

OPINION AND ORDER GRANTING AND DENYING CERTIFICATES

(Issued July 12, 1963)*

Syllabus

1. In future proceedings Commission will require record support for market evidence lacking here. P. 84.

*Initial decision appears on P. 107. Rehearing denied by order issued September 4, 1963, 30 FPC 643.

2. On basis of gas available from additional California production and from Transwestern, there will not be a deficiency in firm peak-day gas requirements for California market until 1968, and in annual requirements until after 1968. P. 85.
3. While building the Rock Springs Line would result in a large amount of unused capacity in the future, there is no good reason to perpetuate such excess potential capacity. P. 85.
4. Since evidence shows less costly ways of supplying gas to California, certification of Rock Springs would be contrary to Commission obligation to make gas available to consumers at lowest reasonable rates. P. 88.
5. Commission *discusses* argument advanced that certification of project would stimulate exploration for additional gas reserves in Wyoming. P. 90.
6. Whether a proposed project involves a wastefully circuitous route is not a question of pattern formed by pipeline on a map, but rather of overall economy—Commission *finds* route is not wastefully circuitous. P. 91.
7. In concluding certificate should be denied, Commission *finds*, (1) there is no immediate need for new pipeline to California; (2) other ways of bringing gas to California appear to be less costly; (3) there is no need to preserve indefinitely the cheap expandibility of Transwestern's system at cost of California consumers; and (4) other alternatives provide further expandibility as protection to California market needs. P. 92.
8. Commission *issues* certificate of public convenience and necessity covering temporarily authorized facilities; denies applications for abandonment and for certificates of public convenience and necessity in proceeding arising under Section 7, of the Natural Gas Act. Pp. 93–94.

Commissioner Morgan *dissenting*.

George D. Horning, Jr., C. Frank Reifsnyder, Patrick G. Sullivan, Allen R. Grambling, Edward G. Najaiko, Malcolm T. Dungan, Gregory H. Harrison and *Charles V. Shannon* for El Paso Natural Gas Company.

Leon M. Payne and *Charles E. McGee* for Pacific Northwest Pipeline Corporation.

James L. White, John Fleming Kelly, Henry F. Holland and *Baxter F. Holland* for Colorado Interstate Gas Company.

Jacob Goldberg and *E. A. Stansfield* for Plateau Natural Gas Company.

E. A. Stansfield for Public Service Company of Colorado.

E. A. Stansfield for Colorado-Wyoming Gas Company.

James W. McCartney, Daniel C. Arnold, Rayborne Thompson, J. Evans Atwell and *Thomas Vance McMahan* for Transwestern Pipeline Company.

Harry P. Letton, Jr., J. David Mann, Jr. and *Arthur B. Edgeworth* for Southern California Gas Company.

Milford Springer, Joseph R. Rensh, Robert M. Olsen, J. David Mann, Jr. and *Arthur B. Edgeworth* for Southern Counties Gas Company of California.

Arthur B. Edgeworth for Pacific Lighting Gas Supply Company.

Stanley Mosk, Roderick B. Cassidy and *Franklin G. Campbell* for Public Utilities Commission of the State of California.

Richard H. Peterson, F. T. Searls and *Malcom H. Furbush* for Pacific Gas and Electric Company.

Rollin E. Woodbury, John R. Bury and *William E. Marx* for Southern California Edison Company.

Robert Arnebergh, Robert W. Russell and *Arthur Karma* for the City of Los Angeles.

Charles S. Rhyne, Herzel H. E. Plaine, Edward D. Means, Jr., Robert S. Wham and *Donald E. Kelley* for the City and County of Denver.

C. Hayden Ames for San Diego Gas & Electric Company.

Charles H. Ross, Charles C. McDugald and *Kenneth W. Wagner* for Natural Gas Pipeline Company of America.

Gerald H. Trautman for Richfield Oil Company, Standard Oil Company of California, Oil Producers Agency of California, Golden Bear Oil Co., Lloyd Corporation, Ltd., National Oil Company, Mt. Diablo Co., Bonmac Oil Company, Atlas Royalties, Inc., MacGreghar and Company, Petroleum Supply Company, and Frank Goldman.

Gordon D. Hinds and *J. Parker Connor* for the City of Pueblo, Colorado.

Justin R. Wolf and *Charles A. Case, Jr.*, for Northwest Natural Gas Company.

Joseph S. Jones, B. Z. Kastler, Jr., John W. Scott and *Louis L. DaPra* for Mountain Fuel Supply Company.

Edward F. Richards for Utah Gas Service Company and Utah Gas Fuel Company.

John C. Gibbs, Ishier Jacobson, Rueben Goldberg and *Bernard M. Fischman* for Citizens Utilities Company.

Clinton C. Cornelius for Utah-Wyoming Coal Operators Association.

Jerome McGrath, Robert E. Lee Hall and *Welly K. Hopkins* for National Coal Association, United Mine Workers of America, and Fuels Research Council, Inc.

P. L. Jones for Natural Gas Company of Southern Utah.

Donald Hacking and *John B. Kugler* for Utah Public Service Commission.

F. T. Henry and *Louis Johnson* for the City of Colorado Springs, Colorado.

John B. Wright for Raton Natural Gas Company.

Duke W. Dunbar, Henry E. Zarlengo and *Jacob Goldberg* for the Public Utilities Commission of the State of Colorado.

Thomas O. Miller for Public Service Commission of Wyoming.

Fred M. Standley, Alfred P. Whittaker and *Frederick G. Von Huben* for New Mexico Public Service Commission.

Dean C. Mabry for the City of Trinidad, Colorado.

R. Clyde Hargrove, Harold Leventhal, H. S. Littman, Jack Werner and *L. R. Pankonien* for California Gas Transmission Co. and Tennessee California Gas Transmission Co.

John J. O'Connell, Robert E. Simpson and *Frank P. Hayes* for Washington Utilities and Transportation Commission.

John B. Kugler for Idaho Public Utilities Commission.

Robert Y. Thornton and *Lloyd G. Hammel* for the Public Utility Commissioner of Oregon.

John F. Raper for Wyoming Public Service Commission.

Richard W. Sabin for Oregon Public Utility Commissioners.

A. Pratt Kesler for Utah Public Service Commission.

Gabe Hoffenberg for Nevada Public Service Commission.

C. Louis Knight for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

SWIDLER, Chairman:

This is the second Commission decision in these extended certificate proceedings under Section 7 of the Natural Gas Act, among the most complex and difficult proceedings in FPC history. Applications were originally filed by El Paso Natural Gas Company and Pacific Northwest Pipeline Corporation on September 10, 1958, and by Colorado Interstate Gas Company (CIG) on November 7, 1958. The proposed project is intended to supply additional gas to the California market and the Rocky Mountain region. The principal facility to be constructed

is a pipeline from Green River, Wyoming, near Rock Springs in the same State, across Utah and Nevada to the California border. CIG also proposes to build additional facilities including a pipeline extending south of Denver in Colorado and to abandon most of its defective line from Denver to Bivins, Texas. After hearing, the Commission originally approved the proposed project in a decision issued December 27, 1960, 24 FPC 1137, but later granted rehearing. After the second hearing the presiding examiner issued a decision December 18, 1962, generally denying the applications, and it is upon numerous exceptions filed to this latest decision that the proceedings are now before us again.

Procedural and Factual Background

The principal facilities involved are shown on the attached map. CIG has a large pipeline system extending generally northwestward from the Ragoton Field in Kansas and Oklahoma and from the Panhandle Field in Texas to Denver, Colorado. It also has a pipeline extending north of Denver into Wyoming and then west to Green River, Wyoming where it interconnects with El Paso's pipeline that was formerly the line of Pacific Northwest. CIG proposes to construct and operate (1) a new transmission pipeline from Denver south to its Bivins compressor station in the Texas Panhandle; (2) facilities for tying into its system gas reserves in Oklahoma, Kansas and Wyoming; (3) a 34-inch line extending from its Green River compressor station in Wyoming 155 miles to Provo, Utah, where it will interconnect with the proposed line of El Paso's; and (4) a number of compressor stations and appurtenant facilities. CIG seeks authorization to sell to El Paso volumes up to a maximum of 237,712 Mcf per day at Green River and to transport for El Paso from Green River to Provo up to a maximum of 475,424 Mcf per day.[1] CIG also seeks to abandon the greater part of its existing Bivins-Denver line.

El Paso's pipeline system has a somewhat ambiguous status. In addition to its two lines extending from the Permian Basin in southeastern New Mexico and Texas to the California border with a connection to the San Juan Basin in northeastern New Mexico and Colorado, in December of 1959 El Paso acquired the assets of Pacific Northwest including the line extending from the San Juan Basin to the Canadian border. The Commission's order approving the merger[2] was vacated by the Supreme Court which held that the Commission should have awaited the decision in an antitrust suit brought in the Federal District Court in Utah.[3] Recently, the antitrust suit has been dismissed by the District Judge; the United States has appealed; and the proceeding is now before the Supreme Court on petition for affirmance.[4]

In the present proceeding El Paso proposes to construct a 34-inch diameter pipeline from its interconnection with CIG at Provo to the California border near Las Vegas, Nevada, to transport up to 475,424 Mcf per day through this line and to sell the gas to Southern California Gas Co. and Southern Counties Gas Co. (Southern California Companies). El Paso seeks to abandon a Pacific Northwest sale of gas to CIG at Green River with a contract demand of 117,500 Mcf. Since this gas flows east and south to Denver, the effect of the proposals here would be to reverse the flow in Colorado's Wyoming line so that the gas will move westward from Denver to Green River.

---

[1] The pressure base used in this opinion is 14.73 psia unless otherwise specified.

[2] *Pacific Northwest Pipeline Corp., et al.*, 22 FPC 1091, 23 FPC 350.

[3] *California* v. *F.P.C.*, 369 U.S. 482 (April 30, 1962). Whatever its status we shall refer to the San Juan to Canada pipeline as Pacific Northwest.

[4] *United States* v. *El Paso Natural Gas Co.*, No. 94, October Term 1962, jurisdiction noted May 24, 1963, 373 U.S. 390; [District Court reversed and "divestiture" ordered by opinion delivered April 6, 1964, 376 U.S. 651.]

El Paso and CIG estimate that their portions of the proposed construction will cost $58,685,000 and $92,829,566 respectively, or a total of $151,514,566. Under temporary authorization CIG has already constructed some of the facilities consisting of various field laterals and compressor stations with an estimated cost of $9,253,308. These are needed for CIG's present service and we shall certificate them permanently as provided below.

There are other pipelines serving or proposing to serve the California market. Most important is Transwestern Pipeline Company which now delivers gas to Pacific Lighting Gas Supply Company at the California border. Pacific Lighting in turn delivers the gas to the Southern California Companies which transport the gas to the market area. Transwestern's 30-inch diameter main line extends from Roswell, New Mexico, across that State and Arizona to connect with Pacific Lighting near Topock, Arizona. From Roswell it has a lateral extending to the Panhandle-Hugoton-Anadarko area and a lateral extending to the Permian Basin area. The installed capacity of the system is 350,000 Mcf/d and the optimum capacity 640,000 Mcf/d. Applications are pending to utilize the additional capacity available in the Transwestern pipeline. Also, it should be noted, Pacific Gas Transmission Company (PGT) has a pipeline extending from the Canadian border to an interconnection with Pacific Gas & Electric Co. (PG&E) at the Northern boundary of California. Furthermore, at the time of the hearing subsidiaries of Tennessee Gas Transmission Company, in Docket No. CP61–172, *et al.*, had proposed the Pemex Project consisting of a pipeline to extend from near the Texas Gulf Coast through Mexico to California and to transport gas to be purchased from the producers by Southern California Edison Co. (Edison).[5]

In the present proceedings the Commission conditionally approved the Rock Springs project by order issued December 27, 1960, 24 FPC 1137. It found that the project would provide a new and necessary long-term gas supply for the rapidly expanding California market, would give that market direct access to El Paso's new and developing gas fields in Wyoming and would enable El Paso to make fuller use of its Northwest Division facilities at a higher load factor with resulting economies. The Commission conditioned its certificates on the approval by the California Commission of the Southern California Companies' part of the project, including its proposed markets.

On December 28, 1960, the Public Utilities Commission of California issued a decision authorizing the Southern California Companies to construct a pipeline between the California-Nevada border and Newberry, California, for transporting the gas towards the market. The California Commission, however, found that the Rock Springs Project was not needed for several years and that the median in forecasts was 1968. The California Commission conditioned its approval by requiring the applicants to obtain from El Paso a new supply contract so as to eliminate the need for a rate increase as a result of the project, to reduce the period before the project is economically feasible and to provide a load-building period. Subsequently, new agreements were made between the various parties to the project. Under them initial deliveries would commence on January 1, 1964, and would increase to the maximum of 475,424 Mcf per day on January 1, 1965. CIG would charge El Paso for gas sold a demand and commodity rate amounting to about 27 cents at 85 percent load factor, and for gas transported a 56-cent demand and 2.15-cent commodity rate. El Paso's price to the Southern

[5] Tennessee was permitted to intervene in the reopened proceeding on the basis of the competing Pemex proposal, but this proposal was withdrawn and the Gulf Pacific Pipeline proposal in Docket No. CP63–223 was subsequently filed. This new application proposes a pipeline wholly in the United States and transportation of gas not only for Edison, but also for the City of Los Angeles Department of Water and Power.

California Companies after January 1, 1965, would amount to 37.9 cents per Mcf at 100 percent load factor and 39.6 cents per Mcf at an 85-percent load factor.

On June 6, 1961, the California Commission issued a supplemental opinion and order in which it found that the applicants had fulfilled the conditions of the prior order and provided that the certificate previously issued be made applicable to the revised project. Edison and Richfield Oil Company petitioned the Supreme Court of California for a writ of review which was denied January 31, 1962, and a subsequent petition for certiorari was denied by the Supreme Court of the United States (*Southern California Edison Co.* v. *P.U.C. of California*, 371 U.S. 231).

Several interveners filed petitions with this Commission for rehearing of the opinion of December 27, 1960, contending that the new contracts would materially alter the proposals and complaining that the examiner had refused to permit questioning of witnesses regarding alternative routes. On February 21, 1961, the Commission granted rehearing without limitation. Since some question has arisen as to the scope and effect of the subsequent proceedings, we shall refer briefly to our orders relating to them.

On June 22, 1961, the Commission granted a motion for an early hearing. The order stated that "movants request that the hearing be limited to matters relating to the proposed changes." While the Commission found that the hearing should be "limited as hereinafter ordered", the order broadly provided that the proceedings be reopened and "a public hearing with respect to the Rock Springs project, as conditionally authorized by this Commission by order issued December 27, 1960, be held . . . ." The order issued August 25, 1961, 26 FPC 432, reflected the breadth of the rehearing. It said that in the order of June 22, 1961, we took notice of the request "that the hearing be limited to matters related to the proposed changes. Our order, however, while encompassing such changes, did not so limit the hearing."

The order of June 22, 1961, provided that El Paso and CIG file a complete statement of changes in the project. The order of July 21, 1961 (26 FPC 175), provided that the issues should encompass alternate routes and facilities. The order of August 25, 1961 (26 FPC 432), stated that the altered and changed requirements for gas and the rates should be considered in relation to the project's economic feasibility and parties should be permitted to present evidence on changes in reserve estimates. In its order of September 13, 1961 (26 FPC 488), the Commission deemed it necessary that El Paso offer evidence to show whether the project would be economically feasible if Southern California Edison Company should cease to be a customer of Southern California Gas Company because, as the Commission said, it appeared that Edison was seeking other sources of gas supply. In the order of November 2, 1961 (26 FPC 687), the Commission indicated that economic feasibility, financial feasibility and proposed rates were among the relevant issues. On March 22, 1962 (27 FPC 597), it reaffirmed that alternative gas supply possibilities using existing pipelines, by means of exchange arrangements or otherwise, was definitely an issue and on March 23, 1962 (27 FPC 600), it noted its responsibility to consider the impact of the construction upon present and future rates, whether the ultimate consumer would be adversely affected, and the policy of the antitrust laws.

The order of February 7, 1962 (27 FPC 321, 322) stated:

> We have attempted by our orders to confine the proceedings to those matters which resulted from the modifications in the proposals as a consequence of the decisions of the California Commission. In the conduct of the hearing the examiner shall limit testimony to evidence pertinent and relevant to such matters.

While we did not want the second proceedings to be repetitious, our orders do not limit the issues that are presented to us now upon the basis of the whole record including that in the prior proceedings.

The rehearing began on July 24, 1961 and concluded on April 26, 1962. On May 17, 1962 (following the ruling of the Supreme Court in the antitrust proceeding), we denied motions to omit the intermediate decision and required the examiner to make special findings (1) as to the excess pipeline capacity, if any, available to serve California and (2) as to whether the record was sufficient for a decision on the merits assuming that Pacific Northwest be reconstituted as a separate corporation. On June 14, 1962, the examiner issued such findings.

On the question of excess capacity he considered the market requirements of the Southern California Companies, the existing and potential supply of gas and the supply available from the Rock Springs Project and set forth figures that showed a supply deficiency in certain years without the Rock Springs gas but considerable excesses using this gas. On the Pacific Northwest question the examiner concluded that the record was insufficient to show that a reconstituted company would build El Paso's portion of the line or enter into appropriate contracts with the Southern California Companies or CIG. In any case it would be legally impossible, the examiner thought, to issue a certificate to a new Pacific Northwest without an application.

After the exchange of briefs the examiner issued his principal decision on December 18, 1962, proposing that the applications for the Rock Springs Project be denied. Among his reasons were that: the route is circuitous; there is no adequate gas supply in the vicinity of Green River; the project would increase the cost of gas in the Rocky Mountain area and would fail to render complete service to this area; there is no justification for the divided ownership of the Provo line; the El Paso project is of doubtful economic feasibility, and is hopelessly uneconomic if the Edison load is eliminated; and the purchase of Rock Springs gas by the Southern California Companies is economically infeasible since there is no market therefor except for future sales as boiler fuel. Accepting the market estimates of these companies, he found that when he took the peak day supply of gas available from the existing facilities of El Paso and Transwestern plus production in California plus repressuring gas available from oil fields in California there was an excess of peak day supplies available through the year 1967–68, but a deficiency in the years 1968–1969 and 1969–1670 without any consideration of Rock Springs gas. He found, however, that El Paso and Transwestern with further development of their systems could supply enough additional gas to assure excess capacity through the year 1969–1970, the last year considered.

On annual requirements he found that for an average year taking the existing and potential capacity of existing systems, but excluding Rock Springs, there would be an excess supply in every year studied except the first and the last, 1963 and 1970. For a cold year he found deficiencies in 1963, 1969, and 1970. Without the Edison load he found substantial excesses in both average and cold years. He concluded that even with the Edison load there is a want of a market for the Rock Springs gas except for some industrial sales in 1969 and 1970.

The examiner did not find it necessary to decide whether the proposed project would violate the policy of the antitrust laws, in view of his rejection of the project for other reasons.

As to the argument that Pacific Northwest would be "put on its feet", the examiner found that the Rock Springs Project was not designed to provide assistance to Pacific Northwest and there is nothing to be gained by attempting to cure one undernourished system by creating another one.

The examiner proposed that a certificate be issued to CIG for the facilities already temporarily authorized. He proposed denying the application of CIG in other respects and denying the applications of El Paso and Pacific Northwest.

El Paso on January 22, 1963, and CIG on January 24, 1963, filed motions to terminate the intervention of subsidiaries of Tennessee Gas Transmission Company[6] on the ground that the application for the Pemex project had been withdrawn.[7] On February 1, 1963, Tennessee Subsidiaries and Gulf Pacific filed a motion that Gulf Pacific be admitted as a party intervener herein. Both of these motions were denied by our order of February 14, 1963. The proceedings are now before us on the numerous exceptions[8] filed in January of 1963.

Before proceeding with a discussion of the issues, we may note that the following interveners support the project, at least in part: the Southern California Companies, Los Angeles, Colorado Springs, Public Service Company of Colorado, Colorado-Wyoming Gas Co., The Pueblo and Fuel Company, Washington Commission, Wyoming PSC, Oregon PUC, Idaho PUC, Nevada PSC. The following oppose the project: Colorado PUC, Denver, Tennessee Subsidiaries, Edison, the Oil Companies,[9] Transwestern and our staff.

For the reasons set forth below we are of the opinion that the applications for the Rock Springs Project must be denied upon the evidence in this record. We are granting CIG certificates for the facilities already constructed under temporary authorization.

Consideration of the Proposed Project

In our opinion the record shows that the proposed Rock Springs gas is not needed at this time for the proposed service to the California market. The record also shows that other methods of serving the California market appear to be more economical and that the project has certain additional weaknesses, including the inability to render complete service to the Rocky Mountain area.

(a) *The sufficiency of markets in California.*—The main evidence relating to the need for additional gas in California was submitted by the Southern California Companies as summarized in their Exhibit 290. There were objections by the Commission staff to the figures used in the Exhibit on the ground that there was no support for them in the record, but the examiner determined that for the purposes of this decision the requirements set forth in this Exhibit were a not unreasonable forecast of the future needs of the California markets. We agree with this finding, but we would emphasize that in any future proceedings we will require the supporting market evidence lacking here.

The examiner also found that the supply showing in the Exhibit did not include all the gas available. The Exhibit indicates that without the Rock Springs gas there will be a deficiency in the annual requirements this year and a deficiency in the firm peak day requirements by 1964. However, we conclude, as did the examiner, that the Exhibit did not take into account the substantial

---

[6] California Gas Transmission Company and Tennessee California Gas Transmission Company (Tennessee Subsidiaries).

[7] In Docket No. CP61-172, *et al.*, the Tennessee Subsidiaries had applied for a proposed project to transport gas purchased by Edison in Texas, through Mexico to California.

[8] CIG, El Paso, the Southern California Companies, the Tennessee Subsidiaries, Denver, Nevada PSC, Wyoming PSC, Colorado Springs, Oregon PUC, Idaho PUC, Washington Commission, Transwestern, Public Service Company of Colorado, Colorado Wyoming Gas Co., Pueblo Gas and Fuel Co., and the staff of FPC.

[9] Richfield Oil Corporation, Standard Oil Company of California, Oil Producers Agency of California, Golden Bear Oil Co., Lloyd Corporation, Ltd., National Oil Company, Atlas Royalties, Inc., McGreghar Land Company, Petroleum Supply Company, Mt. Diablo Co., Bonmac Oil Company, and Frank Goldman.

amounts of existing capacity and gas supplies available from Transwestern. See below, p. 86. In addition, the amount of California gas currently being used for repressuring for oil production which will become available during the next five years was substantially understated. We recognize that there are no existing contractual commitments which guarantee the availability of all of this gas to Southern California customers, but we are convinced by the evidence that this production will be available to Southern California if and when it needs it and should be considered by us in examining the needs and supplies of the California market. We are also aware that the growth in annual requirements includes industrial sales where fuel oil may well prove to be preferable on the basis of competitive prices. This is especially important in view of the fact that the smog season does not include the months when peak firm requirements are reached.

On the basis of additional California production and the additional gas available from Transwestern with a minimum of new facilities we conclude that there will not be a deficiency in the firm peak day gas requirements until 1968. This is the same conclusion as that reached by the examiner and the California Commission. We conclude, as did the examiner, there will be no deficiency in the supplies to meet annual requirements until after 1968.

We find, therefore, that evidence of a need for this gas in about five years has been submitted, but, as we discuss below, we are not convinced by the evidence that the Rock Springs Project is the best or the most economic means of filling these future needs of the California market. As there will be no need for firm gas prior to 1968 above that available through minimum expansion of Transwestern and optimum use of El Paso's existing system, it does not appear that the necessity for bringing additional gas to California is so pressing as to justify our certificating this project without first exploring the possibility strongly suggested by the record that there are better ways of meeting California's needs for more natural gas.

(b) *Alternative means of serving California.*—The most important respect in which this project fails to meet the requirements of the public convenience and necessity is revealed in the evidence showing that other means of supplying the California market would probably be less costly. The principal evidence on this question was presented by Transwestern, although some evidence was introduced by El Paso and the staff. We shall discuss some of the alternative proposals below but before doing so make the general observation that these alternatives involve the use of existing facilities with additional compression, extensions and looping, rather than an entirely new pipeline. It is a question, then, of comparing the cost of transporting additional gas by these alternative means with the Rock Springs price of 37.9 cents per Mcf at 100 percent load factor. For this purpose the incremental costs of the alternative methods are more significant than the rolled-in costs, which would apply to the whole volume of gas already being transported over the alternative route in question because we are comparing alternative costs of supplying *additional* gas to California. In any case, we note that savings are shown even on the basis of rolled-in costs, which we quote. Of course, we are aware that building the Rock Springs line would result in a large amount of unused capacity available in the future, but there seems to be no good reason to perpetuate a status of excess potential capacity.

Also relevant to these comparisons is that CIG would sell gas to El Paso at a price unjustifiably lower than its other wholesale prices. In this respect the examiner finds that in designing its rate to El Paso, CIG employed a 3.75 cents per Mcf differential in the commodity factor in favor of El Paso as against its general service customers. In developing its rate CIG used a zone-gate allocation

method [10] by which the rates were computed as though the sales were made in Zone 1 and transportation costs were added for the sale to El Paso in Zone 2. In making the allocation in Zone 1, CIG imposed the differential in favor of the pipeline customers (including El Paso) as against the general service customers. The net effect of the differential is to allocate 1.6 cents per Mcf less cost to El Paso or approximately $1,000,000 a year.

The record shows no cost justification for the differential other than that CIG has offered a similar differential in the past to its pipeline customers, in order, apparently, to avoid controversies between the customers in northern Colorado and Wyoming and those in the Denver area.[11] We do not think that the history of CIG's rates based on considerations not relevant to the El Paso sale justifies extending the differential to El Paso as against the Rocky Mountain customers.[12] Thus in making comparisons, which are, of course, based on estimates only, it would be proper to consider that El Paso's price for its sale in California is 37.9 plus 1.6 cents per Mcf or 39.5 cents per Mcf.

Some of the alternative means of delivering gas to California are as follows:

(1) One alternative route, concerning which there is considerable record evidence, involves the use of Transwestern's pipeline, which now receives gas from the Panhandle area and the Permian Basin area and delivers it to Pacific Lighting. Transwestern's presentation as to this route is based on several alternative assumptions. Those in which it includes an additional 15 percent capacity to conform to its rate schedules [13] are, we believe, most valid for the purpose of comparison although this additional capacity slightly increases its cost. On this basis Transwestern presented evidence showing that with an additional investment of $2,253,000 its existing capacity could be increased from 350,000 Mcf/d to 402,500 Mcf/d and that with a further investment of $30,277,000 the system would be increased to its optimum of 640,000 Mcf/d.[14] For this 237,500 Mcf/d of additional gas there would result an incremental cost of 24.06 cents per Mcf and a "rolled-in" cost of 33.94 cents per Mcf at 100 percent load factor for the period 1964–1967 including an assumed purchased gas cost of 16.75 cents per Mcf reflecting its average cost of gas. Since Transwestern's system is located in proximity to large natural gas fields, we do not doubt that a gas supply will be available.

(2) Transwestern has also produced evidence showing that it could either transport 237,500 Mcf/d of CIG's gas to California, or alternatively that it could transport both CIG's gas and the additional 237,500 Mcf/d from El Paso.

Under the first assumption investment of $2,253,000 would be necessary, as before, to add the 15 percent peaking capacity and $35,650,000 would be required to construct a necessary 40-mile 22-inch pipeline to interconnect with CIG and to build additional compressor stations. This would result in incremental costs of

---

[10] An allocation method the Commission rejected in *Tennessee Gas Transmission Co.*, 27 FPC 202 (1962).

[11] See *Colorado Interstate Gas Co.*, 11 FPC 324, 361 (1952).

[12] See Natural Gas Act, Sections 4(b), 5(a), 7(e); compare Robinson Patman Act, 15 USC § 13 providing that it shall be unlawful to discriminate in price where the effect may be substantially to lessen competition or tend to create a monopoly.

[13] Under Rate Schedules CDQ–1 and LX of Transwestern's FPC Gas Tariff, First Revised Volume No. 1 the buyer, Pacific Lighting, is entitled to take 115 percent of the contract demand quantity, which is the average daily quantity of gas for which buyer has contracted to purchase. The contract demand quantity is 300,000 Mcf/d as set forth in Transwestern's service agreement with Pacific Lighting, so that Transwestern is obligated to deliver 345,000 Mcf/d to Pacific Lighting.

[14] The designed capacity of Transwestern's existing system is 350,000 Mcf/d, but it is actually capable of delivering 370,000 Mcf/d at 800 psig or over 400,000 Mcf/d at a lesser pressure without any additional construction.

transportation of 8.09 cents per Mcf for the additional 237,500 Mcf and rolled-in costs of transportation of 17.50 cents per Mcf at 100 percent load factor.

Under the second assumption, Transwestern showed that with an additional plant investment of $84,318,000 the whole 475,000 Mcf/d Rock Springs volumes could be transported through its system and there would be still available the 15 percent peaking capacity. This would include the 40-mile connection with CIG in Texas, a 108-mile connection with El Paso in the San Juan Basin, and additional compression and looping. On this basis, and at 100 percent load factor, the incremental transportation cost for the period 1964 through 1967 would be 8.46 cents per Mcf for the 475,000 Mcf of additional gas and the total transportation cost for the Transwestern contract demand and Rock Springs volumes would average 15.64 cents per Mcf for the period 1964 through 1967, declining to 14.41 cents in the latter year.

Transwestern does not include cost of purchased gas on these two assumptions but suggests using the price the Commission allowed in the Aneth Field of 17.7 cents per Mcf. *El Paso Natural Gas Co., et al.*, 23 FPC 369, 375. This assumption is conservatively high, for our area producer price in the Panhandle area of Texas and Oklahoma is 17 cents and in the Permian Basin is 16 cents (24 FPC 818, 820). Considering the Rock Springs price of 37.9 cents per Mcf at 100 percent load factor (and even more clearly after adding the 1.6 cents per Mcf representing CIG's discriminatory differential), it can be seen that effectuation of either of Transwestern's proposals should result in substantial savings to customers in California.

Using the proposed amount of Rock Springs gas of 475,000 Mcf/d, the annual saving would be $1,733,750 for each 1-cent price differential at 100 percent load factor (475,000 Mcf/d x 365 x .01). According to its evidence, if Transwestern transported all of the Rock Springs gas, its incremental price would be 8.46 cents plus 17.7 cents or 26.36 cents. The Rock Springs price is 37.9 plus the unjustified CIG differential of 1.6 or 39.5 cents at 100 percent load factor. The 13.14-cent difference would thus represent an approximate saving to gas consumers of $23,128,225 per year at 100 percent load factor.

Alternatively the computation can be made on the basis of total cost of all of Transwestern's sales. Transwestern's evidence sets forth that its cost of service for the present 350,000 Mcf/d with 52,500 Mcf/d of excess capacity would average 40.63 cents per Mcf for the 1964–1967 period, assuming a purchased gas cost of 16.75 cents per Mcf. As noted above the price for the 475,000 Mcf/d of Rock Springs gas would be 39.5 cents at 100 percent load factor (including the 1.6-cent differential). The rolled-in costs stated by Transwestern for the original 350,000 Mcf/d plus the 475,000 Mcf/d Rock Springs volumes plus 52,500 of excess capacity would be 33.34 cents per Mcf (transportation costs of 15.64 cents and purchased gas cost allowance of 17.7 cents). Savings would thus be 7.29 cents on the 350,000 Mcf/d or $9,312,975 annually and would be 6.16 cents on the Rock Springs 475,000 Mcf/d or $10,697,900, totalling $19,992,875 annually on this approximate basis.

We may observe before leaving Transwestern's proposed alternatives that permitting the Transwestern expansion will not leave the California market without a safety factor in case of increased needs because there are other means of delivering gas to this market, which may also serve as a safety factor. These are the alternatives discussed below.

(3) Another alternative indicated by the record evidence would employ the northern segment of El Paso's Southern Division. Utilizing the existing exchange agreement between El Paso and Northern Natural Gas Company, El Paso could purchase up to 200,000 Mcf per day from CIG for delivery to Northern Natural at Dumas, Texas. This delivery would be in partial repayment for the 475,000

Mcf per day which Northern Natural is delivering to El Paso at Plains, Texas. By construction of additional loops and compressor facilities on its Northern Division facilities west of Plains, El Paso could correspondingly increase its capacity and deliver the 200,000 Mcf per day at Topock. As the examiner points out, this gas could be delivered by El Paso in the same way it proposed to deliver 200,000 Mcf/d to Pacific Gas and Electric Company in accordance with applications filed in Docket Nos. G–15696 and G–18616. The price under this proposal was 33.38 cents per Mcf (at 14.9 psia and 100 percent load factor). These particular applications were withdrawn because it turned out that PG&E did not need the gas.[18]

The applicants variously criticize the presentation of the alternative projects. El Paso argues that the proposal presented by Transwestern employs only incremental costs and that even such costs are underestimated. As already stated, incremental costs are a proper measure of the savings arising from Transwestern's proposal; and in any event there are savings even on a rolled-in basis. El Paso and CIG also contend that Transwestern's costs are understated in that it computed incremental investment above a base of $206,000,000 although its original certificated facilities were constructed for about $181,000,000. In our opinion even if the $25,000,000 of additional facilities are not needed for the original deliveries, their prior construction goes to make the delivery of additional gas incrementally cheaper and the Transwestern proposal more attractive. And of course, in considering rolled-in costs the classification of the $25,000,000 is irrelevant.

The applicants also argue that the evidence of the alternative routes is highly speculative and impractical. They say, particularly, that there is nothing to show that CIG could or would supply gas to El Paso at Dumas or that Transwestern could obtain sufficient reserves of gas to make its proposed deliveries. The evidence on alternative routes and the discussion of the examiner thereon are, of course, based on estimates which are subject to an indefinable margin of error. They clearly would not be sufficient to support an application for such routes. However, in our opinion, these estimates are reasonable for the limited purpose of showing that ways of supplying gas to California probably exist which should be less costly than the proposed project. To certificate the Rock Springs project in these circumstances would be contrary to our obligation to carry out our responsibilities under the Natural Gas Act in such manner as to make gas available to consumers at the lowest reasonable rate.

(c) *Proposed service to the Rocky Mountain area*—With respect to service in the Rocky Mountain area we find that the record does not show that completion of the Rock Springs Project will satisfy the estimated needs for gas. For this reason the proposed service to the Rocky Mountain area does not give support to the project.

The record does not establish that the project would enable CIG to meet peak demands. CIG states that the daily delivery capacity of its Rocky Mountain system upon completion of the Rock Springs Project would be 725,000 Mcf/d.[19] This represents an increase of only 18,234 Mcf/d over the present capacity of 706,766 Mcf/d shown in the record, and is less than 2,000 Mcf/d

[18] There are still other alternative possibilities which, however, on a cost basis do not presently appear to be as favorable as those discussed above. See examiner's decision of December 18, 1962, *infra*, pp. 114–116. The staff introduced evidence as to a further alternative. This would involve use of the line of Pacific Gas Transmission Company and PG&E and would approximately double the present capacity of 450,000 Mcf/d.

[19] The basic exhibits and some testimony show a capacity of only about 710,000 Mcf/d, but the record indicates that some 15,000 Mcf/d is added by attachment of the Patrick Draw field.

above the 723,124 Mcf sales from the presently existing system on the highest peak day of the 1961–1962 winter.[17] In contrast the examiner finds that the peak day requirements of the Rocky Mountain area are as follows:

Winter Season	*Mcf*
1963–1964	753,770
1964–1965	760,060
1965–1966	764,970

CIG objects that the requirement figures include 35,000 Mcf/d for a proposed firm sale to Colorado Fuel and Iron Corporation which is subject to our approval. We think the examiner correctly included this amount even though a certificate was required because it represents a market need and is therefore a valid part of an estimate for the future. CIG offered to increase its capacity to serve the Rocky Mountain area in the amount of 100,000 Mcf/d with the additional expenditure of some $7,500,000. However, there is no application for such an expansion before us and such a proposal would not afford the necessary prompt relief to the Rocky Mountain area.

More important, on an annual basis the record leaves us without sufficient support for any finding that the project will benefit the Rocky Mountain area. As set forth by the examiner the Rock Springs Project requires CIG to furnish annually to the Rocky Mountain area 116,152,530 Mcf plus 3,558,750 Mcf from the Patrick Draw field or a total of 119,711,280 Mcf. On the other hand, the witness for Denver, whose estimates were accepted as reasonable by the examiner (a finding with which we concur) shows annual requirements as follows for the Rocky Mountain markets:

Year	*Mcf*
1963	175,795,590
1964	179,736,260
1965	183,376,220

On this basis CIG would not meet its requirements even if we add the proposed 100,000 Mcf per day or 36,500,000 Mcf per year at 100 percent load factor. CIG answers that it stated its reserves and its market requirements as of a given point of time, "plateauing" its firm sales and showing its interruptible sales for the then existing terms of its contracts. This is, of course, merely an admission that it has not taken future increases into account. While it does not show quantitatively that it would be able to meet the annual requirements of the Rocky Mountain area, its witnesses stated that the company intends to meet those requirements. However, such statements, unrelated to any showing of how this would be done or the cost thereof, do not serve to counter the showing in Denver's exhibits that the present project will fall far short of meeting the needs of CIG's own prime market.

(d) *Other issues relating to public convenience and necessity.* The examiner and the parties raise other questions with respect to the proposed project.

Interveners from the Rocky Mountain and Pacific Northwest states have argued that certification of the project will prevent imminent rate increases by CIG and the Pacific Northwest System presently being operated as a division of El Paso. The evidence supporting this argument with respect to CIG is based on the unrealistic assumption that if this project is denied CIG will have to replace the Bivins Line but will not at the same time seek other ways to improve the utilization, and hence the economy, of its system. With respect to the Pacific Northwest System, the argument is based upon unsupported statements of El Paso officials that a rate increase will be necessary if the present project is

[17] The record indicates that 18,295 Mcf of this was taken out of line pack.

not granted whereas one might not be necessary if it were. Presently the proper rates for the Pacific Northwest System are involved in a rate case in Docket No. G–13202. This filing was made on August 6, 1957, prior to the merger between Pacific Northwest and El Paso. No additional rate increases have been filed since the time El Paso took over operation of the Pacific Northwest System and no allocations between the Pacific Northwest System and the rest of the El Paso system have been determined, including, of course, any allocation of the proposed facilities to serve southern California. Nor can the eventual status of the Pacific Northwest System be determined in view of the pending antitrust action. Under these circumstances it would be pure speculation to accept the opinion of the El Paso officials as to the ultimate outcome of a new rate filing, if in fact one is ever made.

Even if we assume that grant of the present project would redound to the financial benefit of the Pacific Northwest System, either as a division of El Paso or as an independent company, this fact would not be determinative here. The principal purpose of the project is to serve the southern California market. If this could be done by the proposed project in a manner which would provide needed new service to southern California, at rates comparable to those achievable from other likely alternatives, the possible benefits to the existing customers of the Pacific Northwest System would be an important additional factor in the project's favor. We have found, however, that this is not the case; certainly there can be no justification for requiring the customers in southern California, for whose primary benefit the project is intended, to pay more for their gas supply than they otherwise would in order to benefit gas consumers in other parts of the country.

Another argument advanced as a reason for certificating this project was the expectation that it would stimulate exploration for additional gas reserves in Wyoming by providing a market for such reserves. Existing facilities already provide such a market. In granting the original certificate for Pacific Northwest Pipeline Corp. and the pipeline of CIG running east from Green River, the Commission pointed out that these lines should stimulate additional production in Wyoming. (*Northwest Natural Gas Co., et al.*, 13 FPC 221.) The existing Pacific Northwest line makes it possible to take Wyoming gas to California by going south to San Juan and then west through El Paso's main line. It also brings Wyoming gas to the markets of the Pacific Northwest. The line of CIG provides an outlet to the eastern markets for Wyoming gas. In addition the line of Mountain Fuel Supply Co. serving Colorado, Wyoming and Utah is undoubtedly capable of taking substantial amounts of Wyoming gas production. As far as we can ascertain, none of these existing lines has as yet been fully utilized as outlets for Wyoming gas.

As gas reserves become economically available in Wyoming, presumably Pacific Northwest and CIG will utilize them in preference to the relatively expensive Canadian gas used in much of the Northwest line and the San Juan gas purchased by CIG at Green River. It appears, therefore, that the necessary capacity and markets to stimulate production in Wyoming for the immediate future are already in existence and the next step in an orderly utilization of our natural resources and proper performance of our regulatory responsibilities would be to await the development of additional Wyoming gas rather than add another pipeline in the hope that it will provide the stimulation which existing pipelines have failed to do.

It has been contended that the proposed route of the project is circuitous. The examiner, following the staff brief, finds that a pipeline should run from the principal source of supply to the principal market with reasonable directness and that the proposal here violates this proposition and is therefore unsound.

He points out that the gas would travel approximately 1,252 miles from the Texas Panhandle Field to the delivery point near Las Vegas, Nevada, and similarly that El Paso proposes to transport gas from the San Juan Basin 300 miles north to Green River and then southwest 536 miles to the Las Vegas delivery point. He finds that the gas reserves committed to El Paso in the vicinity of Green River are not sufficient to support the Provo line. He also finds that there are uncertainties with respect to the availability of Canadian gas.

The problem here is essentially one of comparative costs and the purpose of the pipeline. Whether a proposed project involves a wastefully circuitous route for moving gas is not a question of the pattern formed by the pipeline on a map, but rather one of overall economy, considering the established location of present pipelines, the sources of the gas, comparative costs of moving the gas to market, and other factors. While the record does not make clear the extent to which future expansion of gas supplies in Wyoming may be anticipated, the applicants have shown that gas from that state would be used for Rock Springs. It appears also that gas from Canada would be available, either directly or by displacement. The proposed project, as El Paso argues, would serve to bring together gas from several sources and provide flexibility of operation. Furthermore, it would use the existing pipelines of CIG and Pacific Northwest. Therefore, it is not controlling in our view that a large part of CIG's contribution of gas would come from the West Panhandle Field of Texas, or that at times substantial amounts of gas would flow north to Green River from the San Juan Field. We thus do not find that the route is wastefully circuitous as argued by the parties.

In addition to finding, as mentioned above, that CIG has given El Paso an unjustified price differential, the examiner finds that the Denver and Pierce Compressor stations located between Denver and Cheyenne are not needed except for the sale to El Paso and should be allocated to the sale to El Paso, but we are of the opinion that CIG correctly cites the *Trunkline* case[18] to the contrary, for it states that "The Commission has consistently rejected allocation methods which would, in effect, assign costs of particular main line facilities to a specific customer."

On the economic feasibility of the Provo line the examiner finds that even assuming there is a market for the gas, El Paso has failed to meet the burden of establishing that the project is economically feasible, and, that if it is assumed that Edison ceases to be a customer of Southern California Companies, El Paso's portion of the Rock Springs project is hopelessly uneconomic. In our opinion the record indicates that with the Edison load El Paso's portion of the project would probably earn an adequate return by the third year. As pointed out by the examiner, El Paso did not introduce up-to-date exhibits with the Edison load included reflecting the cost of service applicable to the gas which it would deliver to Southern California Companies from the Provo line. Thus it is necessary to apply data relating to the years 1962, 1963 and 1964 to the years 1965, 1966 and 1967. On this basis and without the adjustments made by the examiner, the evidence shows a return of 3.9 percent for 1965, 4.5 percent for 1966 and the adequate return of 7.8 percent for 1967 in spite of the fact that only 475,000 Mcf/d of the Provo line's designed capacity of approximately 850,000 Mcf/d would be used by the contemplated project. If CIG's rate differential in favor of El Paso is eliminated, the return figures fall to 2.54 percent for 1965, 3.63 percent for 1966 and 6.9 percent for 1967.[19] Without the Edison

[18] *Trunkline Gas Company*, 21 FPC 704, 711.

[19] Of course, if the price to California is correspondingly raised as contemplated by the comparisons made above, the return figures would not be reduced.

load and eliminating the 1.6 cents per Mcf differential, return is reduced to 1.71 percent, 2.93 percent and 3.82 percent respectively.

There is nothing in this record, however, to show that Edison would not be a customer of the Southern California Companies for El Paso's gas if we were to certificate this sale. The possibility of its getting gas from the Pemex Project has now been eliminated. It is true that it has entered into an arrangement principally with the Humble Oil and Refining Company and other producers to purchase gas in Texas, and this is the subject of the application by Gulf Pacific in Docket No. CP63–223, but there is no evidence concerning Gulf Pacific before us at this time, the application having been filed long after the record herein was closed. As already noted, in this application there is proposed a pipeline to extend from the Texas Gulf Coast to California to carry gas purchased from the producers by Edison and the Department of Water and Power of the City of Los Angeles. However, these plans of Edison are dependent on the completion of that proceeding and the grant of required certificates by this Commission. For purposes of this proceeding no consideration may be given to the Gulf Pacific application.

The Tennessee Subsidiaries argue that El Paso, CIG and the Southern California Companies have violated the policy of the antitrust laws with respect to the California market. We are aware that "anti-trust considerations are relevant to the issue of public 'convenience and necessity' ". *California* v. *F.P.C.*, 369 U.S. 482, 485. However, because we find Rock Springs deficient in other respects and because any new project proposed by the present applicants would probably differ from it, there does not seem any reason to discuss it in relation to the policy of the antitrust laws. This is also true with respect to the matter now pending before the Supreme Court in *United States* v. *El Paso Natural Gas Co.*, No. 94, October Term 1962, jurisdiction noted May 24, 1963.

(e) *Conclusion on public convenience and necessity.*—The record is clear that there is no immediate need for a new pipeline to transport gas to California even though the California market is growing. At the same time the record shows that other ways of bringing gas to California appear to be less costly than that proposed by the applicants here. Certainly there is no need to preserve indefinitely the cheap expandibility of the Transwestern system at the cost of the California consumers. The other alternatives provide further expandibility as a protection to the California market needs. Thus we are compelled to deny the project, but we shall institute a further proceeding so that full consideration may be given to the other possible routes for transporting gas to California. In doing so we recognize that the applicants may no longer be able to hold together this particular project, or be able to reconstitute a similar project. However, if it turns out that there are substantial gas reserves in Wyoming and the needs of the market make it feasible to transport this gas to California rather than some other area of need, we are confident that means will be found to bring it about.

Initiation of Comparative Proceedings

Although we are denying certificates to the Rock Springs Project, in view of the expanding market for natural gas in Southern California and the need for substantial additional supplies beginning with 1968, we shall institute a proceeding to determine how the long term needs for natural gas deliveries to Southern California may be met in the manner which is most desirable from the standpoint of the public interest. In the new proceeding further opportunity will be given for the presentation of evidence on alternative methods for serving the Southern California market. These methods may include, in addition to the pending Gulf Pacific proposal, expansion of El Paso's Southern Division's

facilities, expansion of Transwestern, and the delivery of gas by PGT into Northern California as well as a line from the Rocky Mountain area to California. We do not exclude other possibilities. However, we reserve the right to exclude from the proceeding proposals for limited expansions by Transwestern and El Paso not involving construction of major facilities.

In view of this determination, we shall defer action on the application of Gulf Pacific in Docket No. CP63–223, and shall consolidate it with any other applications for major pipeline construction for the supply of gas to the Southern California market filed within three months of the issuance of this opinion and order.

The Bivins Line

In the course of the hearing evidence was developed that CIG's line extending from Denver, Colorado, to Bivins, Texas, is obsolete in design and has deteriorated. Engineering reports show that the line is Dresser coupled instead of being welded at the joints as in modern practice, and that it leaks at many of the couplings. In our opinion this line should be repaired or replaced irrespective of our decision in the Rock Springs Project. In fact, CIG has filed an application in Docket No. CP63–344 which proposes among other things a new 24 and 20-inch pipeline from Morton Junction, Colrado to Denver and to retire a major portion of the Bivins-Denver transmission line. Because of this filing, it is not necessary to take steps on our own motion to bring about rehabilitation and repair of the Bivins' line. Furthermore, we shall deny CIG's application in the present Docket No. G–16904 to abandon the line immediately. The record shows that the line has operated for some years in doubtful condition and could be operated for some purposes in an interim period.

The Commission further finds:

(1) El Paso and CIG are, and Pacific Northwest, if a separate corporation, would be, natural-gas companies within the meaning of the Natural Gas Act.

(2) The facilities which El Paso, Pacific Northwest and CIG propose to construct and operate and those which CIG has constructed and is operating under temporary authorization, as described in their applications, are for the transportation and sale of natural gas in interstate commerce for resale subject to the jurisdiction of the Commission and the construction and operation of such facilities and the proposed sales and deliveries of natural gas are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) CIG is able and willing properly to do the acts and to perform the service by means of the temporarily authorized facilities proposed by it; and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the temporarily authorized facilities as proposed by CIG and any sales subject to our jurisdiction to be made thereby are required by the public convenience and necessity, and a certificate therefor should be issued.

(5) El Paso, Pacific Northwest and CIG have not shown that the remainder of the facilities proposed and the sales to be made thereby are or will be required by the present or future public convenience and necessity or that the public convenience and necessity permit abandonment of the Bivins line.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued in Docket No. G–16904 authorizing CIG to construct and operate the facilities heretofore temporarily authorized in Docket No. G–16904, as described in CIG's application, and to transport natural gas as proposed therein and to make

any sales of natural gas subject to our jurisdiction affected by such facilities, upon the terms and conditions of this order.

(B) The certificate herein issued shall be accepted in writing by a responsible official of CIG. The general terms and conditions set out in paragraphs (a), (c) (insofar as applicable to facilities which have already been constructed), and (e) of Section 157.20 of the Commission's *Regulations Under the Natural Gas Act* shall attach to the issuance of the certificate. CIG shall file the applicable information called for by paragraph (c) of Section 157.20 within 30 days from the issuance date of this order.

(C) The application of CIG in Docket No. G–16904 is hereby denied in all other respects, including abandonment of the Bivins line.

(D) The applications of El Paso in Docket No. G–16235 and of Pacific Northwest in Docket No. G–16237, are hereby denied.

(E) Exceptions not granted herein are denied.

Commissioner Morgan *dissenting.*

MORGAN, Commissioner, *dissenting:*

The majority of the Commission, having deliberated since oral argument on February 21, 1963 concerning the preparation of the opinion, repeatedly revised, by which it hopes to justify the denial of certification in this case which it announced to a startled world by press release last May 1,[1] now insists that I prepare my dissenting opinion with impossible haste. Although the occasion giving rise to this sudden passion for speed has by no means been made clear to me I shall try to accede to it and, to the best of my ability in these circumstances, present my objections to the action of the majority in denying the certificate. It is my hope that the reader of this document will exercise some forbearance in his judgment of its style, clarity and completeness.

Most laymen who read the majority's opinion can be expected to conclude that this was merely a rather routine but puzzling case wherein the Commission refused to authorize an additional pipeline to serve the admittedly increasing demands of a huge and growing state, because (after subjecting that "expanding market" to hyper-critical scrutiny) it appeared that the proposal was premature—taking into consideration time for judicial review and construction—by a year or two.

But those people who read the majority's opinion and who realize the need for a pipeline system that would integrate the towering long-range demands of the far-western United States with the distant southwestern, Rocky Mountain and western Canadian natural gas fields, will probably wonder whether the Federal Power Commission knows what it is doing.

And those who know the history of this case, including the years of incessant pressure exerted by this Commission on El Paso Natural Gas Company to advance just such a proposal as is here rejected, will be rather sure the Commission does *not* know what it is doing.

* * * * * * *

The pipeline system linking the natural gas fields of the southwest with the market areas in southern California and the Pacific Northwest resembles a large, right-angled triangle. The westerly axis, running roughly north and south is represented by the lines of the Pacific Transmission and Pacific Gas & Electric Companies, running from the western Canadian fields southward to California;

---

[1] That press release contained this remarkable gem of understatement: "* * * because of the many complexities of the case, preparation of the formal opinion may require considerable additional time."

the base is formed by the lines of the Transwestern and El Paso companies running eastward from southern California across to the New Mexico, west Texas and Oklahoma natural gas supply field; and the hypotenuse is formed by the El Paso line that runs from the San Juan basin fields in a northwesterly direction through the Rocky Mountain supply region to the market centers of the Pacific Northwest and thence northward to the gas fields of Canada.

At a point about in the center of that hypotenuse line, specifically at Rock Springs, Wyoming (in the middle of the Rocky Mountain gas reserves), the applicants herein propose to run an additional line straight southwestward to the southern California market—exactly bisecting, as it were, the existing, grand pipeline triangle. Thus, by virtue of this single new connection with the (hypotenuse) line running from Canada through the Rocky Mountain area to the southwest, the insatiable gas market of southern California (long dependent solely upon southwestern reserves) would at last be linked by a single new connection to new sources of Rocky Mountain, Canadian, southwestern, and (through Colorado Interstate facilities described later) Kansas-Hugoton gas reserves.

To portray the need for and the logic of the proposed Rock Springs line, it is necessary briefly to review the development of natural gas pipeline service to California; the difficulty that El Paso has experienced in obtaining reserves necessary to sustain present and future levels of that service; and the basic pipeline network that presently exists.

El Paso Natural Gas Company entered the southern California gas market shortly after California's own supply of natural gas began to fall short of market demands. Under a certificate granted by this Commission in May 1946, El Paso constructed a 1,000-mile pipeline (the original, base line of the triangle) extending from Dumas in west Texas to Blythe in southern California, for the sale of gas from the Permian and Panhandle fields in Texas to the Southern California Companies.[2] El Paso's second major step was taken when it effected a complete looping of that base line, and constructed a lateral therefrom to deliver gas at Topock from the Permian and Panhandle fields to the Pacific Gas & Electric Company (serving central and northern California), under an authorization granted in February 1949.[3] Thereafter, and as the demands of the California market expanded, El Paso continued to expand its transportation facilities and, until 1960,[4] to serve as the sole supplier of out-of-state natural gas to California.

But unlike the market demands of Southern California, El Paso's supply reserves are not unlimited. The (out-of-state) natural gas fields closest to California are in the San Juan basin, the Aneth field, and the Permian basin—all in the southwest. These fields now constitute southern California's chief source of supply; they are among the oldest fields in the country; for years they have supplied some of the largest consumer areas in the country in addition to El Paso's California markets; and the enormous daily withdrawals from these fields constantly lessens their productive lives.[5] Accordingly, early in the 1950's it became evident that El Paso would have to obtain additional sources of reserve supply if it were to keep pace with the ever-increasing demands of its California market.

---

[2] 5 FPC 115.

[3] 8 FPC 992.

[4] As explained later, in 1960 the Commission authorized the construction of lines to deliver Canadian gas to northern and central California, and southwestern gas to southern California, by the Pacific Gas Transmission and Transwestern Pipeline companies, respectively.

[5] 22 FPC at 1124.

The most obvious supplementary source was the Pacific Northwest Pipeline (the hypotenuse of the triangle), certificated by the Commission in June 1954.[6] That line, extending from the San Juan basin in New Mexico to Pacific Northwest's primary market in the northwest, was supported by Pacific's gas reserves in New Mexico, Colorado and Wyoming. Also, the Commission pointed out, that line—

> * * * traverses three large sedimentary basins in the States of Colorado, Utah and Wyoming in which there has been only minor development due to the lack of a market. It is common knowledge * * * that development of this potentially productive area will be retarded unless stimulated by a market outlet.[7]

El Paso moved immediately to obtain supplementary sources of that Canadian and Rocky Mountain gas for its California market through Pacific's facilities. In November 1955, when Pacific was authorized to expand its system to import about 300,000 Mcf/d of gas from Canada,[8] El Paso therein also received authorization (in G–8932) to obtain about 100,000 Mcf/d of Canadian and Wyoming gas from Pacific Northwest under an exchange arrangement. That gas, plus additional quantities obtained from the Permian and San Juan basins, provided El Paso with the supply needed to meet the increased demands of its California and other (on-route) consumers at that time.

But it did not provide much more. "In fact," the Commission pointed out—

> the record shows that the three California companies will have requirements for larger volumes of natural gas at a very early date in excess of the supply from their present California sources and the total gas which El Paso will be delivering to them under its present proposal.[9]

El Paso was well aware of this: its own proposal to provide the needed "larger volumes" had been rejected! In this same docket, El Paso had originally proposed to construct a new line (a parallel of the presently proposed Rock Springs line) to convey Canadian gas purchased at Pacific's compressor station No. 11 near Mountain Home, Idaho, to a point just above the elbow of the California-Nevada border near Reno; and there to deliver the gas to Pacific Gas & Electric for delivery to the Southern California Companies. But PG&E refused to accept delivery at any point other than Topock, far to the south on the Arizona-California boundary; Pacific Northwest had to sell that gas at other points on its system instead; and the Commission refused El Paso's request to reverse the examiner's ruling rejecting all El Paso's evidence on the several alternative methods of providing additional quantities of gas to the California market.[10]

The inability of El Paso's southwestern reserves to sustain the demands of its California market became increasingly evident in the years that followed. In December 1956, for example, (in authorizing El Paso to loop its southern facilities to deliver additional quantities of gas to southern California), the Commission felt constrained to comment as follows:

> The record demonstrates that the additional gas supplies acquired by El Paso will be adequate to serve the three California utilities with the additional 151,725 M.c.f. per day on a firm basis for a period of 15 years.

---

[6] Commission Opinion No. 271, at 13 FPC 221. In the same proceeding the Commission also authorized Colorado Interstate to construct its 365-mile, Wyoming transmission line (which figures in the subject proceeding). It ran from a point on Pacific's line near Rock Springs, Wyoming, eastward across Wyoming and directly south to Denver, Colorado; and carried 100,000 Mcf/d of gas the Commission therein authorized CIG to purchase from Pacific, eastward and south to CIG's Rocky Mountain customers.

[7] 13 FPC 230.

[8] Commission Opinion No. 289, at 14 FPC 157.

[9] *Ibid.*, at 169 (November 1955).

[10] 20 Fed. Reg. 7173–75 (September 24, 1955).

> On this basis, El Paso's ability to meet its system requirements is left unaffected by its proposal in this proceeding. Staff opposes issuance of the certificate, however, for the reason that the evidence does not show that El Paso will be able, commencing in 1959, and thereafter, to supply gas to meet its estimated system requirements. * * * [We] are [not] unmindful of the serious problem facing El Paso with respect to its ability to meet its system requirements. The record conclusively demonstrates that after 1958 the requirements of present customers will exceed El Paso's ability to supply gas to them. This, of course, is of serious concern not only to El Paso but to ultimate consumers in California and elsewhere on the El Paso system. * * * [We] shall require in the next certificate proceeding which El Paso has before us, that it present a definite program demonstrating how its future system requirements are to be met and how the ultimate consumers will be protected.[11]

When El Paso's next certificate application came before the Commission in March 1958,[12] the Commission observed that "the evidence shows that, with its supplies of gas now certificated, El Paso will be able to meet in full the estimated market requirements for natural gas of its existing customers only through 1963"; and accordingly it remanded the question of the sufficiency of El Paso's reserves to the examiner.

The examiner issued his decision in May 1959.[13]

> California has had a very large increase in its population and in its industry," he reported, "and this area will constitute an ever increasing market for natural gas. * * * El Paso as a matter of business necessity must obtain well over a trillion cubic feet of deliverable gas per annum just to stand still, i.e., to maintain the present balance of reserves relative to requirements. * * *
>
> The adequacy of gas supply is a relative matter, and adequacy can only have meaning when related to requirements. Every time El Paso increases its requirements there must be an increase in gas supply in order to maintain the balance which existed theretofore between these two elements and when supply is not adequate relative to requirements the company will have to buy more than an incremental amount in order to reach a reasonable relationship between reserves and requirements. To improve materially the present relationship between supply and requirements, it would be necessary for El Paso to acquire well over a trillion cubic feet per annum even if it did not obtain any additional authorizations from the Commission to sell more gas.[14]

The examiner concluded that El Paso's available reserves were barely enough to support this particular sale. Affirming the examiner, the Commission (again) observed that:

> * * * it is clear that any future authorizations to El Paso will have to be based on additional reserves in excess of the annual increments necessary to maintain the existing minimum balance for its present services.[15]

Further on this point, in its Order Denying Rehearing, the Commission stressed that—

---

[11] 16 FPC 1356, 1356–57.

[12] Docket Nos. G–11797 and G–12580, at 19 FPC 393, involving applications for the construction of additional facilities for the delivery and sale of additional quantities of southwestern gas to southern California.

[13] 22 FPC 906.

[14] *Ibid.*, at 951.

[15] 22 FPC 900 at 904.

> El Paso * * * has only a bare minimum of reserves and is experiencing difficulty in maintaining and adding to these reserves. The entire record shows that in the area served by El Paso there is a great need and demand by all types of customers for additional gas.[16]

El Paso's efforts to obtain and to connect needed "additional reserves," which efforts form the basis of the Rock Springs proposal here rejected, are well known. In brief, they involve (1) El Paso's application in the summer of 1957 to merge with and thereby acquire access to the southwestern, Rocky Mountain and Canadian supply sources of the Pacific Northwest (hypotenuse) pipeline; (2) El Paso's proposal, filed in September 1958, to connect those additional reserves with the southern California market by the shortest route possible—namely, by a line running from Rock Springs in the center of the Pacific Northwest line directly down to southern California; and (3) El Paso's application filed in December 1958 to purchase Canadian gas through the Canada-to-California line simultaneously proposed by Pacific Gas Transmission Company (the westerly leg of the triangle), and to transport that Canadian gas to southern California via the Pacific Northwest and Rock Springs lines.

To protect the feasibility of these arrangements, El Paso intervened in the proceedings involving Transwestern's proposal (filed during the period April to September 1958) to construct a new pipeline to parallel El Paso's lines from the Panhandle and Permian basins in the southwest to southern California. As certificated by the Commission, Transwestern was authorized to deliver 300,000 Mcf/d to the Southern California Companies through a line having an initial capacity of 350,000 Mcf/d and a potential of 640,000 Mcf/d. In this Transwestern proceeding, El Paso asked the Commission in March 1959 either (1) to find that the Southern California Companies' requirements would support both the volumes Transwestern would deliver and the volumes El Paso would deliver over its Rock Springs line; or (2) if it did not make that finding, to consolidate the Transwestern and Rock Springs applications for a comparative hearing. *The Commission refused.* Granting that request (filed two days, before the close of the Transwestern hearing), it said, would delay the proceeding. Anyway, the Commission added, project—

> exclusivity is not an automatic inference where *the area to be served has demonstrated capacity in the past for absorbing substantial increments of natural gas* and two or more applications sought to be consolidated have been filed at a considerable time from each other. [Emphasis supplied.][17]

In his decision issued July 1, 1959, approving the Transwestern proposal, the examiner announced that as to the needs of southern California market, the evidence showed that the Transwestern and Rock Springs lines combined would not fill the requirements of the southern California market. In the examiner's own words—

> This record is replete with evidence that both the Transwestern and the El Paso [Rock Springs] quantities of natural gas are urgently required to meet the heavy actual and anticipated growth in peak-day firm demand experienced in this market area, also that in the very near future the Gas Supply Company, and its affiliated companies, the Southern California Companies, will require additional quantities.[18]

Affirming, the Commission (on August 10, 1959) stated:

> we * * * adopt so much of the examiner's decision as treats of the need for this gas in the Southern California markets.[19]

---

[16] 23 FPC 213 (January 1960).
[17] 21 FPC 594 at 596 (April 28, 1959).
[18] 22 FPC 407 at 413.
[19] 22 FPC 391 at 393.

Next, on December 23, 1959, the Commission unanimously affirmed the examiner's decision[20] approving the El Paso-Pacific Northwest Pipeline Company merger. The merger was particularly desirable, the Commission said, for the reasons (among others) that "the record shows * * * that California has a continuing and increasing demand for gas, and is now importing in excess of 2,000,000 Mcf per day"; that "present sources of supply for this imported gas are the San Juan Basin, the Aneth Field, the Permian Basin and the Panhandle area of Texas"; that "El Paso is in need of additional supplies of gas in order to continue rendition of service to California"; and that "the merger constitutes a step in the direction of increased supplies of gas."[21]

As to the claim that "the merger will not make the gas supplies of Pacific's system available to El Paso's present customers * * * without the construction of extensive pipeline facilities," the Commission said, "in any event, if the continuing increased demands for gas in California are to be made available, new construction must be undertaken by El Paso or some other company."[22] Further, the Commission asserted, "* * * we cannot appraise the proposed merger from a narrow viewpoint but must look to the future when gas supplies north of El Paso's present system become more important as Permian and San Juan reserves decrease and when additional facilities are built to provide free movement of gas north and south."[23]

The following August,[24] the Commission also approved (a) the proposal of Pacific Gas Transmission Company and its parent, Pacific Gas & Electric Company, to construct a line from the Canadian border south to Antioch near San Francisco to serve the northern two-thirds of California; and (b) El Paso's purchase of 50 million Mcf of Canadian gas annually from Pacific Gas Transmission at a point near Spokane, Washington for sale (by displacement) in southern California. As the examiner in the Pacific Northwest Pipeline-El Paso merger proceeding brought out,

> * * * the purchase of this additional quantity of Canadian gas was only feasible because the gas could be transported and sold to El Paso for delivery to Southern California Companies by means of the Provo-Las Vegas [i.e., Rock Springs] pipeline.[25]

As to the needs of the southern California market, the examiner in this Pacific Gas Transmission-El Paso proceeding found—

> * * * that El Paso not only has a market for the Canadian gas to be supplied to California by displacement, but [it also] has an immediate and pressing need for such resources, which, the record shows, are not obtainable elsewhere.[26]

And the Commision affirmed him. So for the foregoing reasons, and for other reasons discussed later, the examiner, the Federal Power Commission, and the California commission unanimously approved the Rock Springs project when it came before them in the latter half of 1960.

In the words of the United States Supreme Court, the function and responsibility of the Commission in certificate matters such as this one is as follows:

> The Commission is the guardian of the public interest in determining whether certificates of convenience and necessity shall be granted. * * *

> [I]ts function is * * * to determine from its analysis of the total situation on which side of the controversy the public interest lies."[17]

It is necessary briefly to describe "the total situation."

The Rock Springs pipeline project has five main advantages and benefits. First and foremost it is a proposal whereby the vast and rapidly increasing natural gas requirements of southern California may be linked with the gas reserves of the Canadian, Rocky Mountain, southwestern, and Kansas-Hugoton natural gas fields by a single new line. It would do this by extending a single new line from southern California, 500 miles in a northeasterly direction to Rock Springs, Wyoming, where—

(a) because Rock Springs is located in the middle of the Rocky Mountain gas fields, the new line would make Rocky Mountain gas reserves available to southern California; and

(b) because Rock Springs is located in the middle of the line whose northern end extends to Canada, the new line would make Canadian gas reserves available to southern California; and

(c) because Rock Springs is located in the middle of the line whose southern end extends to the southwest, the new line would make additional southwestern gas reserves available to southern California; and

(d) because Rock Springs is located at terminus of Colorado Interstate's system that extends eastward to the Kansas-Hugoton fields, the new line would make Hugoton-Panhandle reserves available to southern California.

To say that this multi-faceted reserve supply feature solely and sufficiently justifies the Rock Springs project would be to employ the most restrained form of understatement. Suffice it to say that this Commission has long and rightly insisted that the public interest *requires* that the southern California market be provided with supplementary natural gas reserves; and that the Rock Springs proposal responds to and fulfills that requirement in a manner far surpassing the highest expectations.

Yet the Rock Springs proposal has four other major benefits. And each of them, subsidiary though it may be to the central long-range reserve supply purpose of the project, possesses public interest features of substantial magnitude and is considerably to be desired for its own sake, as will be seen. Thus, the second major benefit is that by providing Rocky Mountain gas reserves with a direct and open outlet to southern California, the Rock Springs proposal would give further impetus to the development and discovery of additional Rocky Mountain gas. That these reserves are already of vast magnitude, even though inadequately explored because of present lack of markets, is too well known to require documentation.

Third, by providing a central point at which gas from the Canadian, Rocky Mountain, Hugoton-Panhandle, and San Juan areas can be pooled, controlled and dispatched, the Rock Springs project would provide the economies of all (related) regions, presently dependent upon gas from a single source, with the assurance and flexibility of continued supplies from any one of several different areas in the event of a shortage or disruption in existing service patterns. Moreover, the project would make the increasing reserves of Canada and the dwindling reserves of the southwest increasingly *available* to southern California, without making that area increasingly *dependent* upon either. This fact has long-range rate advantages to southern California which have been ignored in the present proceeding.

Fourth, by employing the under-utilized northwest-southwest pipeline to bring gas south from Canada and north from the San Juan basin for southern

[17] *U.S. v. Detroit Navigation Co.*, 326 U.S. at 241 (1945).

California, the Rock Springs project would improve the revenue position of that presently under-utilized line and minimize the present probability of rate increases which will be inescapably damaging to the economies of the several states it traverses and to the welfare of the public it serves.

Fifth, by providing Colorado Interstate with additional markets for its gas and through-put for its lines, the Rock Springs project would give CIG the additional sales base that would enable it, without increasing rates, to replace its ancient, hazardous Panhandle-to-Denver artery with a new 360-mile line. Conversely, denial of the certificate will require CIG to replace that line at the sole expense of its Colorado customers, who will unquestionably be faced with a consequent rate increase.

This, in brief, is "the total situation" to which this Commission was required to address itself. This, then, is "the total situation" which this Commission must find to be or not to be in the public interest.

As the history of large-scale, venturesome undertakings shows, the feasibility of a project involving long-range planning and subsidiary benefits of the scope and magnitude of Rock Springs, cannot be determined by splitting it asunder and testing each of its integral parts by legalistic standards and attitudes developed to meet the problems of the past. But naturally, a venture having the magnitude and benefits of Rock Springs may be expected to generate a strong opposition from rival communities and promoters. And we may expect those rivals to demand that it be criticized, analyzed and judged by every conceivable rule and standard however picayune.

That is the situation here.

First, as noted later, this project has already been certificated (conditioned upon approval of the California Public Utilities Commission) by FPC. And approval of the California commission has been granted on two occasions. At the present time and in this proceeding the Rock Springs project is supported by the Southern California Companies, whose utility responsibilities require them to assure themselves of long-range gas supply reserves; by the City of Los Angeles, California because the economic sustenance and growth of the third largest city in the Nation dictate that additional reserve supplies be made available; by the Public Service Commissions of the States of Nevada, Utah, Wyoming, Idaho, Oregon, and Washington because the sale of the gas, the development and discovery of additional gas supply reserves, the construction of the new line, and the utilization that the project would make of the existing transmission system, is necessary to the economic health, industrial growth, and general welfare of these states; by the largest public customer of Colorado Interstate, namely the Public Service Company of Colorado and its subsidiaries, the Colorado-Wyoming Gas Company and the Pueblo Gas and Fuel Company, because they are anxious to obtain improved service from and avoid rate increases by CIG; and by the City of Colorado Springs, Colorado, presently served by and exposed to CIG's ancient and hazardous Bivins-to-Denver line, because it also is anxious to obtain the improved service, to avoid the rate increases, and to enjoy the related benefits that the CIG portion of the Rock Springs project would provide.

On the other side, the Rock Springs project is opposed by the Tennessee Gas Transmission Company because it or its subsidiaries want to build a new transcontinental line from the Atlantic Coast of Texas for the sole purpose of selling Atlantic Coast gas as boiler fuel to the Southern California Edison Company, which has always been supplied by the Southern California Companies, with resulting rate benefits (due to the size of the Edison boiler fuel sale), to the household consumers of Southern California; by Edison itself because it wants and is determined to get its own independent gas supply

service, even though more costly; by Transwestern Pipeline Company because it believes its existing line from the southwest could be used to meet southern California's additional requirements for the next two or three years; by Denver and by the Colorado Public Utilities Commission ostensibly because they claim to believe CIG will neglect its utility responsibility in Colorado if it participates in the Rock Springs project; and by this Commission's staff for a series of individual reasons too numerous, complex and trivial to enumerate; and finally by the California oil companies because they fear that the availability of the needed natural gas supplies to southern California will diminish their sales of oil.

It is very difficult (and the majority opinion does not make the attempt) to state flatly that all *or any* of these objections are based on a sound, factual elucidation of the public interest.

The application for this project was filed five years ago, during the summer of 1958. Two and one-half years later, it was unanimously approved, unscathed, by and with the blessing of this Federal Power Commission. Then and there, on December 27, 1960, this Commission ordered—conditioned *only* upon the California commission's approval of the portion of the line to be built by the Southern California Companies to receive this Rock Springs project gas—that this entire project "shall be constructed and placed in operation within eighteen months."[28] The Commission reached its unanimous decision on the basis of a lengthy hearing record, briefs, and reply briefs, an extensive and highly affirmative examiner's decision,[29] exceptions thereto by all interested parties, a lengthly oral argument, and more than due deliberation.

Unfortunately, time does not here permit an exposition or recital of the public interest aspects of the Rock Springs proposal which compelled this Commission to find this project to be overwhelmingly in the public interest. It therefore will again suffice to say (for that record, decision, and opinion speak for themselves) that the examiner and the Commission exhaustively covered and considered each and every objection raised against the project, however picayune, myopic and unimaginative, and including those now seized upon by the present majority, weighed them, and found each objection wanting. There as here, of course, some of those objections were beneath administrative notice.[30]

Next, despite the fact that the California commission was only concerned primarily with the immediate need of the southern California market for this Rock Springs gas and the economic feasibility of the intrastate segment of the line to convey it to the southern California load centers, the California commission unanimously found the entire Rock Springs project to be in the public interest not once, but twice; and its reasons for so doing so were affirmed by the

---

[28] 24 FPC 1137 at 1146.

[29] 24 FPC 1147 (July 15, 1960).

[30] The examiner's treatment (at 24 FPC 1180) of one of the Colorado PUC's major objections to the project is illustrative.

> The reversal of the flow of the gas in the Green River line * * * together with the extension of its system to Salt Lake City (Provo, Utah) opens up to Colorado an avenue of new gas service to the west and to California—a market which is notoriously hungry for gas. Colorado has not released or reduced any of its facilities or connections with markets to the eastern areas of service; it has merely opened new westward markets. In cooperation with El Paso it has become a supplier of the southern California market. It has been demonstrated that there is substantial economy to the Rocky Mountain areas flowing from the participation of the California customers in the costs of the newly oriented system. The Brief of the Colorado PUC is particularly erroneous in speaking of the possibility that the Rocky Mountain customers could be required to pay for the capacity of [CIG's existing Denver to] Rock Springs line twice. Counsel certainly knows better.

Supreme Court of California and left undisturbed by the Supreme Court of the United States.

On February 21, 1961, however, this Commission granted a rehearing of its (December 27, 1960) approval, for the sole purpose of determining whether the "changes made" [21] in the Rock Springs project to meet the intrastate requirements of the California commission would alter the basic project proposal previously approved by this Commission.[22]

Eventually, and on the basis of their recently filed (and subsequently withdrawn) "Pemex" proposal to build a new line from Texas through Mexico to southern California for the transmission of gas to Southern California Edison Company, the subsidiaries of the Tennessee Gas Transmission Company were allowed to intervene in the rehearing.[23] The "hearing," if it can be called that, thereafter became an administrative shambles, as TGT counsel was allowed to ransack every crevice and cranny throughout the entire foundation and framework of this thrice-approved project. The entire performance, it must sadly be said, revealed the administrative process at its worst.[24]

The examiner's decision came forth on December 19, 1962. Its contents are well-known. It is based on the negativistic assumption that if an infirmity can be shown in any of the many separate elements comprising the entire proposal, the proposal must be rejected in its entirety. Then, quoting large tracts of the Tennessee Gas subsidiaries' brief to support a finding that such infirmities exist, the examiner discards the proposal.

To their credit, my colleagues have rejected many of the examiner's arguments—and I use the word "arguments" advisedly.

---

[21] Which "changes," our order of July 21, 1961 explained, "concern only the time at which such [Rock Springs] facilities will be constructed."

[22] That this was the sole purpose of rehearing is evident from that Order Granting Rehearing and the dissent thereto, both dated February 21, 1961, in this Docket No. G–16235, *et al.* The implication of the majority's claim (here) that such order "granted rehearing without limitation" is entirely misleading; and is entirely belied both by that Order and by the thrust and tone of the procedural orders subsequently issued herein.. The same must be said of the majority's insinuation that rehearing was granted "to permit questioning * * * regarding alternative routes."

[23] Order of September 13, 1961 Granting Application for Rehearing of the Commission's Order (of July 21, 1961) Denying Intervention. Twice before, however, the Commission had ruled that proposals such as the TGT subsidiaries' "Pemex" proposal were contrary to the public interest. See Commission Opinion No. 315–A at 21 FPC 138 (1959), affirmed U.S. Supreme Court; and Opinion No. 333, at 22 FPC 900 (1959).

[24] Late in April 1961, however, the case was shocked from the torpor into which it had fallen, by the discovery that the Washington, D.C. hotel room of El Paso's Rock Springs counsel had been electronically "bugged" for the purpose of eavesdropping on the attorney-client discussions held therein. The extent to which that episode affected the subject proceedings remains unknown, however, for the officials of the Tennessee Gas Transmission Company invoked their privilege against self-incrimination during the limited grand jury proceedings that followed.

Another development, equally unrelated, was the April 1962 ruling of the Supreme Court in *California* v. *F.P.C.*, to the effect that this Commission should reconsider its 1959 approval of the El Paso-Pacific Northwest Pipeline Company merger, for the reason that the Commission should not have approved it until the Department of Justice concluded its (unsuccessful) attack upon the legality of that merger. As the central question in the subject proceeding is whether the proposal to provide southern California with reserve supplies of natural gas by means of the Rock Springs proposal squares with the public interest, the question whether that line (from Rock Springs, or Provo, to southern California) should be owned by El Paso or by Pacific Northwest (each of which is maintained on a separate accounting basis) may be pursued when the merger question again comes before the Commission for approval. The allusions of the majority opinion to that matter are, as admitted therein, absolutely irrelevant to this proceeding.

But the majority's opinion is an absolute paradox.

Having spent the past eight years upbraiding El Paso for basing each of its major certificate applications on only that increment of additional gas reserves necessary to sustain only that increment of additional demand which it proposed to meet immediately, the Commission now rejects El Paso's proposal to obtain long-range reserves in excess of the additional service immediately needed, for the reason that that increment of additional service immediately needed—and only that increment—(naturally) could be provided more cheaply by some "alternative means"!

But the paradox is greater. It is greater because the "alternative means" the Commission here nominates for rendering that immediate increment of service, is none other than the Transwestern Pipeline Company; yet, when previously requested to do so by El Paso, the Commission refused to hold a comparative hearing on the question of whether such service should be rendered by Transwestern or by the Rock Springs proposal![35]

But the more grievous error, and the absolute error, that underlies the majority's false cost comparison—and to use its own words it is "subject to an indefinable margin of error"[36]—is that is compares the cost of gas obtained through a project having a capacity of about 800,000 Mcf with the cost of gas obtained through an incremental proposal having a capacity of only about 400,000 Mcf; and, with no attempt to estimate the cost of the new facilities that will soon be needed to provide the additional 400,000 Mcf (discounted to the extent necessary for premature construction), it rejects the larger proposal because it is more costly than the smaller. In sum, the majority has rejected the Rock Springs proposal on cost grounds alone, but it has employed a totally inappropriate standard in doing so.

Throughout its discussion of this project, the majority opinion betrays an obsession with, and constantly returns to consideration of, the possible effect on the Rock Springs project of the loss of the Edison boiler fuel load. On what can such an obsession be based? It can only be based on the defunct proposal, voluntarily withdrawn by Tennessee, for the Pemex project. *That is not before us.* It is, in fact, dead at the hands of its own sponsor. The only other source of such a discussion is the Gulf Pacific proposal, also sponsored by Tennessee. *But that was not before us in this proceeding.* Having refused El Paso when it sought to turn the Transwestern certificate case into a comparative hearing with Rock Springs shortly *before* conclusion of the Transwestern case, how can we now deny this certificate on grounds which clearly show the Commission is consciously or unconsciously giving comparative consideration to a proposal filed *after this proceeding terminated!*

In any case the California Public Utilities Commission, whose job it is to protect the California consumers who will pay for needed future gas reserves and pipelines, held that this Rock Springs project is required by the demands of California consumers and will be economically feasible *with or without the*

---

[35] See Dissent, page 98.

[36] I wish to warn the reader that he should read the phrase "indefinable margin of error" with caution. It does not mean, as it may seem to the casual reader to mean, that the error is slight or insignificant. It means exactly what it actually says: that the majority makes no pretense of knowing whether their errors of computation are of minor *or of major* magnitude. Without going into the mathematics involved I suggest that, because the majority is comparing rates based on incremental use of existing capacity for the supply of moderate, short-term increases in demand, on the one hand, with rates based on new construction and new reserves which will unquestionably be needed in the near future for long-term increased demand *after short-term demand has been satisfied*, on the other, the chosen approach itself guarantees that the "indefinable margin of error" is inescapably of major dimensions.

Edison load. The majority opinion itself clearly shows the same finding, even without that load, after the usual short initial period of market development. So why the preoccupation with the Edison load? Not only is such preoccupation grossly improper, being based on extra-record developments not before us; it is pointless and senseless by the majority's own findings as well as those of the California commission.

There are many aspects of the majority's unique—to use a kindly word—handling of this proceeding and the rather self-conscious opinion by which it seeks to justify itself, but time will not permit as thorough an exploration of all those aspects as is richly merited. I would like to comment on one aspect, however, which the majority, with more or less becoming modesty, has buried in an obscure paragraph of the opinion rejecting this proposed construction. "In doing so," they say, "we recognize that the applicants may no longer be able to hold together this particular project, or be able to reconstitute a similar project."

This passage deserves expansion.

After years of repeated and increasing pressures and exhortations by this Commission to do so, El Paso, joined by CIG, secured vast reserves of gas in Canada, the Rocky Mountains, the southwest and in the Texas-Oklahoma Panhandles and in Kansas, and dedicated those reserves to the most rapidly-growing market in the United States—that of southern California. This was done prior to 1958—more than 5 years ago. It is reasonable to suppose, that, as experienced pipeline operators, they knew what they were doing—and moreover they had been told by this Commission to do it. Further still, their proposal was approved by this Commission in 1960 and twice by the direct representatives of the California consumers: the California Public Utilities Commission. So it is reasonable to suppose that these acquisitions were made prudently and with business acumen.

But anyone who supposes this was done without cost to the companies—and the lay reader is left free to make such a supposition by the majority opinion—does not know the natural gas business. The acquisition of these reserves and their retention in readiness for the Rock Springs project could only be done at great and continuing cost to the companies.

What was the cost? The majority opinion does not say. It does not say that the reason the companies "may not be able to hold together this particular project" is because even these large companies cannot continue to sustain such heavy expenses after more than 5 years of sustaining them without income already. It does not explain who will bear the burden of these sunk costs now that the Commission has reversed itself and killed a type of project it insisted for the past 8 years was needed and which it approved prior to these proceedings.

I have asked my colleagues what these expenses amount to and they have been unable to tell me. I have asked the staff to supply me with the figures and have not received them. I have asked for a study showing the rate impact on existing customers of these sunk costs which will be irretrievably lost if this decision is not reversed by the Commision on rehearing or by the courts, and I have yet to receive it. I can only suppose—with good grounds—that my colleagues are as much in the dark on this score as I am.

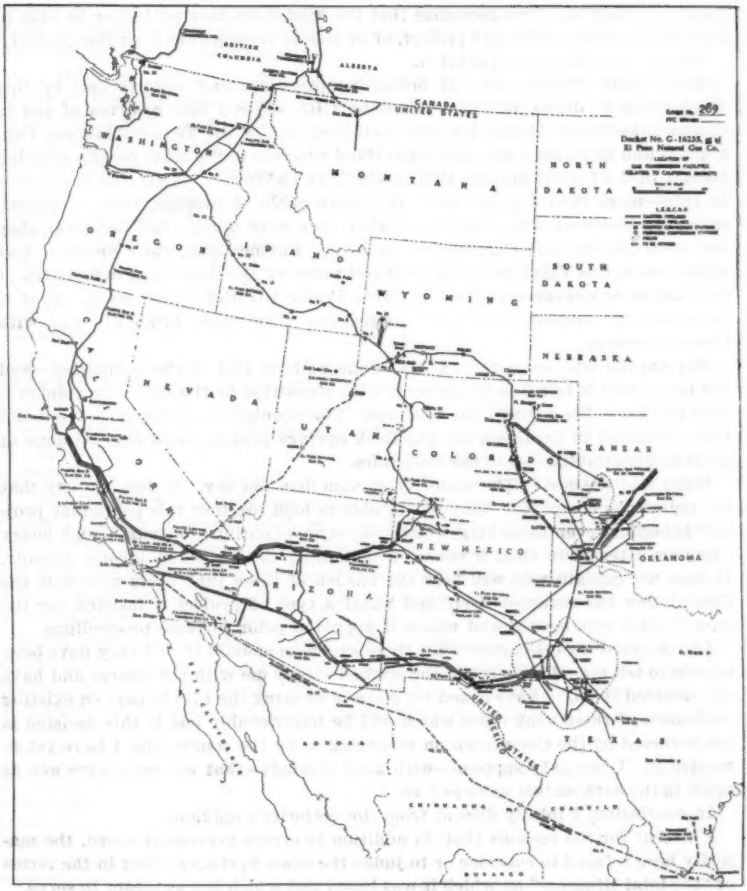
In conclusion, I totally dissent from the majority's opinion.

I dissent for the reasons that, in addition to errors previously noted, the majority here refused to consider or to judge the Rock Springs project in the terms of "the total situation" on which it was based and which it was meant to serve.

I further dissent because I believe that the tactics of the majority in constantly elevating the standards to which the applicants had to conform their proposal constitute an abuse of its own rules and rulings, an abuse of the certificating au-

thority of this Commission, and a denial of the due process of law to which parties appearing before this Commission are entitled.

And lastly, I dissent because I believe the capriciousness with which the majority has strewn the landscape of the western United States with the wreckage of this dramatic proposal; its bland disregard of the enormous, now wasted costs of holding that proposal together since 1956; and the high-handed manner in which it dismissed the inestimable subsidiary benefits this project would have provided the western States of this Nation—unless remedied on rehearing or review—will constitute a lasting impairment of the dignity and effectiveness of a once-great Federal regulatory agency.



INITIAL DECISION

UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND FOR PERMISSION TO ABANDON FACILITIES AND SERVICE

(Issued December 18, 1962)

PURDUE, *Presiding Examiner:* This decision is upon a rehearing of applications of Colorado Interstate Gas Co. and El Paso Natural Gas Co. (respectively filed on November 7, 1958 and September 10, 1958) seeking orders authorizing what is commonly referred to as the "Rock Springs project"; and of an application of Pacific Northwest Pipeline Corp. (filed on September 10, 1958) seeking permission to abandon a sale of natural gas and facilities used therefor. The Colorado Interstate application also seeks permission to abandon certain facilities.

The Rock Springs project is a joint undertaking of Colorado Interstate and El Paso. The project, except for changes and modifications hereinafter adverted to, is described in the original initial decision of Examiner Woodall herein (24 FPC 1147–50). Generally, Colorado Interstate seeks authorization, under Section 7(c) of the Natural Gas Act, to construct and operate (1) a new large-diameter transmission pipeline from its Bivins compressor station and its near-by Fourway compressor station, in the West Panhandle field of Texas, to Denver, Colorado; (2) facilities for tying in gas reserves in Oklahoma, Kansas and Wyoming; (3) a large-diameter transmission pipeline from Station No. 6 on the pipeline of Pacific Northwest (adjacent to Green River, Wyoming, and near Rock Springs, Wyoming) to Provo, Utah; (4) a number of compressor stations and increased horsepower in existing compressor stations; and (5) appurtenant facilities. Colorado Interstate further seeks authorization to sell to El Paso, at Green River, volumes up to a maximum of 237,712 Mcf[1] per day, and to transport for El Paso up to a maximum of 475,424 Mcf per day through the Green River-to-Provo pipeline. Finally, Colorado Interstate seeks permission and approval, under Section 7(b), to retire the major portion of its existing Bivins-Denver transmission pipeline and appurtenant facilities.

Generally, El Paso seeks authorization (1) to construct and operate a large-diameter transmission pipeline from the terminus of the Colorado Interstate pipeline at Provo to a point on the California border near Las Vegas, Nevada (by a slightly shorter route than that proposed at the original hearing), and a 14,000 HP compressor station on such line (an increase in the horsepower originally proposed); (2) to transport up to 475,424 Mcf per day through such pipeline; (3) and to sell the volumes transported to Southern California Gas Co. and Southern Counties Gas Co. of California at the California border, at a pressure of up to 800 pounds psig (instead of a lesser pressure originally proposed).

Pacific Northwest seeks permission and approval to abandon a sale of gas to Colorado Interstate at Green River (consisting of average daily deliveries of 101,154 Mcf and a contract demand of 118,856 Mcf), and facilities used for making such sale. Prior to the filing of Pacific Northwest's application, El Paso had acquired the stock of Pacific Northwest; and on August 7, 1957, had applied to the Commission for authorization, under Section 7(c), to acquire the assets of Pacific Northwest. On December 23, 1959, the Commission authorized the merger of said two companies. *Pacific Northwest Pipeline Corp. et al.*, 22 FPC 1091, 23 FPC 350. Thereupon El Paso adopted Pacific Northwest's application; and prosecuted, and now continues to prosecute, the same. Colorado Interstate transports the 101,154 Mcf eastward through its 22" pipeline between

[1] Unless otherwise specified, all volumes of natural gas referred to herein are at a pressure base of 14.73 psia.

Green River and Denver to serve its Rocky Mountain area customers. In the event abandonment of Pacific Northwest's sale to Colorado Interstate should be approved, this volume of gas would be utilized for the California market. Also, Colorado Interstate would reverse the flow in its Green River to Denver line so that gas would move westwardly from Denver to Green River.

The proposed combined pipeline of Colorado Interstate and El Paso between Green River and the California border will be referred to herein as the "Provo line"; and Colorado Interstate's pipeline between Green River and Denver, as the "Wyoming line."

Colorado Interstate and El Paso respectively estimate that the cost of construction of the former company's portion of the Rock Springs project would be $92,829,566; and the latter company's portion, $58,685,000—a total of $151,514,566.

Colorado Interstate has already constructed some of the facilities involved in its application pursuant to temporary authorization. All of the facilities so constructed at the time of the original hearing are described in the original initial decision, 24 FPC at page 1149. There has been one subsequent installation, the Rawlins compressor station (4500 horsepower), which was completed on August 5, 1960. The combined cost of construction which Colorado Interstate estimated that the foregoing facilities would entail is $9,255,308. The estimated cost of the remainder of the facilities involved in Colorado Interstate's application is, therefore, $83,574,258; and the estimated cost of the remainder of the facilities in the joint Rock Springs project, $142,259,258.

Except for a few customers served off of a transmission line of Pacific Gas and Electric Co. the whole of Southern California is served with natural gas either directly by the Pacific Lighting System or by two utilities to which such system sells gas at wholesale. The Pacific Lighting System is composed of a parent corporation, Pacific Lighting Corp., and three subsidiaries; namely, Southern California Gas Co., Southern Counties Gas Co., and Pacific Lighting Gas Supply Co., Southern California Gas Co., and Southern Counties Co. are distribution companies, and Pacific Lighting Gas Supply Co. is responsible for gas procurement for the Pacific Lighting System. Hereinafter, for convenience, Southern California Gas Co. and Southern Counties Gas Co. (and at times Pacific Lighting Gas Supply Co.) will be referred to, either collectively or individually, as the "Southern Companies." The utilities to which the Southern Companies sell natural gas at wholesale are San Diego Gas & Electric Co. and the City of Long Beach Municipal Gas Department.

The initial decision of Examiner Woodall contains the following language: "El Paso's existing pipeline, which was constructed by Pacific Northwest Pipeline Corporation (now the Northwest Division of El Paso). . .". 24 FPC at p. 1147. In the light of developments subsequent to the issuance of such decision, the above-quoted expression is not justified. At the time of issuance of the decision, the Commission, in *Pacific Northwest Pipeline Corp. et al.*, Docket No. G–13018 *et al.*, by order had authorized the merger of Pacific Northwest into El Paso. On review of such order, the United States Supreme Court, in *California* v. *Federal Power Commission*, 369 U.S. 482 (decided April 30, 1962), held that the Commission could not proceed to a decision on the merits of the merger application in view of the pendency of a suit by the federal government against El Paso and Pacific Northwest challenging the validity, under the antitrust laws, of a transaction whereby El Paso had acquired the stock of Pacific Northwest. The Supreme Court remanded the case to the Court of Appeals for the District of Columbia, and the latter court vacated the Commission's order authorizing the merger.

The original hearing herein terminated on March 30, 1960. Thereafter, by order issued December 27, 1960, the Commission authorized the Rock Springs

project, subject to certain conditions. On the day following, the Public Utilities Commission of the State of California issued a decision and order authorizing the Southern Companies to construct and operate a large-diameter pipeline between the California-Nevada border and Newberry, California, for transporting the gas toward contemplated market areas in Southern California.

The order of the California Commission was made subject to conditions which necessitated a revision of contracts, pertaining to the project, between Colorado Interstate and El Paso, and between El Paso and the Southern Companies. The changes relate principally to the timing of the Rock Springs deliveries of gas. As originally proposed, initial deliveries from El Paso to the Southern Companies at the California-Nevada border were to commence not later than January 1, 1961, with a "build up" from an initial 202,300 Mcf per day, increasing to 475,424 Mcf per day of firm gas by January 1, 1962. As now proposed, El Paso would commence deliveries to the Southern Companies on January 1, 1964, at an initial daily average of 265,024 Mcf and a daily demand of 303,462 Mcf; and on January 1, 1965, would increase the deliveries to 475,424 Mcf per day of firm gas. Similarily, Colorado Interstate now proposes to deliver to El Paso half of the total volumes to be transported through the new Provo line commencing January 1, 1964, and to deliver its full portion of 237,712 Mcf per day in 1965. The agreed-upon initial rates which Colorado Interstate is to charge El Paso (all at 14.9 psia) are as follows: for a contract demand volume of 117,500 Mcf, an initial rate of $1.97 demand and $0.21 commodity; for a contract demand in excess of 176,250 Mcf, an initial rate of $1.72 demand and $0.21 commodity. The latter rate would produce approximately 27¢ per Mcf at an 85% load factor. For the transportation of the gas, Colorado Interstate is to charge an initial rate of $0.56 demand and $0.0215 commodity; and if the average volume transported exceeds 300,000 Mcf/d prior to January 1, 1965, the initial rate is to be $0.33 demand and $0.0127 commodity.

By the supplemental agreement between El Paso and the Southern Companies, the 1964 deliveries are to be at a flat price of 39.6¢ per Mcf. The sale of the contract volume is to be at initial demand and commodity rates which will produce a price of 39.6¢ per Mcf at an 85% load factor and 37.9¢ per Mcf at 100% load factor.

Various Commission orders in the proceedings have made it clear that issues presented and evidence which should or might be adduced upon the rehearing include the following: the changes proposed to be made in the Rock Springs project in view of the aforementioned order of the Public Utilities Commission of California which conditionally certificated facilities for transporting the gas from the Nevada border to a point in Southern California (FPC order issued June 22, 1961, not reported); the reasons for and effects of such changes upon the project (*id.*); "the issues should encompass, and evidence should be adduced concerning, alternative routes and facilities by which El Paso and Colorado Interstate Gas Co. could supply additional gas to the market areas which they propose to serve by the Rock Springs project" (order issued July 21, 1961, 26 FPC 175, 177); "the need for additional gas in the southern California market area * * * El Paso should present evidence concerning the altered estimates of market requirements for the natural gas * * * " (order issued August 25, 1961, 26 FPC 432, 434); "the rates proposed to be charged therefore * * * in relation to the determination of the project's economic feasibility" (*id.*); "all of the factual data underlying the estimates of the requirements of gas in the southern California market" (*id.*); "the gas supply available to El Paso" and "the deliverability life thereof" (*id.*); "evidence which will show clearly whether or not the Rock Springs project will be economically feasible if Edison should cease to be a customer of Southern California Gas Company" (order issued

September 13, 1961, 26 FPC 488, 490);[2] "the economic feasibility of the * * * project" and "the financibility of the project" including justification for the rates which Colorado Interstate proposes to charge El Paso (order issued November 2, 1961, 26 FPC 687); "[the] matter of using existing pipelines, whether by means of exchange arrangements or otherwise, in connection with bringing additional volumes of natural gas to the southern California market * * * [such] evidence should include, among other things and without limitation, the location, ownership, age, and physical characteristics of such pipelines and appurtenant facilities; existing and potential delivery capacity and use; additional facilities required to increase delivery capacity to the economic optimum and cost thereof; costs of operation and of gas at delivery points" (order issued March 22, 1962, 27 FPC 597, 598.); "the impact of the construction [of the project] upon present and future rates and whether the ultimate consumer will be adversely affected thereby * * * how proposed sources of present or future supplies and the relationships between all parties concerned may affect those rates [; such] matters must be viewed, also, in connection with the policy of the anti-trust laws" (order issued March 23, 1962, 27 FPC 600, 601). Also, problems are presented by the decision of the United States Supreme Court in *California* v. *Federal Power Commission, supra.*

The rehearing was held, commencing on July 24, 1961, continuing intermittently over a period of 102 hearing days, and concluding on April 26, 1962. Oral and documentary evidence was introduced by applicant Colorado Interstate, applicant El Paso, the Commission Staff, and the following intervenors: the Southern Companies; California Gas Transmission Co. and Tennessee California Gas Transmission Co. (Tennessee subsidiaries); the City and County of Denver, Colorado; Transwestern Pipeline Co.; and Natural Gas Pipeline Co. of America. Cross-examination of witnesses was conducted by said participants, and by intervenors Public Service Co. of Colorado (Public Service), Colorado-Wyoming Gas Co. (Colorado-Wyoming), The Pueblo Gas and Fuel Co. (Pueblo), Southern California Edison Co. (Edison), The Public Utilities Commission of Colorado, and oil company intervenors.[3] Intervenors Washington Utilities and Transportation Commission, and the Public Utility Commissioner of Oregon were also represented at the rehearing. Following the rehearing, briefs were filed by applicant Colorado Interstate, applicant El Paso, the Commission Staff, and the following intervenors: Washington Utilities and Transportation Commission, Public Utility Commissioner of Oregon, the Southern California Companies, the City of Los Angeles, The Public Utilities Commission of Colorado, the City and County of Denver, the Tennessee subsidiaries, Edison, the oil companies, and Transwestern Pipeline Co.; and a statement of position, by Public Service, Colorado-Wyoming, and Pueblo. The proceedings were thereby submitted for consideration and decision.

The following intervenors support the applications: Washington Utilities and Transportation Commission, Public Utility Commissioner of Oregon, the Southern California Companies, the City of Los Angeles, Public Service, Colorado-Wyoming, and Pueblo. The following participants oppose the granting of any of the applications: The Public Utilities Commission of Colorado, the City and County of

[2] If the Pemex project (Docket No. CP61–172 *et al.*) were consummated, gas would be exported by the intervenor Tennessee subsidiaries from southern Texas to Mexico; and, together with quantities of Mexican gas, transported to the California-Mexican border; whence it would be transported back into the United States to the vicinity of Los Angeles for use as boiler fuel by intervenor Southern California Edison Co., and perhaps for resale.

Denver, the Tennessee subsidiaries, Edison, the oil companies, Transwestern, and the Staff.

Improper Arguments Advanced in Briefs

Counsel for certain of the parties, in their briefs, have gone outside the record by citing and quoting material which was not received in evidence, such as pleadings filed in these and other proceedings, excerpts from briefs in other proceedings, and a speech by a former president of the California Public Utilities Commission. The Examiner has disregarded these extraneous citations and quotations. Counsel should remember that their argument should be based on the evidence in the case.

DISCUSSION

It has been noted that Colorado Interstate has constructed certain of the supply laterals and compressor installations involved in Docket No. G–16904 under temporary authorizations issued by the Commission. All of the participants either advocate, or offer no objection to, the permanent certification of the temporarily-authorized facilities. These facilities are needed for serving Colorado Interstate's Rocky Mountain customers.

The law and the facts compel the conclusion "over and over again" that the application of Colorado Interstate should be denied in all other respects, and that the applications of El Paso and Pacific Northwest should be denied *in toto*.

The applications in the three consolidated proceedings are inextricably bound together. A denial of any one of them requires a denial of all of them. The Colorado Interstate portion of the Rock Springs project can be justified only if the El Paso portion therof is authorized, and vice versa. Likewise, the proposed abandonment of Pacific Northwest's sale of gas to Colorado Interstate at Green River and the proposed abandonment of the Bivins-to-Denver line cannot be justified unless certificates for the Rock Springs project be granted. And the proposed construction cannot be justified unless the abandonments be permitted.

Applicants have the burden of proving that the public interest will be served by the joint project for which they seek certificates, and that the public interest will not be disserved by the abandonments. That is to say, applicants must "satisfy our minds" of such facts. *Michigan Consolidated Gas Co.* v. *Federal Power Commission* (App. D.C.), 283 F. 2d 204, 214; *cf. Transcontinental Gas Pipe Line Corp.*, 11 FPC 94, 97, citing *Western Case*, 20 I.C.C. 307.

The evidence introduced by Colorado Interstate, and that introduced in support of El Paso's and Pacific Northwest's cases, does not meet the burden of proof in vital respects; and in other vital respects, is contrary to the weight of the evidence.

El Paso's Portion of Gas Supply

In the landmark case, *Kansas Pipe Line & Gas Co.*, 2 FPC 29, 40, the Commission held that an applicant for a certificate of convenience and necessity must show that it possesses a supply of natural gas adequate to support its project.

El Paso has failed to establish that it posseses an adequate gas supply to enable it to deliver the 237,712 Mcf/d which it committed itself to furnish. El Paso's showing of gas supply is predicated upon the assumption that El Paso and Pacific Northwest were merged. It appears that a large portion of such 237,712 Mcf/d would come from Pacific Northwest sources; also, that all of the gas which El Paso proposes to supply would be transported to Green River through Pacific Northwest's facilities. There is a dearth of evidence that El Paso can furnish its proposed contribution of gas necessary to support the Rock Springs project without ownership of the assets of Pacific Northwest.

It has been said that the Supreme Court, in *California* v. *Federal Power Commission*, *supra*, upon review of the Commission's action in Docket No. G–13018 *et al.* authorizing the merger of Pacific Northwest into El Paso, held that the Commission could not proceed to a decision on the merits of the merger application in view of the pendency of the suit by the federal government challenging the validity of El Paso's acquisition of the stock of Pacific Northwest; and that the Court of Appeals for the District of Columbia has accordingly vacated the Commission's order which had authorized the merger.

In an order issued on July 2, 1962, in Docket No. G–13018 *et al.*, 28 FPC 7, the Commission recited the facts adverted to in the foregoing paragraph, and said:

> In view of the Supreme Court's decision it is necessary that further action on the question of the acquisition and operation of Pacific's facilities by El Paso under the Natural Gas Act be stayed pending the outcome of those proceedings.

With this state of affairs before us, it is a matter of impossibility to determine, until the final conclusion of the suit by the Federal Government, whether El Paso can acquire the assets of Pacific Northwest. Therefore, El Paso's evidence in the instant proceedings upon the question of gas reserves to support the project is fatally defective; and this failure of proof, alone, necessitates a denial of all of the applications.

Circuitous Route

The Staff state, and the Examiner finds, as follows:

> An outstanding feature of the applicants' proposals is the roundabout route by which they propose to transport the new volumes of gas to California. Instead of following a fairly direct and shorter route, * * * the gas from the Texas Panhandle Field * * * will travel approximately 1252 miles to the El Paso-Southern [Companies] delivery point near Las Vegas along a route shaped roughly like a horseshoe expanded at the open end. It will go approximately 351 miles northwest to Denver, 365 miles north and west through the Wyoming line to Green River, where it will enter the Provo line; and then 536 miles southwest to the California border.
>
> Similarly, although El Paso is currently delivering San Juan gas to [the] Southern [Companies] at Topock, [Arizona], through its existing pipeline facilities, it now proposes to transport San Juan gas destined for [the] Southern [Companies] through its Northwest Division [Pacific Northwest's] facilities approximately 300 miles northward to its station No. 6 at Green River where, upon entering the Provo line, it will practically reverse its direction in a 536-mile journey southwestward to the Las Vegas delivery point.

It is basic in "the business of transporting and selling natural gas for ultimate distribution to the public" that a pipeline should run from the principal source of supply to the principal market with reasonable directness. The proposal advanced by the applicants flagrantly violates such basic proposition, and is therefore unsound.

If one but takes a look at the Commission map, "Major Natural Gas Pipelines as of June 30, 1962," he will see that there is no pipeline similar to applicants' gigantic horseshoe proposal in all of the pipelines which the Commission has certificated over the years.

The record shows that Colorado Interstate has available, for sale to El Paso, 237,500 Mcf/d in the West Panhandle field of Texas, in the vicinity of its Bivins and Fourway compressor stations; and that its gas reserves in the area are sufficient for such volume to be available during the next 15 years.

The record further shows that the great burden of such daily volume can be transported to the California border near Topock, Arizona, over either of two much more direct routes than are involved in applicants' proposal, and that via the first of the two alternative routes, the entire 237,500 Mcf/d can be so transported. If applicants utilize the first of the two alternatives, the cost of the 237,500 Mcf/d to the Southern Companies would be far less than the rate at which El Paso proposes to sell the Rock Springs gas at the California-Nevada border; and, under the second alternative, the cost would also be less.

The first of the two alternative routes is via the system of Transwestern, which now delivers gas to the Southern Companies. Transwestern has a main line which consists of aproximately 645 miles of 30" line extending from Roswell, New Mexico, across New Mexico and Arizona to a point of connection with a line of the Southern Companies near Topock. Two Transwestern laterals lead into its main line at Roswell. One of these, the Panhandle lateral, consists of 291 miles of 24" transmission line extending from the Panhandle-Hugoton-Anadarko areas of Texas and Oklahoma. The other lateral, the West Texas lateral, consists of 166 miles of 24" line and 62 miles of 20" line extending from the Permian Basin area of West Texas. Both main laterals tie into various sublaterals which connect sources of gas supply in the Panhandle and West Texas areas. The installed design capacity of the system is 350,000 Mcf/d; and the optimum capacity, 640,000 Mcf/d.

The evidence shows that by construction of a 40-mile, 22" pipeline from Colorado Interstate's Fourway station to Transwestern's facilities, and additional compression on Transwestern's system, Transwestern could deliver the 237,500 Mcf/d of Colorado Interstate gas at the California border. A reasonable estimate of the cost of transporting such volume through a Transwestern system thus extended, and having its optimum capacity of 640,000 Mcf/d, is $35,650,000, or an incremental transportation cost of only 8.09¢ per Mcf for the period 1964–67. The transportation would be at substantially a 100% load factor.

While we are not purporting to make a rate determination, it would appear, from the record, that 22¢ per Mcf (at 14.9 psia) is a top price for the sale of the gas by Colorado Interstate at the Fourway station or the Bivins station; and we shall accept such figure for the purpose of this treatment. The cost of the 237,500 Mcf/d to the Southern Companies at the California border would thus be on the order of 30.09¢, as compared with El Paso's proposed Rock Springs rate of 37.9¢ at 100% load factor.

The record shows that Transwestern is ready, willing and able to construct the facilities referred to in the preceding paragraph (including additions for the operation of its system at optimum capacity), and to transport the 237,500 Mcf/d to California for applicants.

The second of the two alternative routes is via the northern segment of El Paso's Southern Division, which extends from Texas to Topock in a fairly direct course. Under a temporary contract, Colorado Interstate is now selling 100,000 Mcf/d (at 14.9 psia) to El Paso at Dumas, Texas, at 22¢ per Mcf. There is also in force a long-term agreement between El Paso and Northern Natural for the exchange of volumes of gas up to 475,000 Mcf/d. An effect of the two agreements is that Colorado Interstate delivers gas to Northern Natural at Dumas, and Northern Natural delivers an equivalent volume to El Paso at Plains. The evidence shows that Northern Natural can make delivery of as large a volume as 200,000 Mcf/d at Plains with existing facilities.

El Paso introduced no evidence respecting its ability to procure the delivery of 200,000 Mcf/d at Plains, or any other volume on a long-term basis, by virtue of its exchange agreement with Northern Natural.

In its order of March 22, 1962, the Commission admonished the applicants as follows: "Affirmative evidence * * * should be presented by the applicants" respecting "the matter of using existing pipelines * * * in connection with bringing additional volumes of natural gas to the southern California market." It is a presumption of law that evidence withheld would be adverse if produced. Cyc. of Fed. Proc. (3d Ed.), Vol. 8, sec. 26.273.

In the light of the foregoing evidence, the admonition of the Commission to El Paso, and the presumption of law above adverted to, the Examiner is warranted in concluding, and does find and conclude, that a permanent arrangement can be effected whereby Colorado Interstate will sell 200,000 Mcf/d to El Paso at Dumas; and, under the exchange agreement, Northern Natural will receive such gas there and will deliver 200,000 Mcf/d to El Paso at Plains.

The evidence shows that by an El Paso-estimated expenditure of $65,580,000 for loops and compressor facilities, El Paso can increase its delivery capacity by, and can deliver, an additional 200,000 Mcf per day (14.9 psia) from its Southern Division at Topock at a cost of service no higher than between 33¢ and 34¢.

El Paso, on July 29, 1958, and May 25, 1959, filed applications in Docket Nos. G–15696 and G–18616 for authorization to construct such facilities and make sales of the 200,000 Mcf per day to Pacific Gas and Electric Company at a rate level of 33.38¢ per Mcf (at 14.9 psia) at 100% load factor. El Paso did not prosecute these applications, however, because it developed that PG&E did not need the gas. In 1960 El Paso and PG&E agreed that if El Paso should find another market for the 200,000 Mcf of gas "prior to firm agreement being reached as to date of delivery to PG&E," the arrangement for the delivery of such gas to PG&E would be terminated. James S. Moulton, vice president and executive engineer of Pacific Gas and Electric Company, testified that because of discovery of more gas available to PG&E "than any prior trend of discoveries would indicate as probable in California," PG&E assumes, subject to some "imponderables," that it will need only about 400 million cubic feet of additional gas until some year after 1970, and that the 400 million cubic feet will be made available from the pipeline systems connecting PG&E to Canada.

Mr. Moulton further testified as follows:

> PRESIDING EXAMINER: Now, Mr. Moulton, when if at all, is it your best judgment that you will need the El Paso gas involved in those two docket numbers? The WITNESS: Mr. Examiner, it depends entirely on the assumptions made. Now, under the assumption I described in this exhibit prepared by Mr. Frank, it shows that we wouldn't need it until beyond 1970. Other assumptions could be made, and I don't believe could be challenged, that could show its need earlier than that, but certainly not before 1965. I can't answer it more specifically.

The record is thus indefinite as to whether PG&E will desire to have an additional 200,000 Mcf per day from El Paso in 1965 or sometime after 1970. But the fact remains that PG&E has agreed that El Paso may cancel its arrangement with PG&E respecting the 200,000 Mcf per day and utilize its present and proposed Southern Division facilities for the sale of gas to other customers at any time until and unless El Paso and PG&E enter into a firm agreement for the date of delivery of the gas to PG&E. The increased delivery capacity of 200,000 Mcf per day (or a lesser increased capacity) could be used, just as well, to transport the increment of 100,000 Mcf/d of Colorado Interstate gas.

Manifestly, the 200,000 Mcf/d of 22¢ gas at Plains can be transported and sold

by El Paso at Topock at a rate far below El Paso's proposed Rock Springs rate of 37.9¢ at 100% load factor (and 39.6¢ at 85% load factor).

But even assuming that it were necessary for El Paso to construct a line between Dumas and Plains, a distance of 204 miles, it is a justifiable conclusion that the cost of service of purchasing the 200,000 Mcf/d; and of transporting such volume through the line, and thence on to California in El Paso's main system, would be below El Paso's proposed Rock Springs rate. There is no evidence in the record specifically directed to the cost of a Dumas-to-Plains line. However, there is testimony of an expert witness for Colorado Interstate in which he gave his opinion respecting what would be the cost of a 24" pipeline from Morton Junction, Kansas, to Pueblo, Colorado. The evidence shows that a pipeline of such size is more than sufficient to transport 200,000 Mcf per day. The witness estimated the cost of the Morton Junction-to-Pueblo line at $60,920 per mile; and the cost of a compressor station, to obtain additional compression needed, at $263,333 per 1000 horsepower. On this basis the cost of a 204-mile 24" line would be $12,427,000, or $13,669,700 with 10% for contingencies and overheads. The land between Dumas and Plains is good pipeline country, certainly as good as that between Morton Junction and Pueblo. But assuming *arguendo* that the estimate per mile, applied to the Dumas-to-Plains line, is on the low side by even as much as 20%, the total estimated cost of the line would be $16,403,640. It can be inferred from the record that if any compression at all be needed, a 1000 horsepower compressor would suffice; and that the cost thereof would be not more than $350,000, including contingencies, overhead and 20% allowance for possible underestimate. Working capital at the factor of 2% employed by the Colorado Interstate witness would be $335,073. The result is a total capital cost of $16,738,713, which will be rounded to $16,750,000. The Colorado Interstate witness reasonably used a factor of 18% to arrive at the transmission cost of service of the Morton Junction-to-Pueblo line. Using the same factor, the transmission cost of service of the Dumas-to-Plains line becomes $3,015,000. From these figures, the unit cost of transmission at 100% load factor (73,000,000 Mcf) would be 4.13¢, which cost we shall round to 4.25¢.

At a 22¢ purchase price and a transmission cost to Plains of 4.25¢, the unit cost of the gas at Plains would be 26.25¢ per Mcf. Plains is in the heart of El Paso's Southern Division; and it would seem that transporting the gas from such point to the California border would increase the cost of the gas at the state border to a sum on the order of 35¢ per Mcf.

The 35¢ figure, however, is merely an indication of the likely cost. The Examiner, upon the record made, is unable to find specifically what would be a reasonable estimate of the cost of the gas at Topock.

The inadequacy of the record is due to the failure of El Paso to comply with the Commission's admonition to the applicants to present affirmative evidence respecting utilization of existing pipelines for bringing additional volumes of natural gas to the southern California market. Again, the presumption of law applies that evidence withheld would be adverse if produced.

The Examiner is warranted in concluding, as he does, that El Paso could purchase 200,000 Mcf/d of gas from Colorado Interstate at Dumas, transport the same to Plains, and thence transport the volume, via its Southern Division, to Topock, at a lesser cost than the price which El Paso proposes to charge for the Rock Springs gas at the California-Neveda border.

Next to be considered is the question of an alternative route for transporting the 237,712 Mcf/d which El Paso, itself proposes to furnish for the Rock Springs project. We shall assume, for the purpose of the discussion, that Pacific Northwest is merged into El Paso, and that Pacific Northwest's facilities are a part of what is referred to as El Paso's Northwest Division.

El Paso's contribution of 237,712 Mcf/d to the Rock Springs gas supply would, of course, have to come from its Northwest Division, which includes its reserves and facilities in San Juan Basin.

The question is presented as to the feasibility, and the cost, of transporting additional volumes of gas southward via the Northwest Division to Ignacio, and of transporting such volumes thence (together with gas produced in the San Juan Basin) to El Paso's Southern Division, and thence to Topock.

It would seem likely that the 237,712 Mcf/d, or a large portion thereof, could be transmitted over such route by reinforcing El Paso's existing facilities.

El Paso introduced no evidence as to the feasibility or cost of its transporting the 237,712 Mcf/d, or any lesser volume, via such route, by reinforcing its existing lines or otherwise.

In the light of (1) the fact that there are lines already in existence along the entire route above described which, so far as appears, could be reinforced to permit the passage of greater volumes of gas than are now transmitted therein; and (2) the presumption which attends El Paso's failure after the admonition of the Commission, to produce evidence on the question of the feasibility of such route for transporting a volume of 237,712 Mcf/d, the Examiner finds that at least a substantial portion of El Paso's contribution of 237,712 Mcf/d could be transmitted to Topock feasibly, and at a lesser cost, than an equivalent volume could be transmitted to the California-Nevada border.

Assuming a market for 200,000 Mcf/d (at 14.9 psia) of Colorado Interstate gas (or for 237,500 Mcf/d if Transwestern's facilities be utilized), either the Transwestern system or the El Paso Southern Division (including a new line from Dumas to Plains on the assumption one is required) offers a more desirable alternative than applicants' project. Assuming a market for more than 237,500 Mcf/d, either (1) utilization of El Paso's Ignatio to Topock route, together with a line from Dumas to Plains assuming one is required and El Paso's Southern Division from Plains westward; or (2) utilization of El Paso's Ignatio to Topock route and Transwestern's facilities, are more desirable than applicants' project.

The savings above considered which would be achieved by making use of the alternative routes are in addition to the savings which would accrue to Colorado Interstate by its foregoing the Rock Springs project, which savings are treated of hereinafter.

> The existence of a more desirable alternative is one of the factors which enters into a determination of whether a particular proposal would serve the public convenience and necessity. That the Commission has no authority to command the alternative does not mean it cannot reject the proposal. *City of Pittsburgh* v. *Federal Power Commission* (App. D.C.), 237 F. 2d 741, 751.

For these additional reasons, the applications should be denied.

No Gas Supply in Vicinity of Green River Adequate to Justify Provo Line

The intervenor Southern Companies correctly say in their briefs:

> The Rock Springs project proposed in these applications can be most clearly described in two segments. The eastern segment consists of the revamping and augmentation of the Colorado Interstate system. The western segment consists of a new large-diameter pipeline project commencing at [Green River] and extending southwesterly to the California border * * *

In effect, the "western segment," or the Provo line, constitutes a new pipeline project in itself. It would commence at a point in southwest Wyoming and ex-

tend southwestwardly to the California border, a distance of 550 miles, and from the latter point lines inside California would continue the project for some 200 miles until the market areas in Southern California are reached.

It has already been observed that, as a prerequisite to the issuance of a certificate of convenience and necessity for a pipeline, there must be committed to the project supplies of natural gas adequate to support it.

Even assuming that Pacific Northwest's gas reserves and facilities are to be considered as belonging to El Paso, there are no gas reserves committed to El Paso which originate at, or in the vicinity of, Green River that are anywhere near sufficient to support a "project" of the magnitude of the Provo line. Nor is Colorado Interstate, with its existing facilities, able to deliver any gas at such point. For these additional reasons, the applications should be denied.

El Paso says that the Provo line would afford the California market access to tremendous reserves of natural gas in Canada which would first be transported from the border by the pipeline of its Northwest Division (Pacific Northwest). There may be circumstances, such as the commitment of adequate Canadian supplies to the project, at rates that would enable it to be economically feasible, which would overcome the want of adequate gas supplies originating in the vicinity of Green River. But no circumstances of this nature are here present. See Commission order issued herein December 27, 1960, 24 FPC 1137, 1142. It is true that in 1957, Westcoast Transmission Co. Ltd. and Pacific Northwest entered into a contract for the purchase by Pacific Northwest of 150,000 Mcf/d of Kingsgate Canadian gas, which the Southern Companies in turn agreed to take from El Paso. But these volumes have not been included in the Rock Springs project for the reason that uncertainties exist as to when, if at all, the Canadian gas would be exportable.

Rock Springs Project Would Adversely Affect Colorado Interstate's Rocky Mountain Customers

Increased Cost of Gas to Public in Rocky Mountain Area without Offsetting Benefits

The City and County of Denver and The Public Utilities Commission of the State of Colorado take the position that they would be worse off with the project than without it. For consumer interests to advance such a proposition is startling, and analysis of the evidence establishes that their position is justified.

The evidence shows that, if the project were to become a reality, the cost of service to Colorado Interstate's Rocky Mountain customers would be materially increased, and such customers would be faced with the prospect of higher rates. The evidence discloses that for 1960 (the most recent year for which complete data were available) the cost of service to the Rocky Mountain customers was 24.06¢ per Mcf, and that the indicated cost in 1961 was substantially the same. The evidence further shows that if the project were consummated, the cost of service to such customers would be 27.52¢ per Mcf. The difference of 3.46¢ in the cost of service is of major significance. The record discloses that Colorado Interstate's present rates in the Rocky Mountain area are too high; *i.e.*, in 1960, on the basis of a 6½% rate of return, Colorado Interstate received an excess profit of approximately $2,000,000. The record further discloses that if the project should be carried out, Colorado Interstate's revenue, at the current rates and the proposed rates to El Paso, would be so diminished that the annual excess revenues would be more than wiped out, and Colorado Interstate would be entitled to a rate increase of about $900,000 per year—a total diminishment in revenue of some $2,900,000 annually. The record also discloses that even if the Rock Springs project should become a different project by disallowance of a 3.75¢ rate

differential in favor of El Paso, hereinafter considered, there would still be a diminishment in Colorado Interstate's revenue of about $1,900,000.

The evidence is clear that the Rocky Mountain customers would receive no commensurate benefits from the Rock Springs project, either by increased deliveries to the Rocky Mountain area or by increase in Colorado Interstate's capacity to serve such area.

Colorado Interstate says that the Rock Springs project would increase the daily delivery capacity of its system by 80,000 Mcf. As of the time that its application (Docket No. G–16904) in the instant proceedings was filed, this statement was correct. But in 1959, 1960 and 1961, said applicant installed facilities either on or connecting to the Wyoming line pursuant to temporary authorizations in Docket No. G–16904 and pursuant to authorizations in other proceedings.

The effect of these installations is such that if the entire Rock Springs project were authorized, the daily delivery capacity would merely be increased by 18,232 Mcf. According to Colorado Interstate's own statements in its reply brief, the Examiner finds that the increased capacity already installed is as follows:

Facilities	Docket No.	Date issued	Mcf capacity
Table Rock compressor, 180 HP	G–18340	May 8, 1959	
Table Rock Lateral (Temporary authorizations)	G–16904	May 8, 1959	20,109
Rawlins Station (Temporary authorization)	G–16904	Aug. 5, 1960	48,694
Lateral from Patrick Draw Field (Constructed under budget certificate).	CP61–138	Mar. 1, 1961	[4] 8,230
Total			77,033

[4] The Patrick Draw field delivers 15,000 Mcf/d into Colorado Interstate's system, but there is a net increase of only 8,230 Mcf/d because the 15,000 Mcf partially displaces gas coming from Green River.

Colorado Interstate says, and the Examiner finds, that the resulting present daily delivery capacity of the system is 706,768 Mcf.

According to Colorado Interstate's further statement in its brief, the daily delivery capacity of its system upon completion of the entire Rock Springs project would be 725,000 Mcf; and the Examiner so finds.

The difference between these two volumes, 18,232 Mcf, constitutes the comparatively small additional increase in the capacity of Colorado Interstate's system which would result if the entire project were to come to fruition. Thus, most of the increased capacity of 80,000 Mcf has been attained without said applicant's proposed major Rock Springs installation, the new Bivins-to-Denver large-diameter pipeline.

Colorado Interstate could have sought and received a certificate authorizing the Table Rock lateral and the Rawlins station separate and apart from the Rock Springs project—as witness the circumstance that these facilities have been constructed despite the fact that the new Bivins-to-Denver line has not been authorized. The installation of the Table Rock and Rawlins facilities, with the gas in the Wyoming line continuing to flow from west to east, is a normal and expected development, in view of the existing and potential gas reserves along the route of the line; and such facilities make for utilization of the spare capacity in the Wyoming line.

Colorado Interstate, itself, estimates that under the Rock Springs proposal, it would supply only 116,152,530 Mcf to the Rocky Mountain area annually (not counting 3,558,750 Mcf from the Patrick Draw field—15,000 Mcf times 365 days times 0.65 reasonably assumed load factor).

The proposal which Colorado Interstate advances for an increase in the daily delivery capacity of its system to a mere 725,000 Mcf is in the face of the fact that

a vice president of the company readily concedes that the Rocky Mountain sales will steadily increase. He said that it is "inconceivable * * * that the unbroken history of increased demands" will not continue.

Reasonable estimates of the peak-day requirements in the Rocky Mountain area for the winter season indicated below are as follows:

Winter Season	*Mcf*
1963–64	753,770
1964–65	760,060
1965–66	764,970

Under Colorado Interstate's proposal, there would thus be a peak-day deficiency in the three winter seasons of 28,770 Mcf, 35,060 Mcf and 39,970 Mcf, respectively.

There would also be a deficiency, if the Rock Springs project were authorized, in the annual supply of gas for the Rocky Mountain area. Reasonable estimates of the annual requirements for the area in the years 1963 to 1965, inclusive, are shown below.

Year	*Mcf*
1963	175,795,590
1964	179,736,260
1965	183,376,220

It has been noted that the Rock Springs project calls for Colorado Interstate to furnish annually to the Rocky Mountain area only 116,152,530 Mcf. and the increased annual deliveries from the Patrick Draw field would be 3,558,750 Mcf. So Colorado Interstate's total annual deliveries would be only on the order of 119,711,280 Mcf. The annual deficiencies in the respective years would, therefore, be approximately as follows: 1963, 56,084,310 Mcf; 1964, 60,024,980 Mcf; and 1965, 63,664,940 Mcf.

It is true that the foregoing analysis does not take into account one factor which Colorado Interstate avers would inure to the benefit of the Rocky Mountain customers; to-wit, the new Bivins-to-Denver line would supplant the existing Bivins-to-Denver line, which Colorado Interstate claims is obsolescent. Such factor will be considered *infra* pages 121, 122, under another subheading. Suffice it to say at this point that the construction of a new pipeline would be but small comfort to the Rocky Mountain consumers when compared with the disadvantages of the project above described.

Colorado Interstate represents as follows:

> * * * that an additional 100,000 Mcf of transmission capacity, above that daily design capacity involved in the present case, will be made available to CIG's Rocky Mountain area customers by the addition of compression horsepower to the facilities south of Denver proposed herein. With respect to such additional capacity, CIG will seasonably apply for and, upon receipt of requisite authority, will add from time to time such part of such additional compression horsepower as may be needed to meet the requirements of its Rocky Mountain area customers when such requirements are evidenced by contract demand nominations or by other appropriate contractual obligation.

We do not question these assertions. But we do say that in order for Colorado Interstate to receive the certificate authorizations for which it is to apply in the future, it must establish that it has obtained adequate gas reserves to meet the requirements, and that such future projects are economically feasible. It is to be noted that a vice president of Colorado Interstate frankly conceded that, if the Rock Springs project were to become a reality, his company would

have to acquire additional gas reserves in order to take care of the increases in the requirements of its Rocky Mountain customers. Under Colorado Interstate's proposals, at the very best the gas-consuming public in the Rocky Mountain area would be saddled with still additional costs before their requirements could be met.

Clearly, the proposed investment and operation by Colorado Interstate would have an adverse effect upon said applicant's charges for the services which it renders, without offsetting benefits; and for this reason the application in Docket No. G–16904 should be denied. *East Tennessee Natural Gas Co.*, 23 FPC 916, 917. In determining whether a permit for a project should be granted, a regulatory agency should give consideration to "any public loss" which may ensue. *Democrat Printing Co. v. Federal Communications Commission* (App. D.C.), 202 F. 2d 298, 301.

With the fall of Colorado Interstate's case, that of El Paso falls also.

Colorado Interstate Facilities Would be Inadequate to Render Complete Service in Rocky Mountain Area

The facts treated of under the last subheading establish that the project which Colorado Interstate proposes is inadequate to meet the needs of the consuming public in the Rocky Mountain area.

In *Kansas Pipe Line and Gas Co., supra*, 2 FPC at page 46, the Commission laid down the rule that an applicant "must show that the facilities for which [it] seeks a certificate are adequate to render a full and complete public service in the territory proposed to be served."

For the reason of inadequacy of Colorado Interstate's proposed facilities, the application of Colorado Interstate, and perforce that of El Paso, should be denied.

Alternative Means of Serving Rocky Mountain Area Proposed by Denver

Apparently, one factor which motivated Colorado Interstate to enter into the Rock Springs project was a desire for more rate base than it now has.

Certain suggested alternative means to serve the Rocky Mountain area, involving a great deal less investment than Colorado Interstate's proposal for serving such area, were advanced by the City and County of Denver or their engineer witness. These means consist of the following, among others: (1) the construction of a loop line on the existing Bivins-to-Denver line from Bivins to Pueblo, installed in stages as needed to meet aditional requirements, a reasonably estimated cost of which is approximately $14,000,000; (2) an increase in Colorado Interstate's production and purchases in the West Panhandle and Hugoton fields; and (3) continued development and expansion of operations in the Table Rock and Patrick Draw fields.

Relative to the first suggestion, the Denver witness explained that the loop line would enable Colorado Interstate to provide the additional requirements for the Rocky Mountain area through the winter of 1965–66 and perhaps beyond such time, including the sale of 35,000 Mcf/d of additional firm gas to an industrial concern pursuant to a recent contract; that the loop line would enable said applicant to reduce the operating pressure on the Bivins-Denver line; and that the loop line could utilize available compression horsepower from the old line, and automated compression when it becomes economically feasible to replace the old compressor engines or add compression; and also that the loop line could handle the load to maintain service when maintenance is necessary on the old line. The Examiner agrees with the foregoing statements of the expert witness as to the advantages of the loop line and the advantages of retaining the old line and operating it in conjunction with the loop.

Relative to the third suggestion, it has already been shown that since Colorado Interstate filed its application in the instant proceedings, said applicant has increased the daily deliveries from the Wyoming line by 77,033 Mcf, obtained from areas of production adjacent to such line. It would appear probable that substantial additional volumes of gas from such areas will be available to Colorado Interstate in the future.

Obviously, a prudent combination of these various ways of meeting the future requirements of Colorado Interstate's Rocky Mountain customers would achieve a very great saving in cost and expense compared with Colorado Interstate's proposal.

The Examiner is of the view that such combination of the three aforementioned means of serving the Rocky Mountain area as is deemed proper by Colorado Interstate's management will be adequate to meet such area's gas supply problem; and is far preferable to the Rock Springs project from the standpoint of the Rocky Mountain customers and the public interest.

Colorado Interstate makes a plea that the present Bivins-Denver line (a 22'' and 20'' line), constructed in 1928, is "obsolescent" and "unsafe"; and should be superseded by the large-diameter (136 miles of 34'', and 100.8 miles of 30''), high-pressure pipeline which it proposes. An expert witness on behalf of Colorado Interstate said that the line can be replaced most econmically in conjunction with the Rock Springs expansion.

Colorado Interstate's vice president in charge of operations testified that the condition of the present line is such that there is a serious threat of loss of service to the area south of Denver; that "there is no way which we can predict will be the place that this line is going to blow up, * * * nor when it is going to blow up; but we can predict what * * * is going to happen when it blows up": that the line was thoroughly inspected in 1958, and "we recorded—because that is about all you can do in this situation— * * * 242 leaks," and repaired 15 of the worst leaks; and that each of the 90,000 Dresser couplings in the line is leaking to a degree. Both Colorado Interstate witnesses said that the line is expensive to maintain and operate as compared with modern facilities and that its condition is such as to constitute a hazard to operating and maintenance personnel. There was also certain hearsay evidence concerning the present Bivins-Denver adduced at the original hearing on behalf of Colorado Interstate, the weight to be accorded which the Examiner cannot appraise.

The testimony above summarized is offset by the factors concerning the line above referred to in the testimony of the Denver witness. The force of the testimony is also offset or weakened by the following considerations:

Because of the ambiguity created by the twice-repeated reference to "the line blowing up," it should be observed that a whole line never blows up—a blow up occurs only at a particular spot.

Significantly, the Colorado Interstate vice president said that "we have not spent any more money on that line in prospect for abandonment than we could help," and there is no evidence that the installation of some new sections in the Bivins-Denver line would not put the line in reasonably satisfactory operating condition. In this connection the Examiner takes administrative notice that the pipeline of Northern Natural from the Texas Panhandle field to Omaha, Nebraska, completed in 1931, only three years later than the Bivins-Denver line, and the pipeline of Natural Gas Pipeline Co. of America from such field to Chicago, completed in 1932, are each still in service. For that matter, there have been a number of replacements in the Bivins-Denver line, so all of it does not date back to 1928.

The Colorado Interstate witness recognized that the Bivins-Denver line can be operated safely at a lesser pressure than that at which it now operates, and

said that it could be used as a lateral line where a temporary interruption would not hurt. The record also shows that the company has been able to effect repairs in the line without interruption of service, except a temporary loss of service to interruptible customers in 1957. Also, there is no evidence as to the present volume of gas leakage, even in the absence of adequate maintenance of the line.

Furthermore, there has been a change in Colorado Interstate's method of operating the present Bivins-Denver line which causes it to have additional usefulness. Colorado Interstate formerly operated the line, as originally planned, by transporting gas from Bivins station to Denver, and to points along the route of the line. The line, as so used, was designed for a capacity of 155,000 Mcf per day. Colorado Interstate now uses the pipeline to transport 133,000 Mcf per day northward from Bivins station toward Denver, and to transport from 60,000 to 80,000 Mcf per day southward from Denver. This manner of operation increases the sales capacity of the line from 155,000 Mcf per day to about 210,000 Mcf per day at the pressures now employed, which are lower than those for which the line was designed.

Colorado Interstate has failed to establish to the satisfaction of the Examiner, or by a preponderance of the evidence, that the Bivins line should be abandoned.

For these additional reasons, the application should be denied.

Alternative Means of Serving Rocky Mountain Area Proposed by Tennessee Subsidiaries

Assuming for the purpose of the discussion that Colorado Interstate has established that its present Bivins-Denver line should be abandoned, the evidence shows that the objectives which Colorado Interstate says it seeks in these proceedings for the Rocky Mountain area can be accomplished far more economically if Colorado Interstate so expands its system as to serve the Rocky Mountain area only. The objectives stated by Colorado Interstate are to provide 80,000 Mcf per day of immediate additional capacity to the Rocky Mountain area; to retire and replace the Bivins-Denver line; and to provide a further potential added capacity of 100,000 Mcf per day to the Rocky Mountain area.

It has been seen that already Colorado Interstate has obtained 77,033 Mcf of additional capacity from the Table Rock, Rawlins and Patrick Draw facilities which are either on, or tie into, the Wyoming line. The Tennessee subsidiaries established by cross-examination of a Colorado Interstate witness that in addition to this increased capacity, 80,000 Mcf of immediate capacity can be obtained, and the other aforementioned stated objectives can be achieved (1) by continuing purchases to the extent of 100,000 Mcf/d from Pacific Northwest (or El Paso) at Green River, and (2) by installation of the following transmission facilities: 136 miles of 24'' pipeline, Morton Junction to Pueblo; 100.9 miles of 20'' pipeline, Pueblo to Denver Hamlen Avenue meter station; Trinidad lateral; and Morton County compressor station, 6000 HP; and by supercharging Lakin compressor station. A reasonable estimate of the capital cost of these facilities, according to the evidence, is only $18,000,000.

The cross-examination of the Tennessee subsidiaries also shows that the revenues from the operation of Colorado Interstate's transmission system after the construction of the foregoing facilities would exceed the corresponding cost of service by a small margin. Consequently, such a separate project is economically feasible even before attachment of the additional load which would be made possible by the potential capacity of 100,000 Mcf per day. The excess of revenues over cost of service, $36,809, is more particularly shown by the following tabulation:

SEPARATE ROCKY MOUNTAIN SERVICE BY COLORADO INTERSTATE—COST OF SERVICE AND REVENUES FROM OPERATION OF MORTON JUNCTION-PUEBLO-DENVER LINE (CONSTRUCTION OF WHICH WOULD BE REQUIRED), PLUS ADDITIONAL COST OF SERVICE BY COLORADO INTERSTATE'S PRESENT TRANSMISSION SYSTEM

Item	Cost of service	Revenue
1. Sale of 80,000 Mcf/d plus volumes previously transported by Bivins line (approx. 36,000,000 Mcf per annum).		$9,848,809
2. Total transmission cost of service, new facilities ($18,000,000 x 18%).	$3,240,000	
3. Savings from abandonment of Bivins line (negative cost).	(2,310,000)	
4. Cost of gas referred to in Item 1 (36,000,000 Mcf x 16.45¢).	5,922,000	
5. Additional cost of remainder of transmission system gas because of retention of El Paso Rock Springs purchase (185,000,000 Mcf x 1.6¢).	2,960,000	
Totals	9,812,000	9,848,809
Excess revenues		36,809

The Examiner finds that the above amounts are valid and reasonable estimates.

In an attempt to refute the foregoing showing, Colorado Interstate sets up a straw man and knocks him down. Said applicant notes that the revenues from the incremental volumes of gas (80,000 Mcf/d) are $3,447,000, and points out that such sum is less than the total transmission cost of service plus the cost of the incremental volumes. This is an irrelevant consideration. What matters is the total revenue compared wih the total transmission cost of service plus the total cost of the gas transmitted.

Next, Colorado Interstate claims that the additional cost of the gas referred to in Item 5 of the tabulation should have been computed by multiplying 185,000,000 Mcf by 2.12¢, instead of 1.6¢. This claim is without merit. The 1.6¢ is the difference between 16.45¢, the average cost per Mcf of production, purchases and gathering to Colorado Interstate including the purchase at Green River, and 14.85¢, such average cost exclusive of the Green River purchase. The 2.12¢ is the difference between the 16.45¢ and 14.33¢, which latter figure was the rate arrived at in a settlement of a Colorado Interstate rate case, and did not purport to be a cost figure. The Colorado Interstate witness, himself, said that the 1.6¢ "looks like a reasonable figure" to adjust the cost of the 185,000,000 Mcf to recognize the continuance of Colorado Interstate's purchase at Green River.

Assuming that the alternative expansion of the Colorado Interstate system proposed by the Tennessee subsidiaries is required instead of the Denver proposals, such expansion is decidedly more desirable than Colorado Interstate's portion of the Rock Springs project; and for this additional reason, the applications should be denied.

Response to Miscellaneous Arguments of Colorado Interstate

There are averments in the testimony on behalf of Colorado Interstate that a Colorado Interstate separate expansion to serve the Rocky Mountain area would result in a rate increase to its Rocky Mountain customers of on the order of $5,000,000. Colorado Interstate introduced no study to support this claim. As best the Examiner can gather from the record, the basis for the claim is that said applicant would have to continue to purchase gas from Pacific Northwest (or El Paso) at Green River at the present rate of 27¢ per Mcf, and in the future at still higher rates, of which applicants say there is a prospect. Thus, one of Colorado Interstate's vice presidents testified:

> * * * in my judgment [a project designed solely to serve the Rocky Mountain area] would result in a rate increase to present customers on the order of $5,000,000. This is predicated upon the present rate of approxi-

> mately 27¢ per Mcf for gas which we purchase from El Paso near Green River, Wyoming.

And another of its vice presidents testified:

> * * * that Rock Springs gas today is costing us 27¢ per Mcf * * * [The president of El Paso] has testified that the Pacific Northwest system is still in a revenue deficiency position, and we may get further increases down the road. * * * our average purchased gas price * * *, excluding the [Green River] gas, now, is only 15¢ per Mcf * * *, so we think it is much better for our customers that we cancel that contract at Green River and turn that gas around and supply their needs with 15¢ gas rather than to continue to supply them with 27¢ gas, * * * and all we need is a line into Denver to take care of them. That will save us * * * in gas purchase costs alone, about $5,000,000 a year * * *.

These claims are not valid. They are refuted by the evidence above considered respecting means other than the Rock Springs project of serving the Rocky Mountain area. Indeed, the first of the two vice presidents was the selfsame witness who, on cross-examination, furnished the data and the figures which demonstrate that a separate project to serve the Rocky Mountain area, including abandonment of the present Bivins-Denver line, and continuation of the present minimum average daily purchases of 100,000 Mcf/d at Green River, would entail no revenue deficiency. Unquestionably, purchases at Green River can also be held to this minimum, and there would be no revenue deficiency, under the alternative means of serving the Rocky Mountain area proposed by Denver.

Furthermore, the difference between Green River 27¢ gas and the average production, purchase and gathering cost of Colorado Interstate's other supplies, 15¢ (14.85¢, to be exact), is not a correct figure to use. For it has been shown that if the Rock Springs project were consummated, Colorado Interstate would have no 14.85¢ gas left with which to meet the future increased needs of the Rocky Mountain customers, and would be forced to procure other gas supplies to satisfy those needs, at prices which are unknown.

The claimed prospect of higher gas purchase costs at Green River cannot counterbalance (1) the enormous saving in capital costs and expenses which will accrue to Colorado Interstate from serving the Rocky Mountain area by the alternative means which have been treated of, and (2) the fact that said applicant will have ample 14.85¢ gas for increased needs of the Rocky Mountain area.

Next, Colorado Interstate avers that certification of its temporary facilities and denial of the rest of its project will increase its gas purchase costs by $3,600,000 annually. The reason which Colorado Interstate assigns is that if the Rock Springs project is denied, said applicant, "under its present purchase pattern," would have to increase its contract demand from El Paso (Pacific Northwest) at Green River by 42,559 Mcf in order to maintain its present transmission capacity. The present contract demand is 117,500 Mcf/d. In the Rock Springs agreements between El Paso and Colorado Interstate, El Paso gave assurance that "except under unusual circumstances, not anticipated," it would furnish Colorado Interstate up to 170,000 Mcf/d during the 1960–61 and 1961–62 winter seasons so that peak-day requirements of the Rocky Mountain customers could be met. The additional volumes from El Paso were to consist of gas for which Colorado Interstate had previously paid but had not taken. Apparently, the 42,559 Mcf is the difference between the present contract demand at Green River and the volume at Green River which, according to Colorado Interstate, can now be transmitted in the Wyoming line.

The qualification which Colorado Interstate necessarily makes in its position, "under its present purchase pattern," shows that its contention has but

little force. Colorado Interstate's management is duty bound not to sit idly by and increase its contract demand for purchases at Green River while neglecting to take steps to supply the Rocky Mountain area with its 14.85¢ gas, and additional production in the Table Rock and Patrick Draw fields as well. It has been seen that even now a 15,000 Mcf/d input into the Wyoming line from the Patrick Draw field has displaced 6,770 Mcf/d of the gas which previously was coming from Green River. As already brought out, in the absence of the Rock Springs project, it is economically feasible for Colorado Interstate to supply the present and increasing requirements of the Rocky Mountain area from its present sources of supply other than Green River purchases (except for the 117,500 Mcf/d Green River contract volume).

To be sure, Colorado Interstate would have to continue taking volumes of on the order of 160,000 Mcf/d at Green River, as a temporary expedient during the present winter season, pending Commission authorization for, and the construction of, additional facilities by Colorado Interstate. But it is likely that said applicant will not need to have even a temporary increase in the contract demand of its Green River purchases. The volumes over the present contract demand which El Paso assured Colorado Interstate it would undertake to furnish for meeting peaks in the winters of 1960–61 and 1961–62 were volumes for which Colorado Interstate had already paid, as has been seen. The record shows that on January 1, 1961, such prepaid gas was 2,392,134 Mcf. It is probable that there is an ample sufficiency of the prepaid gas remaining to supply all of the volumes on peak days which the transmission capacity of the Wyoming line enables Colorado Interstate to take. It stands to reason that El Paso should be willing for Colorado Interstate to use any prepaid gas under the same, or a similar, arrangement to that which said parties entered into for the 1960–61 and 1961–62 winters. If Colorado Interstate acts with due diligence, including consideration of the possibilities of there being an abridged hearing upon an application seeking authorization of facilities for a separate expansion to serve the Rocky Mountain area or of there being a temporary authorization of such facilities, Colorado Interstate will likely have such facilities installed before the heating season of 1963–64.

No Justification for Divided Ownership of Provo Line

It has been shown that applicants propose that the pipeline from Green River to the California border be owned and operated in part by Colorado Interstate: and in part, by El Paso. The Colorado Interstate portion, from Green River to Provo, is 155 miles in length; and is far removed from the area which Colorado Interstate now supplies with gas. No purpose is served by Colorado Interstate owning such stretch of line other than that of increasing said applicant's rate base. In addition, El Paso's segment of the Provo line would be separated from the rest of its Northwest Division (assuming for the purpose of the discussion that it has acquired the assets of Pacific Northwest). The divided ownership of the line from Green River to California is without justification.

This is an additional reason for denying the applications.

Even Assuming a Market for Rock Springs Gas, No Satisfactory Showing that El Paso Portion of Project is Economically Feasible

In *Colorado Interstate Gas Co.* v. *Federal Power Commission*, 324 U.S. 581, 591, the Supreme Court said: "* * * considerations of fairness * * * govern the allocation of costs." This criterion requires the making of two adjustments to El Paso's purported cost of service.

The first adjustment is the elimination of a Colorado Interstate 3.75¢ rate differential in favor of El Paso. The following language, made use of by the Tennessee subsidiaries in developing the point, is adopted by the Examiner as findings and conclusions:

> The conclusive objection to CIG's [an abbreviation employed by the Tennessee subsidiaries to denote Colorado Interstate Gas Co.] rate proposal * * * is that it is unduly discriminatory, granting a preference in favor of El Paso and to the detriment of CIG's general service customers in the Rocky Mountain area. To understand the use and impact of the discrimination, it must be noted that CIG proposes to employ two rate zones. At the present time CIG employs only one rate zone with a system-wide volumetric allocation of cost to demand and commodity components in that one rate zone. CIG proposes to set up a separate Rate Zone 2 for El Paso, leaving all its present customers in Rate Zone 1. In developing the Zone 2 El Paso rate, Colorado employed the zone-gate allocation method. This method treats all costs in Zone 1 as though all customers, including El Paso, received service in Zone 1; the gas flowing out of Zone 1 is then charged with the additional costs incurred in Zone 2. The critical point is that costs are allocated to Zone 2 volumes in Zone 1 just as though that volume was sold in Zone 1. In making its allocations in Rate Zone 1, CIG *arbitrarily* imposed a 3.75¢ per Mcf differential to the *commodity* costs between its general service and pipeline service in favor of the pipeline service customers (including El Paso) in that zone. The *net* effect of the use of the 3.75¢ differential in Zone 1 is to allocate 1.6¢ per Mcf less cost to El Paso than would have been the case had the differential not been employed.
>
> There is no cost basis for this differential. It [allegedly] is employed solely because CIG historically has used a similar rate differential in favor of *small* pipeline customers, to wit: Colorado-Wyoming Gas Company and Citizen's Utilities Company. In the past, the size of the load served those two companies was such that the differential in their favor did not seriously penalize CIG's general service customers. The differential was originally imposed to permit distributing companies north of Denver to buy gas at a price comparable to Denver's; as [a CIG witness] pointed out, this reason was basically political to avoid controversy between local communities. However, when this differential is applied to the volumes estimated to be sold to El Paso, it produces a change of a full $1 million per year. In other words, an *additional* $1 million per year would have been allocated to *El Paso* and $1 million per year *less* to CIG's general service customers had this differential not been employed.
>
> There is * * * no justification for granting El Paso a $1,000,000 per year cost differential *at the expense* of CIG's *present customers* simply because small pipeline customers have enjoyed some differential in the past. This is an *outright gift* of $1,000,000 per year to El Paso from CIG's other customers. The situation of the small pipeline customers is in no way comparable to that of El Paso; the size and character of the loads are entirely dissimilar, * * *
>
> If this were not enough, the * * * fact is that the *amount* of the differential and the *method* by which it is computed in favor of El Paso is far more discriminatory than the amount and method of the differential historically employed in favor of the small pipeline customers. In the past, the method employed for the small pipeline customers was by means of an adjustment to the *demand* portion of their rate, so that the size of the differential actually received varied in accordance with their load factor. The differential in El Paso's case is applied directly to the *com-*

> *modity* portion of the cost allocation, so that El Paso receives the *full amount* of the differential regardless of the load factors. The absolute level of the differential employed in favor of El Paso (3.75¢ per Mcf) is the *highest* the differential has *ever* been in the history of CIG, and is *higher than it now is* in favor of the small pipeline companies. * * * El Paso should pay its full share of CIG's cost of service, the use of the discriminatory differential should be disallowed, * * * [Italics those of Tennessee subsidiaries.]

Colorado Interstate correctly points out that the proposed rate to El Paso at Green River is higher than the rate at Denver. But this fact does not justify the differential. It has been noted that the distance between Denver and Green River over the route of the pipeline between such two points is 365 miles. Obviously there would be substantial additional costs attendant upon the transportation of the 237,712 Mcf per day from Denver to Green River for sale to El Paso, the sole use to which the line would be put. The creation of a second zone, with a higher price to El Paso based upon cost, is proper. But having a second zone does not excuse the 3.75¢ differential in favor of El Paso—a differential which constitutes a departure from a full cost allocation to El Paso in Zone 1.

Colorado Interstate and the Southern Companies argue that Colorado Interstate would have been justified in adopting a system-wide method of allocation instead of having two rate zones, in which event the rates to El Paso at Green River would have been lower than those here proposed. From the treatment in the preceding paragraph hereof, it is manifest that a single zone would have been unjust and unfair to the Rocky Mountain customers. Colorado Interstate and the Southern Companies base their argument upon the fact that the Commission adopted a system-wide allocation for El Paso's Southern Division system. The operation of El Paso's Southern Division is so dissimilar to Colorado Interstate's Rock Springs project that the Commission precedent respecting El Paso's Southern Division has no application. The great bulk of El Paso's Southern Division sales are made at the western end of its system; *i.e.*, 91% of the sales capacity is devoted to Tucson and points west thereof, and 78%, to the Southern California sales. In contrast, the sale of gas to El Paso, to which the entire 365 miles of line west of Denver would be devoted, would constitute but 25% of the capacity of the Colorado Interstate system.

The nature of and reason for the second adjustment to El Paso's cost of service is also well expressed by the Tennessee subsidiaries, and the Examiner adopts their language, and finds and concludes, as follows:

> CIG in its use of the zone-gate method * * * has included within the boundaries of Zone 1 its [proposed] Denver and Pierce compressor stations, [to be located on the Wyoming line], and allocated the costs attributable to those stations amongst all customers in Zone 1, including El Paso. However, the Denver and Pierce compressor stations are required *only* for service to El Paso. Service to all customers *except* El Paso could be rendered just as well *without* the Denver and Pierce stations. As a consequence, it is only fair and reasonable that El Paso, which receives the sole benefit of those stations, should pay their entire cost. [Italics those of Tennessee subsidiaries.]

El Paso did not introduce up-to-date exhibits reflecting the cost of service applicable to the gas which it would deliver to the Southern Companies from the Provo line, with the Edison load included. We are relegated to making use of said applicant's Exhibits 14 and 120, which pertain to such a showing for the years 1962, 1963 and 1964, at a rate of return to El Paso of 6½%. Since the project was subsequently deferred for three years, the figures for 1962, 1963 and 1964 now apply to 1965, 1966 and 1967. From the figures in Exhibits 14

and 120, the estimated rate of return, adjusted to eliminate the 3.75¢ differential and to make a direct allocation of the Denver and Pierce compressor stations to the service to El Paso, is reduced to the following percentages: in 1965, 1.05%; in 1966, 2.12¢ and in 1967, 6.08%.

There is another feature which increases El Paso's cost of service applicable to the Rock Springs project materially; *i.e.*, volumes of gas which El Paso has been and is contractually obligated to take, or for which it must pay if it does not take the gas, with the right to make up, or recoup, the gas within a specified period of time. The record shows that El Paso has incurred large expenditures for this take-or-pay gas which it has not been able to take. As of December 31, 1961, the prepayments amounted to $14,357,239. The record further shows that in 1962, 1963 and 1964 El Paso would incur large additional expenditures for gas which it would not take during such period of time. The payments for gas not taken become working capital, in other words, part of the rate base; and are manifestly a substantial cost item. El Paso expects to make up most of the volumes after the Rock Springs project commences full operation, if authorized. But apparently it would have to write off some amounts spent for gas which it could not recoup; just what the loss would be because of write-offs, the record does not show.

It is manifest that a large portion of the take-or-pay obligations was incurred because of the Rock Springs project. In fairness, the costs for such portion of the take-or-pay gas should be allocated directly to the project. El Paso, however, has merely allocated the costs generally to all of its customers.

El Paso takes the position, which the Examiner does not believe to be justified, that it is unable even by allowing considerable latitude for the exercise of judgment, to make a breakdown between the take-or-pay obligations incurred for the Rock Springs project and those not incurred for the project. Again, the presumption applies that evidence withheld would be adverse if produced.

Irrespective of whether there is a market for the gas, El Paso has failed to satisfy the Examiner's mind—*i.e.*, has failed to meet the burden of establishing—that its portion of the Rock Springs project is economically feasible.

For these additional reasons, the applications should be denied.

Project Not Economically Feasible Without Edison Load

The foregoing treatment has been predicated upon the assumption that the Southern Companies will continue to serve the Edison load. The record is clear that if Edison should cease to be a customer of the Southern Companies, El Paso's portion of the Rock Springs project is "hopelessly uneconomic."

El Paso's allocation studies treat the delivery of the volumes which El Paso proposes to supply at Green River as though the delivery were a sale. Likewise, in the ensuing analysis of El Paso's method of allocating the cost of such volumes, the delivery will be referred to as a "sale" and the Provo line as a "customer," in the interest of simplicity.

At the original hearing, in arriving at the cost of service applicable to such gas, El Paso's allocation witness, in Exhibit 14, appears to have made a demand unit allocation of 235,000 Mcf (at 14.9 psia). But in Exhibit 263, sponsored by the witness at the rehearing, the witness, in arriving at the purported cost of service without the Edison load, allocated only 165,000 Mcf (at 14.9 psia) as the demand units attributable to the sale at Green River. The 165,000 Mcf is not a proper share of the demand units, and an adjustment back to the 235,000 Mcf is required.

The Examiner adopts as findings and conclusions the following language in the brief of the Tennessee subsidiaries:

> The method [of allocation] El Paso adopted * * * was to treat the Northwest Division [Pacific Northwest] as a single zone, and to make a system-wide allocation of both demand and commodity costs on a volumetric basis. In other words, the costs were divided between customers solely on a volumetric basis after classification between demand and commodity costs, without regard to the location of the customer point of delivery on the pipeline system. The same dollars would be allocated to a sale taking place at the Canadian border, at Rock Springs, or at San Juan if the volumes at each place (both demand and commodity) should be the same. This means, of course, that an increase or decrease in gas volumes, either on the demand side or the commodity side, allocated to any one customer, automatically changes not only the costs allocated to that customer, but also the costs allocated to all other customers on the system.
>
> To illustrate this principle, costs are assigned to a given service on a straight ratio basis: that is, that percentage of demand costs is assigned to a given customer which represents the ratio of that customer's demand volume to total system demand volumes. It follows by pure arithmetic that if the demand volumes assigned to one particular customer are increased, the percentage of demand costs assigned to that customer increases, and the percentage of demand costs assigned to all other customers decreases: vice versa if a demand volume is decreased. Use of this single zone volumetric method makes it particularly important that these volumetric allocations be done on a basis which is consistent for all customers.
>
> The El Paso allocation method sponsored by [El Paso's allocation witness] in Exhibit 263 does *not* do so. [His] method for determining demand units for the Rock Springs sale is *not* consistent with the method he employs for determining demand units for other customers. * * * In Exhibit 263 [the witness] assigned demand costs to all customers situated north of Station 7 [a point 70 miles northwest of Green River] on a capacity basis; that is, he allocated to those customers as a group the full capacity of the pipeline located north of Station 7. For the customers located south of Station 7, [the witness] stated that he based his allocations on the peak day estimated for each customer. This is correct in the case of Mountain Fuel Supply Company, but when it came to Rock Springs he abandoned *both the capacity and the peak-day estimate method.* The proposed capacity of the Rock Springs facilities is 470,000 Mcf per day [at 14.9 psia] in the year 1965 when fully powered. Only 50% of this, or 235,000 Mcf, is available from CIG, so the remaining 235,000 Mcf must come from the Northwest Division. However, [the witness'] Exhibit 263 demand unit allocation to Rock Springs in 1965 and thereafter was only 165,000 Mcf, instead of the 235,000 Mcf which represents a *capacity* allocation on a basis consistent with that employed for the custmers north of Station 7. * * * Furthermore, [the witness] did *not* use Rock Springs' estimated peak-day volumes as a basis for Exhibit 263 demand unit allocations. The peak-day volume estimated to be delivered to the Southern Gas Companies at Las Vegas in Exhibit 260, Schedule 3, page 1, line 8 (prepared by * * * El Paso's market witness) is 470,000 Mcf, of which at least 235,000 would have to come from the Northwest Division. [The allocation witness] offered no reasonable explanation as to why he elected to allocate demand units to the Rock Springs sale in Exhibit 263 on a basis different from that employed in Exhibit 14, and different from either of the two methods employed in Exhibit 263 for other Northwest Division cus-

tomers, although questioned at some length thereon. There is *no* reasonable justification for this difference in treatment; since the capacity is in fact proposed to be installed, and is in fact proposed to be used whenever required, Rock Springs should be allocated its full share of the demand costs on that basis. If the full demand unit allocations are not assigned to Rock Springs, this installed capacity nevertheless will be paid for, but by *other* Northwest Division customers. [Italics those of Tennessee subsidiaries.]

The effect of adjusting El Paso's cost of service on the Provo pipeline (without the Edison load) for (1) elimination of the Colorado Interstate $3.75¢ differential, (2) the direct allocation of the Denver and Pierce compressor stations, and (3) use of a demand allocation volume of 235,000 Mcf (at 14.9 psia) to El Paso at Green River, is to reduce El Paso's rate of return to zero in 1964 and 1965, to a bare 0.65% in 1966, and to a bare 1.97% in 1967.

Purchase of Rock Springs Gas by Southern Companies Economically Infeasible—No Market Therefor Except Distant-Future Sales as Boiler Fuel

It has been pointed out that already there are two pipeline systems extending from Texas to California, the Southern Division of El Paso and the Transwestern system.

Extreme caution should be exercised in determining whether to certificate the Rock Springs project, for we should be very careful not to authorize it if it is not needed. These assertions are prompted by the following considerations:

(1) The project is very costly, and the consumer is going to have to foot the bill. Under settled law, the question of the economic feasibility of the Southern Companies' proposal to purchase the Rock Springs gas is properly to be taken into account in passing upon El Paso's application for the authorization which it seeks. *Virginia Petroleum Jobbers Association* v. *Federal Power Commission*, 293 F. 2d 527, 529, certiorari denied 368 U.S. 940; *Coastal Transmission Corp.*, 26 FPC 318, 330.

(2) It is in the public interest that the supply of natural gas in the United States be conserved for use by the people of the nation as a premium fuel so far as practicable. *Federal Power Commission* v. *Transcontinental Gas Pipe Line Corp.*, 365 U.S. 1, 8, 22. There is just so much gas in the ground; and when it is gone, the people who enjoy its benefits for "superior uses" will have those benefits no longer. If there are too many pipelines, either capacity lies idle or an undue proportion of gas goes for boiler fuel.

It has been noted that the Commission prescribed—and wisely so—that the matter of using existing pipelines to bring additional volumes of gas to the southern California market should be fully explored.

Peak-Day Requirements and Supply

The Southern Companies presented the phase of El Paso's case having to do with their estimated market requirements and supply, and the question of the economic feasibility of their purchase of the Rock Springs gas. The most recent estimates of their market witness are set out in Exhibit 290.

The estimate of peak-day requirements in Exhibit 290, made early in 1961, was calculated at a mean temperature of 36 degrees Fahrenheit. Adoption of calculations at such temperatures is liberal to the applicants, for a mean temperature that low last occurred in 1937; and before that, in 1922. A 37-degree temperature occurred in 1949. However, the Examiner accepts the estimate as not being without the bounds of reasonableness.

These estimated peak-day requirements are as follows:

Heating season	*Mcf*
1962–63	3,040,000
1963–64	3,205,000
1964–65	3,365,000
1965–66	3,528,000
1966–67	3,695,000
1967–68	3,871,000
1968–69	4,048,000
1969–70	4,227,000

The out-of-state sources from which the Southern Companies at present obtain their gas supplies, as has been seen, are the Southern Division of El Paso and Transwestern. A reasonable estimate of the peak-day supply from El Paso in each of the eight winters in question is that specified in Exhibit 290, 1,143,000 Mcf. This volume is the Southern Companies' maximum contracted daily demand from El Paso's Southern Division (1,130,000 Mcf at 14.9 psia converted to a pressure base of 14.73 psia).

As to Transwestern, such company has a large amount of unused capacity in its system. Despite efforts on its part, it has been unable to sell the load represented by such unused capacity to the Southern Companies (except an increase from the present contract demand quantity, 300,000 Mcf/d, to 350,000 Mcf/d on November 1, 1963). If applicants do not take advantage of Transwestern's willingness to transport 237,500 Mcf/d of Colorado Interstate gas, or if the Commission should not authorize such transportation; it is a reasonable and justifiable conclusion from the evidence that the peak-day volume which Transwestern can now, and will in the future be able to, deliver to the Southern Companies with its existing facilities is at least 420,000 Mcf. The service agreement between Transwestern and the Southern Companies contains a provision that deliveries of 300,000 Mcf are to be made at a pressure of not less than 800 pounds psig. At such pressure, Transwestern is able to deliver at the California border in the winter only approximately 370,000 Mcf per day. But substantially larger volumes can be delivered at a lesser pressure, as is permissible under Transwestern's LX Rate Schedule. During January, February and March 1962, Transwestern delivered to the Southern Companies volumes in excess of 420,000 Mcf on the Southern Companies' peak day and on 37 other days. Many of these daily deliveries were substantially more than 420,000 Mcf, and reached a high of 430,611 Mcf. The fact that Transwestern delivered in excess of 420,000 Mcf on the 1961-62 peak day and the other days mentioned warrants the conclusion that Transwestern has the ability to deliver, and the Southern Companies have the ability to receive from Transwestern, 420,000 Mcf on peak days in the future.

The Examiner finds and concludes that a reasonable and conservative estimate of the peak-day supply available to the Southern Companies from the existing facilities of El Paso and Transwestern, during the heating seasons 1962–63 to 1969–70, inclusive, is as follows:

	Mcf
El Paso Natural Gas Co	1,143,000
Transwestern Pipeline Co	420,000
Total	1,563,000

The California sources of peak-day supply consists of (1) underground storage, (2) normal production sources, and (3) other sources in California available during periods of peak demand. The Southern Companies' estimate of peak-day volumes available to them from intrastate sources, reflected in their

Exhibit 290, which the Examiner considers to be reasonable as of the time early in 1961 when the peak-day estimate was made, is as follows:

Heating season	Underground storage (Mcf)	Normal production sources plus some peaking gas (Mcf)	Total California sources (Mcf)
1962–63	1,097,000	639,000	1,736,000
1963–64	1,102,000	584,000	1,686,000
1964–65	1,122,000	581,000	1,703,000
1965–66	1,162,000	577,000	1,739,000
1966–67	1,162,000	574,000	1,736,000
1967–68	1,162,000	570,000	1,732,000
1968–69	1,182,000	566,000	1,748,000
1969–70	1,182,000	563,000	1,745,000

The out-of-state and California-source peak-day supplies above specified give us the following totals:

Heating season	*Mcf*
1962–63	3,299,000
1963–64	3,249,000
1964–65	3,266,000
1965–66	3,302,000
1966–67	3,299,000
1967–68	3,295,000
1968–69	3,311,000
1969–70	3,308,000

It will be noted that the forgoing peak-day supplies are in excess of the peak-day requirements for the winters of 1962–63 and 1963–64 (*supra*, p. 131); and therefore, on the basis of the above volumes alone, that there is excess pipeline capacity in each of such two heating seasons.

But the peak-day volumes which will be available to meet the requirements are in fact far in excess of the volumes in the tabulation last above set out. In his Special Findings issued in these proceedings on June 14, 1962, which were made without the benefit of briefs, the Examiner found that there would be an estimated 620,000 Mcf of additional peak-day repressuring gas available during the respective heating seasons 1962–63—1969–70, inclusive. In the light of the briefs which have since been submitted, the Examiner is satisfied that such finding is erroneous. The Examiner, however, does find, as a reasonable estimate, that the Southern Companies will have available and will utilize 550,000 Mcf of additional peak-day gas during the respective winter seasons 1964–65—1969–70, inclusive, from one trillion cubic feet of repressuring gas testified about on December 14, 1961, by a witness in a proceeding before the California Public Utilities Commission.

The witness, R. W. Todd, a vice president of Pacific Lighting Gas Supply Company whose duties include purchasing gas from California producers, said in the California proceeding that there are numerous gas reinjection programs now being carried on by California producers; and at the conclusion of the projects the gas used for recycling will be available for sale to the Southern Companies under long-term contracts. He further said that late in 1961, the Southern Companies were apprised that two gas reinjection projects, employing in excess of one trillion cubic feet of natural gas, either had reached, or within the next two or three years would reach, their economic limit; and that when the gas was no longer needed for reinjection it would be sold by the producers to

the Southern Companies. The record shows that the particular significance of repressuring gas is that it can be used predominantly to meet winter and peak-day loads, in contradistinction to the larger portion of California gas purchased by the Southern Companies, oil-well gas, the rate of production of which is determined by the production of oil.

It should be noted that no portion of the trillion cubic feet is included in the Southern Companies' estimate of peak-day supplies contained in Exhibit 290, since the peak-day estimate was prepared early in 1961 and, according to Mr. Todd, the Southern Companies were not apprised of such repressuring gas until "late in 1961."

In their comments on the Special Findings, the Southern Companies, referring to Mr. Todd's testimony, aver that there is a "lack of trustworthiness in hearsay evidence." To be sure, the testimony is hearsay. But no party objected to its receipt in evidence in these proceedings; and the statements constitute an admission against interest by a responsible officer of Pacific Lighting, in the very field in which his duties lie. Moreover, the evidence stands unweakened by any effective contradiction or denial. Indeed, W. M. Jacobs, the president of Pacific Lighting, testified in the instant proceedings, on January 24, 1962, that the Southern Companies had by that time entered into long-term contracts for the purchase of 200 billion cubic feet of the one trillion cubic feet.

Respecting the 200 billion cubic feet, Mr. Jacobs went on to say that "the actual delivery date of that gas is not set, and the rate of delivery in cubic feet per day has not been established." But there is no denial of Mr. Todd's statement that the producers would sell the trillion cubic feet to the Southern Companies when the economic limit of the recovery operations had been reached, which event apparently has already occurred as to the 200 billion cubic feet, or is in the offing. And there is no denial by Mr. Jacobs of Mr. Todd's further statement that the entire trillion cubic feet will be available within the next two or three years.

The Southern Companies and El Paso attempt to make something of the fact that on January 22, 1962, counsel for Southern California Gas Co. made the following statement at the hearing in the instant proceedings:

> I am informed that this testimony [, Mr. Todd's,] was inadvertently in error, and that the California Commission has been so advised by letter, that in fact only 200 billion cubic feet of gas is actually under long-term contract, and that the date of delivery and availability and rate of delivery of that gas is also uncertain.
>
> Now, we expect to confirm this, Your Honor, through the testimony or through questions of Mr. Jacobs at such time as he is on the stand, * * *

The Examiner makes a twofold response to the position now taken by the Southern Companies and El Paso:

First, the above quoted statement of counsel is not evidence in the proceedings.

Secondly, if the statement were evidence, either it does not militate in any wise against the correctness of Mr. Todd's testimony, or else it is insufficient to change the effect of, or weaken, that testimony. Apparently what counsel had in mind were the facts subsequently testified to by Mr. Jacobs, and which have already been referred to in this decision. Those facts do not contradict Mr. Todd's testimony in any way. If counsel had anything else in mind when he said that he had been informed that Mr. Todd's testimony was in error, counsel was apparently under a misapprehension, because Mr. Jacobs' subsequent testimony did not "confirm" counsel's statement that there had been an error.

The Examiner regrets taking the space to answer such trivial arguments, and he only does so lest the Commission (unintentionally on the part of the Southern Companies and El Paso) be misled.

Another witness for the Southern Companies perhaps attributed to Mr. Todd a representation on January 12, 1962, that "It is possible, even, that it might be four or five years before this gas does become available." But such statement of possibility, if made by Mr. Todd, cannot prevail against his testimony under oath before the California Commission, received in evidence in the instant proceedings. If Mr. Todd desired to retract that testimony in any respect, it was incumbent upon him to appear as a witness in these proceedings for that purpose. He failed to produce himself as a witness despite the fact that the hearing did not conclude until two and a half months after his testimony before the California Commission was made a part of the record in these proceedings.

The Examiner finds, as a reasonable estimate, that in the winter of 1964–65, three years from the time of Mr. Todd's testimony, the Southern Companies will have available at least a trillion cubic feet of repressuring gas in addition to the volumes of gas which form the basis of the estimated peak-day supply contained in Exhibit 290.

Keith Kelsey, assistant vice president of Southern California Gas Co., recognized that the one trillion cubic feet, when contracted for, will be delivered by the producers as it is processed, at an average rate of at least 275 million cubic feet a day, which rate will spread the delivery over a period of about ten years.

Mr. Jacobs testified that the repressuring gas,

> can be produced at rates which can be varied, and therefore we would seek to put it under contract ultimately on a basis which would enable us to take the gas primarily in the winter for peaking purposes, and for the seasonal requirements of the firm customers rather than to take the gas at a steady rate throughout the year.

It may well be that, in meeting its peaks, the Southern Companies can and will use four or five times as much of the repressuring gas as the average daily take of 275,000 Mcf. But the Examiner finds that a reasonable estimate of the annual load factor at which the Southern Companies will take the repressuring gas is 50%. It follows that a reasonable estimate of the daily volume of such repressuring gas which the Southern Companies will use in meeting the peaks is twice 275,000 Mcf, or 550,000 Mcf, as heretofore found. This estimation is held to 550,000 Mcf in order to be conservative, and to counterbalance such general considerations as the interrelationship of the repressuring supply and storage deliverability.

The record shows that there is an important additional source of peak-day gas, which the Southern Companies did not include in their estimates of supply; *viz.*, emergency gas. This is gas that California producers make available to the Southern Companies on a temporary basis in periods of extreme peak demand. The substantial nature of emergency gas as a source of peak-day supply is shown by the testimony of Mr. Jacobs that, "the peak demand days * * * are largely cared for by emergency gas and underground storage." Contrary to the experience of the Southern Companies, said companies, in making their peak-day estimates, assumed that none of their existing emergency-gas contracts would be renewed, and that there would be no new emergency-gas contracts entered into.

The record further shows that there are two sources of additional peak-day gas which the Southern Companies did not take into account in arriving at their estimates of supply; *viz.*,

(1) Mr. Todd's testimony is to be borne in mind that the projects involving the trillion cubic feet are but two of numerous gas reinjection programs in California, at the termination of which the gas will be available for sale to Pacific Lighting.

Mr. Jacobs testified that Pacific Lighting takes all of the California-produced gas available to it.

(2) The Southern Companies should be able to purchase additional gas from El Paso on their peak days under an existing contract whereby they have the right to purchase any gas that is a "kick-back" from Pacific Gas and Electric Co. For the evidence shows that PG&E stands to have substantial quantities of surplus gas. Mr. Jacobs testified:

> I know, of course, that they [PG&E] have a new pipeline from Canada which will bring in substantial quantities of gas from that source, and it may be, in fact I hope it is true, that we can avail ourselves of some of the low-priced gas (GX or GX1).[5]

The record also discloses that there have been a number of unanticipated discoveries of gas in the territory served by PG&E. (In the tabulations *infra*, the "kick-back" gas is included as a California supply, for simplicity.)

The three factors last treated of—emergency gas, termination of other gas reinjection programs, and "kick-backs" from PG&E—reenforce the finding of an estimated 550,000 Mcf of additional peak-day gas. They also warrant the conclusion, as a reasonable estimate, that there will be still additional peak-day gas to the extent of at least 50,000 Mcf available to the Southern Companies in each of the heating seasons 1964–65—1969–70, inclusive.

The total volumes of California gas reasonably estimated as available to meet the peak-day load in the respective years 1962–63 to 1969–70, inclusive, are as follows:

Year	Exhibit 290 total California supply (Mcf)	Additional repress. and other peaking gas available (Mcf)	Total California supply (Mcf)
1962–63	1,736,000	(6)	1,736,000
1963–64	1,686,000	(6)	1,686,000
1964–65	1,703,000	600,000	2,303,000
1965–66	1,739,000	600,000	2,339,000
1966–67	1,736,000	600,000	2,336,000
1967–68	1,732,000	600,000	2,332,000
1968–69	1,748,000	600,000	2,348,000
1969–70	1,745,000	600,000	2,345,000

[6] The Examiner includes no estimate for the 1962–63 and 1963–64 peak days for volumes of gas in this category because such estimate is unnecessary for the purpose of this decision.

When to the totals in the last column of the foregoing table are added the 1,563,000 Mcf of gas hereinbefore found to be the supply available from out of state to meet the peak-day loads (*supra*, p. 131), the total peak-day gas available

[5] The Staff introduced evidence, received without objection, that PG&E is the owner of part of an Alberta-California pipeline system; and that by an expenditure of some $67,000,000, the average daily delivery of natural gas from such pipeline can be increased from an existing capacity of about 412,000 Mcf/d to 800,000 Mcf/d. There is no showing as to when, if at all, PG&E intends to increase the capacity of the system. Nor is there any showing that PG&E is willing or intends to sell any of such gas to, or exchange gas with, the Southern Companies; or that no undue burden would be placed upon it by a Commission order requiring a sale of gas to the Southern Companies. The evidence has relevancy, if any, only as a rather remote factor to be considered in weighing the probabilities whether the Southern Companies will receive considerable volumes of El Paso gas which PG&E does not choose to take.

from California sources and existing out-of-state facilities in the respective years 1962–63 to 1969–70, inclusive, is seen to be as follows:

Year	Total California supply (Mcf)	Total out-of-State supply (Mcf)	Total supply with existing facilities (Mcf)
1962–63	1,736,000	1,563,000	3,299,000
1963–64	1,686,000	1,563,000	3,249,000
1964–65	2,303,000	1,563,000	3,866,000
1965–66	2,339,000	1,563,000	3,902,000
1966–67	2,336,000	1,563,000	3,899,000
1967–68	2,332,000	1,563,000	3,895,000
1968–69	2,348,000	1,563,000	3,911,000
1969–70	2,345,000	1,563,000	3,908,000

The foregoing estimated peak-day supplies available from existing facilities exceed the estimated peak-day requirements for the six respective years 1962–63 to 1967–68, inclusive, as will be seen from the following tabulation:

Year	Supply available (Mcf)	Market requirements (Mcf)	Excess supply (Mcf)
1962–63	3,299,000	3,040,000	259,000
1963–64	3,249,000	3,205,000	44,000
1964–65	3,866,000	3,365,000	501,000
1965–66	3,902,000	3,528,000	374,000
1966–67	3,899,000	3,695,000	204,000
1967–68	3,895,000	3,871,000	24,000
1968–69	3,911,000	4,048,000	(137,000)
1969–70	3,908,000	4,227,000	(319,000)

The existence of an excess of supply over requirements in the winter seasons through 1967–68 finds further support in the testimony of an officer of Southern California gas company, himself, and in a statement of the Southern Companies, in their brief, that they "could serve their firm load for a number of years without the Rock Springs project."

The Examiner finds and concludes that the volumes shown in the last column of the foregoing table, "Excess Supply (Mcf)," for the six respective years 1962–63 to 1967–68, inclusive, are a reasonable and conservative estimate of the excess peak-day capacity available to serve the southern California market which will exist on the El Paso and Transwestern systems with the facilities now installed.

It has already been found (*supra*, p. 114) that by an El Paso-estimated expenditure of $65,580,000 for loops and compressor facilities, El Paso can increase the delivery capacity of its present facilities at the southern California border by 200,000 Mcf/d (at 14.9 psia), at a cost of service no higher than between 33¢ and 34¢ and that the increased capacity can be used to supply an additional 200,000 Mcf/d to the Southern Companies. By the installation of still more facilities, El Paso doubtless could increase the capacity of its Southern Division by more than 200,000 Mcf/d; but the increase of 200,000 Mcf/d is the only increase that is supported by cost figures in the record. The present capacity plus the 200,000 Mcf/d is, for convenience, referred to herein as the potential capacity of El Paso's Southern Division. If El Paso does not choose to develop and utilize the potential delivery capacity to transport to the Southern Companies gas which is now a part of the Rock Springs supply, said applicant can develop and utilize the 200,000 Mcf/d of potential delivery capacity to transport to the Southern Companies the gas which it had planned to sell PG&E when it filed the applications in Docket Nos. G–15696 and G–18616.

The Examiner, therefore, finds and concludes that El Paso can supply 200,000 Mcf/d to the Southern Companies from its Southern Division upon the construction by it of the facilities referred to in the preceding paragraph; and that a reasonable price for such gas is no more than the price at which said applicant proposed to sell the same to PG&E; *i.e.*, 33.38¢ per Mcf (at 14.9 psia).

We shall now turn to the question of Transwestern selling to the Southern Companies additional gas to the extent of the potential delivery capacity of its system. The examiner finds that the capacity of the Transwestern system at the California border can be increased to its maximum of 640,000 Mcf/d (an increase of 290,000 Mcf/d over the present daily delivery capacity) by the construction of new compressor stations, additions to existing compressor stations, and lateral and gathering lines. A reasonable and valid estimate of the cost of the additional facilities is on the order of $32,490,000.

Transwestern's only firm customers are the Southern Companies. The record discloses that Transwestern controls by gas purchase contracts adequate gas reserves to support a deliverability of on the order of 517,800 Mcf/d for a period of at least 15 years.

Transwestern draws its gas supplies from two great natural-gas production regions of the United States, the Permian Basin region and the Panhandle-Hugoton-Anadarko region. Its sytsem lies near another great production area, the South Texas region; and extends westward through the edge of the San Juan Basin, another gas production area.

John H. Murrell, a petroleum, geological and economic engineer and the president of DeGolyer and MacNaughton, a firm of the highest standing which specializes in the estimation of oil and gas reserves and the availability of oil and gas reserves, testified in substance as follows:

That in my opinion Transwestern can acquire in the vicinity of its pipeline system additional reserves in excess of five trillion cubic feet of gas over the next 15 years; this amount would be amply sufficient to sustain a 290,000 to 300,000 Mcf/d deliverability for such period; Transwestern can purchase in competition with others, over the next one to two years, at least an additional two trillion cubic feet of gas in the area traversed by its pipeline system, and nearby areas; and the volume last mentioned would increase Transwestern's deliverability approximately 300,000 Mcf per day for a 10-year period.

It is true that on February 2, 1962, Transwestern and a subsidiary of Cities Service Gas Co. entered into a contract for the sale and purchase of gas. The agreement provides for the sale at the eastern extreme of Transwestern's existing system of 100,000 Mcf/d beginning in January 1964; and of 200,000 Mcf/d commencing in January 1966, and continuing thereafter during the 20-year term of the contract. None of the excess capacity of Transwestern's principal laterals and main line would be utilized by such deliveries.

Adding to Transwestern's present deliverability the 300,000 Mcf/d increased deliverability to which Mr. Murrell testified, and deducting the 200,000 Mcf/d which Transwestern is obligated to sell to Cities Service, the resultant deliverability is 617,800 Mcf/d.

In view of the great gas producing areas in which the Transwestern system has its origin, as above described, the other gas producing areas adjacent to its system, and the positive nature of Mr. Murrell's testimony (*e.g.*, the additional reserves of in excess of five trillion cubic feet which Transwestern can acquire would be "*amply* sufficient to sustain a 290,000 to 300,000 deliverability"; "a measly little 5 trillion cubic feet" from "that tremendous area"), the Examiner finds that Transwestern will have no difficulty in entering into contracts for the purchase by it of additional gas reserves which, coupled with its present reserves,

will be sufficient to support a deliverability of 640,000 Mcf/d over the period of the next 15 years.

It follows that the potential peak-day supply from Transwestern at the California border is 220,000 Mcf over and above its present peak-day supply of 420,000 Mcf.

Transwestern is desirous of selling additional gas to the Southern Companies to the extent of the optimum capacity of its facilities.

Transwestern introduced expert testimony, supported by exhibits, that, for the period 1964 through 1967, the incremental cost of service for delivering the additional 290,000 Mcf/d volumes at the California border at 100% load factor would be an average of 23.39¢. The purchased gas component of such cost of service is 16.75¢ per Mcf, which is the present Transwestern average cost. It is true, as Colorado Interstate says, that the prices which Transwestern will pay for gas in the future are unknown. But we have been cited to no better way, in estimating the amount of the purchased gas component, than to use Transwestern's present average cost of purchased gas. For that matter, the purpose of estimating Transwestern's incremental cost of service is to compare such estimate with El Paso's Rock Springs project estimated cost of service. El Paso, in estimating the cost to it of the Rock Springs gas, employed prices now in effect, and failed to employ fixed contract increases. To reach an estimated figure for the Transwestern cost of service comparable to that of El Paso's Rock Springs project estimated cost of service, it seems to be appropriaite to calculate the cost to Transwestern of the future purchases of gas on the basis of its present average cost of purchased gas.

El Paso points out that Transwestern now has deliverability capacity in its field facilities of some 172,800 Mcf/d in excess of its present requirements. El Paso argues that the costs associated with those facilities should have been assigned to the additional deliveries assumed by Transwestern. We agree. El Paso furnished no figures as to what the claimed effect on the incremental cost of service would be of assigning the excess capacity in the field facilities thereto. As best we can make out from the record, the addition to the incremental cost would be a little over 2¢.

The Examiner is of the view and finds, on the basis of the evidence above adverted to, that a reasonable estimate of Transwestern's incremental cost of service for the additional 290,000 Mcf/d (which figure includes peak-day deliveries) is on the order of 26¢ per Mcf.

The potential capacity of the El Paso Southern Division and Transwestern systems above referred to should, if needed, become a reality shortly prior to the 1963–64 heating season. The statement, *supra*, page 125, relative to the time which would likely be required for Colorado Interstate to install additional facilities to serve the Rocky Mountain area exclusively, is also true of the additional El Paso Southern Division facilities. Manifestly, Transwestern should be able to install the additional facilities on its system before the 1963–64 heating season.

During the winter of 1963–64 and the subsequent winters, the potential peak-day additional capacity of the Southern Division of the El Paso system at the California border (200,000 Mcf) plus the potential additional peak-day capacity of the Transwestern system at such border (220,000 Mcf) give us a total potential peak-day additional capacity from these two out-of-state sources available to the southern California market of 420,000 Mcf.

Adding the potential peak-day additional capacity to the existing excess peak-day capacity of the two systems, the total excess capacity, existing and potential, of the Southern Division of the El Paso system, and the Transwestern system,

for the respective winters 1962–63 to 1969–70, inclusive, for serving the southern California market is as appears in the last column of the table below.

EXISTING AND POTENTIAL EXCESS PEAK-DAY CAPACITY FOR SERVING SOUTHERN COMPANIES FROM SOUTHERN DIVISION EL PASO SYSTEM AND TRANSWESTERN SYSTEM

Year	Excess capacity existing facilities (Mcf)	Potential additional capacity (Mcf)	Total existing and potential excess capacity (Mcf)
1962–63	259,000	----------	259,000
1963–64	44,000	420,000	464,000
1964–65	201,000	420,000	421,000
1965–66	374,000	420,000	794,000
1966–67	204,000	420,000	624,000
1967–68	24,000	420,000	444,000
1968–69	(137,000)	420,000	283,000
1969–70	(319,000)	420,000	101,000

The Examiner finds and concludes that volumes shown in the last column of the foregoing table are a reasonable and conservative estimate of the excess peak-day capacity on the Southern Division of the El Paso system and on the Transwestern system now available, and which can be made available, to serve the southern California market in the eight respective years 1962–63 to 1969–70, inclusive.

Certainly, the installation of facilities to attain such portions of the potential capacity, above described, of the Transwestern and El Paso systems as are needed for the requirements of the southern California market is greatly to be preferred to the Rock Springs project. It follows that there is no need whatever for the Rock Springs project in order for the Southern Companies to meet the peak requirements on their systems at any time during the period from January 1, 1964 (when applicants propose to commence operations) through the winter season 1969–70.

Annual Requirements and Supply

The Southern Companies' Exhibit 290 contains an estimate of annual gas requirements and supply for the years 1963 through 1970. This estimate was prepared in February 1962, much later than the preparation of the peak-day portrayal in such exhibit. The Southern Companies estimate their annual requirements on two bases: (1) an "Average Year," and (2) a "Cold Year."

The Southern Companies' estimates of their average-year firm gas requirements are somewhat overstated. Their market witness made an unwarranted temperature adjustment from 1745 degree days to 1800 degree days. The areas served by the Southern Companies are sufficiently contiguous longitudinally for the same annual average of degree days to apply to each area. The average degree-day year for the 30-year period, 1931–1960, is 1744; and Southern Counties Gas Co. uses 1745 degree days in forecasting volumes of "unaccounted for" gas. The effect of the improper adjustment to 1800 degree days is an overstatement of the firm sales by about 2%. In addition, the estimated rate of attachment of firm meters, as reflected in Exhibit 290, appears to be overstated to a limited extent; and the estimated use per meter is perhaps a little overstated above the temperature element overstatement. For the companies' estimates of their firm requirements in these and prior proceedings before this Commission for the years 1956 to 1960, inclusive (derived by the same methods as they employed in compiling Exhibit 290) have been proved by the sales actually experienced in such years to be too high. Allowing for unduly mild

winter seasons in most of such years, the actual firm requirements for these years fell below the estimates by approximately 5%. However, a 5% difference between estimation and realization is not unreasonable; and the Examiner adopts the Southern Companies' estimates of average year firm requirements in Exhibit 290.

By a "cold year," the Southern Companies mean a year "as cold as 1949 when there were 2342 degree days in the service area of the Southern California Companies." The Southern Companies correctly say that they must be prepared to meet a cold year. Their estimate, in Exhibit 290, of the cold-year firm requirements seems to be overstated to a limited extent because of the apparent overestimate in rate of meter attachments and perhaps in use per meter. But the estimate is accepted by the Examiner as being within the confines of a reasonable estimation.

Column (e) of Exhibit 290 lists the Southern Companies' estimated firm requirements, both for an average year and a cold year. Column (h), "interruptible adjusted," lists the estimated interruptible requirements as reduced by the amount of fuel oil that the Southern Companies assume will be burned. The record is clear that the volumes in column (h) have not been adjusted for any estimated curtailments. In the interest of simplicity, column (h) volumes will be referred to herein as the interruptible gas requirements, since they constitute the estimated interruptible volumes which the Southern Companies have the opportunity of supplying.

The Examiner is of the view, based upon the testimony of the Southern Companies' market witness and data upon which the witness relied, that the estimate of the interruptible requirements is reasonable; and he so finds.

With Edison Load. Including the load of Southern California Edison Co., the average-year estimates of the Southern Companies' annual firm and interruptible requirements (for sales at retail and wholesale), and the resultant totals, set out in Exhibit 290, are as follows:

AVERAGE-YEAR REQUIREMENTS

Year	Firm (Mcf)	Interruptible (Mcf)	Total (Mcf)
1963	363,000,000	390,000,000	753,000,000
1964	384,000,000	408,000,000	792,000,000
1965	400,000,000	425,000,000	825,000,000
1966	417,000,000	447,000,000	864,000,000
1967	435,000,000	469,000,000	904,000,000
1968	453,000,000	478,000,000	931,000,000
1969	471,000,000	491,000,000	962,000,000
1970	489,000,000	519,000,000	1,008,000,000

The corresponding estimate of cold-year requirements contained in Exhibit 290 is as follows:

COLD-YEAR REQUIREMENTS

Year	Firm (Mcf)	Interruptible (Mcf)	Total (Mcf)
1963	401,000,000	390,000,000	791,000,000
1964	420,000,000	408,000,000	828,000,000
1965	438,000,000	425,000,000	863,000,000
1966	457,000,000	447,000,000	904,000,000
1967	476,000,000	469,000,000	945,000,000
1968	496,000,000	478,000,000	974,000,000
1969	516,000,000	491,000,000	1,007,000,000
1970	536,000,000	519,000,000	1,055,000,000

Exhibit 290 sets out certain volumes from California sources as being available to meet the foregoing estimated annual requirements. The evidence shows that there will be substantial California-source volumes besides such volumes. It has already been seen (*supra*, pp. 132–133) that, according to the testimony of officers of the Southern Companies, an additional trillion cubic feet of repressuring gas will be delivered to the Southern Companies at an average rate of at least 275,000 Mcf/d, commencing "two or three years" from December 1961. On an annual basis, 275,000 Mcf/d amounts to 100,000,000 Mcf. It is a reasonable and conservative conclusion that the Southern Companies will receive at least 100,000,000 Mcf of the trillion cubic feet of repressuring gas in each of the years 1965 to 1970, inclusive.

Moreover, the finding (*supra*, p. 135) is to be borne in mind that 50,000 Mcf is a reasonable estimation of peak-day gas from emergency-gas sources, additional repressuring gas, and PG&E "kick-backs." It is a conservative assumption that, annually, gas from these sources will be taken at only a 20% load factor. On this basis, the Examiner finds, as a reasonable estimate, that there will be an average of 10,000 Mcf/d from these sources, or 3,650,000 Mcf annually.

A reasonable estimate of the total annual volumes from California sources is as set out in the last column of the table below, and the Examiner so finds.

ADDITIONAL CALIFORNIA SOURCES

Year	Exhibit 290	Trillion cf of repressuring gas (Mcf)	Other additional gas (Mcf)	Total (Mcf)
1963	187,000,000		3,650,000	190,650,000
1964	174,000,000		3,650,000	177,650,000
1965	173,000,000	100,000,000	3,650,000	276,650,000
1966	172,000,000	100,000,000	3,650,000	275,650,000
1967	171,000,000	100,000,000	3,650,000	274,650,000
1968	170,000,000	100,000,000	3,650,000	273,650,000
1969	169,000,000	100,000,000	3,650,000	272,650,000
1970	168,000,000	100,000,000	3,650,000	271,650,000

The Southern Companies' principal source of out-of-state annual supply is the Southern Division of El Paso's system. In the Examiner's opinion, the Southern Companies' maximum contracted daily demand from El Paso, 1,143,000 Mcf, multiplied by 365, or 417,195,000 Mcf, which will be rounded to 417,000,000 Mcf, is a reasonable and justifiable estimate of the annual volume which El Paso will be able to deliver with its existing facilities during the period 1963 through 1970. This view is supported by the following considerations: (1) flow diagrams prepared by El Paso's chief pipeline engineer showing the daily design capacity of the El Paso Southern Division depict that said company is capable of delivering such volumes to the Southern Companies; (2) the fact that El Paso has contracted to deliver up to 1,143,000 Mcf daily to the Southern Companies leads to the inference, at least *prima facie*, that El Paso is, and will continue to be, able to make such delivery; (3) in 1960, El Paso's average daily gas sales were in excess of 1,143,000 Mcf; namely, 1,155,910 Mcf; (4) the Southern Companies, themselves, estimate that they will receive 417,000,000 Mcf annually from El Paso during the period in question; and (5) an expert witness for the Tennessee subsidiaries also utilized the Southern Companies' maximum contracted daily demand in estimating the annual volume which the latter companies would receive from El Paso in 1965, and rounded the annual volume to 417,200,000 Mcf.

The Southern Companies' other out-of-state supplier, Transwestern, has no customers other than the Southern Companies, except two small interruptible

industrials near the eastern end of its system. The volumes which Transwestern can deliver at the California border are not lessened because of these two small sales. The Examiner is justified in finding, and does find, that Transwestern can, and will continue to be able to, deliver to the Southern Companies its present delivery capacity of 350,000 Mcf per day throuhgout the years in question. The volumes thereby made available to the Southern Companies are 127,800,000 Mcf in each of the eight years (not counting the extra day in each of the two leap years).

Tabulating the annual volumes available to the Southern Companies from California sources, from El Paso with its existing facilities, and from Transwestern with its existing facilities, the totals arrived at are as set out in the last column of the table below.

ANNUAL VOLUMES AVAILABLE TO SOUTHERN COMPANIES WITH EXISTING FACILITIES

Year	Available from California sources (Mcf)	Available from El Paso existing facilities (Mcf)	Available from Transwestern existing facilities (Mcf)	Total available from existing sources (Mcf)
1963	190,650,000	417,000,000	127,800,000	735,450,000
1964	177,650,000	417,000,000	127,800,000	722,450,000
1965	276,650,000	417,000,000	127,800,000	821,450,000
1966	275,650,000	417,000,000	127,800,000	820,450,000
1967	274,650,000	417,000,000	127,800,000	819,450,000
1968	273,650,000	417,000,000	127,800,000	818,450,000
1969	272,650,000	417,000,000	127,800,000	817,453,000
1970	271,650,000	417,000,000	127,800,000	816,450,000

Comparing these estimated supplies with the estimated average-year and cold-year requirements set out at page 140, *supra*, it will be seen that the estimated supplies are far above the estimated firm requirements in each of the eight years, but are well below the estimated firm requirements plus the estimated interruptible requirements.

Turning next to the question of the potential annual volumes which can be made available to the Southern Companies from El Paso's Southern Division and from Transwestern, and the resultant potential excess capacity of such systems with which to serve the Southern California market, it will be recalled that the additional 200,000 Mcf/d of gas which would become available from El Paso's Southern Division, if and when the G–15696 and G–18696 facilities are installed, is at a pressure base of 14.9 psia. The equivalent volume at 14.73 psia is 202,300 Mcf. The 202,300 Mcf multiplied by 365 results in 73,839,000 Mcf, which quantity the Examiner estimates is the additional annual volume which would be available from El Paso to the Southern Companies by reason of the construction of such facilities.

The additional daily supply potentially available from Transwestern of 290,000 Mcf (640,000 Mcf minus 350,000 Mcf) times 365 comes to 105,850,000 Mcf.

The Examiner allows, as an estimate, until December 1, 1963, for the installation of the additional El Paso Southern Division and Transwestern facilities. So in the table below, there is included, for 1963, only a one month's increase in the load that the Southern Division of El Paso and Transwestern would carry. For the subsequent years in question, the full additional annual volumes are depicted. The results appear in the last column of the table.

ANNUAL VOLUMES AVAILABLE TO SOUTHERN COMPANIES AFTER ADDITION OF G–15696 AND G–18696 FACILITIES AND TO TOTAL DESIGN CAPACITY OF TRANSWESTERN LINE

Year	Total available from existing sources (Mcf)	El Paso potential supply (Mcf)	Transwestern potential supply (Mcf)	Total available supply including potential capacity existing systems (Mcf)
1963	735, 450, 000	6, 271, 000	8, 990, 000	750, 711, 000
1964	722, 450, 000	73, 839, 000	105, 850, 000	902, 139, 000
1965	821, 450, 000	73, 839, 000	105, 850, 000	1, 001, 139, 000
1966	820, 450, 000	73, 839, 000	105, 850, 000	1, 000, 139, 000
1967	819, 450, 000	73, 839, 000	105, 850, 000	999, 139, 000
1968	818, 450, 000	73, 839, 000	105, 850, 000	998, 139, 000
1969	817, 450, 000	73, 839, 000	105, 850, 000	997, 139, 000
1970	816, 450, 000	73, 839, 000	105, 850, 000	996, 139, 000

The excess annual volumes (for the average year and the cold year, respectively), above the firm and interruptible market requirements estimated by the Southern Companies, which would thereby result, are set out in the last column of the two tables below.

AVERAGE YEAR

EXCESS ANNUAL VOLUMES AFTER ADDITION OF G–15696 AND G–18696 FACILITIES AND AT TOTAL DESIGN CAPACITY OF TRANSWESTERN SYSTEM

Year	Total available supply including potential capacity existing systems (Mcf)	Exhibit 290 firm and interruptible market requirements (Mcf)	Excess supply including potential capacity existing systems (Mcf)
1963	750, 711, 000	753, 000, 000	(2, 289, 000)
1964	902, 139, 000	792, 000, 000	110, 139, 000
1965	1, 001, 139, 000	825, 000, 000	176, 139, 000
1966	1, 000, 139, 000	864, 000, 000	136, 139, 000
1967	999, 139, 000	904, 000, 000	95, 139, 000
1968	998, 139, 000	931, 000, 000	67, 139, 000
1969	997, 139, 000	962, 000, 000	35, 139, 000
1970	996, 139, 000	1, 008, 000, 000	(11, 861, 000)

COLD YEAR

EXCESS ANNUAL VOLUMES AFTER ADDITION OF G–15696 AND G–18696 FACILITIES AND AT TOTAL DESIGN CAPACITY OF TRANSWESTERN SYSTEM

Year	Total available supply including potential capacity existing systems (Mcf)	Exhibit 290 firm and interruptible market requirements (Mcf)	Excess supply including potential capacity existing systems (Mcf)
1963	750, 711, 000	791, 000, 000	(40, 289, 000)
1964	902, 139, 000	828, 000, 000	74, 139, 000
1965	1, 001, 139, 000	865, 000, 000	136, 139, 000
1966	1, 000, 139, 000	904, 000, 000	96, 139, 000
1967	999, 139, 000	945, 000, 000	54, 139, 000
1968	998, 139, 000	974, 000, 000	24, 139, 000
1969	997, 139, 000	1, 007, 000, 000	(9, 861, 000)
1970	996, 139, 000	1, 055, 000, 000	(58, 861, 000)

It will be seen that, even without the Rock Springs project, the estimated supplies will exceed both firm and interruptible requirements in all of the years except 1963 and 1970, and a 1969 cold year. The picture for 1963 would not

be affected by authorization of the Rock Springs project, for it will be remembered that applicants' proposal is that deliveries from the Rock Springs facilities are not to commence until January 1, 1964.

In 1964 to 1968, inclusive, with the potential of the El Paso Southern Division and Transwestern developed, there would be no curtailments whatever. In 1970, there would be a curtailment of a portion of the interruptible load; and also in 1969, if there were to be a cold year. Thus, in the entire five-year period from 1964 through 1968, and probably in 1969 as well, there would be no market at all for any of the Rock Springs gas. When the market did commence, in 1969 or 1970, the only sales would be of a portion of the Rock Springs increment, for boiler fuel. Even these sales would be made way below the cost of service (*i.e.*, cost of purchased gas, cost of transportation to industrial markets, and cost of distribution).

In the face of this situation, there can be no justification for the Rock Springs project.

For the Southern Companies to purchase the Rock Springs gas on top of the excess supplies shown in the last two tables would, of course, be sheer folly because of the vast financial loss to them that would ensue. And the Southern Companies have evinced no intention of doing so.

In their brief, the Southern Companies take the position that the Rock Springs project should be authorized and that the expansion of the El Paso Southern Division and Transwestern systems should be deferred until their market grows to the point where they are ready to purchase the increased volumes from the latter two systems. Such proposition is untoward and contrary to the public interest for the following reasons: (1) the record shows that El Paso has been under heavy expense for prepayments for gas to support the increased deliveries of 202,300 Mcf/d which it expected to make to PG&E, and which are now available to the Southern Companies—if the sale of such gas to the Southern Companies is deferred until said companies have need of it in addition to the Rock Springs gas, El Paso would continue to bear heavy expense for prepayments over a period of years; (2) Transwestern, over a period of years, would lose the increased revenue that would result from utilization of the potential capacity of its system; (3) the consuming public of Southern California would be deprived, during the intervening years, of the El Paso Southern Division and Transwestern increments, which are less costly than the Rock Springs gas; (4) there would be a failure, in the language of the Commission's order of March 22, 1962, to use "existing pipelines * * * in connection with bringing additional volumes of natural gas to the Southern California market," and a failure to make use of "potential delivery capacity to the economic optimum"; and (5) it has been seen (*supra*, p. 116) that the Commission can properly reject applicants' proposal because of the existence of preferable alternatives.

The Southern Companies urge that they should be permitted to contract for the Rock Springs supply because "a package of surplus Colorado Interstate gas" is available, and they should look to the future needs of their market. This argument is wholly without merit. It falls before the weight of the five considerations above noted. Moreover, El Paso's contract with the Southern Companies respecting the Rock Springs gas calls for the sale and purchase of the following volumes: 109,500,000 Mcf in 1964, and 173,528,000 Mcf annually thereafter. And the Southern Companies are obligated to pay for these volumes, at firm rates, even though they fail to take them, with the mere right to make up gas paid for but not taken within a five-year period. The Southern Com-

panies, themselves, make no contention, and could not be heard to contend, that the foregoing arrangement should receive the approval of the Commission if they are to have no market for any of the gas until seven years hence at best.

The Southern Companies argue that deliveries of gas to them should be made at a high load factor, with consequent lesser purchase costs than otherwise. The Southern Companies can maintain deliveries at a plenty high load factor by purchasing gas from the enlarged El Paso Southern Division and Transwestern systems, and the question of just what is a proper load factor in the public interest can await determination in future El Paso Southern Division and Transwestern certificate proceedings.

Without Edison Load. The natural-gas load of Southern California Edison Company, estimated by that company itself and which the Examiner accepts as reasonable, for the years in question is as follows:

	Mcf
1963	85,000,000
1964	91,000,000
1965	97,500,000
1966	107,800,000
1967	118,500,000
1968	124,400,000
1969	132,600,000
1970	140,400,000

Deducting the Edison load from the total estimated requirements set out page 140, *supra*, the estimated annual requirements of the Southern Companies, if Edison ceases to be a customer, are seen to be as follows:

Average Year

	Mcf
1963	668,000,000
1964	701,000,000
1965	727,500,000
1966	756,200,000
1967	785,500,000
1968	806,600,000
1969	829,400,000
1970	867,600,000

Cold Year

	Mcf
1963	706,000,000
1964	737,000,000
1965	765,500,000
1966	796,200,000
1967	826,500,000
1968	849,600,000
1969	874,400,000
1970	914,600,000

The excess of the estimated annual volumes (for the average year and the cold year, respectively), above the firm and interruptible market requirements estimated by the Southern Companies, which would result after the development

of the potential of the El Paso Southern Division and Transwestern systems appears in the last column of the two tables below.

AVERAGE YEAR

EXCESS ANNUAL VOLUMES AFTER ADDITION OF G–15696 AND G–18096 FACILITIES AND AT TOTAL DESIGN CAPACITY OF TRANSWESTERN SYSTEM

Year	Total available supply including potential capacity existing systems	Firm and interruptible requirements excluding Edison load	Excess supply including potential capacity existing systems
1963	750, 711, 000	668, 000, 000	82, 711, 000
1964	902, 139, 000	701, 000, 000	201, 139, 000
1965	1, 001, 139, 000	727, 500, 000	273, 639, 000
1966	1, 000, 139, 000	756, 200, 000	243, 939, 000
1967	999, 139, 000	785, 500, 000	213, 639, 000
1968	998, 139, 000	806, 600, 000	191, 539, 000
1969	997, 139, 000	829, 400, 000	167, 739, 000
1970	996, 139, 000	867, 600, 000	128, 539, 000

COLD YEAR

EXCESS ANNUAL VOLUMES AFTER ADDITION OF G–15696 AND G–18696 FACILITIES AND AT TOTAL DESIGN CAPACITY OF TRANSWESTERN SYSTEM

Year	Total available supply including potential capacity existing systems	Firm and interruptible requirements excluding Edison load	Excess supply including potential capacity existing systems
1963	750, 711, 000	706, 000, 000	44, 711, 000
1964	902, 139, 000	737, 000, 000	165, 139, 000
1965	1, 001, 139, 000	765, 500, 000	235, 639, 000
1966	1, 000, 139, 000	796, 200, 000	203, 939, 000
1967	999, 139, 000	826, 500, 000	172, 639, 000
1968	998, 139, 000	849, 600, 000	148, 539, 000
1969	997, 139, 000	874, 400, 000	122, 739, 000
1970	996, 139, 000	914, 600, 000	81, 539, 000

Thus, it is seen that without the Edison load, there would be no market for any of the Rock Springs gas in any of the years, if the potential of the El Paso Southern Division and Transwestern systems be developed.

It has already been shown that, even with the Edison load, there is a want of a market for the Rock Springs gas, except for some industrial sales in 1970, and maybe in 1969, that would be made below cost. Without the Edison load, the economic infeasibility of the Rock Springs purchase would be worsened; for the Southern Companies would be injured more by not selling gas for which they would be obligated to pay than by selling some of it at a loss for low priority industrial use.

CONCLUSION

For these additional reasons, the applications should be denied.

Question of Violation of Policy of Antitrust Laws

The intervenor Tennessee subsidiaries adduced evidence in the attempt to show that El Paso, Colorado Interstate and the Southern Companies have violated the policy of the antitrust laws, to the financial detriment of the consuming public. They make a strong argument that the facts establish their contention, and that for such reason the applications should be denied. Applicants and the Southern Companies argue stoutly that they have not violated the national antitrust policy.

It does not seem advisable to decide the issue for the following reasons:

(1) We have already demonstrated, time and again, that the applications should be denied. Hence, a ruling on the question of violation of the national antitrust policy is not material (in the sense of being essential to the decision); and need not be made. "* * * there is no requirement in law that every contention or even most of the contentions advanced by the many parties respecting the numerous issues in the lengthy and involved proceedings which come before us, be ruled on *seriatim* and specific findings made on each." *Tennessee Gas Transmission Co.*, 17 FPC 406, 415. To adopt said intervenors' language respecting another issue, there is "no point in 'beating a dead horse.'"

(2) To treat of and determine the complicated question of whether applicants and the Southern Companies have violated the policy of the antitrust laws would unnecessarily prolong the time of issuance of this decision.

(3) An action, hereinbefore referred to, is now pending before the District Court of Utah wherein the federal government charges that El Paso's acquisition of the stock of Pacific Northwest violated Section 7 of the Clayton Act. Apparently such suit involves a similar question to that which the Tennessee subsidiaries raise in the instant proceedings.

The Examiner recognizes, and repeatedly held during the hearing, that, in the language of the Supreme Court in *California* v. *Federal Power Commission*, *supra*, 369 U.S. at page 485, "'antitrust considerations' are relevant to the issue of 'public interest, convenience, and necessity.'" And there is no intention here to abnegate our responsibility. But, in our opinion, the applications cannot be granted in any event; and to labor this decision by going into the violation-of-the-policy-of-the-antitrust-laws question would be a "a needless waste of time and money."

If, despite these reasons, the Commission desire that the Examiner pass upon such question, the proceedings can, of course, be remanded to him.

Benefits to Consumers Served by Pacific Northwest System

The Washington Commission and the Oregon Commissioner take the position that the Rock Springs project is in the public interest and of benefit to the users of natural gas in their states. Also, the Southern Companies assert that the project would "put an undernourished pipeline system on its feet." There is insufficient evidence to support the averment that Pacific Northwest [Northwest Division of El Paso] would be "put on its feet" by applicant's project; but it is perhaps correct to say that the "Northwest Division" is undernourished. No evidence was adduced at the rehearing which affords adequate basis for altering the finding of the Federal Power Commission, made after the original hearing that the project,

> will enable El Paso to make fuller use of its Northwest Division facilities, at a higher load factor, with resulting economies to Northwest Division customers; * * *

These considerations are insufficient to warrant certification of applicants' project. The Examiner agrees with and adopts the following statement of the Tennessee subsidiaries, which he has modified to eliminate the factor that said intervenors do not concede that the project would benefit the Pacific Northwest (Northwest Division) system:

> * * * in appraising [the] benefits to the Northwest Division [Pacific Northwest], * * * [the] benefits * * * must be viewed in perspective. The Rock Springs Project *primarily* proposes a new service to southern California and additional service to the Rocky Mountain area; the fundamental purpose is *not* to provide assistance to the Northwest Division, nor is it to put an "undernourished pipeline system on its feet." If the Northwest

> Division is indeed an "undernourished pipeline system" the estimates and cost studies originally made by its sponsors must have been erroneous. The same thing is true of applicants' estimates and cost studies for the Rock Springs Project. There is nothing to be gained, and much to be lost, by attempting to cure one undernourished system by creating yet another uneconomic and undernourished system, and letting the first feed off the second. * * * it is the needs of southern California and the Rocky Mountain area, which are the areas proposed to be served, which must be considered *first*, and * * * it is the public convenience and necessity of service to *those* areas which must determine this case. [Italics those of Tennessee subsidiaries.]

Also, the aforementioned benefits to the customers served by the Pacific Northwest system may be more than offset by a consideration advanced by Edison. Edison argues forcefully that the Rock Springs project is contrary to the long-range best interests of the Pacific Northwest system in that it denies that system access to the California market.

Claim that Utah and Nevada Communities Could be Served by Provo Line

El Paso avers in its opening brief, without citation to the record, that "this project will make natural-gas service feasible to communities in Utah and Nevada which are not now served by any natural-gas pipeline." The Provo line would be laid in sparsely settled country. The factors of population and distance of towns and villages from the Provo line afford a *prima facie* indication of the economic feasibility or infeasibility of serving a particular town or village. Based upon these criteria, there appear to be only five communities in Utah to which natural-gas service might perhaps, with economic feasibility, be brought; *viz.:*

Community	Population	Distance from proposed Provo line
Milford	1,471	Adjacent to line.
Cedar City	7,543	23 mi.
St. George	5,130	17.4 mi.
Fillmore	1,602	4 or 5 mi.
Nephi	2,566	Adjacent to line.

There is not a single town, village or hamlet in Nevada, not served with natural gas, that could be supplied from the Provo line with economic feasibility.

El Paso does not propose at this time to furnish natural-gas service to any community in Utah or Nevada. However, it correctly says in its reply brief that there would be capacity in the Provo line for service to Utah customers. El Paso further says that if said applicant "concludes that it is not economic to build a lateral to serve a community and the community feels otherwise about it and is willing to build a lateral to the pipeline, El Paso will give it a tap." If said applicant should correctly "conclude" that it would be uneconomic to build a lateral to a community, then its statement of willingness to "give" the town "a tap" is an empty gesture. For the Commission does not authorize a sale of gas to a community unless there is a satisfactory showing that the community's project is economically feasible. See, *e.g.*, *Michigan Wisconsin Pipe Line Co.*, 21 FPC 552, 567–68.

The circumstance that the five Utah communities might receive natural-gas service by reason of the Provo line cannot, of course, be a salient consideration in the determination of these proceedings.

FINDINGS AND CONCLUSIONS

Upon consideration of the evidence adduced and the argument of counsel, it is further found and concluded that:

(1) Colorado Interstate, El Paso and Pacific Northwest are each a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The facilities of Colorado Interstate, hereinbefore referred to and more particularly described in the original initial decision herein and in the application in Docket No. G–16904, that have been constructed under temporary authorization are used in the transportation and sale of natural gas in interstate commerce for resale, subject to the jurisdiction of the Commission, as integral parts of Colorado Interstate's permanently authorized pipeline system; and the construction and operation of such facilities are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Such temporarily authorized facilities are adequate to render the service which Colorado Interstate proposes and which said applicant is hereinafter authorized to provide.

(4) Colorado Interstate has adequate supplies of natural gas to enable it to render the service herein authorized.

(5) Colorado Interstate is able and willing properly to do the acts and to perform the service by means of such temporarily authorized facilities proposed by it; and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of the temporarily authorized facilities as proposed by Colorado Interstate are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered.

(7) The construction and operation of the remainder of the facilities proposed by Colorado Interstate in Docket No. G–16904, and the facilities proposed by El Paso in Docket No. G–16235 and by Pacific Northwest in Docket No. G–16237, would not serve the public convenience or necessity.

(8) The application of Colorado Interstate in Docket No. G–16904 should be denied except as stated in paragraph (6); and the applications of El Paso in Docket No. G–16235 and of Pacific Northwest in Docket No. G–16237, and each of such two applications, should be denied.

ORDER

Wherefore, it is ordered, subject to review by the Commission on appeal, or review by the Commission on its own motion, as provided in its Rules of Practice and Procedure, that:

(A) A certificate of public convenience and necessity be and the same is hereby issued in Docket No. G–16904 authorizing Colorado Interstate Gas Co. to construct and operate the facilities heretofore temporarily authorized in such proceeding, hereinbefore referred to and more particularly described in the original initial decision herein and in Colorado Interstate's application, and to make the transportation of natural gas as therein set forth, upon the terms and conditions of this order.

(B) The certificate herein issued shall be accepted in writing by responsible officials of Colorado Interstate. The general terms and conditions set out in paragraphs (a), (c) (insofar as applicable to facilities which have already been constructed), and (e) of Section 157.20 of the Commission's *Regulations under the Natural Gas Act* shall attach to the issuance of the certificate. Colorado Interstate shall file the applicable information called for by paragraph (c) of Section 157.20 within 30 days from the issue date of this order.

(C) The application of Colorado Interstate in Docket No. G–16904 be and the same is hereby denied in all other respects.

(D) The application of El Paso in Docket No. G–16235 and the application of Pacific Northwest in Docket No. G–16237, and each of such applications, be and the same are hereby denied.

HOWELL PURDUE
Presiding Examiner.

SUPPLEMENTAL NOTE

The writing of this decision was completed on December 7, 1962. While the decision is in the process of being duplicated, a news item of December 13, 1962, has been brought to the attention of the Examiner to the effect that Pacific Lighting Gas Supply Co. has contracted with Transwestern Pipeline Co. for the purchase of 150,000 Mcf per day in addition to present deliveries; that by the terms of the contract, Pacific Lighting is to increase its purchases from Transwestern to 350,000 Mcf per day by November 1, 1963, and to 450,000 Mcf per day by November 1, 1965, subject to approval by this Commission.

MEMORANDUM OPINION NO. 394

MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NOS. G–16841, RP61–19; PEOPLES GAS LIGHT AND COKE COMPANY v. MIDWESTERN GAS TRANSMISSION COMPANY, DOCKET NO. RP63–11

ORDER DETERMINING REFUND OBLIGATION AND DENYING MOTION TO CONSOLIDATE

(Issued July 12, 1963)*

Syllabus

1. Interpreting *Opinion No. 320*, Commission *rules* Midwestern is obligated to pass on to its customers all refunds received for period April 5, 1960 to October 1, 1962, constituting reduction in gas purchase costs below level upon which rates initially allowed Midwestern were predicated. P. 152.
2. Fact that suppliers' further increased rates were filed subsequent to Opinion 320 is irrelevant—in suggesting otherwise Midwestern attempts ex post facto rewriting of the Opinion. P. 152.
3. Commission *determines* refund obligation in proceeding arising under Section 1.6(b) of the Rules.

Commissioners O'Connor and Woodward *dissenting.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

On June 6, 1963, Peoples Gas, Light, and Coke Company filed a motion which is in substance a request that Docket No. RP63–11 be consolidated with the proceedings in Docket No. RP61–19, *et al.* Docket No. RP63–11 was instituted by complaint of Peoples against Midwestern Gas Transmission Company, and it raises two issues regarding the nature and extent of Midwestern's obligation to make refunds and rate reductions passing on the refunds and rate reductions of its supplier, Tennessee Gas Transmission Company. Peoples' contention that Midwestern is obliged to make prospective rate reductions effective as of Oc-

*Rehearing denied by order issued September 6, 1963, 30 FPC 659. Order approving settlement issued October 30, 1963, 30 FPC 1149.

tober 1, 1962, appears to be identical with the issue which the Commission raised *sua sponte* by letter of April 11, 1963, and which was included for decision in Docket No. RP61–19, *et al.* by the order of May 10, 1963.[1] Peoples is a party to the consolidated proceedings in Docket No. RP61–19, *et al.*, and thus it would serve no purpose whatever to order a further consolidation with respect to this first portion of its complaint.

The second contention raised in Peoples' complaint is that Midwestern is obliged, by the terms of Opinion No. 320, 21 FPC 653, to pass on to its customers the refunds received from Tennessee for the G–19983 period to the extent that these refunds bring Midwestern's gas purchase costs for that period below what they would have been at the G–17166 level of rates.

It appears that Midwestern, without questioning its obligation to do so, has passed on to its customers substantially all of the refunds received from Tennessee with respect to the G–17166 period. In a letter of January 25, 1963, to the Commission's Secretary, Midwestern stated its understanding of its obligations under Opinion No. 320:

> Opinion No. 320 issued by the Federal Power Commission on May 12, 1959, granting a Certicate of Public Convenience and Necessity for the construction of the Southern System of Midwestern Gas Transmission Company provided that if Midwestern should receive refunds from Tennessee Gas Transmission Company under Docket Nos. G–11980 and G–17166, Midwestern should make corresponding refunds to its customers, subject to the approval of the Commission.

On the subject of G–19983 refunds, Midwestern stated in the January 25, letter only that it had not increased its rates to pass on that increase from Tennessee and that therefore it did not propose to pass through any of the refunds received from Tennessee. This letter did not include a calculation showing whether or not the G–19983 refunds from Tennessee had reduced Midwestern's gas purchase costs for the period from April 5, 1960, to October 1, 1962, below what it would have experienced under the G–17166 rates. Since January 25, Midwestern received from Tennessee two further refunds with respect to the G–19983 period (on February 7 and May 3, 1963). Subsequent to the latest of the Tennessee refunds, Midwestern, at the request of our Staff, submitted a calculation which indicated that its gas purchase costs for the G–19983 period, taking account of all refunds, were still about $30,000 in excess of what they would have been at the G–17166 rates.

In an answer to Peoples' complaint filed on April 22, 1963, Midwestern takes the position that regardless of whether the refunds from Tennessee have brought its costs below the G–17166 level, it is not obligated to pass on any refunds applicable to the period from April 5, 1960 to October 1, 1962. Thus Midwestern states, "Peoples' position * * * ignores the fact that the paragraph here involved of Opinion No. 320 not only makes no reference to Docket No. G–19983 but could not have made any such reference. At the time Opinion No. 320 was issued, only two Tennessee rate cases were pending, namely, Docket Nos. G–11980 and G–17166." Midwestern further argues that Peoples' contention involves an "*ex post facto* revision of Opinion No. 320" which "would violate the fundamental principles of fairness and equity embraced in the concept of the process of law."

---

[1] In the order of May 10, 1963, 29 FPC 903, we indicated that it was appropriate to give further consideration to Midwestern's alternative contention that Opinion No. 320 imposed an obligation to make prospective rate reductions only if Midwestern has experienced a net reduction in its cost of service. Our present order does not affect or prejudge that issue.

We have concluded that Peoples' interpretation of Opinion No. 320 is the proper one and that therefore Midwestern is and will be obligated to pass on to its customers all the refunds received and to be received that represent a reduction in its gas purchase costs for the period from April 5, 1960, to October 1, 1962, below the level of costs that would have been incurred at the G–17166 rates. Midwestern should, within ten days of this order, submit to the Commission and serve on all Southern System customers the calculations necessary to determine the current dollar amount of Midwestern's refund obligations, if any, as a consequence of our ruling herein.

The reasons which have led us to this interpretation of Opinion No. 320 may be stated simply. As one of the conditions to issuance of certificate of public convenience and necessity for construction and operation of Midwestern's Southern system, the Commission undertook to determine the rates which Midwestern would be permitted to charge initially. In doing so, the Commission had before it Midwestern's estimate of its cost of service. By far the largest element of the estimated cost of service was the expense of gas purchased from Tennessee computed at the rate which was soon to be in effect, subject to the obligation of Tennessee to refund amounts ultimately found not to be justified. The rates which the Commission allowed Midwestern included in full Midwestern's estimated gas purchase costs. Thus, it was plainly necessary to take account of the possibility that Midwestern, having been allowed a rate that recovered the full gas purchase costs, would later receive a refund of a portion of those costs. This the Commission did by the following provision of Opinion No. 320 (21 FPC at 662):

> Of course, should a reduction in Tennessee's filed rates result in a refund, Midwestern should make a corresponding refund to its customers subject to our approval.

With this background it will be apparent that Tennessee's later filing of further increased rates, which merely added another layer of possible future refunds, could not terminate the protection that Opinion No. 320 gave Midwestern's customers. Regardless of whether they were to result from Docket No. G–17166 or Docket No. G–19983, the refunds that Tennessee might be ordered to pay Midwestern could still bring the actual experienced gas purchase costs below the level of costs upon which the rates allowed Midwestern had been predicated. Regardless of whether the refunds were to result from Docket No. G–17166 or G–19983, they would still be refunds resulting from "a reduction in Tennessee's filed rates." The fact that further increased rates were filed by Tennessee subsequent to Opinion No. 320 is, in short, entirely irrelevant; and, in suggesting otherwise, Midwestern, rather than Peoples, attempts an *ex post facto* rewriting of the Opinion. The unsoundness of Midwestern's position is accentuated in the light of its status as a subsidiary of Tennessee. Under Midwestern's reading, the Commission imposed an obligation that was subject to complete frustration the next day, or anytime thereafter, by the unilateral act of the Tennessee-Midwestern management. While the Supreme Court has noted the "somewhat illusory" nature of the protection afforded consumers by the Section 4(e) refund power, *F.P.C.* v. *Tennessee Gas Transmission Co.*, 371 U.S. 145, 154, we are certain that it is not that illusory.

In view of the decision we have reached on the G–19983 aspect of Peoples' complaint, its motion to consolidate has become moot.

The Commission orders:

(A) Peoples' motion of June 6, 1963 is denied.

(B) Midwestern shall within ten days of the date of this order, submit to the Commission and serve upon all Southern System customers the calculation described in the body of this order.

(C) Midwestern is and will be obligated to pass on to its Southern System customers all refunds received and to be received from Tennessee with respect to the period from April 5, 1960, to October 1, 1962, which constitute a reduction in Midwestern's gas purchase costs for that period below what they would have been at the G–17166 level of rates.

Commissioners O'Connor and Woodward *dissenting.*

OPINION NO. 378–A

TEXAS EASTERN TRANSMISSION CORPORATION, DOCKET NOS. G–12446, G–12447; CONTINENTAL OIL COMPANY, DOCKET NO. G–12432

OPINION AND ORDER ON REHEARING

(Issued July 12, 1963)*

Syllabus

1. In rejecting producers' argument that under Louisiana law there is no such thing as sale of gas in place, Commission is interpreting and applying Natural Gas Act, not state law. P. 154.
2. Commission *rejects* contention that Internal Revenue treatment of lease transaction as capital gain is conclusive and binding—citing *Colorado Interstate.* P. 154.
3. Discussing *Panhandle* Commission *states* that here lease transaction, however designated and under whatever provision of local law, was means by which producers were paid for gas by pipeline which transported and delivered it to buyers in other states. Pp. 154–155.
4. Reaffirming that jurisdictional question was properly considered, Commission *observes* it is a well-known principle that competency of administrative agency to act upon such matters is always open for judicial determination. P. 155.
5. It is not necessary to discuss extent of Commission power to reform contracts under the Natural Gas Act, since it did not attempt to do so here. P. 156.
6. Upon rehearing, Commission *modifies* prior opinion by clarifying filing requirements; *confirms* opinion as modified; *denies* rehearing and *grants* stay pending judicial review. Pp. 156–157.

Commissioner Woodward *dissenting.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

This opinion and order relates to the merits of applications for rehearing by Texas Eastern Transmission Corporation, Continental Oil Company, Sun Oil Company, General Crude Oil Company and M. H. Marr, as well as by intervener H. E. Dishman, filed with respect to our Opinion No. 378 and Order issued February 6, 1963, 29 FPC 249. In Opinion No. 378 we found that the transaction by which the producers conveyed their leasehold interests in the Rayne Field to Texas Eastern was a sale for resale in interstate commerce subject to our jurisdiction. We therefore deferred decision on Texas Eastern's certificate application until the company and the producers should enter into a new arrangement and make appropriate filings.

In their applications for rehearing Continental and Marr contended that they did not have proper notice that the jurisdictional question was to be considered

*For appearances see Opinion No. 378, 29 FPC 249. Reversed, *sub nom M. H. Marr* v. *F.P.C.*, 336 F. 2d 320 (CA5–1964). Affirmed, *U.G.I.* v. *Continental Oil Co.*, 381 U.S. 392 (1965).

and were denied due process. We granted rehearing by order of April 2, 1963, 29 FPC 692, which specified that the producers should notify the Commission within thirty days thereafter if they desired to present evidence on the jurisdictional question. On March 6, 1963, H. E. Dishman, a minority leaseholder in the Rayne Field, had petitioned for intervention or in the alternative for rehearing and stay, and by order of May 1, 1963, 29 FPC 875, we permitted him to intervene, granted rehearing with provision for notifying the Commission within thirty days if he wanted to present evidence and denied his request for a stay of the Commission's Opinion No. 378 and Order pending judicial review.

Continental, General Crude, Sun, Marr, and Texas Eastern have filed applications for rehearing of our April 2, 1963 order granting rehearing and have rejected any opportunity to present further evidence.[1] Within the 30-day period specified in the May 1, 1963 order, Dishman has filed no request to present further evidence. By letters of May 14, 1963, the Secretary of this Commission stated to each of the five applicants for rehearing that the application was not addressed to a final order and as such was not acceptable for filing, but would be processed as a motion for reconsideration of the April 2, 1963 order. While it is now clear that no additional evidentiary hearing is desired by the parties, the issues raised in the original applications for rehearing supplemented by the second round of applications for rehearing are still before us for disposition.

In our opinion No. 378 we discussed at length the principal issue here, namely our jurisdiction over the transfer of gas leases by the producers to Texas Eastern. We see no need to repeat our discussion of this basic issue. The quick answer to the producers' additional argument that under the law of Louisiana there is no such thing as a sale of gas in place is that we are interpreting and applying the Natural Gas Act, not State law.

Some of the producers also argue that the Internal Revenue Service treatment of the transaction as a capital gain is conclusive and binding upon us. Here again the producers rely on an entirely different statute with different purposes. In *Colorado Interstate Gas Co.* v. *F.P.C.*, 209 F. 2d 717, 727 (CA10), reversed on other grounds 348 U.S. 492, we were upheld in using a value for depletion at variance with one fixed by the Internal Revenue Service. In support of their contention the producers cite *Sunshine Anthracite Coal Co.* v. *Adkins*, 310 U.S. 381. In that case the Bituminous Coal Commission had determined that the Sunshine Company's coal was bituminous and was not exempt under the Bituminous Coal Act which included provisions for taxation (50 Stat. 72). This determination was affirmed by the Court of Appeals. In a suit to enjoin collection of the tax on bituminous coal the Court held the question of the nature of the coal had already been determined. However, this case is distinguishable from the present case, for the taxing provision was in the Bituminous Coal Act and the Bituminous Coal Commission was given authority to determine who was exempt from the Act and hence exempt from the tax.

The producers again cite *F.P.C.* v. *Panhandle Eastern Pipe Line Co.*, 337 U.S. 498, in support of their position, but fail to appreciate the significance of the fact that contrary to the situation in the *Panhandle* case the leases in this case were transferred to a pipeline which intended to transport the gas in interstate commerce. The lease transfer transaction, however designated and under whatever provisions of local law, was a means by which the producers were paid

---

[1] The applications of Continental and General Crude contain statements that could be classified as scurrilous. Section 1.15(f) of our Rules of Practice and Procedure.

for their gas by a pipeline which transported the gas and delivered it to buyers in other States.[2]

Arguing that the question of jurisdiction has already been settled, Continental cites several cases where a prior determination of a question has been held controlling. These include *Morand Bros. Beverage Co.* v. *N.L.R.B.*, 204 F. 2d 529 (CA7), certiorari denied 346 U.S. 909, where on remand of a proceeding the Board expressed its disagreement with the court's view of the law on lockout of employees during a strike, *International Union* v. *Eagle Picher M. & S. Co.*, 325 U.S. 335, where the Board attempted to change its order with respect to a back-pay formula after the Court of Appeals had held[3] the Board's order should be enforced with minor modifications, and *City of Tacoma* v. *Taxpayers of Tacoma*, 357 U.S. 320, where the State of Washington argued that the city could not condemn property although this question had already been settled in favor of the city on appeal from this Commission's order granting a license (*State of Washington Dept. of Comm.* v. *F.P.C.*, 207 F. 2d 391, 396 (CA9), certiorari denied 347 U.S. 936). None of these cases involved, as did this one, questions of the basic jurisdiction of the agency over a particular type of transaction. It is a well-known principle that the question of jurisdiction, that is the competency of the administrative agency to act upon the subject matter, is always open for judicial determination. *Borax Ltd.* v. *Los Angeles*, 296 U.S. 10, 18. This principle has also been applied to reconsideration of jurisdictional questions by administrative agencies where the equities involved so required. See Davis, *Administrative Law* (1958), § 18.07. Moreover in each of the above cases the original holding apparently was fully considered by the court and involved an important issue in the case. In the present case the question of jurisdiction was not in issue and, as the opinions make clear, received little attention. The court found that the Commission in granting a certificate to Texas Eastern had appeared to confer general approval on the pricing aspects of the gas lease acquisitions without sufficient support in the record. The question of jurisdiction over the producer's disposition of the gas was not an issue to be decided, and neither the New York Commission nor any other party contended that this Commission had jurisdiction, or argued any of the considerations in support of such jurisdiction. The two short allusions of the court to the jurisdictional question merely put the quite different problem which was presented for its deci-

[2] There are several other matters relating to the jurisdictional problem that deserve comment. We had stated (p. 255, lines 20–23) that the seller retained management of the field. We did not mean all sellers but only Continental as explained previously (p. 254, paragraph (4)).

We agree with General Crude that in the *Panhandle* case (337 U.S. at p. 500) the seller of the gas reserves, Panhandle, retained an interest in the reserves sold, namely an option to purchase the gas. However, the most important distinction between this case and *Panhandle* remains, for here the sale was made in order to supply the interstate market.

Several of the producers contend that we were incorrect in using 79 percent and 81.5 percent as representing Texas Eastern's original and later interest in the Rayne Field reserves. They argue that the total interest assigned was around 95 percent subject to royalties. This is true enough, but we recognized the distinction between Texas Eastern's own interest and the royalty interest. While the producers argue that there is no royalty gas owned as such, Texas Eastern's vice president referred to Texas Eastern's own gas and the royalty gas as separate and subject to different methods of payment (Tr. 1930). Thus, irrespective of State law, the purchaser thought in terms of buying gas, not merely a leasehold interest.

The producers also point out that for the purposes of the present arrangement Texas Eastern bought and operates a gathering system and central dehydration facilities. With respect to the leasehold transaction they add that instead of 16 promissory notes, there were 16 for each seller. Neither of these corrections we think is material or would change our view of the transaction.

[3] *Eagle-Picher M. & S. Co.* v. *N.L.R.B.*, 119 F. 2d 903 (CA8).

sion in context. The court itself recognized they were not necessary to the decision stating "[I]t is of no importance here that the transactions by which Texas Eastern proposed to acquire the gas will themselves be, by virtue of a change in form, beyond the regulatory control of the Commission," since the pipeline's construction project was within the Commission's jurisdiction and the Commission was warranted in inquiring into Texas Eastern's costs "regardless of the status of the seller." [4] The question of jurisdiction has now been raised; we find the question of importance to the execution of our regulatory functions as explained in our Opinion No. 378; and we are of the opinion that it was properly considered.

The producers and Texas Eastern contend that we should not and do not have power to require them to rescind the lease sale arrangement. In our Opinion No. 378 we have already discussed why we consider that it is not in the public interest for the Commission to certificate this transaction; it is not necessary to discuss the extent of our power to reform contracts under the Natural Gas Act, for we did not attempt to do so here. In our Opinion No. 378 we required that the producers, Continental, Sun, Marr and General Crude within six months of the issuance of this order make filings of appropriate rate schedules and applications for certificates of public convenience and necessity, and required Texas Eastern to file a revised application for a certificate within the same period. By this we intended to give the parties further opportunity to obtain certificates in these proceedings for a sale of gas which they have consummated at least in part. Without such revised filings we would be constrained to deny certificates, and, in such case, the parties would be in the position of being in violation of the Natural Gas Act. We did not intend to order the parties to execute a particular kind of contract, or any contract, apart from the necessity of completing the present proceedings. In order to make our meaning clearer we shall revise our finding (7) and ordering clause (B) as shown below. In doing so we shall provide that ordering clause (B) apply to Dishman and any other Rayne Field producers who have entered into lease sale arrangements with Texas Eastern.

Certain of the producers have requested a stay of our Opinion and order. In view of the fact that court proceedings are already in progress, we shall grant such a stay as provided in revised ordering clause (B) below.

The Commission finds:

The applications for rehearing filed by Continental, Sun, Marr, General Crude, Texas Eastern and Dishman present no new facts or principles of law which were not considered by the Commission when it issued its Opinion No. 378 on February 6, 1963, or which having now been considered warrant any change or modification of said order except as stated in our orders of April 2, 1963 and May 1, 1963 or as specified in this Opinion No. 378–A and Order.

The Commission orders:

(A) Our Opinion No. 378 and Order issued February 6, 1963 is hereby confirmed as the order of the Commission except as modified by our orders issued April 2, 1963 and May 1, 1963 and by this Opinion No. 378–A and Order, and the motions for reconsideration filed by Continental, General Crude, Sun, Marr, and Texas Eastern are hereby denied.

(B) Finding clause (7) in our Opinion No. 378 and Order [page 258] issued February 6, 1963 is amended to read as follows:

(7) It is appropriate in the administration of the Natural Gas Act that decision on Texas Eastern's application for a certificate of public convenience and

[4] *P.S.C. of New York v. F.P.C.*, 287 F. 2d at page 146.

necessity be deferred and that opportunity be afforded for further filings on the part of Texas Eastern and its suppliers of gas.

(C) Ordering clause (B) in our Opinion No. 378 and Order issued February 6, 1963 is amended to read as follows:

(B) Continental, Sun, Marr, General Crude, Dishman and any other Rayne Field producers who have transferred gas leases to Texas Eastern are granted opportunity to make filings of appropriate rate schedules and applications for certificates of public convenience and necessity until six months after the issuance of final mandate upon the completion of court review proceedings herein, and in the same period Texas Eastern may file a revised application for a certificate to put into effect any new arrangement for supply of gas to Texas Eastern from the Rayne Field in conformity with this opinion, the public interest and the Natural Gas Act.

Commissioner Woodward *dissenting.*

WOODWARD, Commissioner *dissenting:*

On February 6, 1963 when the original Opinion issued in this proceeding, I did not participate but now that the matter is before us on a Petition For Rehearing, I would prefer to make my views known by issuing the following dissent:

Prior to February 6, 1963, this Commission consistently recognized its unqualified lack of jurisdiction over the sale, purchase or transfer of leasehold interests by natural gas companies. The Supreme Court of the United States, at the conclusion of its opinion in *Federal Power Commission* vs. *Panhandle Eastern Pipe Line Co.*, 337 U.S. at pp. 515–516 (1949) told the Commission what it could do if it wished to obtain such authority:

> If the Commission is of the opinion that it should have power to control the disposition of leases by natural gas companies, it is authorized to call the attention of Congress to that fact.

In its annual reports to Congress for the past twelve years, the Commission has advocated an amendment to Section 7 of the Natural Gas Act which would vest it with jurisdiction over transfer of leaseholds by natural gas companies.[1] In spite of these pleas in each instance the Congress has not acted to confer upon this Commission the power which, clearly, it does not presently possess. In this proceeding, the Commission commits grave error in attempting to exercise jurisdiction in areas forbidden to it by the Congress and the Supreme Court of the United States. To attain its objective, the Commission is now saying that any sale of property which contains gas in formation is subject to its jurisdiction. Without question, this is an unlawful assumption of jurisdiction.

"Great weight" must be given to an agency's consistent interpretation of the law it administers, especially where the agency has sought to have the law amended, but Congress has declined to do so and has thereby acquiesced in the agency's historical interpretation.[2]

The Commission's assertion of jurisdictional authority over the sale of leasehold rights in Rayne Field, on the basis of an unsupported vague and obscure dissertation, is a complete reversal of its prior position in these proceedings. At no time did the Commission so much as infer that it might possess or exercise jurisdiction over the Rayne Field leaseholds. Opinion 322, issued June 23, 1959,

granted Texas Eastern's application for certification and the Commission explicitly declared (21 FPC 860 at p. 864) :

> Texas Eastern has not filed an application for a certificate authorizing acquisition of the Rayne Field leases and *we have no authority to issue such a certificate.* [Emphasis supplied.]

The Public Service Commission of the State of New York appealed Opinion 322 before the U.S. Court of Appeals for the District of Columbia Circuit. In its brief, the Commission affirmed its position that it lacked jurisdiction over the Rayne Field leasehold sale stating;

> The Commission order does not authorize the purchase of lease—*undisputably such authorization is outside its jurisdiction* [*Infra*, p. 17, emphasis supplied.]

The Court of Appeals disposed of the New York Commission appeal by holding (287 F. 2d at pp. 145, 146) :

> It is of no importance here that the transaction by which Texas Eastern proposes to acquire gas will themselves be, by virtue of the change in form, beyond the regulatory control of the Commission.

In my judgment, that opinion conclusively settled the jurisdictional question. The leasehold sale was not a sale in interstate commerce; it affected only rights and interests in real property located wholly within the State of Louisiana. Any other conclusion disparages the Court of Appeals adjudication—this fact is indisputable. If permitted, this Commission's course of action would destroy the rights of parties to court review and render the decision of the courts meaningless.

Apart from its misapplication of the statute, the majority errs in attempting to force the parties herein to revise their contracts. The Natural Gas Act is the only source of this Commission's authority and there is nothing in the Act which confers such absolute power on the Commission. The majority cannot, by decree, force a meeting of the minds of the parties here involved.

Moreover, in a Section 7 proceding, the Commission must make findings, in accordance with the statute, of present or future, rather than past, public convenience and necessity, *City of Pittsburgh* v. *F.P.C.*, 237 F. 2d 741, 752; *Panhandle Eastern Pipe Line Co.* v. *F.P.C.*, 236 F. 2d 289, 292. Here, the Commission's attempt to impart retroactive effect to its findings is totally invalid.

Rehearing should be granted and Opinion No. 378 and Order, issued February 6, 1963, should be reversed and set aside.

OPINION NO. 396

CITIES SERVICE GAS COMPANY, DOCKET NO. G–18799

OPINION AND ORDER DETERMINING TAX ALLOWANCE, DISALLOWING RATES AND REQUIRING REFUND

(Issued July 15, 1963)*

Syllabus

1. Parents' intra-system methods of allocating consolidated tax payments among subsidiaries cannot be the basis of determining amount allowed regulated company as operating expense in rate case. P. 160.

*Initial decision appears on p. 176. Stay granted by order issued August 29, 1963, 30 FPC 623. Order issued September 10, 1963, rescinding paragraph (H) and denying rehearing in all other respects, 30 FPC 676. Set aside, *Cities Service Gas Co.* v. *F.P.C.*, 337 F. 2d 97 (CA10–1964). See order terminating proceedings, 33 FPC 233.

2. Tax allowances in cost of service are to permit regulated company to secure rate which, after taxes, will provide reasonable return on jurisdictional investment—not to insure that other components of complex corporate system are enabled to "cash-in" on tax losses. P. 162.
3. Fundamental rate-making principle governing disposition of consolidated tax issue requires separation between regulated and un-regulated costs and revenues. P. 162.
4. It is inappropriate to assign any tax liability to non-regulated affiliates which had no taxable income in period considered. P. 164.
5. Commission *concludes* that actual tax paid by Cities Service system, as normalized, is reasonably allocable among the regulated companies. P. 164.
6. Commission *determines* proper method for computing Federal income taxes to be included in the cost of service of regulated company where company has joined in consolidated tax return with affiliates. P. 164.
7. In proceeding arising under Section 4(d), Commission *determines* tax allowance; *disallows* rates and *requires* refunds. Pp. 164–166.

Commissioner Morgan *concurring.*

Commissioner Woodward *dissenting,* joined by Commissioner O'Connor.

Harry S. Littman, Jack Werner, Conrad C. Mount, Henry L. O'Brien and *Richard Littell* for Cities Service Gas Company.

Charles E. McGee, James D. McKinney, Jr. and *R. E. Christiansen* for Missouri Public Service Company and The Gas Service Company.

Irvin Fane, Arthur J. Doyle and *Lowell L. Smithson* for Kansas City Power & Light Company.

Donald W. Steward for Union Gas System, Inc.

J. David Mann, Jr., William W. Ross, Robert D. Youle and *Stanley C. Whiteaker* for Midwest Industrial & Commercial Gas Users Association.

Robert D. Youle, Richard S. Righter, J. David Mann, Jr. and *William W. Ross* for Sheffield Steel, Division Armco Steel Corp.

William Carl Zimmerman for City of Topeka, Kansas.

Charles S. Rhyne, J. Weston Miller, Herzel H. E. Plaine, Benjamin M. Powers and *John F. Thice* for The Municipal Group.

Glenn D. Evans for Missouri Public Service Commission.

John F. Thice for Missouri Portland Cement Company.

J. Weston Miller, Charles S. Rhyne and *Herzel H. E. Plaine* for City of Springfield and City Utilities of Springfield.

John F. Thice for the City of Independence, Missouri.

Leo E. Forquer and *Cyril S. Wofsy* for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

Ross, *Commissioner:*

This proceeding is before us on the single question of the proper tax allowance to be included in the cost of service of Cities Service Gas Company (Gas Company) and to be reflected in its rates after our approval on March 27, 1961, 25 FPC 582, of a rate settlement agreement between Gas Company and customers representing almost the entire volume of gas sold by it.[1] The settlement cost of service included federal income taxes in the amount of $7,055,981, calculated at the statutory rate of 52 percent upon Gas Company's return after mak-

[1] This proceeding involves a locked-in period because Gas Company made a further filing increasing its rates in Docket No. RP62–1, which rates became effective on December 23, 1961, except for Rate Schedules I–1 and I–2 which became effective July 23, 1961.

ing all deductions applicable to Gas Company as a separate corporate entity but the Settlement Agreement specifically reserved for future determination the issue of the proper amount of federal income taxes to be allowed Gas Company in this proceeding and provided for refunds as a result of a final order on the tax question.

Gas Company is a member of the Cities Service system. The parent corporation is Cities Service Company, which, through its wholly owned subsidiary, Empire Gas and Fuel Company, owns all the outstanding stock of Gas Company and, altogether, directly or indirectly owns the stock of 37 corporations. Among these Gas Company is the only company engaged in the interstate transportation and sale of natural gas. The other subsidiaries are engaged in a wide range of petroleum activities. Subsidiaries explore for and produce oil and natural gas, not only domestically in Oklahoma, Louisiana, Texas, Illinois, Kansas, Mississippi and New Mexico, but also in the offshore areas of the Gulf of Mexico. Other subsidiaries produce petroleum products in Canada, Columbia, Venezuela, Peru, Arabia and the French Sahara. Still other subsidiaries own and operate refineries, oceangoing oil tankers, railroad tank cars, and an office building.

The parent has filed a consolidated tax return for a number of years and Gas Company has been included in the consolidated return except for the years 1950, 1951 and 1952. Under the Internal Revenue Code (Sections 1501–1504) when a consolidated return is filed, all corporations whose stock is owned 80 percent or more by the Parent Company, must be joined in the consolidated return. In the return the losses of any company can be set off against the taxable income of other companies in the group. A net loss in any year can be carried back to the three preceding years or carried forward to the succeeding five years (Sections 172 of the Code). The tax rate on the consolidated return is 54 percent, instead of the usual 52 percent for a separate corporate income tax return, but the 2 percent penalty applies only to the amount of the consolidated taxable income which exceeds the taxable income that is derived from a utility, such as Gas Company (Section 1503 of the Internal Revenue Code).

The Parent Company has allocated the burden of the consolidated tax payments among the various subsidiaries on the following basis. The regulated companies, such as the Gas Company, were charged 52 percent of their net taxable income while the remainder of the consolidated tax, if any, was then allocated among the nonregulated subsidiaries showing a profit in proportion to their respective taxable incomes. Their intrasystem methods of allocation, of course, cannot be the basis of determining the amount allowable to Gas Company as an operating expense in a rate case.

The staff argues that in computing an allowance for federal income tax to be included in the cost of service the Commission should adhere to its interpretation of the doctrine of actual taxes payable. When any company participates in the filing of a consolidated tax return, it should also participate in any saving generated whichever company is responsible for the saving. The important fact, the staff says, is that Gas Company joins in the Parent Company's consolidated tax returns, so that the taxable income or loss becomes a "fused mass" in which each dollar is indistinguishable from any other dollar. The filing of the consolidated tax return, the staff adds, does not produce any separate income tax liability on the taxable income of the Gas Company, but instead, produces a tax liability for the whole group.

As a result of these views the staff did not apply the statutory rate to Gas Company's taxable income, but rather employed a consolidated effective tax rate of 10.53 percent for the purpose of determining the proper allowance for federal income taxes in Gas Company's cost of service. This tax rate was de-

rived, in essence, by dividing the consolidated tax paid by the Cities Service system by the total taxable income of all the profit making affiliates computed separately for the years 1957, 1958 and 1959.[2] By this method the staff computed an effective tax rate of 23.92 percent for 1957, 0 percent for 1958 (where there was a consolidated tax loss), and 7.67 percent for 1959. It averaged these three figures to obtain its effective tax rate of 10.53 percent which it applied to the Gas Company's income in the test year 1958 to obtain a tax allowance of $785,565.

Cities Service argues that the tax rate actually payable on the Gas Company's stipulated return is 52 percent. It says that taking into account the carry-back of losses, there are no tax savings which can be attributed to the Gas Company's inclusion in the consolidated return. Furthermore, it contends that it is the Gas Company's rates which are in issue here not the rates for the oil, or gasoline, or petro-chemicals, or the other products produced and sold by the companies in the Cities Service system. It says that where rates are being set for a utility operation, the costs applicable to that operation are germane, not the costs of the unrelated non-utility operations. It adds that if there is any saving from the non-utility operations they belong to the stockholder who incurred the losses and not to the ratepayer, who has paid no obligation of the non-jurisdictional subsidiaries and has not contributed to their losses. The staff's proposal, the companies say, would take away from the investors a portion of the incentive provided by Congress to encourage exploration for oil, domestically and abroad, would put the company at a competitive disadvantage with other oil companies, and would penalize the Parent Company for its own form of corporate organization. Cities Service claims that the staff's consolidated effective tax rate is a clear deprivation of property without due process of law, because it takes the benefits of the large tax deductions from the non-jurisdictional companies and passes them along to the gas customers in the form of rate reductions.

In his decision issued April 23, 1962, the Examiner agrees with Cities Service. He holds that the staff's position is basically wrong because it would thwart the true congressional intent of the tax law permitting the filing of a consolidated return, which was to encourage holding companies to expand their overall businesses for the betterment of the national and international economy. He cannot see the justice of permitting Gas Company's customers to receive what he considers a windfall from losses occurring in businesses unrelated to that of the regulated natural gas company merely because Gas Company and the corporations having the losses happen to have a common corporate owner. The Examiner adds that the regulated businesses should not have the right to take away from the non-regulated entity any part of the losses it utilizes for tax purposes. The Examiner thinks that, if driven to it, the Parent Company could rearrange its system of corporations in such manner as to eliminate tax losses, and there would then be no tax saving to allot to the gain companies, including Gas Company. Exceptions were filed by the staff and a large Municipal Group[3] which had intervened and the issue is before us for decision.

The authorities do not give us a clear answer to the question of whether the tax allowance for the regulated company should take into account the losses

---

[2] Since the test year 1958 showed a consolidated loss, the staff used the three year period in order to reach a more representative result.

[3] Consisting of the Kansas Cities of Altamont, Atchison, Chanute, Cherryvale, Downs, Erie, Gerard, Grenola, Howard, Iola, Melvern, Meriden, Osage City, and Perry; the Missouri Cities of Carl Junction, Carrollton, Carthage, Clinton, Independence, Joplin, Kansas City, Marshall, Neosho, Nevada, Oronogo, Pierce, Platte City, Springfield, St. Joseph, Waverly and Webb City; and City Utilities of Springfield, Missouri.

of affiliates. Some authorities appear to support the "actual taxes" concept as advanced here by the staff. *City of Pittsburgh* v. *Pennsylvania PUC*, 128 A. 2d 372, 385–387 (Pa. Super. Ct. 1956); *Re New Jersey Power & Light Co.*, 9 N.J. 498, 89 A. 2d 26, 41 (1952). Other authorities eliminate the losses of affiliated companies or of separable operations of the same company. *Southern Union Gas Co.* v. *New Mexico PSC*, No. 31074 (D. Santa Fe County, June 9, 1961); "Rates and Rate Structure," 29 PUR (N.S.) 391, 481–842 (N.Y.P.S.C., 1938).

The starting point in resolving the consolidated tax issue is the amount of the consolidated tax payment. This is the only real cost which was incurred by Gas Company in conjunction with the other Cities Service affiliates. The task is then to determine the proportion of the consolidated tax which is reasonably attributable to the Gas Company *vis-a-vis* the other Cities Service affiliates. The basic error in the position of Cities Service is that it ignores this point and claims an amount of Federal income taxes in Gas Company's cost of service on the basis of a hypothetical figure which Gas Company would have paid if it were a separate company. The simple truth of the matter is that Gas Company paid no separate Federal income tax but participated in the filing of a consolidated return with the other Cities Service affiliates. To accept Cities Service's position would be to approve fixing of jurisdictional rates on the basis of converting a hypothetical tax payment into a prudent operating expense. In effect, Cities Service argues that Gas Company ratepayers should make Cities Service stockholders whole for the tax losses of nonregulated enterprises even though this means an allowance for taxes over and beyond that which the consolidated system as a whole actually paid. We reject this view as neither just nor reasonable. Tax allowances in a cost of service are for the purpose of permitting the regulated entity to secure a rate which, after taxes, will provide a reasonable return on jurisdictional investment, not to insure that other components of a complex corporate system are enabled to "cash-in" on their tax losses.

However, we agree with Cities Service that the fundamental rate making principle governing our disposition of this issue requires a separation between regulated and unregulated costs and revenues. This principle controls our allocation of other costs which are jointly incurred by regulated and unregulated companies, or departments within the same company, and is controlling here.[4] If we were to allocate the consolidated system tax return among all profit companies including those in whole or part engaged in unregulated activities, there would be no sound reason for refusing to fix jurisdictional rates at a level sufficient to make up any real losses these companies might suffer.

Staff's approach possesses a quality of artificiality and instability which renders it unsatisfactory for ratemaking purposes. In effect, staff's effective tax rate is derived by taking the ratio Gas Company's income bears to the total income of the profit making companies, and applying this percentage to the system tax paid. It would be easy for Cities Service to escape from this onerous assessment by rearranging affiliates, mergers or intrasystem pricing arrangements in order to eliminate all or most of the other profit entities and thus increase the effective tax rate of the Gas Company. Significantly, the record shows that Cities Service could accomplish this result.

There are three preliminary matters to resolve before computing Gas Company's tax allowance according to the principles stated above. First, we must decide the period of time to be used in the computation. The Parent Company paid no federal income tax for 1958, the test year. If this test period were

[4] As shown above, this principle is inconsistent with Cities Service's position that Gas Company's tax allowance should be computed as if it were a separate company.

representative, we would include no tax allowance in Gas Company's cost of service. However, the tax liability of a complex such as Cities Service for a single year is not apt to be representative. As stated above, the record shows extensive tax data for each of the companies of the Cities Service system for the years 1957 through 1959. While data for a longer period of time might be useful for normalization purposes, in our opinion the detailed data for this three year period of time is sufficient to determine the tax rate applicable to Gas Company.[5]

A second preliminary matter requires us to compute taxable income by normalizing deductions for accelerated amortization and liberalized depreciation, consistent with our treatment in *Alabama-Tennessee Natural Gas Company*, 27 FPC 1180. This is done in Appendix A. However, here as in other rate cases following *Alabama-Tennessee*, the order herein will be made dependent upon our determination in that proceeding regarding the propriety of normalization for rate making purposes. In the event the so called flow through approach is adopted, the rates herein approved on a tentative basis will be appropriately modified.

The third problem is that there are certain companies in the Cities Service system a portion of whose business is subject to regulation. The taxable income of these companies should first be allocated into regulated and nonregulated categories. Cities Service, however, has failed to present any evidence upon which to make such an allocation. We can, however, make an appropriate allocation of the taxable income of Cities Service Oil Company, (which represents nearly 99% of the total taxable income of the mixed companies, i.e., those companies having both regulated and nonregulated income), by taking official notice of certain evidence presented in the Oil Company's rate case in Docket No. G–9519, *et al.* This evidence (taken directly from the Oil Company's own books), shows that 6.28% of Oil Company's gross investment in net plant is devoted to regulated activities (production of natural gas).[6] The data relative to the production of casinghead gas is not included in this figure. Inasmuch as casinghead gas represents 13.51 percent of Oil Company's gas revenues,[7] we will adjust the 6.28 percent figure to take this additional investment into account. Applying the resulting 7.13 percent[8] to Oil Company's total taxable income of $51,252,182 produces regulated income for Oil Company of $3,654,281.[9] A similar allocation with respect to Cities Service Production Company results in 24.16 percent or $6,464,235 of that Company's tax losses attributable to regulated activities.[10]

---

[5] We recognize that the record contains limited information for earlier years, i.e., 1954 through 1956. However, the information for the earlier years in this case is not sufficiently detailed to be used in computing the tax allowance for Gas Company in the manner determined appropriate herein; and to the extent that it indicated a different profit and loss picture may have obtained earlier, the subsequent history of Cities Service indicates that such earlier periods could not be considered as representative for rate making purposes.

[6] Docket No. G–9510, et al., Exhibit 38, Schedule 3.

[7] *Ibid.*, Exhibit 35, Schedule 3, Sheet 3.

[8] This figure was obtained by multiplying $29,775,181 (investment in gas plant excluding casinghead) by 1.1351. The resulting figure of $33,797,808 is divided by total plant investment of $473,788,545 which produces 7.13%.

[9] We wish to make it clear that a simple manner of allocating the taxable income of mixed companies should be used in any future cases involving this issue. Obviously, it is administratively infeasible to compute a detailed cost of service for large integrated corporations to determine one element of a regulated company's cost of service.

[10] $12,970,603 or 17.46 percent of Production Company's average net investment of $14,276,476 relates to gas production, exclusive of casinghead gas. Casinghead gas represents 38.34 percent of the Company's gas revenues, and the 17.46 percent figure adjusted to take this further investment into account produces 24.16 percent. (Docket No. G–9510, Exhibit 32, Schedule 2, Sheet 1, and Exhibit 35, Schedule 2, Sheet 2.)

Having made these adjustments, we can now allocate the tax cost of the Cities Service system between regulated and nonregulated companies. For the three year period under consideration, the nonregulated affiliates, including nonregulated income of Oil Company, had no taxable income. In fact, the record shows they had a substantial tax loss. It is therefore inappropriate to assign any tax liability to this group of companies. Accordingly, we conclude that the actual tax paid by the Cities Service system, as normalized, is reasonably allocable among the regulated companies.

In sum, the proper method to be applied in computing the Federal income taxes to be included in the cost of service of a regulated company where that company has joined in a consolidated tax return with affiliates is (1) separate the companies into regulated and unregulated groups, (2) determine the net aggregate taxable income of each group, and (3) apportion the net total consolidated tax liability over a representative period of time between the two groups, and among the companies in the regulated group, on the basis of their respective taxable incomes; provided that the allowance so computed for the regulated company shall not exceed what its tax liability would be for rate making purposes, if computed on a separate return basis.

The computation of Gas Company's tax allowance is computed in Appendix B. As this Appendix shows, we based this computation on the ratio Gas Company's taxable income bears to the total taxable income of the regulated group. This, of course, is similar to staff's approach which we consider reasonable when the nonregulated affiliates have been excluded.

The Commission further finds:

(1) Gas Company's proper tax allowance is $5,866,847.

(2) The rates filed by Gas Company filed pursuant to the Settlement Agreement and our order of March 27, 1961, subject to the reservation of the tax issue are excessive and should be disallowed.

(3) Gas Company should file tariff sheets and make refunds in accordance with this opinion.

The Commission orders:

(A) The rates filed by Gas Company pursuant to the Settlement Agreement and our order of March 27, 1961, are hereby disallowed.

(B) Gas Company shall, within 45 days of the date of this order, file appropriate substitute tariff sheets to its FPC Gas Tariffs except for Rate Schedules I–1 and I–2 containing rates satisfactory to the Commission based on a tax allowance of $5,866,847 for the test year, found to be appropriate in this opinion and order. Gas Company shall accompany its rate filing with supporting cost of service and allocation data presented in the same form and manner as that contained in the exhibits attached to the stipulation approved in our order of March 27, 1961, revised only to reflect the change in the allowance for federal income taxes. Gas Company shall further furnish with its filing a statement setting forth the method of computation of such rates and showing the derivation thereof. Gas Company shall also accompany its tariff sheets and supporting data with a certificate showing service of copies thereof on all purchasers under the rate schedules involved, interveners in this proceeding, and interested state commissions. Comments by such parties shall be submitted to the Commission within ten days after service by Gas Company as required herein.

(C) Upon acceptance by the Commission of the tariff sheets filed by Gas Company pursuant to paragraph (B) above, the rates, charges and classifica-

tions set forth therein shall become effective for the period November 23, 1959, through December 22, 1961.

(D) Gas Company shall, within 70 days of the date of this order, file with the Commission a statement showing the distribution to its jurisdictional customers of appropriate amounts to be refunded with interest at 6 percent. With respect to Rate Schedules F–1, F–2, C–1, C–2, E, P and X–5 the refund shall represent the differences between (1) the amounts collected under rates charged in accordance with the stipulation of October 21, 1960, and our order of March 27, 1961, and (2) the amounts that would have been collected under the rates filed pursuant to this opinion and order, from November 23, 1959, to December 22, 1961, with interest at 6 percent. With respect to Rate Schedules I–1 and I–2 the refund shall, in accordance with the stipulation, represent an amount equal to 50 percent of the difference between (1) the sum that would have been payable under I–1 and I–2 Rate Schedules made effective February 23, 1961, for natural gas purchased from Gas Company during the period from June 23, 1959, through July 22, 1961, and (2) the charges which would have been payable for such service during the same period if I–1 and I–2 rates reflecting the Commission's determination of the reserved tax issue had been in effect.

(E) Gas Company shall accompany its statement of refunds with a computation of the refunds and interest, and the derivation thereof, and with a certificate showing service of copies thereof on all purchasers under the rate schedules involved, interveners in this proceeding, and interested state commissions. Comments by such parties shall be submitted to the Commission within ten days after service by Gas Company as required herein.

(F) Within 10 days of the approval of the statements of refunds by the Commission, Gas Company shall make the required refunds so computed and within 15 days thereafter shall report to the Commission in writing and under oath the amount of refund made to each of its customers, showing separately the amount of principal and interest so paid and shall serve a copy of such report upon each of the customers receiving a refund. Concurrently therewith, Gas Company shall file with respect to such refunds, releases from its jurisdictional customers showing receipt of the principal and interest in conformity with this opinion and order.

(G) As provided in the Settlement Agreement approved by our order of March 27, 1961, Gas Company shall file further rate reductions and make further refunds as a result of refunds to it by its suppliers or a reduction in its cost of purchased gas.

(H) The rates required to be filed herein are specifically subject to such further adjustment as may be required as a result of the application of a final decision by the Commission in *Alabama-Tennessee Natural Gas Co.*, Docket No. G–5471, *et al.*,* on the treatment of deferred federal income taxes to the computation of the tax allowance made herein but only from and after the date of such decision or a later date if specified by the Commission therein.

(I) Exceptions not granted herein are hereby denied.

Commissioner Morgan *concurring.*

Commissioner Woodward *dissenting*, joined by Commissioner O'Connor.

Cities Service Oil Co., Del. (regulated portion)	1,499,006	1,259,798	895,477	3,654,281
				61,652,662
Percent of Cities Service Gas Co. to total regulated companies [1]				67.93
Consolidated tax allowance for years 1957–1959 (Appendix A)				25,909,822
Average consolidated tax allowance ($25,909,822÷3 years)				8,636,607
Tax allowance for Cities Service Gas Co. (67.93 percent × $8,636,607)				5,866,847

[1] No portion of the consolidated tax is allowable to Cities Service Production Company because that company had no taxable income.

MORGAN, Commissioner, *concurring:*

On the basis of the record before us it appears that, by virtue of filing a consolidated Federal income tax return for the years 1957 through 1959, the Cities Service System companies collectively enjoyed a Federal income tax saving in the order of some $48 million.

It also appears from the record before us that with few exceptions, one of which is discussed below, the parent company allocated this enormous saving

among the members of its corporate family on the proportionate basis of the taxable income each of them produced. This appears eminently fair, and this, moreover, is the method the tax regulations suggest for distributing these savings among the corporate family.

It is the "few exceptions" that concern us—most particularly, the Cities Service Gas Company. We are concerned with this "exception," first because that company sells a commodity vested with a public interest, at rates having the force of law, to consumers whose ratepaying welfare we are charged by Congress with protecting; second, because on the basis of allocating this saving which parent has chosen for its *unregulated* companies (that is, in proportion to taxable income), this particular public utility *should have* enjoyed savings of about $17.7 million during the period mentioned; third, because utility regulation traditionally and without detectable exception has always required savings in utility tax costs to flow through in the form of reduced rates to the consumers who alone and by law must bear the utility's entire tax burden; and fourth, because the parent in this case has refused to apportion, distribute, allocate or grant a single penny of the entire tax saving to the public utility that has been placed under what should be the watchful eye of the Federal Power Commission.

The vociferous legalisms and cries of outrage that the company has raised as a result of staff's suggestion that this utility, like its sister affiliates, should share fairly, equitably, and proportionately in the tax saving in question—a tax saving made possible in large part by the utility's taxable income—have created a large and to some degree confusing record here.

But the company's cries of outrage are no more heartfelt than the cries and suggestions of "outrage," "fraud," "fictitious," "dishonest," "indefensible," "sinful" and other expletives that were uttered in the United States Senate and House of Representatives when, despite the same defenses offered there as here, the details of the selfsame practices by the selfsame company were made known to the Congress during its consideration of the bill that became the Public Utility Holding Company Act of 1935.[1]

The practice was not then and there outlawed because—and it is safe to say *only* because—that very practice had been forbidden for any and all corpora-

---

[1] Specifically, see pages 477–482 of Volume 72A, "Utility Corporations," setting forth the results of certain financial practices uncovered in the course of the Federal Trade Commission's massive investigation in this utility area from 1928 to 1935; see the hearings on the bill before the House Commerce Committee at pages 153–155; Senate hearings at pages 234–255 and 514; the debate on the bill in the Senate at 79 Cong. Rec. 8392 and 8525–26; and in the House at 10323.

The comment of Senator Norris was typical:

> Practically all the systems I have shown on the various charts, together with others not shown, made what the law formerly permitted—that is, returns for taxation purposes on a consolidated basis—resulting in a great saving of taxes to the holding-company groups, although, as a matter of fact, operating groups as a rule were subject to a tax. However, the holding companies, taking advantage of the law permitting consolidated returns, collected the taxes from their operating companies, and then, by setting off losses sustained by some of the operating companies, it was possible in this way to retain these taxes by balancing losses of some operating companies against profits of other operating companies. Thus it has often happened that operating companies have paid taxes which ordinarily would have been due the Federal Government, and the holding companies by balancing off losses from other operating companies paid no tax to the Federal Government, but retained the money the operating company had paid as taxes. So some operating companies actually paid their taxes, expecting the money to go to the Federal Government through the holding companies, but by the process I have just described the holding companies kept the taxes and paid nothing to the Federal Government. If anybody can square that with honesty, I should like to have him do it.

tions, except railroads owning 95% of their operating subsidiaries, by the Revenue Act of 1934. But, with the imposition of the wartime excess profits tax, Congress by the Revenue Act of 1942 allowed the practice to be resumed. The matter is now before us, a Federal public utility commission, for disposition in the light of the basic tenents of the public utility law we are charged with administering.

If this were a matter of tax law, as company and the dissenting opinion would have us treat it, we, like the Internal Revenue Service, would only be interested in checking the accuracy of company's arithmetic. But this is a rate proceeding, not a tax audit. The problem here is only the problem of determining how the utility's share of the system's actual tax liability should be determined; or the extent to which a regulated utility's tax and ratepaying consumers should realize or be deprived of a saving in tax charges which in utility law are imposed upon and chargeable exclusively to utility ratepayers.[2]

The difficulty is not in determining whether this utility's share of the tax saving should benefit the consumers who pay its taxes: the difficulty is in estimating this utility's proper share of the saving. Many methods for allocating that saving or estimating the utility's share thereof have been explored, but each has been found wanting by my colleagues. Speaking for myself, I must say that the method used by Cities Service for allocating its total tax liability and tax saving among *some* of its subsidiaries, and by the staff for allocating that total liability and saving among *all* of Cities Service's subsidiaries, is the most logical method and the one which best meets the standards and requirements of utility regulation. Further, it alone of all methods considered here is the one which reflects those vigorous expressions of Congressional intent in this particular matter which should guide the exercise of our discretion.

Briefly, the facts in this case relating to the three-year period under review are these: The system of which Gas company is a part consists of 37 separate corporations, about 6 of which are regulated; and the tax losses of some of the system's companies reduce the taxable profits of its regulated and unregulated companies and thereby reduce the system's over-all actual tax liability. The amount of the system's actual liability—or its tax saving (i.e., the difference between the total tax that would have been paid if each company in the system had been taxed separately, and the tax actually paid on the profits of those companies as reduced by the losses of the other companies)—properly should be distributed or apportioned over the system's profit companies on the basis of the separate taxable income each profit company had; and the record before us is totally barren of any sensible reason for differentiating between regulated and unregulated companies. At least it is barren of any reason which will stand scrutiny in the light of the public interest.

Here the total profits of the system's profit companies for the three-year period were $123.4 million; other system companies had tax losses totalling $100 mil-

[2] Consolidating the income of several wholly-owned corporations for the purpose of determining system income is especially appropriate in the case of public utility systems, because management often chooses to organize those systems into a series of separate corporations to facilitate doing business in each of the states in which the utility system operates. This is the reason used to justify the use of the consolidated return by utilities before Congress; and this also is the reason Congress removed the 2% penalty tax for public utilities that file consolidated returns (see House Ways and Means and Senate Finance Committee hearings on H.R. 8400 in the 84th Congress, the bill that became Internal Revenue Code of 1954). And in removing that penalty tax, as well as in making the privilege of filing consolidated returns available to public utilities as well as to other taxpayers. Congress was aware that from the time of the Supreme Court's opinion in the *Galveston* case, 258 U.S. 388 (1922), if not earlier, where the law of public utility regulation operates it requires utility consumers to pay the full amount, but not more than the full amount, of the utility's actual tax liability, or its allocated share of the system's actual tax liability.

lion; taxable system income thus was $23.4 million; and consolidated system tax liability for the three-year period was $11.4 million. The tax saving thus realized was the difference between the $63.2 million that the profit-making companies would have paid if they had been taxed separately, and the $11.4 million that the system actually paid, or (excluding a $4 million refund in 1958 of 1955 taxes) roughly $48 million.

Taxable profits of Gas company alone were $42 million; and it would have paid a tax of about $22 million *if* it had been taxed separately.

If the system's over-all tax liability or tax saving had been distributed among the profit companies proportionately on the basis of their separate taxable incomes, since Gas company's $42 million of taxable income was about 35% of total system taxable income ($123.4 million), Gas Company should bear about 35% (or $4 million) of the system's actual $11.4 million tax liability; and should benefit by about 35% (or $17 million) of the system's $48 million tax saving.

But Gas company did not charge its customers $4 million for taxes. It charged them the $22 million Gas company would have had to pay *if* it had been taxed separately. Gas company turned over the $17 million saving to the parent company, which, the record shows, used these funds to subsidize its non-regulated activities.[3]

Gas company says this is all right. It says it really did have a "tax" bill of $22 million, because the parent company on its books did not allocate any of the system's $48 million tax saving to Gas company. The parent company purposefully assumed that its tax losses wiped out the taxable income of its unregulated companies (only), and that the whole 37-company system's tax liability was chargeable to the regulated companies alone. The result of this "allocation theory"—to use a very dignified term—is that Gas company's consumers were charged an amount for "taxes" that was larger than the actual tax liability of the entire 37-company system.[4] Moreover, Gas company did not reduce its "tax" charge to its consumers even in years when the amount of system tax loss was so large that, after wiping out all unregulated company profits, it *should have* reduced Gas company's separately computed "tax" charge. The parent company did not give Gas company's consumers the benefit of Gas company's share of the tax savings as computed, *even under its own arbitrary allocation method.* The position of Cities Service company is that none of the system's tax savings should be used to reduce Gas company's hypothetical "tax" charges to its consumers, because those consumers did not finance the tax losses that gave rise to those savings. But, as we shall see, that is exactly what the consumers did, although involuntarily.

This entire practice is in complete conflict with the established principle that because a utility's consumers alone must pay its entire tax bill under rates having the force of law, a utility cannot charge its consumers more for taxes than the actual amount, estimated where necessary, that the utility actually paid or contributed to the U.S. Treasury, or more than the utility's *proper and equitable share* of the system tax actually paid. In the utility field, stockholders are entitled to a fair, constitutional rate of return, and the tax thereon is paid by utility consumers so that the fair return will not be reduced by taxes. Once the utility or its stockholders have received that return, they may not obtain

[3] We are only concerned with Gas company's $17 million share of the system's $48 million tax saving, because that $17 million was actually paid in cash by Gas company's consumers who pay its "taxes." We are not concerned with the other $31 million. To the extent it is attributable to the system's unregulated companies, it belongs to the stockholders and management who must see that the taxes of those companies are paid.

[4] During the three-year period in question, although total system actual tax liability was (only) $11.4 million, Gas company's consumers were charged $22 million for "taxes."

more by claiming higher, fictitious, or hypothetical costs they might have incurred *if* they had been organized or operated in some other, *unreal* manner. To allow additional return—over and above a fair return as defined by the courts—is to countenance unjust enrichment of the utility or its owners at the expense of the ratepayer.

My colleagues, perhaps unwilling to chart clear regulatory policy amid the consolidated tax legalisms raised herein, prefer (a) to separate the system's business into its regulated and unregulated portions; (b) to apply all of the system's tax losses (which normally stem from some of its unregulated activities) to reduce the profits or tax liability of its unregulated profit companies first, and then (c) to use whatever loss deductions may remain to reduce the liability that the utility or utilities would have had if they were separately taxed. This, it will be noted, gives the priority of use of the system's tax loss benefits primarily or even entirely to its unregulated profit companies.[5]

In passing, it may be noted that if this policy is equitable and if "turn about is fair play," the priority could and perhaps should be reversed for regulatory purposes. That is, if preference is to be given either group of subsidiaries, regulatory authority might properly apply the tax loss benefits first to wipe out the tax liability of the *regulated* subsidiaries (which almost invariably operate at a taxable profit), and then to use whatever loss deductions may remain to reduce the tax liability that the *unregulated* subsidiaries would have had if their taxes had been separately computed. This would not alter the system's over-all tax liability. But it would produce significantly larger tax reductions for the regulated companies, which would eventually be translated by regulatory authority into reduced rates and gross revenues. It would likewise greatly reduce the expendable funds, generated in the guise of "taxes" paid by utility ratepayers, which the parent company now disburses across the face of the earth to operate the speculative ventures of its various non-regulated corporations.[6] It is these specific corporate operations, *in large part financed and underwritten by "taxes" extracted from ratepayers,* which give rise to the tax loss benefits which the parent company claims it has the *exclusive* right to enjoy on the ground that the ratepayers had nothing to do with them!

It naturally follows that reversal of the priorities herein approved would produce another barrage of legalisms and redoubled screams of rage and pain from the parent company. The reader, whether he is a judge, a corporate lawyer or a utility ratepayer, can reach his own conclusions as to the validity of such protests. For if he has followed the discussion this far he can see clearly what has been happening and he knows exactly to whom it has been happening.

In any event, it is clear that the policy adopted here gives priority and favored treatment to the non-regulated companies rather than to those whose rates are subject to regulatory control by this and other commissions. I should have preferred that no priority or favored treatment be given to either group; and, speaking only for myself, I therefore believe that the actual tax and actual

[5] On the basis of Gas company's average "tax" charged during the three-year test period used herein, Gas company here claimed an average annual "tax" allowance of $7,055,981; on the basis of an allocation of the system's average actual tax during that period, staff claimed, properly, in my opinion, that Gas company should receive a tax allowance of $789,082; the majority opinion herein (after normalizing tax deductions for liberalized depreciation and accelerated amortization and making other refinements) grants Gas company $5,866,847. This is not regulation at its best. My reasons for accepting this result are set forth hereinafter.

[6] That the great bulk of these far-flung speculative enterprises are of no benefit or advantage to consumers who are served by Gas company—and who pay its "taxes"—is made abundantly clear by the majority opinion in the second paragraph thereof.

tax allocation method here urged by the staff is the preferred solution to this problem.

Most reluctantly, however, and solely for the purpose of enabling a decision to be reached in this case, I concur in the policy adopted by my colleagues of the majority. Though far from perfect, it is a discernible improvement over the situation that has existed here and in numerous other corporate families for many years. The approach of the majority, which is more in the nature of an assignment than an allocation, will serve at least to limit the tax liability of Gas Company's ratepayers to the actual liability of the entire system as a whole. It at least will prevent them from having to pay a tax charge that is *larger* than the actual liability of the entire system of which Gas company is a minor part.[7] This is no small matter, for Gas company's lawyers have been unable to obscure the fact that in 1958, when the tax liability of the total system was zero, the parent company nevertheless imposed a "tax" charge upon the ratepayers of the regulated utility in the amount of $6,367,534, not one penny of which was paid to the Federal Treasury.

In sum, this method of apportioning the tax saving and tax burden has the limited virtue of accommodating, to a very small and unsatisfactory degree, the two irreconcilable concepts at war with one another here. That is, it permits company and stockholder to enjoy an overly generous portion of the benefits which they erroneously claim are entirely theirs by virtue of the tax law alone; and it goes some small way toward producing a more equitable charge to ratepayers for the estimated amount of tax liability actually incurred by or attributable to the regulated utility that serves them.

I should have preferred that we face our responsibilities squarely and discharge them fully. Regrettably, that is not possible; and without my concurrence the little that has been accomplished herein will be lost. It is only on that account that I concur in the result reached by my colleagues of the majority.

WOODWARD, Commissioner, joined by O'CONNOR, Commissioner, *dissenting:*

This is a major rate case in which the Commission must decide a fundamental and critical question. While the Commission, in the past, has properly insisted that certain tax advantages to be obtained from filing a consolidated return for groups composed entirely, or predominantly, of regulated companies, be passed on to consumers, it has not held that business losses of unregulated and unrelated corporations participating in a consolidated return should be utilized for the benefit of the consumers of a regulated natural gas company. The latter issue is before us for the first time.

The majority concludes that the proper method to be applied in computing the Federal income taxes to be included in the cost of service of a regulated company where that company has joined in a consolidated tax return with affiliates is (1) separate the companies into regulated and unregulated groups, (2) determine the net aggregate taxable income of each group, and (3) apportion the net total consolidated tax liability over a representative period of time between the two groups, and among the companies in the regulated group on the basis of their respective taxable incomes. If each of the resulting groups shows a net taxable income, this formula would fairly allocate the total tax in accordance with the respective amounts of taxable income. But where, as here, the unregulated group has a net loss for the test period, the formula appropriates that loss which was the result of expenses and losses financed by the stockholders and deducts it from the tax allowance to be charged the ratepayers, thereby granting to them the entire benefit emanating from the tax loss. As applied here, the $2.4 million net taxable loss of the unregulated group is handed over to the ratepayers by deduct-

[7] Gas company's jurisdictional revenues represent about 5% of the system's gross revenues.

ing it from the taxable income of Gas Company, thereby reducing its tax allowance by $1.2 million.

The Opinion and Order adopted by the majority is based on the false premise that, as to industries regulated by it, the Commission has the authority to limit the effect of a mandate of Congress as expressed in Section 1501 of the Internal Revenue Code. Depriving Gas Company of a tax allowance which would be routinely granted to it by the Commission if it were not for its having a common owner with an unregulated and unrelated petroleum business, should not be done without some very persuasive reasons based upon sound rate-making policies which impose no confiscatory rates, which balance equitable consumer and investor interests and which take fully into consideration the impact of such action upon national economic policies. At the root of regulation is economic policy. The problem of economic growth in the United States is crucially important and inseparably related to economic growth is investment. Under the majority view, the consolidated return would not result in stimulating investment and growth because it has the effect of converting non-jurisdictional losses within the parent company's system into a rate reduction for gas consumers. The majority opinion is not supported by persuasive reasons based on sound policy.

Since this Commission possesses only the legislative powers which the Congress has granted to us, clearly we have no power to amend Section 1501 of the Code. Apart from the fact that there are no tax savings attributable to the inclusion of Gas Company in the consolidated return, the majority view is unlawful because it has the effect of regulating non-utility enterprises beyond the Commission's jurisdiction; it would strip the parent company of congressionally-conferred rights to tax deductions of its non-jurisdictional subsidiaries. The Majority is in error and I dissent.

The Cities Service system is operated principally as an integrated petroleum operation. The jurisdictional revenues of Cities Service Gas Company, a wholly owned subsidiary of Cities Service Company, comprised approximately 4.88%, 5.14% and 6.16% of the total system revenues in 1957, 1958, and 1959 respectively. Only 3% of the gross revenues of two other companies in the system are subject to Commission jurisdiction.[1]

In this proceeding, the Commission is to determine the proper Federal income tax allowance to be included in the cost of service of Gas Company, one of 37 subsidiaries joining the parent company in the filing of a consolidated return.[2]

Chapter 6 of the Internal Revenue Code, "Consolidated Returns," Section 1501, "Privilege to File Consolidated Returns" gives to "an affiliated group of corporations the privilege of making a consolidated return with respect to the income tax imposed" on corporations of which the parent company owns 80% or more of the outstanding stock. When corporations join in such returns, the Code, Section 1503, levies an additional 2% tax upon all includable taxable income except that of utilities such as Gas Company whose tax rate remains at the statutory rate of 52%.

The precise intent of Congress in granting the privilege of the consolidated return to an affiliated group of corporations was to encourage companies to expand their overall businesses for the betterment of the national and interna-

---

[1] Cities Service Production Company and Cities Service Oil Company (Delaware).

[2] Consolidated returns are based on the principle of levying a tax on the true income of a single enterprise even though the business is operated through more than one corporation. The primary advantages of filing a consolidated return may be summarized as follows:
(1) The offsetting of operating losses of one company against the profits of another.
(2) The consummation of inter-company transactions without the recognition of income.
(3) The designation of the parent company as agent of the group for all tax purposes.

tional economy and to eliminate any tax disadvantages of doing such through subsidiaries.

The parent company here owns, directly or indirectly, 100% of the stock of every corporation which participates in the filing of its consolidated return. As such stockholder it owns 100% of the assets of each corporation, and it is entitled to 100% of all net income of each, subject to income tax levies. Also, as the sole stockholder, it bears 100% of every risk, expense and loss sustained by its subsidiaries. These expenses and losses should not be appropriated for the consumers of a regulated natural gas company who bore no part of them, assumed no risks in relation to them, and have no right to use them to reduce their gas costs.

The parent's conducting of its petroleum business through many subsidiaries is a matter of lawful choice and the permission given by the Internal Revenue Code for the filing of one consolidated return by qualified affiliated subsidiaries recognizes such lawfulness. Gas Company performs no activity or function in relation to the parent company's primary business of conducting its petroleum operations. Gas Company is a regulated natural gas company transporting and selling natural gas for resale in interstate commerce and it is operated as such entirely separately from the petroleum operations of the parent company. *Whether one of the included corporations has a taxable gain or loss is determined from its individual tax return calculated separately. It is in the separate return where all lawful expenses of operation are deducted to determine whether there is income of the individual corporation subject to tax.* [Emphasis supplied.]

The examiner clearly determined, on the basis of record, that no part of the cost of producing the revenues of the petroleum business contributes in any way to produce Gas Company's revenues. No part of Gas Company's costs, including its income tax allowance, contributes in any way to producing revenues of the petroleum entity. No part of any loss of any subsidiary corporation in the petroleum business, operated as an entity, is reflected in Gas Company's agreed cost of service. The net taxable income of Gas Company gave rise to no tax savings by the parent; the parent, in effect, see p. 174 *infra*, paid the full 52% statutory rate on the taxable income of the Gas Company.

I see no justification for crediting the Gas Company with part of the losses, thereby reducing its allowance for income taxes. To do so would result in a windfall to the Gas Company's customers and would deprive the parent of tax deductions to which it is lawfully entitled. Stated simply, the tax savings were the result of non-jurisdictional operations and were not financed by Gas Company nor in any way made possible by the inclusion of the Gas Company in the consolidated tax return group. Most assuredly, Gas Company is not entitled to tax savings arising out of foreign and domestic exploration, production, refineries, gas station operations, petrochemical, tanker and other non-jurisdictional operations. The majority view would inflict harmful consequences on the unregulated subsidiaries which the Commission is without power to cure. Unlike the case when it regulates Gas Company alone, the Commission lacks authority either to increase or decrease the prices which the non-utility subsidiaries charge for their petroleum products. Briefly, the majority proposal is a regulatory one way street.

As Examiner Kelly has correctly declared, "The Code does not contain the criteria for rate making in this case. Under the Code, one only considers whether the corporations involved are qualified to participate in the consolidated return, whether such qualified corporations have lawfully computed their respective tax liabilities, what the consolidated tax should be, and whether all other tax laws or regulations have been met * * * The Commission determines

the proper return to be allowed upon the rate base and the proper income tax allowance to make the return net to the investor, and no tax law or regulations should interfere with the performance of this function by the Commission. * * * The Commission has the full right to examine all figures in such consolidated tax return, and to ascertain from what situations or circumstances they may have resulted. There considerations are demanded by the public interest. The public interest demands that a petroleum business receive, at the hands of the Commission at least as much encouragement and incentive in the conduct of its exploration and development activities as the national policy particularly as expressed in the income tax laws, dictates."

The uncontraverted evidence of record conclusively establishes that for each of the test years selected, the inclusion of Gas Company added a cost to the consolidated return in an amount equal to 52% of Gas Company's taxable income. In 1957, the parent company paid a consolidated tax of $12,251,639 on the income of its subsidiaries of which $5,860,398 was attributable to and equal to 52% of Gas Company's taxable income. In 1958 the parent company received a tax refund of $6,367,534, but it would have received a total refund of $10,224,666 if Gas Company had not participated in the consolidated return. Thus, the parent company, in effect, paid a tax of $6,367,534, representing 52% of Gas Company's 1958 taxable income, by forgoing the additional refund in that amount. In 1959, the parent company paid a tax of $2,965,014, but it would have received a refund in the amount of $6,566,531, if Gas Company had not been included in the consolidated return. Thus, the parent, in effect, paid $9,531,545 in payment of the tax at the rate of 52% on Gas Company's taxable income. The record shows that Gas Company's taxable income was not necessary to produce tax savings in the test years.

There is no question that Gas Company would pay a 52% tax had it been considered on a separate basis. The parent, by including Gas Company in the consolidated return, added a cost thereto equal to 52% and allocated a 52% cost to the Gas Company. I fail to see where the inequity of such an allocation lies. The parent company obtains no tax or other advantage from including Gas Company in its consolidated return. Owning 100% of the stock of Gas Company, the law requires that it include this subsidiary in its consolidated return. Gas Company, being a regulated monopoly with a practically assured net income each year, is not among the subsidiaries with losses to offset against the total net taxable income of all subsidiaries having such losses. Therefore, no tax saving whatever results to the parent company from the inclusion of Gas Company in the consolidated return.

The examiner noted further, "Any immediate but perhaps temporary tax saving accomplished by the filing of a consolidated return is not in any sense comparable to a real and permanent tax saving effected by taking a lawful deduction and passing on the benefit thereof to consumers. The tax saving effected by proper deductions is a definitely known and fixed saving for the tax year, which is certainly not true of any temporary saving effected through the offsetting of business losses against business gains. It is not the mere filing of the consolidated return but the fact of business losses having been sustained in the particular tax year which permit the temporary tax saving. The distinction must be acknowledged between the fixed and certain tax saving, and the temporary, uncertain and unascertained tax saving acomplished by utilizing business losses in a consolidated return. The latter should not be used to lower a tax allowance in a cost of service."

Completely ignoring the fact that Congress has provided that taxpayers may lawfully use their tax losses to offset their taxable income in the manner pro-

vided by statute, the majority imparts its own preemptory economic and regulatory philosophy to strike down an act of Congress.

The majority cites no authority of the Commission or the Courts to sustain this onerous theory. This proceeding cannot be resolved on the basis of an imagined rationale which is in fact contradicted by the record or by the reciting of an appealing slogan. This is a clear deprivation of property without due process of law since the majority proposes to take away from the non-utility subsidiaries and the parent company valuable property rights which belong to those companies. The tax deductions given by Congress as incentives to non-utility investment should not be taken away in such manner. No company owes anyone a duty either moral or legal to incur, or to continue to incur, losses in non-jurisdictional business so that jurisdictional rates can be reduced. Following the theory of the majority, how can an integrated oil company, which also has a natural gas pipeline company within its corporate structure, compete on equal terms with an oil company not having similar pipeline operations, if the latter can use all of its tax savings in its oil business but the former cannot? Clearly, it cannot so compete.

I would reflect on a point that deserves serious consideration. All but three of the 37 corporations involved in this proceeding are, in some way, connected with the petroleum business operated by the parent company. Conceivably, the parent's business could be conducted by a departmentalized single corporate entity. If this be true, there would be no losses to offset against taxable income since the single corporation would show an overall profit although some of its departments would lose money. Under such circumstances no consolidated return would be filed and the Commission would routinely grant to the Gas Company a tax allowance based on the statutory rate of 52%. In the instant proceeding, the majority places a penalty on the parent company because it has lawfully chosen to operate its world wide business through subsidiaries. Such a regulatory policy is unsound and inequitable.

The fact remains that Congress has given the parent company, not this Commission, the right to decide whether or not it will take advantage of the consolidated return and the benefits and obligations accruing thereunder. The Commission cannot interfere with this lawful decision of management so to conduct its business. The tax laws recognize this and they have given companies the opportunity to so operate without sustaining a tax loss because of their business activities. Congress did not commit management judgments to an administrative agency; this is the line past which a regulatory commission such as ours may not go.

If the economic advantage arising out of the filing of a consolidated tax return is to be passed on to Gas Company's ratepayers, which is the effect of the majority decision, the intent of Congress will be defeated. Here, the language of the statute is plain and unambiguous and it must be given effect according to its obvious meaning. By allowing the taxpayer the full advantage provided by the consolidated return, no attendant harm results to the ratepayers. This method does not result in higher rates to the consumer, it simply does not operate to reduce them. This view is in harmony with Section 1501 of the Internal Revenue Code, is fair to the ratepayer yet it does not constitute an expropriation of the constitutional powers of Congress.

The majority decision results in glaring defects and inequities; they have not offered any valid and compelling reasons for their decision. Contrary to the views expressed by the majority, I believe every effort should be made to afford all legitimate and necessary incentives to private enterprise while, at the same time, protecting the consumer ratepayer.

The examiner who heard the testimony in this proceeding correctly concluded, upon the basis of the record evidence and the pertinent law and regulatory policy, that the Federal income tax allowance included in the cost of service supporting the settlement agreement approved by the Commission in its order of May 27, 1961, computed at the statutory rate of 52%, is not excessive or in any way improper, and should be approved. In my judgment, the examiner's decision should be affirmed.

INITIAL DECISION
UPON THE SINGLE QUESTION OF INCOME TAX ALLOWANCE

(Issued April 23, 1962)

KELLY, *Presiding Examiner:* Cities Service Gas Company (Gas Company), a corporation engaged in the transportation and sale for resale of natural gas in interstate commerce subject to the jurisdiction of the Commission, proposed, pursuant to Section 4 of the Natural Gas Act (Act), an annual increase in its jurisdictional rates and charges, by tendering for filing revised tariff sheets on May 21, 1959. The proposed increased rates were suspended by Commission order of June 19, 1959, and they became effective subject to refund pursuant to Commission order of November 23, 1959. By order of March 27, 1961, the Commission approved and made effective the "Stipulation of Settlement filed October 21, 1960, as amended" which had been agreed upon by the parties, and which reserved for future determination only the single issue of what amount of Federal income taxes was properly to be included in the cost of service underlying the approved settlement. Tariff sheets, revised to be in keeping with the agreed settlement, were ordered to be, and have been, filed by Gas Company.[1] Gas Company was required by said order to make refunds to each of its jurisdictional customers in accordance with the settlement agreement; and such refunds have been made. The Commission found that good cause existed for the termination of this proceeding except as to the one reserved issue.

On June 28, 1961, the Commission ordered a public hearing to be held on July 19, 1961, concerning the lawfulness of the rates and charges contained in the revised tariff sheets here involved, to the extent that they are, or may be, "affected by a determination of the issue of the proper amount of federal income tax allowance to be included in the cost of service underlying the settlement agreement" approved and made effective by the Commission order of March 27, 1961.

Sessions of the hearing were held on July 19, September 21 and 22, and on November 20, 21 and 22, 1961. On October 6, 1961, the Commission permitted intervention by Cities Service Company (parent company), the owner through a subsidiary, of all of the outstanding stock of Gas Company. No evidence was presented at the hearing except by Gas Company and the parent company jointly, and by the Staff of the Commission. Gas Company and the parent company have jointly filed an initial brief and a final reply brief to the brief of the Staff which was the only other party to file a brief. The final reply brief was filed March 9, 1962. While there were interveners in this proceeding who represented customer and consumer interests, no briefs were filed by any of them.

On February 28, 1961, Gas Company filed a written motion seeking the approval by the Commission of the proposed settlement which was contained in the "Stipulation of Settlement Pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure", filed October 21, 1960, as modified in certain particulars. The motion recited the pertinent facts concerning the filing of the

[1] A footnote at 25 FPC 582 of the Commission order of March 27, 1961, gives the designation of the tariff sheets here involved.

proposed revised tariff sheets containing its proposed annual rate increase, and told of the negotiations among the parties which led to the proposed settlement. The motion pointed out that the settlement agreement was "subject to the condition that the income tax issue be reserved for future determination in this proceeding with provision made for any appropriate adjustments of refunds and rates in the event such adjustments are required as a result of such determination." In connection with this reserved issue the motion showed

> That there was included in the cost of service on which the settlement herein was based income taxes at the rate of 52 percent upon Cities' taxable income as a separate corporate entity, but the Staff has indicated that the proper allowance should be some possible lesser amount, based upon the consolidated income tax return of the entire Cities Service system.

The issuance of this decision has been given priority and expedited because of the averment in the aforesaid motion by Gas Company filed February 28, 1961,

> That it is necessary for Cities to acquire new gas supplies and construct facilities which will require additional borrowing, but in view of the contingent liability, if any, created by the reserved issue and particularly the unknown extent thereof, Cities will be handicapped in doing additional borrowing as long as such issue remains unresolved.

In the body of the Commission order of March 27, 1961, appeared the following:

> We believe, in accordance with the agreement of the parties, that further study is required to determine whether the federal income tax allowances included in the cost of service supporting this proposed settlement are appropriate. Accordingly, upon investigation by the Commission, in the event the allowances for federal income tax in Cities Service's cost of service supporting this settlement shall be found to be excessive, then Cities Service shall refund such amounts as may be ordered, together with interest thereon at the rate of 6% per annum, and shall file revised rates as may be ordered, to reflect the reduction in the cost of service resulting from such tax adjustments. A hearing as to this issue will be held as soon as practicable.

With regard to the aforesaid reserved issue, it was ordered therein that

> (H) The settlement approved by this order is subject to the following condition and reservation: In the event it is determined by a subsequent order or orders of the Commission that the computation of the federal income tax allowance included in the cost of service is improper and that a lesser amount should have been included, Cities Service shall be required to make further refunds and reductions in its rates. A public hearing will be held on a date to be fixed by notice from the Secretary concerning the issue of the proper allowance for federal income taxes to be reflected in Cities total cost of service.

Attached to the Commission order which approved the settlement, as Schedule 2 of Exhibit B thereto, is a document entitled "Classification of Cost of Service for Settlement Purposes Year 1958". In Columns (1) and (2) of this document is the list of the various items constituting the "Total Cost of Service", which is referred to in said order as the "cost of service supporting this settlement." In this list appear the "Return at 6.25% $8,708,532" and the "Federal Income Tax" $7,055,981. The amount of the return is calculated at the agreed rate of 6.25 percent upon the agreed rate base for the test year 1958. The amount of the Federal income tax was calculated at the statutory rate of 52 percent upon this calculated return, after making all proper deductions related to the operation of Gas Company as a separate corporate entity. No question is raised in this proceeding concerning the propriety of said calculated income tax, as an item of cost for the test year 1958 for Gas Company as a separate

corporate entity filing a separate income tax return without participation in a consolidated tax return. The Staffs contention that the income tax allowance in the cost of service should be less than the amount calculated as aforesaid is based entirely upon the fact that Gas Company participates in the consolidated tax return filed by the parent company, pursuant to Sections 1501 *et. seq.* of the Internal Revenue Code, by the provisions of which a tax saving is permitted to be accomplished by offsetting the losses of participating subsidiaries against the net taxable income of the other qualified subsidiaries who participate in the consolidated return. It is argued by the Staff that a part of such tax saving should be applied in accordance with a formula devised by it so as to reduce the income tax allowance in Gas Company's cost of service. Gas Company vigorously contends that it is entitled to the full amount of the income tax allowance now shown in the cost of service supporting the settlement.

The Commission order of June 28, 1961, which fixed the hearing date as July 19, 1961, directed that Gas Company present, at the commencement of the hearing, its case-in-chief in respect to the limited issue, and that immediately following such presentation the "Commission staff and all other parties desirous of submitting a direct case into the record with respect to such issue shall do so." This prescribed procedure was followed at the opening session of the hearing, and the "case-in-chief" of Gas Company and the "direct case" of the Staff were received into the record on July 19, 1961. A recess was then taken and cross-examination of the Gas Company witness and the Staff witnesses was conducted on September 21 and 22, 1961. Direct examination and cross-examination were conducted on November 20, 21 and 22, 1961, of the witnesses who presented the rebuttal evidence on behalf of Gas Company.

At the initial session of the hearing on July 19, 1961, Gas Company's case-in-chief was presented through a single witness, a qualified accountant with extensive experience in the field of natural gas rates. As a part of his testimony this witness presented Exhibit No. 1, which is a computation of Federal income tax for the test year 1958 on the basis of figures set forth in Schedule 2 of Exhibit B to the Commission order approving the settlement. The return calculated at the agreed rate of 6.25 percent upon the agreed rate base is shown on both Exhibit 1 and said Schedule 2 as $8,703,532. From this return are deducted the "Tax Adjustments", totaling $2,190,319, which were the actual deductions taken by Gas Company in its income tax return for 1958. The "Balance of Return," shown on Exhibit No. 1 as $6,513,213, results from this subtraction. The Federal income tax allowance for the cost of service is calculated by taking 108.3333 percent of the return so reduced, which is $7,055,981. This tax allowance in Exhibit No. 1 is the same as that shown on said Schedule 2. Adding the "Balance of Return" and the income tax allowance, the net taxable income of Gas Company for the test year 1958 is $13,569,194. This witness testified that Gas Company participated in the consolidated income tax return of 1958 of the parent company and that under such consolidated return, the parent company "pays 52% Federal Income Tax on the taxable net income of Cities Service Gas Company, which is the same tax as would be paid by Cities Service Gas Company if no consolidated income tax return were filed." He testified also that the participation of Gas Company in the consolidated tax return did not result in "any tax savings or benefits from the regulated business" of Gas Company either to it or to the parent company. Gas Company rested its case-in-chief upon this evidence.

The Staff presented three witnesses, all Commission employees. The first was a Certified Public Accountant who serves the Commission as a "Supervisory Auditor specializing in matters concerning the appropriate allowance for taxes to be included in cost-of-service studies for rate-making purposes." He had ex-

tensive experience in income tax matters as an employee of the Internal Revenue Service. His assignment in this case was "the task of computing a consolidated effective tax rate to be used in determining the federal income tax allowance in the cost of service"; and he defined such tax rate as "reflecting the tax savings achieved through the filing of a consolidated federal income tax return." His Exhibit No. 2 discloses the mathematical computation employed by him in deriving the "consolidated effective income tax rate" of 10.53 percent which he recommends to be used in calculating the Federal income tax allowance for Gas Company in its cost of service. The second Staff witness was likewise a qualified accountant employed as a Supervisory Auditor. He made a computation, presented in his Exhibit No. 6, to show the effect of the use of the tax rate of 10.53 percent instead of the regular statutory tax rate of 52 percent for corporations, when applied to the cost-of-service figures given in Schedule 2 of Exhibit B of the stipulation of settlement attached to, and approved by, the Commission order of March 27, 1961. In said Schedule 2 the amount of the Federal income tax there shown, calculated at 52 percent of the agreed return after proper deductions, was $7,055,981, and the amount calculated by this witness at the rate of 10.53 percent was $785,565, or $6,270,416 less than the amount of tax taken from said Schedule 2. The third Staff witness was a qualified engineer whose assignment in this proceeding "was to adjust the rates agreed to by the parties and accepted by the Commission in its order issued March 27, 1961, to reflect the staff's adjustment to the jurisdictional cost of service necessitated by the staff's adjustment of the Federal income tax and return allowance."

The testimony of four witnesses constituted the rebuttal evidence of Gas Company. One of these was the same qualified accountant whose testimony was presented as the "case-in-chief" of Gas Company. His rebuttal testimony was in refutation of the Staff's position concerning the computation of its "consolidated effective tax rate," which he contended was improper and inappropriate as a rate-making procedure. The second witness was the Chief Accounting Officer of the parent company, who was likewise a Director and Vice President of that corporation. He gave in very considerable detail information concerning the stock holdings of the parent company in quite numerous corporations, particularly those included each year in the filing of its consolidated income tax return with the Bureau of Internal Revenue, among which was, of course, Gas Company. He discussed the business of the parent company conducted through such included subsidiary corporations, in relation to its financial affairs, accounting policies, business transactions between the affiliated corporations, its Federal income tax problems, and other related affairs. The third witness was a lawyer who had specialized in Federal income tax laws and regulations over a period of 25 years, and he gave his opinion of the validity and propriety of the computation by the Staff of its "consolidated effective tax rate," in the light of the applicable and pertinent Federal income tax laws and regulations. He had not theretofore ever advised the parent company or any of its subsidiaries in connection with the preparation of their consolidated income tax returns. The fourth witness was a consulting economist and attorney who testified concerning the impact to be expected from the acceptance of the Staff's position here, upon the American economy generally, and particularly in relation to economic stability and upon the objective of the national and international economic policies of the Government.

All of the adduced evidence has been carefully reviewed and it is the basis of this decision. The conclusions reached therefrom are hereinafter stated. In making the decision here it is necessary, upon the basis of the record evidence, to adopt either the position of Gas Company and its parent or that of the Staff. Gas Company contends that the computation of the income tax allowance in

the cost of service should be made at the statutory rate of 52 percent of the net taxable income. The Staff contends that its computed "consolidated effective income tax rate" of 10.53 percent, which is the average of its computed tax rate respectively for the years 1957, 1958, and 1959, should be substituted for the statutory rate of 52 percent in the calculation of the tax allowance. The burden of proof is upon Gas Company to establish that its proposed rate increase is just and reasonable, and to do this in relation to the single issue here for decision, it must show that the tax allowance appearing in the cost of service supporting the rate settlement approved by the Commission order of March 27, 1961, is not excessive when properly computed at the tax rate of 52 percent, regardless of its participation in the consolidated income tax return filed by the parent company.

The parent company was incorporated as a holding company in 1910, under the laws of Delaware. It acquired interests in numerous public utility companies. To supply the needs of such companies, the parent company, operating through subsidiary corporations, began exploration for natural gas, discovered oil, and thus became engaged in the oil business. As a result of the provisions of the Public Utility Holding Company Act of 1935, the parent company gradually disposed of its interests by 1954 in approximately 55 public utility corporations which it had acquired. It did not dispose of its interests in Gas Company, which it had owned indirectly since this corporation was organized in 1922, as said company was not a public utility as defined in said Act. Over the years both the public utility company holdings and its oil business expanded greatly, and after it had disposed of the former it became predominantly engaged in the petroleum products business on a quite large scale. The parent company has remained throughout strictly a holding company, and its petroleum operations are today conducted through subsidiary corporations organized by it.

Exhibit 10 in the record, a part of the testimony of the Chief Accounting Officer of the parent company, is entitled "Directory of Cities Service Company and its subsidiaries included in the consolidated tax returns of Cities Service Company for the period 1954 through 1959." There are listed in the index to this exhibit 47 corporations, including the parent company, which participated in the filing of said consolidated tax returns for one or more years in the period from 1954 to 1959, inclusive. Following the index is a succinct description and history of each of such corporations, and this shows that 9 of said listed corporations have since been absorbed by merger into one of the other corporations so listed, leaving a balance of 37 corporations, of the outstanding stock of which the parent company owns 100 percent either directly or through other corporations among the 37. The parent company owns all of the stock of Empire Gas and Fuel Company (Empire) which, in turn, owns all of the outstanding stock of Gas Company. Gas Company owns all of the stock of Cities Service Gas Producing Company, which, like Empire and Gas Company, participated in the filing of a consolidated income tax return with the parent company in all years from 1954 to 1959, inclusive. The parent company owns stock interests of less than 80 percent in several other corporations, and also in corporations organized under the laws of Canada, but these are not includable lawfully in a consolidated income tax return.

As a pipeline company transporting and selling natural gas for resale in interstate commerce, Gas Company is a natural gas company regulated by the Commission under the Act. As a producer of natural gas which sells its entire production to Gas Company for resale in interstate commerce, Cities Service Gas Producing Company (Producing Company) is likewise a natural gas company regulated by the Commission. Among the 35 other companies joining in

the consolidated return there are two other regulated companies, namely, the Cities Service Pipe Line Company and the Kansas Gas Supply Company. The former owns and operates crude oil gathering and trunk pipelines in interstate commerce, and its tariff for transportation charges is regulated by the Interstate Commerce Commission, although it is owned 100 percent by, and transports only for, Cities Service Oil Company (Delaware), one of the 37 corporations joining in the consolidated return. The Kansas Gas Supply Company operates an intrastate natural gas pipeline which is regulated by the Kansas Commission. Cities Service Oil Company (Delaware) and Cities Service Production Company both are indirectly owned 100 percent by the parent company and join in the consolidated return. Approximately 3 percent of the gross revenues of these two companies is derived from the sale of natural gas in interstate commerce at rates regulated by the Commission. With the exception of the 6 companies mentioned in this paragraph, all other subsidiaries of the parent company are entirely unregulated in their businesses.

Gas Company purchases gas in Texas, Oklahoma and Kansas, either from its wholly owned Producing Company or from unaffiliated producers and relatively a very small amount of gas is purchased from Cities Service Oil Company (Delaware) and Cities Service Production Company. This gas is sold from its transmission lines in Texas, Oklahoma, Kansas, Missouri and Nebraska. Approximately 70 percent of such sales of gas are for resale and thus subject to the jurisdiction of the Commission and the remainder of approximately 30 percent is sold directly to industrial customers mostly located in Kansas and Missouri. Gas Company, and its wholly owned Producing Company, whose entire production of gas it purchases, are in no way connected with the petroleum business conducted by the parent company through its numerous subsidiary corporations. Nor is Kansas Gas Supply Company, described above, so connected. All corporations, other than these 3 regulated companies, which participate in the filing of the consolidated income tax return of the parent company are primarily engaged in some phase of the most extensive unregulated petroleum business owned and operated by the parent company through them.

The testimony of the Chief Accounting Officer of the parent company established certain facts concerning its petroleum operations carried on by its 100 percent owned subsidiaries as they existed in 1958, the test year. Exploration for and development and production of crude oil and natural gas are conducted through various subsidiaries both in the United States and foreign countries, including Canada, Italy, French Sahara, Egypt, Colombia, Arabia, Peru and Venezuela. Through the activities of the other subsidiaries the petroleum operations include the refining, at four refineries, of crude oil, of which some is asphalt or heavy crude oil; the purchase and sale of crude oil and natural gas; operation of 19 wholly or jointly owned gasoline extraction plants, the transportation of crude oil and petroleum products by pipelines, tank cars, and ocean-going tankers; the marketing of all of its petroleum products, scientific research in relation to petroleum and products derived from it; the operation of filling stations selling products ordinarily found at such places; owning and operating office buildings to house the officials and office employees of the parent company and various subsidiaries; the fiscal and financial activities needed for such an extensive petroleum business; and all other activity incident to the operation of such a giant industry. This officer's testimony points out in detail just which corporations conduct respectively the various activities and functions set forth above. Also it shows the relationship of the parent company to these numerous corporations in directing and coordinating their separate operations in the management of the total petroleum business. Attention should here be called to the fact that Gas Company performs no activity or function in relation to the parent company's primary

business of conducting its vast petroleum operations. Gas Company is a regulated natural gas company transporting and selling natural gas for resale in interstate commerce, and it is operated as such entirely separately from the petroleum operations of the parent company.

This official of the parent company testified that his company's activities were directed toward two ends, namely, (1) the "coordination of an integrated petroleum operation," and (2) "the protection of its various investments." He then gave, at Transcript page 480, a concise description of the services and activities performed by the parent company in relation to its "petroleum operations," as follows:

> With respect to the petroleum operations of Cities Service Company and its subsidiaries, the services performed by the parent holding company, Cities Service Company, relate to the coordination, correlation, evaluation and development of the various aspects of the integrated petroleum operation carried on by it through its various operating petroleum subsidiaries. Typical of this would be the evaluation of various exploratory operations, the negotiation for concessions, both domestically and overseas, the organization of the companies to engage in exploration operations, the staffing of those companies, the advising and assisting in the financing for those companies, the financing of a transportation system, both marine and pipeline, to move oil and refined products, the conduct of negotiations with governmental authorities on matters of interest to the integrated petroleum operation and the conduct of negotiations for the acquisition of new properties, such as plants or developed producing properties.
>
> Speaking generally, the parent holding company undertakes to do whatever is required to benefit the petroleum operation without inquiring as to whether the particular project or activity being undertaken will benefit one subsidiary or another in the integrated petroleum operation. The various operating petroleum subsidiaries concern themselves mainly with day to day operation of the various properties owned or operated by them. Everything other than day to day operations is the responsibility of Cities Service Company.

Of course, the parent company incurs expenses in the performance of the foregoing activities and functions, and in the protection of its various investments. However, the expenses incident to the latter are not great, as it is not necessary at the present time for the company "to spend much of its productive time in the protection of its investments." The parent company is now in a position to "spend the great bulk of its time in developing new opportunities for its petroleum subsidiaries and expanding into new lines of endeavor associated with the petroleum business." It has been the policy of the parent company for more than 20 years to impose no part of such expenses upon any subsidiary. It being strictly a holding company, it is assumed that its only revenues are derived from dividends declared by its subsidiaries, and the Staff evidence establishes that such dividends are eliminated in the preparation of a consolidated tax return. participants which showed losses for 1957, 1958 and 1959.

The conducting of its petroleum business through numerous subsidiaries, rather than through a single departmentalized corporation, is a matter of choice. The management of the parent company had the right to make this choice. For the purposes of this decision there is accepted the legal presumption that this manner of doing business is lawful in all respects. The permission given by the Code for the filing of one consolidated return by numerous qualified affiliated subsidiaries recognizes such lawfulness. It is also a matter of choice by the parent company management as to which of its subsidiaries organized by it

under corporation laws, shall have the qualifications required to participate in a consolidated tax return. Operating its business in this entirely lawful manner, the parent company should not be penalized in any way merely because it has chosen to operate a petroleum business through numerous corporations rather than through a single corporation. The Chief Accounting Officer of the parent company explained in considerable detail the reasons for doing business in this manner, and such reasons are here found to be in keeping with prudent management. There is no necessity to relate all of such reasons in this decision when there is here recognized the right of management to choose to operate its business in this lawful manner without being in any way penalized therefor. This is especially true when this manner of doing business in no way prevents a fair balancing of consumer and investor interests in this rate proceeding. Also, there must ever be present the realization that the parent company is not conducting its petroleum business through subsidiaries to gain tax advantage.

Chapter 6 of the Internal Revenue Code is entitled "Consolidated Return"; and Section 1501, the first section of this chapter, is entitled "Privilege to File Consolidated Returns." This section gives to "an affiliated group of corporations" the "privilege of making a consolidated return with respect to the income tax imposed" by the Code "in lieu of separate returns." The parent company has availed itself of this "privilege" every year since its organization when the Federal income tax laws permitted it. Gas Company has joined in all such consolidated returns since its organization except for those years when it was permitted by a tax law of 1950, as a utility, to file a separate return in spite of its being owned indirectly 100 percent by the parent company. Prior to the Code of 1954, only corporations owned 95 percent could join in such return but this Code reduced this to 80 percent and required that all includable utilities likewise join in the consolidated return. The Code requires the inclusion of all corporations of which the parent company owns 80 percent or more of the outstanding stock. When corporations join in such returns the Code, Section 1503, levies an additional 2 percent tax upon all includable taxable income except that of utilities such as Gas Company, upon the income of which the tax rate remains at the regular statutory rate of 52 percent on corporate net income.

In the filing of a consolidated return, the Code permits the aggregate losses of all of the includable corporations having such, to be offset against the total net taxable income of the other corporations. The losses of the corporations having them are thus used to reduce the amount of net income which is taxable. It is in this use of losses that a reduction in the total tax to be paid under the consolidated return is accomplished for the particular tax year. Whether one of the included corporations has a taxable gain or a loss is determined from its individual tax return calculated separately. It is in the separate returns where all lawful expenses of operation are deducted to determine whether there is income of the individual corporation subject to tax. However, in considering the issue here the distinction must be kept in mind between tax deductions used to arrive at the net taxable income, if any, of the individual corporation, and the net losses of a corporation, if any, which result from taking all lawful deductions from gross income.

The Staff would classify as a "tax saving" the difference between the total of the Federal income taxes payable upon the basis of the separate returns of all participating corporations having taxable income, and the Federal income tax payable upon such total after its reduction by offsetting against it the aggregate losses of all participating corporations having such, as is permitted when a consolidated return is filed. The Staff would then allot to each participating

corporation having taxable income a portion of this "tax saving" based upon the "ratio of each company's separate return income to the total separate return income". In the agreed cost of service which is Schedule 2 of Exhibit B to the Commission's order of March 27, 1961, Gas Company's income tax allowance is based upon the regular statutory corporate income tax rate of 52 percent, which would be here granted routinely if Gas Company did not participate in a consolidated tax return. The Staff has devised a "consolidated effective tax rate" of 10.53 percent to be used instead of the statutory rate of 52 percent in calculating the income tax allowance so as to reflect the "tax savings."

The Staff's formula for deriving a "consolidated effective tax rate" is not greatly complicated. There is first ascertained the income tax of each participating corporation having taxable income upon a separate return basis, and these are totaled. The total of the consolidated income tax paid by the parent company, as shown by its consolidated return, is then subtracted from the first total above, and the difference is classified by the Staff as the "tax saving" for the year. It is then determined what percentage the "tax saving" is of the total of the taxes payable upon the basis of the separate returns of all the participating corporations having taxable income. The statutory tax rate of 52 percent is then multiplied by such percentage, and the result is subtracted from the 52 percent to obtain the "consolidated effective tax rate" for the particular year. Thus, in 1957 the "tax saving" was 54 percent of the total of the taxes payable upon a separate return basis by all corporations having taxable gains. It was then calculated that 54 percent of the 52 percent statutory rate was 28.08 percent, which was subtracted from the 52 percent to arrive at the "consolidated effective tax rate" for 1957 of 23.92 percent. By this same arithmetical procedure, the "consolidated effective tax rate" for 1959 was calculated to be 7.67 percent. For 1958, the test year, the "tax saving" was 100 percent of the total income taxes payable on a separate return basis by the corporations having gains, by reason of the fact that the losses of other corporations were very considerably in excess of the total taxable income of the gain corporations. Therefore, the "consolidated effective tax rate" for 1958 was zero percent. The consolidated effective tax rates for 1957 of 23.92 percent, for 1958 of zero percent and for 1959 of 7.67 percent were then simply added together and divided by three to arrive at the 10.53 percent, which the Staff recommends as the "consolidated effective tax rate" to be used to calculate Gas Company's income tax allowance for the test year of 1958. As shown heretofore, this reduction of 52 percent to 10.53 percent would reduce the income tax allowance in the cost of service by $6,270,416 according to the Staff's calculations, and Gas Company's rates would be calculated for the future on this basis.

Depriving Gas Company of $6,270,416 which would be routinely granted to it by the Commission if it were not for its having a common owner with an unregulated and unrelated petroleum business, should not be done without some very cogent reasons based upon sound rate-making policies which impose no confiscatory rates, which balance equitably consumer and investor interests, and which take fully into consideration the impact of such action upon national economic policies. The Staff's recommendation that its "consolidated effective tax rate" be utilized to make rates for Gas Company for the indefinite future is not supported by cogent reasons so based.

The Staff's position is basically wrong because it would thwart the true Congressional intent behind the tax law permitting the filing of a consolidated tax return by a holding company and its subsidiaries which are owned 80 percent or more by it. This law is not comparable to that which permits the expensing of intangible drilling costs or to that which grants the depletion allowance of 27.5 percent to oil and gas companies. It is not comparable to any tax law

which permits a corporation to take deductions of various expenses of operation. It was the failure of certain gas companies to take such deductions for rate purposes as well as tax purposes that has been condemned upon the occasions in recent years when there was invoked the principle of granting a tax allowance in the cost of service which reflected only actual taxes payable (the actual tax rule). And while the Commission has insisted in the past that certain tax advantages to be obtained from filing a consolidated return for groups composed entirely or predominantly of regulated companies, be passed on to consumers, it has not held that business losses of unregulated and unrelated corporations participating in a consolidated return should be utilized for the benefit of the consumers of a regulated natural gas company.

The true intent of the Congress in granting the "privilege" of the consolidated return to an "affiliated group" of corporations "connected through stock ownership with a common parent corporation," in the relationship defined in Section 1504 of the Code, was most obviously to encourage holding companies to expand their overall businesses for the betterment of the national and international economy. This encouragement consisted of the recognition of the right of a parent company to do business through numerous subsidiaries, while not suffering the full impact of business losses sustained by some subsidiaries in new and yet unproductive ventures, or in the more hazardous activities. This impact of business losses was lessened by permitting the total of them to be offset against the total of the net taxable income of those subsidiaries having such. These business losses represent cash out of pocket due to the expenses of subsidiaries exceeding their revenues. They are not just some ordinary expenses of operation to be deducted when computing to ascertain net taxable income. In the case of business losses the computation has already been made with a minus tax resulting.

It must be borne in mind that the parent company here owns, directly or indirectly, 100 percent of the stock of every corporation which participates in the filing of its consolidated return. As such stockholder it owns 100 percent of the assets of each corporation, and it is entitled to 100 percent of all net income of each, subject to income tax levies. Also, as the sole stockholder, it bears 100 percent of every loss sustained by its subsidiaries. While net losses are permitted by the tax laws to be offset in the next five years against net taxable income which the taxpayer may have in those years, as is more fully hereinafter shown, it must be kept in mind that the right to use such losses for such purpose is vested in the one sustaining the loss originally. These losses should not be permitted to be used to benefit, in the tax year sustained, the consumers of a regulated natural gas company who bore no part of them, assumed no risks in relation to them, and have no right to use them to reduce their gas costs.

We are not dealing here with any so-called "phantom taxes", which result from utilizing certain lawful tax deductions for tax purposes and not for rate purposes. There is no doubt that a tax saving thus accomplished and not passed on to the consumers effects additional return to the regulated company. Any immediate but perhaps temporary tax saving accomplished by the filing of a consolidated return is not in any sense comparable to a real and permanent tax saving effected by taking a lawful deduction and passing on the benefit thereof to the consumers. The tax saving effected by proper deductions in a definitely known and fixed saving for the tax year, which is certainly not true of any temporary saving effected through the offsetting of business losses against business gains under the existing laws, as hereinafter shown. It must always be remembered that it is not the mere filing of the consolidated return but the fact of business losses having been sustained in the particular tax year which permits

the temporary tax saving. And the distinction must in fairness be acknowledged between the fixed and certain tax saving, and the temporary, uncertain and unascertained tax saving accomplished by utilizing business losses in a consolidated return. The latter should not be used to lower a tax allowance in a cost of service. The many reasons for this conclusion appear hereinafter.

If it were assumed, *arguendo*, that there should be passed on to the customers of Gas Company some portion of the immediate benefit which may be derived by the parent company each year by exercising the "privilege" of filing a consolidated return, the Staff offers no logical or fair way to measure what that portion should be. To begin with, the so-called "separate return income" of Gas Company shown in Schedules 1, 2 and 3 of the Staff's Exhibit 2 is in each instance very considerably larger than it would be if it reflected revenues derived from rates based upon a cost of service which included a Federal income tax allowance calculated at any rate even remotely approximating 10.53 percent, rather than being calculated as it was, at the 52 percent statutory tax rate, heretofore routinely allowed to Gas Company by the Commission. The figures in the aforesaid Schedules 1, 2 and 3 were taken from the consolidated income tax return of the parent company and its subsidiaries. Thus, the "tax saving" allotted to Gas Company by the Staff on the basis of its larger taxable income, would be less and the "consolidated effective tax rate" would be more, if its taxable income included only an income tax allowance of 10.53 percent.

For the test year 1958 no tax at all was paid by the parent company, but instead it received from the Government a tax refund. Thus, for the test year, according to the Staff theory, there was a 100 percent tax saving by all corporations having taxable income and participating in the consolidated return for that year. In rate cases the Commission strives to arrive at a rate determined to be just and reasonable for the indefinite future. In the process of making this determination, there is sought to be ascertained, on the basis of actual book figures for a normal test year, an estimate of expected sales and expenses for some months in the future. Any item of revenue or expense for the test year shown by evidence to be abnormal may be made normal on the basis of some reasonable estimation. The Staff recognizes as abnormal the zero income tax allowance that would result in 1958 from its method of allocating the "tax saving" for that year to the various corporations with taxable income which participated in the consolidated return. Does the Staff method of calculating the "consolidated effective tax rate" provide a means of producing arithmetically a reasonable estimation of what the normal Federal income tax allowance for Gas Company should be for the indefinite future, which would effect a fair balance of the interests of the consumers and the investor here involved?

The answer must be in the negative, because there is positively no way to make any fair estimate of what the "tax savings" may be for the indefinite future, as calculated by the Staff method, and it is they which cause the Staff's "consolidated effective tax rate" to increase or decrease. The "consolidated effective tax rate" must rise and fall with the tide of the national and international economy, and from many other factors, which may be affected by innumerable and unpredictable happenings. It is conceivable, although not immediately probable, that all of the corporations now participating in the consolidated return may, through good management and good fortune, have taxable income in the future. On the other hand, the aggregate losses of some such corporations may frequently, through misfortune or otherwise, exceed the aggregate taxable income of the others. Thus it is possible for the "consolidated effective tax rate" to be at various times in the future, by the Staff's manner of calculation, anywhere from zero percent to 52 percent. And there is no fair way to strike an average between zero and 52 percent which would balance equitably consumer and investor interests.

Business losses are not sought. They may be anticipated in the early years of a business venture, but large expenditures are not made with the purpose of losing money in the long run. When they occur for whatever reason the consolidated return procedure offers some relief, in that the losses bring a reduction in the total net taxable income for the particular tax year in which the actual outlay of cash occurs. But business losses are not something that are arranged. While business expenses may be budgeted, business losses are not determined and planned in advance. There is no way to ascertain them in advance with any degree of accuracy, so as to give validity to the Staff's formula which utilizes a most inaccurate estimate of them as a basis for making just and reasonable rates for the indefinite future.

At this point it would be well to assert the importance of realizing that we are not here dealing with a group of regulated corporations, as were the Commission and the Courts in many cases cited in the Staff brief. It may be assumed that with prudent management and a nonconfiscatory net rate of return above taxes, a regulated company will have relatively stable revenues and expenses. Any group of such companies might see no advantage to filing a consolidated return, due to the fact that none of the group would have losses to offset against gains under normal conditions. The "privilege" of filing such a return might be exercised by such a group only because of the expenses of a parent company incurred in the management and operation of its several regulated subsidiaries, which might be offset against their gains, so as to effect a reduction of the 52 percent income tax rate by a small number of percentage points, which would be used to calculate the income tax allowance for the cost of service of each participating regulated company. And each one of such group of regulated companies would receive proportionately a true tax saving which might well be used as a basis for just and reasonable rates for the indefinite future. Thus, such actual tax saving might be accomplished by this reasonable method, in which the tax reduction would be effected by the use of a deduction of expenses, which might well not vary greatly from year to year, as distinguished from immediate but possibly only temporary, tax benefits derived from losses suffered largely by companies engaged in hazardous businesses, which may vary greatly from year to year.

The Code of 1954 permits the carrying back and carrying forward of operating losses. A loss in the tax year may be carried back and offset against net taxable income in any of the three preceding years. To the extent that such losses cannot be thus carried back, they may be carried forward and used against such income of any of the five succeeding years. It was the carrying back of the aggregate losses of 1958 against income of 1955 that resulted in the parent company receiving a tax refund for 1958. Thus, it cannot be known with anything approaching definiteness or exactness just what the losses for any tax year will be until the expiration of the fifth year thereafter.

These factors are briefly pointed out to show that there could be no such thing as "normalizing" the income tax allowance in Gas Company's cost of service, if it is to be calculated on the basis of losses incurred by other corporations engaged in businesses which are hazardous, unregulated and unrelated to, and unlike, that of Gas Company. Considering the manner of operation of the parent company, as shown by the evidence, there is absolutely no way of making a fair estimate of the ratio between the corporate gains and corporate losses which its subsidiaries may have in any future year.

The Staff witness who devised the "consolidated effective tax rate" defined it as "a tax rate reflecting the tax savings achieved through the filing of a consolidated federal income tax return"; and he asserted that the "basis for using a consolidated effective tax rate is the regulatory principle that a utility

should be allowed only actual taxes payable in its cost of service." He then contends that the filing of a consolidated tax return by the parent company "results in the payment of the lower tax", and that "in order to adhere to the principle that a utility should be allowed only actual taxes payable in its cost of service, a proportionate part of the tax saving occasioned by the filing of a consolidated return should be reflected in the federal income tax allowance through the use of a consolidated effective tax rate." He then explains how the filing of the consolidated return enables the parent company to offset the losses sustained by some subsidiaries against the gains of others so as to reduce the income tax of the group of subsidiaries. This "tax saving", according to his theory, should be divided among the gain companies in proportion to their respective income taxes calculated on a separate return basis. It must be remembered throughout this proceeding that, in support of its use of its "consolidated effective tax rate" to calculate an income tax allowance for Gas Company's cost of service, the Staff invokes only the single rate-making principle that such allowance should be "only actual taxes payable."

This rate-making principle is of unquestionable validity. Numerous efforts have been made by regulated companies in rate proceedings before the Commission, to obtain an income tax allowance in the cost of service which would be something greater than the amount to be paid to the tax collector by the regulated company and thus to achieve additional return. If these efforts had succeeded, the consumers involved would have paid this additional amount which was not a cost of service to them. It was not a cost of producing the net return to the investor. This principle requires that the regulated company pass on to the consumer every actual tax saving, just as it should pass on any other saving in cost. One question in this rate proceeding is whether it is within the power of Gas Company to bring about a tax saving by participating in a consolidated tax return, which it should pass on to its consumers. There is no doubt that Gas Company would routinely be given an income tax allowance based on the regular statutory tax rate of 52 percent but for the fact that it participates in the consolidated tax return with the parent company and its subsidiaries. This brings us to the question of what rights Gas Company may have to demand any benefit from the immediate effects of the filing of the consolidated return.

The evidence shows the possibility of an actual tax loss resulting from the filing of a consolidated tax return, due to the levying of an additional tax of 2 percent, for a total rate of 54 percent upon the net taxable income of all participants other than utilities which remain at the 52 percent rate. The filing of the consolidated tax return may greatly reduce the amount of taxable income for the tax year, and the immediate effect of such filing would be to reduce the total tax of the group of participants for that particular year. However, when losses may be carried back and used against earnings of the three preceding years or carried forward against earnings for the next five years to the extent they cannot be carried back to the preceding years, it is possible, as pointed out in the evidence, for the tax losses of a particular year to be used in their entirety against earnings of prior or subsequent years, so as to make every dollar of the taxable income of the gain corporations for that year subject to the tax rate of 54 percent. While no such result may be anticipated in the normal course of events considering the hazardous business in which the parent company predominantly engages through its subsidiaries, this possibility, under the tax laws, well illustrates that no particular gain corporation has a legally enforceable right to demand at the end of a particular tax year that it then be given a share in the immediate tax benefit resulting from business losses which may eventually be eliminated by being offset against income of subsequent

years. It would appear that the Staff is claiming such a right to be vested in Gas Company for assertion each year.

It is true that the foregoing is an extreme illustration. However, the carrying back and carrying forward of losses may eliminate a great portion of the tax losses of a particular tax year. At least the actual tax losses may be considerably less than as first indicated in the consolidated tax return for the particular tax year. Furthermore, the net taxable incomes of some participants reflected in the consolidated return for a particular year may conceivably be wiped out or greatly reduced by their losses of the next three succeeding years being carried back to them under the tax laws, and this would play havoc with the Staff's ratio for distributing the "tax savings" among the gain companies of that particular tax year. In any event, it is impossible to determine until five years after the particular tax year, just what tax benefits for the tax year have resulted. Gas Company has no right, legal or moral, to demand a portion of such unascertained benefits. It may be stated definitely also that no such unascertained benefit is an actual and known saving in taxes which should be passed on to the Gas Company's consumers, under any fair interpretation of the actual tax rule laid down by the Commission and the Courts.

When pointing out that the "underlying theory" for its recommended usage of its designed "consolidated effective tax rates" was the regulatory principle that only actual taxes payable should be included in the cost of service," the Staff brief cited the relatively recent El Paso rate case,[2] and quoted therefrom as follows:

> We think, in short that there is no statutory authority for the Commission to treat actual savings in taxes to which natural gas companies are entitled any differently than savings in any other cost of service. It is the obligation of all regulated public utilities to operate with all reasonable economies. This applies to tax savings as well as economies of management. The net result of this, of course, is that such savings as are effected are passed on to the consuming public. This we consider to be the natural and necessary consequence of rate regulation.

In the foregoing quotation the word "entitled" stands out. The Court said that the Commission has no statutory authority "to treat actual savings in taxes to which natural gas companies are entitled" any differently "than savings in any other cost of service." It speaks of the "obligation of all regulated public utilities to operate with all reasonable economies", including tax savings. All such savings are to be "passed on to the consuming public". But the Court was thinking of and spoke about only such "actual savings in taxes" as regulated natural gas companies were "entitled" to obtain and enjoy. No question has been raised by the Staff that Gas Company has not availed itself of every possible actual tax saving to which it was "entitled", in calculating its income tax allowance in the cost of service for the 1958 test year, as a separate corporate entity filing a separate tax return without participating in a consolidated tax return. This brings us to the question of what "actual savings in taxes" Gas Company becomes "entitled" to, by law or regulatory policy, merely by virtue of participating in the consolidated tax return of the parent company and its many subsidiaries, under the pertinent facts and circumstances here established by the evidence.

The first thought which comes to mind in respect to Gas Company's *rights* as a participant in the consolidated return, is that the immediate benefits to be derived from such return are entirely the result of *business losses* suffered by some unregulated participants in the consolidated return. The parent company simply would not exercise in any year its "privilege" of filing a consolidated return

[2] *El Paso Natural Gas Co., et al., v. F.P.C.*, 281 F. 2d 567, cert. denied 366 U.S. 912.

but for the fact that some of its subsidiaries sustain losses. Certainly Gas Company is not "entitled" to demand that losses occur each year so that a consolidated return may be filed by the parent company for its benefit. At the very outset, wonderment arises as to the justice of permitting Gas Company's customers to receive a windfall from losses occurring in businesses utterly unrelated to that of the regulated natural gas company whose rates are here involved, merely because Gas Company and the corporations having the losses happen to have a common corporate owner. Furthermore, the wonderment becomes astonishment when it is shown that the losses which are the basis of the Staff's calculation of its "consolidated effective tax rate" of 10.53 percent, may under tax laws be actually much less, or possibly entirely eliminated, by a mere change in the business fortunes of the loss subsidiaries in early subsequent years. Considering the fact that Gas Company would be routinely granted an income tax allowance calculated at the statutory rate of 52 percent, if it were not for the common ownership of it and these loss subsidiaries, there can be no justice to reducing Gas Company's tax allowance on the basis of losses, the extent of which may not be known definitely for five years.

It might be well to give at this point a simple arithmetical hypotheses to illustrate how damaging may be the effect of using business losses of unregulated companies for the benefit of consumers by reducing the income tax allowance on the basis of the results shown in a consolidated tax return of a particular year, in keeping with the Staff theory. If the regulated company has net taxable income in 1961 of $1000 and an unregulated company has a loss of $1000, neither pays any income tax under the consolidated return for that year, and the regulated company has a "tax saving" of $520. In 1962 each of these companies makes $1000 and no consolidated return is filed because there are no losses to offset against gains. Each pays $520 tax in 1962. Thus, the regulated company pays $520 tax on $2000 for the two years instead of $1040 at the tax rate of 52 percent. The unregulated company pays $520 and has no income for the two-year period. In all fairness the unregulated company should be allowed to carry forward its loss of 1961 and pay no tax for the two-year period, and the regulated company should be required to pay its full tax of $1040. If this $520 in so-called "tax saving" for 1961 is taken away from the parent of the two companies and passed on to the consumers of the regulated company, the parent is $520 out of pocket.

The evidence clearly establishes, as heretofore shown, that all but three of the 37 corporations which joined the parent company in the filing of the consolidated return are in some way conected with the petroleum operations conducted by the parent company. This immense petroleum business of the parent company could conceivably be conducted by an extensively departmentalized single corporate entity. If this were the case there would be no losses to offset against taxable income as the single corporation would show an overall profit even though some of its departments would lose money, just as some of the existing subsidiaries now do. In these circumstances no consolidated tax return would be filed, and the Commission would routinely grant to the Gas Company a tax allowance based on the statutory tax rate of 52 percent. This being true, the Staff is seeking to penalize the parent company merely because it conducts its large petroleum business through numerous subsidiaries in a perfectly lawful way. The tax impact, according to the evidence, would be just about the same whether one or a number of corporations operate the petroleum business.

The Chief Accounting Officer of the parent company gave sound business reasons why it was advisable to conduct its business in the present manner. The Commission should not interfere with the decision of management so to conduct

its unregulated, non-jurisdictional business. Although the subsidiaries doing business abroad are organized as domestic corporations, there is a separate corporation for each foreign country in which business is done. This officer testified that there was a reluctance among American oil companies "to expose to the laws of various foreign jurisdictions any assets not located or required in connection with operations in that foreign country", and that a separate corporation for each foreign country was advisable for this and other reasons, including the reduction of the "problem of allocations of income and expense in connection with the calculation annually of foreign taxes and other assessments." With these subsidiaries doing extensive exploration and development in each such foreign country, it is easy to see the advantage of separate corporations. These corporations and the subsidiary which conducts the domestic exploration and development for the parent company,[3] sustain a high percentage of the losses by the separate corporations which are reflected in the consolidated tax return. Most of these subsidiaries operating in foreign countries are relatively new corporations, and it is a matter of common knowledge in the oil business that corporations will have financial losses in the early days of their exploration and development activities, before the revenues begin to be adequate to cover the vast expense involved. It would not be equitable or just to permit the consumers of Gas Company to profit from these business losses which result from a wise manner of doing business, and thus penalize unnecessarily and unfairly the parent company.

The petroleum business is highly competitive. Every competitor of the parent company has the right to conduct its business in this same wise manner of having separate corporations to conduct the various natural divisions of its petroleum business, particularly of having separate corporations to engage in exploration and development activities. No detailed explanation is necessary to convince that financing in this country by the parent company or any of its domestically operated subsidiaries is made vastly easier by having separate corporations to conduct these hazardous operations of the petroleum business in foreign countries. There are any number of other sound business reasons for the parent company to have numerous subsidiaries rather than a single corporation to operate its petroleum business. It would be particularly unfair to deprive the parent company of this means of doing business wisely when meeting strong competition.

The parent company does not have this system of numerous subsidiaries for tax purposes. The evidence shows that no tax advantage is obtained by having it. The tax laws recognize the lawfulness of it, and give opportunity to a parent company to conduct its business in this wise manner without sustaining tax loss because of it. There is no reason why a regulatory commission should reach beyond the periphery of its jurisdiction to take away this opportunity to wisely conduct a vast petroleum operation, in the face of the national policy expressed in the tax laws, merely because the parent company happens to own as much as 80 percent of the stock of a regulated natural gas company.

The parent company most certainly obtains no tax, or other, advantage from including Gas Company in its consolidated return. Owning 100 percent of the stock of Gas Company, the law requires that it include this subsidiary in its consolidated return. Gas Company, being a regulated monopoly with a practically assured net income each year, is not among the subsidiaries with losses to offset against the total net taxable income of all subsidiaries having such.

[3] Cities Service Production Company which is not to be confused with Cities Service Gas Producing Company, a wholly-owned subsidiary of Gas Company. Production Company is engaged in exploration and development activities in this country including the offshore operations in the Gulf of Mexico by the CATCO group.

Therefore, no tax saving whatever to the parent company results from the inclusion of Gas Company in the consolidated return.

It is the position of the parent company that it pays each year to the Government the full 52 percent tax on the net taxable income of Gas Company, calculated on a separate return basis. In this connection there is made at page 9 of the Joint Initial Brief the following statement:

> In this case, a simple and direct way of testing whether the Federal income tax claimed on the Gas Company exceeds the taxes actually payable on the stipulated return is to compare the total consolidated tax liability of all of the subsidiaries in the Cities Service system, other than the Gas Company, (1) *before* and (2) *after* including the Gas Company in the consolidated return.

Concerning the position stated above, the Staff brief makes at page 22, the following statement:

> * * * The important fact here is that the Gas Company does join in the Parent Company's consolidated tax return filed with the Internal Revenue Service. The taxable income or loss reported in the Parent Company's consolidated tax return becomes a fused mass in which each dollar is indistinguishable from any other dollar of the consolidated income or loss.

The question presented by the above contradictory positions is whether Gas Company should be regarded, in determining the single issue here, as merely an integral part of a total business conducted by the parent company, or as a subsidiary engaged in a regulated business completely separate from the parent company's unregulated primary business, and under operating conditions totally different. It is unimportant here how this question is answered for tax purposes. The importance is in determining the question for purposes of rate making.

If the petroleum business of the parent company, operated by it through its numerous subsidiaries, is essentially a business unit, of which Gas Company is no part, then in fairness it has the right to be considered entirely separately from Gas Company in determining the reserve issue in this proceeding. This petroleum business produces profits, although some phases of the business may be operated unprofitably in some tax years. The business losses occurring from year to year in the operation of this business are in the long run exceeded by the total revenues of the business. Otherwise, the parent company would soon be out of business. The only reason at all that there are any annual losses to be reflected in a consolidated return is that the parent company chooses, for sound business reasons shown hereinbefore, to conduct its integrated petroleum business through numerous corporations rather than a single corporation. It would be a perfectly lawful act for the parent company to merge into its own corporate entity every unregulated subsidiary which operates any part of its petroleum business. Therefore, it would be definitely unfair not to consider the total petroleum business of the parent company as a separate business entity, when deciding the reserved issue.

Considering the petroleum business, headed and directed by the parent company, as an entity, it has no losses to use in a consolidated return. Of course, it does not now exist as a legal corporate entity but it is here regarded as such for the practical and just purpose of illustrating how its costs are attempted to be used by the Staff to reduce Gas Company's net taxable income for tax purposes. This entity has revenues which it is entitled to have reduced for tax purposes by the total of all costs of producing the revenues. No separate corporation, conducting a regulated and wholly unrelated business, should have any right to take away from such entirely unregulated entity any part of its costs to utilize for tax purposes. No part of the cost of producing the revenues

of the petroleum business contributes in any way to produce Gas Company's revenues. No part of Gas Company's costs, including its income tax allowance, contribute in any way to producing revenues of the petroleum entity. No part of any loss of any subsidiary corporation in the petroleum business, operated as an entity, is reflected in Gas Company's agreed cost of service. The effect of the use of the Staff's "consolidated effective tax rate" upon the financial affairs of this hypothetical entity, must in justice be examined.

This hypothetical entity should be permitted to use its own costs to reduce its own net taxable income for tax purposes. It would not be so permitted if the income tax allowance of Gas Company is reduced by using a lower income tax rate than 52 percent. The difference between the tax allowance of 52 percent and that calculated at 10.53 percent would have to be absorbed by the hypothetical entity. This is true because the parent company has to pay each year the full 52 percent tax rate on the full amount of the net taxable income of Gas Company, when it is considered separatety from the petroleum entity for rate-making puropses, as distinguished from tax purposes. If the tax allowance in Gas Company's cost of service is reduced as proposed by the Staff it will definitely be at the cost of the petroleum business. The mere fact that the parent company is the sole owner and operator of the petroleum business is no valid reason for treating it any differently as the sole stockholder of Gas Company, than would be treated any group of the public owning the stock of Gas Company. The public group would be entitled to have a tax allowance which would make its return on its investment net to it each year, and there is no valid reason for not giving to the parent company here, under rate-making policies, the same net return. There is an agreed rate of return of 6.25 percent in the stipulated cost of service in this proceeding. Exhibit No. 16 presented by the parent company shows lucidly how the use of the Staff's proposed "consolidated effective tax rate" would reduce the return on the agreed rate base to 4.06 percent.

As shown above it is the Staff position that all "taxable income or loss reported in the Parent Company's consolidated tax return becomes a fused mass in which each dollar is indistinguishable from any other dollar of the consolidated income or loss." Under the Code, all taxable incomes and tax losses, separately computed for each corporation participating in the consolidated income tax return, are indeed considered in the aggregate, and the difference between the total taxable incomes and the total tax losses, constitutes the consolidated net taxable income or the consolidated net tax loss. But the Code does not contain the criteria for rate making in this proceeding. Under the Code, one only considers whether the corporations involved are qualified to participate in the consolidated return, whether such qualified corporations have lawfully computed their respective tax liabilities, what the consolidated tax should be, and whether all other tax laws or tax regulations have been met. The Internal Revenue Service is concerned with the proper computation of the actual net taxable income of Gas Company for a particular year, but it is not interested in the manner in which just and reasonable natural gas rates were determined which produced the taxable income. All gains and all losses may become, for tax purposes, what the Staff calls "a fused mass" of indistinguishable dollars, but for rate making purposes under the Act, Gas Company's dollars of taxable income remain entirely distinguishable from all other dollars reflected in the consolidated return. The Commission determines the proper return to be allowed upon the rate base and the proper income tax allowance to make the return net to the investor; and no tax law or regulation should interfere with the performance of this function by the Commission. The Commission, of course, considers the tax laws to determine what amount of tax allowance will make such return net; but it may look to many other factors in making this determination. The Commission is indeed not required by any law or rate-making policy to accept blindly figures taken from a consolidated tax

return of a group of corporations quite predominantly unregulated as a basis for an income tax allowance in the cost of service of a regulated natural gas company. Instead, the Commission should fully consider the equities of each such situation, and carefully balance the interests of consumer and investor in fixing the income tax allowance in the cost of service. The Commission has the full right to examine all figures in such consolidated tax return, and to ascertain from what situations or circumstances they may have resulted. These considerations are demanded by the public interest.

The public interest demands that a petroleum business receive, at the hands of the Commission, at least as much encouragement and incentive in the conduct of its exploration and development activities as the national policy, particularly as expressed in the income tax laws, dictates. Such hazardous activities are more fully discussed hereinafter, and it is only necessary to say at this point that the "consolidated effective tax rate" of the Staff would violate such national policy by removing incentive and bringing discouragement to the petroleum business here involved. To realize this fully one has to keep separate in his mind the business of Gas Company from that of the parent company operating its petroleum business. Looking at them separately, one easily realizes that what the Staff proposes amounts to the Commission regulating a petroleum business over which it has no jurisdiction. The Commission would be driving the parent company to abandon a wise manner of conducting its petroleum business through a group of subsidiaries rather than as a single corporate entity, because the latter corporate arrangement would, under all foreseeable circumstances, do away with all tax losses to be utilized in a consolidated income tax return.

If driven to it, the parent company could rearrange its system of corporations in such manner as to eliminate business losses, and there would then be no "tax saving" to allot to the gain companies, including Gas Company. And the ultimate consumers of the jurisidictional gas sold by Gas Company have no right whatever to insist that the present system arrangement of corporations be continued for their benefit. In the Staff Exhibit No. 2, only the gain corporations in the consolidated return are listed by name. The parent company has introduced Exhibit No. 18 which lists respectively in three separate schedules, the names of the loss corporations, together with the amounts of their losses, for the years 1957, 1958 and 1959. Those loss corporations which engage in exploration and development activities are separately shown, and all such are doing business in foreign countries, except Cities Service Production Company (Production). This company had substantial losses for each of these three years. However, it was pointed out in the testimony that Cities Service Oil Company (Delaware), whose own personnel was actually developing the properties owned by Production, had for each of these three years net profits which would have easily absorbed all such losses of Production. A simple merger of these two companies would wipe out much of the "tax savings" which the Staff would distribute in part to Gas Company's consumers. There would be no justice to giving to these consumers any benefits resulting from these losses of Production; they bore no part of the cost in connection with these losses.

When Gas Company and the petroleum business of the parent company are kept separately in mind, there is no doubt that the parent company pays each year the full income tax of Gas Company calculated at 52 percent. In keeping Gas Company and the petroleum business separate for the purpose of considering the issue here fairly and justly, there are no business losses and no "tax savings" and it will be necessary that the parent company pay the full 52 percent tax each year on Gas Company's net taxable income. This payment may be made in cash, Government bonds, tax credits or whatnot, but it is made. For the year 1958 a tax refund of $3,857,132 was received by the parent company

from the Government. The tax due at 52 percent on the net taxable income of Gas Company for 1958 was $6,367,534 and, of course, this tax liability prevented the refund for that year from being $10,224,666 instead of the smaller amount. Gas Company's full tax liability was thus met and paid for the year 1958.

The evidence shows that all losses reflected in the consolidated returns of the parent company for the years 1957 through 1959 were by subsidiaries engaged in its petroleum operations. Over this period of three years a high percentage of such losses were by subsidiaries engaged in exploration and development activities, all in foreign countries with the exception of Production. In Exhibit 15 the gross investment in these subsidiaries is given, as are their tax losses taken in consolidated returns, through 1959. Approximately $27 million of tax losses incurred by Production were utilized in the three consolidated returns of 1957 through 1959, and were used by the Staff in its calculation of "tax savings" for those years. It was brought out in the evidence that in 1961 Production sold a portion of the oil reserves developed by it, in connection with the production of which tax losses were sustained and taken in consolidated returns of the parent company. The sale of these reserves produced a taxable gain of approximately $30 million which must be reflected in the 1961 consolidated return of the parent company. It is anticipated by the parent company management that there will be additional substantial profits of Production in future years to constitute taxable income. This is, indeed, illustrative of the unfairness of permitting this subsidiary's losses to be used as proposed by the Staff.

Other injustices in the Staff's proposal are seen when certain types of losses reflected in the consolidated returns are considered. Exploration and development of oil properties in this and foreign countries produce large tax losses, but there will be taxable gains from these oil properties in the future. There are the liberalized depreciation and rapid amortization tax benefits which are allowed under Sections 167 and 168 of the Code, but these, as is well known to the Commission, are merely deferrals of tax payments to future years. There are capital gains and losses reflected in the consolidated return. There are investment losses to the parent company by reason of taking the business losses of certain subsidiaries in the consolidated return, of which these subsidiaries could not avail themselves. There is present also the possibility of certain losses taken in a return, being disallowed when the separate returns and the consolidated return for the particular year are finally audited by the Internal Revenue Service. At the time of the hearing, the last such audit was for the tax year 1952. While these particular types of losses are pointed out for emphasis, there is no cogent reason given by the Staff why any business losses of the unregulated and entirely separate petroleum business, operated lawfully by the parent company through its subsidiaries, should be utilized to bring a windfall to the consumers of a regulated natural gas company in the manner proposed by the Staff.

The Staff complains about the manner of allocating tax liability among the gain subsidiaries by the parent company. It contends that Gas Company and the few other regulated companies are discriminated against in such allocation. We are concerned here with one issue, namely, whether Gas Company is entitled to receive an income tax allowance in its cost of service based on a tax rate of 52 percent or on the "consolidated effective tax rate" of 10.53 percent. The parent company, being entitled to 100 percent of the gains and liable for 100 percent of the losses, we are not here concerned with what it does with its revenues after they are lawfully obtained, so long as it interferes in no way with the rendering of that adequate service to its customers by Gas Company for

which it is compensated in its cost of service. The parent company deals with the tax collector, and it is its duty to pay all lawful income taxes of the participating subsidiaries, including Gas Company. The parent company's bookkeeping in relation to its 100 percent owned unregulated subsidiaries, is not subject to Commission regulation. The consumers of the gas sold by Gas Company are in no way hurt by any bookkeeping of the parent company so long as Gas Company's cost of service, including the return and the related income tax, is not excessive and produces a just and reasonable rate. Consumers are expected to pay the income tax allowance in a cost of service at the full tax rate of 52 percent, unless there is some cogent reason for reducing such rate. It is specifically found that no such reason has been shown in this record.

The Staff cites no authority of the Commission or the Courts to sustain its theory that consumers of natural gas sold in interstate commerce should have the benefit of "tax savings" derived from business losses of unregulated corporations whose business activities are entirely unconnected with and dissimilar to those of the regulated natural gas company transporting and selling such gas. Among the Commission decisions cited by the Staff is the case of *United Fuel Gas Company*, 12 FPC 251, 254–265, in which the Commission was considering tax savings resulting from the filing of a consolidated return by the companies in the Columbia System. The Commission had a situation there of a consolidated return filed by a group of regulated companies with relatively stable revenues and expenses. Nothing is disclosed in the decision as to what feature of the consolidated return effected the tax saving of approximately "10 percent," which presumably would reduce the effective tax rate to 46.8 percent. No business losses were mentioned in this decision. The Commission merely made the comment that the "Columbia Gas System, of which United Fuel is a part, files a consolidated tax return, resulting in a tax savings benefitting each constituent company." The situation here is in no sense comparable to the situation there, because it is not shown by this record that "each constituent company", participating in the parent company's consolidated return, receives a benefit from the Staff proposal here. Certainly the loss companies would receive no such benefit.

It has been reiterated frequently in this decision that the Commission would routinely grant a tax allowance in Gas Company's cost of service based upon the statutory tax rate of 52 percent but for the fact that it and a vast petroleum business, not subject to regulation, have a common owner. This reiteration is for emphasis. No subsidiary owned less than 80 percent, directly or indirectly, by the parent company may be included in a consolidated income tax return. It would be the simplest matter for the parent company to dispose of 21 percent of its stock holdings in Gas Company and thus put Gas Company in a position to receive routinely its full tax allowance of 52 percent, and there would be nothing within the limits of the Commission's regulatory powers to prevent this action. While the parent company would then lose 21 percent of the dividends declared annually by Gas Company, it would not lose in excess of $6 million, as it would by the tax computation of the Staff. The evidence shows that the parent company has stock holdings of less than 80 percent in other corporations, the businesses of some of which are subject to regulation. Valid reasons have been hereinbefore given why the consumers of the gas sold by Gas Company should not profit by the business losses of certain departments of the parent company's petroleum business operated as subsidiary corporations. The parent company should not be compelled to sell 21 percent of Gas Company's stock and be forced to encounter the rights of minority stockholders, when valid reasons exist for not doing so. The parent company has not threatened to sell such a block of stock if it received an unfavor-

able decision here, but it would be entirely justified in doing so. The right of the parent company to take this action is not to be brushed off lightly merely by saying that it has not yet exercised such right, but has included Gas Company in its consolidated return. It has had no warning, until in this case, that the Staff would devise its "consolidated effective tax rate" to reduce the income tax allowance in the cost of service, as Gas Company has been receiving for many years an income tax allowance calculated at the regular statutory rate of 52 percent, although it has participted with the parent company in the filing of a consolidated return in many tax years.

The Staff is to be commended for its zeal to protect the consuming public against excessive rates. However, in rate making there is a "zone of reasonableness" which has a floor and a ceiling, neither of which should be violated. The actual tax rule is not without limits to its applicability. To show a violation of this rule it must be established that dollars are taken away from the consumers involved to which they are entitled. No such situation is shown by this record.

It is concluded, upon the basis of the record evidence and the pertinent law and regulatory policy, that the Federal income tax allowance included in the cost of service supporting the settlement agreement approved by the Commission in its order of March 27, 1961, computed at the statutory rate of 52 percent, is not excessive or in any way improper, and should be approved.

ORDER

Wherefore, it is ordered, subject to review by the Commission pursuant to its Rules of Practice and Procedure, that the aforesaid Federal income tax allowance in Gas Company's cost of service computed at the rate of 52 percent, is hereby approved and this proceeding is hereby terminated.

DANIEL J. KELLY,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

GEORGIA POWER COMPANY, DOCKET NO. E-7099

ORDER ACCEPTING RATE SCHEDULE FOR FILING AND AMENDING ORDER TO SHOW CAUSE

(Issued July 15, 1963)

On June 5, 1963, Georgia Power Company, Atlanta, Georgia (Georgia Power), submitted for filing as a rate schedule, pursuant to Section 205 of the Federal Power Act, a primary service agreement and amendments thereto with the City of Thomaston, for wholesale electric service to a new delivery point, No. 2. The submittals are designated as Georgia Power Company Rate Schedule FPC No. 634, Supplement No. 1 to Rate Schedule FPC No. 634, and Supplement No. 2 to Rate Schedule FPC No. 634. As proffered the rate schedules are to become effective upon the commencement of Georgia Power's service to the City of Thomaston at delivery point No. 2, estimated to be on or about July 6, 1963.

Rate Schedule FPC No. 634 provides for the delivery of power and energy requirements under Georgia Power's standard "WR-4" rate for municipalities. The City of Thomaston is presently receiving service from Georgia Power at delivery point No. 1, under Rate Schedule FPC No. 327, also under the "WR-4" rate. The Commission, by order issued May 27, 1963, 29 FPC 1049, ordered Georgia Power to show cause why certain designated provisions in Georgia Power's "WR-4" Rate Schedules and contracts, among others should not be

found to be unjust or unreasonable. Rate Schedule FPC No. 327, for service to the City of Thomaston, is listed in Appendix C to that Order.

The Commission finds:

(1) It is necessary and appropriate for purposes of the Federal Power Act, particularly Section 205 thereof, that Georgia Power's Rate Schedule FPC No. 634, Supplement No. 1 to Rate Schedule FPC No. 634, and Supplement No. 2 to Rate Schedule FPC No. 634 be accepted for filing, to become effective on the date of initial service, but not prior to July 6, 1963, 30 days after filing.

(2) It is necessary and appropriate for purposes of the Federal Power Act, particularly Sections 205, 206, 307, 308 and 309 thereof, that the Order issued May 27, 1963, in this docket be amended to include in the list of rate schedules in Appendix C the following designated rate schedule: Georgia Power Company, Rate Schedule FPC No. 634, for service to City of Thomaston at delivery point No. 2.

The Commission orders:

(A) Georgia Power Company Rate Schedule FPC No. 634, Supplement No. 1 to Rate Schedule FPC No. 634, and Supplement No. 2 to rate schedule FPC No. 634 are hereby accepted for filing and shall become effective on the date of initial service, but not prior to July 6, 1963.

(B) Georgia Power Company shall notify the Commission in writing of the date on which service under the above designated rate schedule commences.

(C) The order issued May 27, 1963, in Docket No. E-7099, is hereby amended to include in the list of rate schedules in Appendix C Georgia Power Company Rate Schedule FPC No. 634, City of Thomaston delivery point No. 2.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

MISSISSIPPI POWER COMPANY, DOCKET NO. E-7112

ORDER TO SHOW CAUSE

(Issued July 15, 1963)

Mississippi Power Company (Mississippi Power), Gulfport, Mississippi, a corporation organized under the laws of the State of Maine, has filed with the Federal Power Commission, from time to time, pursuant to Section 205 of the Federal Power Act, rate schedules and contracts for service to rural electric cooperatives, including those listed below. These rate schedules and contracts contain a provision which may have the effect of restricting the rural electric cooperatives from reselling to certain classes of potential customers power purchased from Mississippi Power under the filed rate schedules and contracts.

The following provision which may be restrictive is contained in rate schedules on file with the Commission, designated below:

Contract for Electric Service for Resale By Rural Cooperative Associations

Electric Service: * * * provided, however, the Customer agrees, in consideration of the Company's obligation hereunder to supply the Customer's wholesale electric service for the Customer's resale to consumers other than farms and homes, that it will pay, in addition to all other charges made pursuant to this contract and rate schedule, the following charges for that portion of the service hereunder which is resold to all consumers whose individual maxi-

mum electric service requirement during any month is in excess of 175 kilowatts:

$1.75 per month per kilowatt for each of the first 500 kilowatts of each such consumer's maximum requirement in the month that is in excess of 175 kilowatts, plus

$1.30 per month per kilowatt for each of such consumer's maximum requirement in the month that is in excess of 675 kilowatts.

The sum of the kilowatt requirements of all such consumers so billed in the month shall not be less than 75% of the greatest sum of kilowatt requirements so billed during any of the preceding eleven months.

Provided, the additional charge above specified shall not apply to electric service resold to a consumer whose maximum electric service requirement during any month of the twelve month period preceding the effective date of this contract exceeded 175 kilowatts.

The above provision is contained in the following rate schedules of Mississippi Power on file with the Commission:

Customer	Designation of currently effective rate schedules (FPC No.)	Delivery point
Coast EPA	54	Picayune (South).
Do	55	Landon.
Do	56	Poplarville (Derby).
Do	57	Bay St. Louis.
Do	58	Biloxi.
Do	59	Picayune (North).
Do	60	Westonia.
Do	66	Biloxi (Gay Road).
Do	67	Salem.
Do	72	Saucier.
Pearl River Valley EPA	68	South Columbia.
Do	69	Tatum Salt Dome.
Singing River EPA	70	Cumbest Bluff.
Do	71	Gulf Hills (St. Martin's).

The provision set out above may have the effect of restricting the rural electric cooperatives from reselling to certain classes of potential customers power purchased from Mississippi Power under the above rate schedules. It constitutes rates, charges or classifications or rules, regulations, practices or contracts affecting rates, charges or classifications within the meaning of Sections 205 and 206 of the Federal Power Act and may be unjust, unreasonable, and, therefore, unlawful.

The Commission further finds:

(1) It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 307, 308 and 309 thereof, that Mississippi Power Company be directed to show cause in writing why the Commission should not find and determine the above-mentioned provision in Mississippi Power Company's filed rate schedules to be unjust or unreasonable.

(2) In the event that the above-mentioned provision is found to be unjust or unreasonable it may be appropriate for purposes of the Federal Power Act, particularly Sections 205, 206, 304, 307, 308 and 309 thereof, for the Commission to order a hearing to determine and fix the just and reasonable rates, charges, classifications, rules, regulations, practices or contracts to be thereafter observed and in force for service by Mississippi Power Company to rural electric cooperatives.

The Commission orders:

(A) On or before August 19, 1963, Mississippi Power Company shall respond to this order through Answer as provided in Section 1.9(c) of the Commission's Rules of Practice and Procedure, 18 CFR 1.9(c).

(B) Notices of intervention or petitions to intervene in this proceeding may be filed with the Commission on or before August 6, 1963, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8).

OPINION NO. 395

MONTANA-DAKOTA UTILITIES CO., DOCKET NOS. CP61-234, CP61-297; AMERADA PETROLEUM CORPORATION, DOCKET NO. CI61-1133; SIGNAL OIL AND GAS COMPANY, DOCKET NO. CI61-1271; LYDA HUNT-HERBERT TRUSTS, ET AL., DOCKET NO. CI61-1621; TEXACO INC., DOCKET NO. CI61-1687; CONTINENTAL OIL COMPANY, OPERATOR, ET AL., DOCKET NO. G-14440

OPINION AND ORDER DETERMINING JURISDICTION

(Issued July 15, 1963)*

Syllabus

1. Distinguishing prior *Montana-Dakota* case Commission *notes* that here Amerada and Signal gas is commingled with gas from other producers, admittedly sold in interstate commerce, so it can no longer be stated with certainty that all gas sold in North Dakota came from Amerada and Signal. P. 203.
2. Under Lo-Vaca, contractual arrangements of parties cannot be used to deprive Commission of jurisdiction over sales where part of gas in reality flows across state lines. P. 205.
3. Noting *Lo-Vaca* is now controlling, Commission *holds* all gas sold at Tioga is sold in interstate commerce and such sales and related contracts are jurisdictional. P. 206.
4. Commission *determines* jurisdiction over producers' sales, and *requires* contracts be filed as rate schedules in accordance with Section 4 of the Natural Gas Act. Pp. 206-207.

Commissioner Woodward, joined by *Commissioner O'Connor*, dissenting.

Earl H. A. Isensee and *Armin Johnson* for Montana-Dakota Utilities Co.

William R. Allen and *Cecil E. Munn* for Signal Oil and Gas Company.

N. Kenneth Scott, Jr., Cecil E. Munn and *Joseph W. Morris* for Amerada Petroleum Corp.

Robert W. Henderson and *Robert Kennedy* for Lyda Hunt-Herbert Trusts, *et al.*

George B. Mickum, III, Richard Taylor and *James R. Townsend* for Texaco Inc.

Martin Vaaler, Bruce Hagen and *Wallace Owen* for North Dakota Public Service Commission.

Richard C. Steffey for the Staff of the Federal Power Commission.

---

*Initial decision appears on p. 210. Rehearing denied by order issued September 10, 1963, 30 FPC 677. Set aside, *sub nom Amerada Petroleum Corp.* v. *F.P.C.*, 334 F. 2d 404 (CA8-1964). Affirmed *F.P.C.* v. *Amerada Petroleum Corp.*, 379 U.S. 687 (1965).

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

Ross, *Commissioner:*

This is a proceeding upon applications for certificates of public convenience and necessity under Section 7 of the Natural Gas Act. On September 5, 1962, the presiding examiner issued the second of two decisions in this proceeding. The sole question presented in this second decision, is the Commission's jurisdiction over certain sales by Amerada Petroleum Corporation (Amerada) and Signal Oil and Gas Company (Signal) to Montana Dakota Utilities Co. (MDU) at Signal's liquids plant at Tioga in northwestern North Dakota. It is the examiner's conclusion that the Commission has jurisdiction over these sales. This question, which is the only question remaining to be decided in this case is before us now on exceptions to the examiner's decision filed by Amerada and Signal.

In an earlier decision, issued May 16, 1962, 27 FPC 1094, the examiner disposed of the certificate applications of Lyda Hunt-Herbert Trusts, *et al.* (Hunt Herbert), Texaco Inc. (successor to the original applicant The TXL Oil Corporation), and Continental Oil Company, *et al.* At that time the examiner severed for subsequent decision the applications of Amerada and Signal which involved disputed issues as to price and jurisdiction. By order issued June 1, 1962, 27 FPC 1092, the Commission adopted this earlier decision of the examiner. Thereafter, on August 28, 1962, 28 FPC 367, upon motion of Amerada and Signal, the Commission disposed of the price issue, granting certificates to these applicants at an agreed upon reduced initial price of 16 cents per Mcf at 14.73 psia instead of the 17-cent price applied for, and upon condition that the applicants file their claimed nonjurisdictional contracts at the same reduced initial price pending ultimate determination of the jurisdictional issue. Thus, only the jurisdictional issue remains to be decided.

Amerada and Signal propose to furnish MDU with gas at the Tioga plant under two sets of contracts. One set, referred to as the North Dakota contracts, is intended to cover the sale of gas which is destined for intrastate consumption only. The second set, referred to as the interstate contracts, is intended to cover that portion of the gas sold to MDU which is destined for transportation over the state boundary into Montana. Amerada and Signal contend that sales to MDU under the North Dakota contracts are nonjurisdictional since the sales are not made in interstate commerce, and that the North Dakota contracts need not be filed with the Commission. In support of their position, the applicants rely principally upon the decision of the Commission in *Montana-Dakota Utilities Co.*, 16 FPC 401, affirmed, *State of North Dakota* v. *F.P.C.*, 247 F. 2d 173 (CA8), where it was held that sales by these same producers to MDU under a firm sales contract for resale in North Daktoa were intrastate sales, even though the gas was commingled in the pipeline with gas sold to MDU by the producers under a "dump" sales contract and intended for delivery outside of the state. Staff, on the other hand, contends that sales under the North Dakota contracts are in interstate commerce, relying principally upon the Commission's recent decision in *Lo-Vaca Gathering Co.*, 26 FPC 606 (Opinion No. 348), now on appeal in the Fifth Circuit.* The examiner concludes that there is a single flow of gas in interstate commerce in respect of all gas supplied by Amerada and Signal to MDU at Tioga, that sales under both the interstate and North Dakota contracts are jurisdictional, and that the latter must be filed as rate schedules with the Commission.

Under the North Dakota contracts, MDU is required to purchase at least two-thirds of its annual North Dakota requirements from Amerada and Signal—

[*FPC's order vacated September 24, 1963, 323 F. 2d 190, certiorari pending.]

53⅓ percent from Amerada and 13⅓ percent from Signal. And of the gas delivered to MDU at Tioga and used in North Dakota, 80 percent is to be attributed to Amerada and 20 percent to Signal. The contracts recite that all of the gas purchased thereunder "shall be transported, used and consumed entirely within the State of North Dakota." They further recite that all gas produced in the contract area in North Dakota which is delivered to MDU and is "used or consumed within the State of North Dakota without being transported beyond its boundaries shall be sold" under the North Dakota contracts, and that these contracts "shall not, at any time, cover the sale or delivery * * * of any gas which is transported beyond the boundaries of the State of North Dakota." Since all of the gas taken by MDU from Amerada and Signal is supplied at Tioga and flows through a continuous loop of interstate pipeline which extends through North Dakota into Montana, the amounts of gas considered to be taken under the North Dakota contracts can only be determined retrospectively after measuring the amounts actually taken off the line for use in North Dakota. At the time the gas is delivered into MDU's line at Tioga, it cannot be determined how much of the gas will be used in North Dakota and so be considered as sold under the North Dakota Dakota contracts, and how much will flow across the state boundaries into Montana and so be considered as sold under the interstate contracts.

The interstate contracts provide that MDU must take-or-pay for 13,687,500 Mcf per calendar year from Amerada and 3,421,875 Mcf from Signal, if offered, or daily quantities of 37,500 Mcf and 9,375 Mcf respectively, less the quantities paid for by MDU on an annual or daily basis under the North Dakota contracts. The purpose of these contract requirements is to have MDU purchase all of the producers' gas which is produced from oil wells and processed in the Tioga plant. MDU's contract with Amerada further provides that on any day when MDU is taking all of the residue gas being produced with oil, it may request Amerada to deliver up to 25,000 Mcf of gaswell gas from deep formations underlying the formations from which the casinghead gas is produced; however, Amerada is under no obligation to drill more than four gas wells, which were to be drilled by September 1, 1962. As in the case of the North Dakota contracts, the amounts to be considered as sold to MDU under the interstate contracts can only be determined retrospectively after the gas drawn off for use in North Dakota has been measured and the amounts to be paid for under the North Dakota contracts have been established.

By reference to the attached map [*infra*, p. 213] which shows most of MDU's system in North Dakota and eastern Montana, including those portions heretofore certificated in this proceeding, it will be seen that MDU's gas flows both east and west from Tioga. To the east it flows through what was previously an intrastate line to Minot, where it enters a newly certificated line connecting Minot with Bismark to the south. At Bismark the new line connects with an existing lateral line extending westward from Bismark to Cabin Creek in Montana, where MDU maintains a large storage field, and at which point connection is made with the rest of MDU's interstate system serving Montana and Wyoming, as well as South Dakota and other areas of North Dakota. To the west from Tioga, MDU's gas flows through an interstate line which curves southwestward through Williston into Montana. At Cabin Creek it connects with the new loop through Minot and Bismark, as well as with the rest of MDU's interstate system. It was along this Williston line that MDU previously delivered both firm gas to lateral customers in North Dakota as well as "dump" gas to interstate customers, and with respect to which the Commission in the earlier *Montana-Dakota* case, *supra*, found the sales by Amerada and Signal of firm gas to be in intrastate and not interstate commerce.

On a peak day in the winter of 1962–1963, MDU will take about 55,000 Mcf from Amerada and Signal at the Tioga plant. In addition, MDU will take into its system at Tioga some 15,000 Mcf from Texaco and Hunt-Herbert as authorized by the Commission's order of June 1, 1962, in this proceeding. Of the total of 70,000 Mcf, available at Tioga, 50,000 Mcf purchased from Amerada and Signal will flow eastward on the loop through Minot and Bismark. All of this gas will be consumed in North Dakota on a peak day, and MDU will even import gas from Cabin Creek along the southern branch of the loop to meet the requirements of customers in North Dakota. The remaining 20,000 Mcf available at Tioga, including 5,000 Mcf from Amerada and Signal and 15,000 Mcf from Texaco and Hunt-Herbert, will flow westward on the loop through Williston. Of this, 10,200 Mcf will be served off the line in North Dakota and at the Montana border, 5,570 Mcf will be served in Sidney, Montana, and 4,230 Mcf will be merged with gas from Montana sources for service in Glendive, Montana, and circulation through Cabin Creek to the rest of MDU's system.

On an average summer day, MDU will take about 45,000 Mcf from Amerada and Signal, while continuing to take about 15,000 Mcf from Texaco and Hunt-Herbert. About 32,000 Mcf of the Amerada and Signal gas will flow eastward towards Minot. The remainder of the Amerada and Signal gas, and the Texaco and Hunt-Herbert gas, will flow westward towards Williston. With a summer market in North Dakota of about 8,750 Mcf per day, approximately 36,250 Mcf of gas from Amerada and Signal will flow across the state lines, and will for the most part end up in MDU's Baker storage field in Montana where it will be held for ultimate redelivery to all parts of MDU's interstate system.

In the earlier *Montana-Dakota* case, the examiner, in language affirmed by the Commission and adopted by the Eighth Circuit, said:

> At the outset it should be noted that this Commission clearly has no jurisdiction over the sales made by Signal and Amerada under the 16-cent "firm gas" contracts. Under Section 1(b) of the Natural Gas Act this commission has jurisdiction only over the transportation of natural gas in interstate commerce, or the sale in interstate commerce of natural gas for resale. It has no authority to regulate *intrastate* sales. The gas sold under the instant 16-cent contracts is admittedly produced and consumed wholly within the State of North Dakota, both in the communities served from the Tioga-Minot line and in the communities served from the Tioga-Williston line. The conclusion that they are accordingly *intrastate* contracts is so obvious as to require no extended discussion. [Footnote omitted.] The fact that this gas travels over the Tioga-Williston line in one stream, along with the gas purchased under the 9-cent "dump gas" interstate contracts does not convert the 16-cent "firm gas" contracts into interstate contracts. [16 FPC 408–9; 247 F. 2d 176.]

The examiner in the instant case notes that, except for the volumes involved, the situation now presented is the same as that presented in the earlier case with respect to the service to North Dakota communities along the Tioga-Williston line. There is, however, a distinction in the present case which, even though not mentioned as such by the examiner, is clearly apparent from his discussion. This is the fact that here the Amerada and Signal gas is now commingled with gas from Texaco and Hunt-Herbert admittedly sold in interstate commerce, so that it can no longer be stated with certainty that all of the gas sold in North Dakota came from Amerada and Signal. Indeed, it is apparent that a portion of the Amerada and Signal gas is transported and sold to purchasers within Montana while some of the Texaco and Hunt-Herbert gas is used within North Dakota.

Whether or not the present case can be distinguished from the earlier case, the examiner is convinced that the sales by Amerada and Signal to MDU in the instant case are in interstate commerce and are subject to Commission jurisdiction. In his opinion, the governing reality is not the contractual intention of the parties to assign portions of an indivisible flow of gas to local service on the basis of statistical facts computed after the sale to the pipeline occurs. He finds it to be a well established principle that the controlling reality is the physical flow of the gas. "If gas, or any part of a given gas supply, ostensibly sold under and attributed to an intrastate gas contract, physically flows or is capable of flow across state lines, the gas is sold in interstate commerce." [Decision p. 218.]

The examiner notes that, with the possible exception of the earlier *Montana-Dakota* case, all recent decisions have found that the Federal jurisdiction attaches to all sales of energy whenever some part of the energy sold ultimately finds its way across state lines.[1] He cites many of the decisions cited by the Commission in the *Lo-Vaca* case, as well as the language of the Commission in that case, where it was observed that the holding in the *Montana-Dakota* case "runs counter to the whole stream of the decisions of this Commission as to what constitutes a jurisdictional sale in interstate commerce and to the decisions of the Supreme Court construing this and other legislation", and that to the extent that it may be inconsistent with *Lo-Vaca* it must be considered to have been "erroneously decided".

Concluding that there is a single flow of gas in interstate commerce in respect of all gas supplied by Amerada and Signal to MDU at Tioga, the examiner holds that all contracts with respect to such flow must be filed as rate schedules with the Commission, and that the price and other provisions of all such contracts are subject to price and other regulation by the Commission under the Natural Gas Act.

Exceptions to the examiner's decision were filed jointly by Amerada and Signal. These exceptions run to all the basic findings and conclusions of the examiner and to his reliance on *Lo-Vaca* and the cases cited. The applicants contend that the issue in this case was conclusively determined in the earlier *Montana-Dakota* case. They argue that there is no relevant difference between the facts of the two cases, that the parties are the same, and that the Commission is bound by the court's determination in that case under the rules of *res judicata* and *stare decisis*. Furthermore, they argue the cases cited by the examiner do not deal with the issue here, which is the Commission's authority to regulate a sale of energy which never leaves its state of origin. The applicants reiterate the fact that only gas sold in North Dakota as metered and measured at the points of consumption is covered by the North Dakota contracts. The fact that the amounts so sold cannot be determined at the time of delivery to MDU at Tioga is of no moment, they contend, in determining jurisdiction. Such "retroactive" measurement, they argue, is the only method by which intrastate volumes of gas which are transported in the same pipeline as interstate volumes may be measured.

In support of their contention that the mere commingling of the gas sold under the two sets of contracts in an interstate pipeline does not change the character of the intrastate sales to interstate sales, the applicants rely primarily on the earlier *Montana-Dakota* case decided in the Eighth Circuit; on certain language in *Peoples Natural Gas Co.* v. *P.S.C. of Pennsylvania*, 270 U.S.

[1] The examiner places special emphasis on *Deep South Oil Co.* v. *F.P.C.*, 247 F. 2d 882 (CA5), in which the jurisdictional question is discussed in majority and dissenting opinions, and on the companion case, *Shell Oil Co.* v. *F.P.C.* 247 F. 2d 900 (CA5), cert. den., 355 U.S. 930.

550; and on *Humble Oil & Refining Co.* v. *Texas & Pacific Ry.*, 155 Tex. 483, 289 S.W. 2d 547. In the *Peoples* case, decided in 1926, gas produced by Peoples in Pennsylvania and sold by it in Pennsylvania was commingled in the same pipeline with gas imported by Peoples from West Virginia. The court there held that the State Commission had jurisdiction to order Peoples to continue making one particular sale in Pennsylvania. In the course of its opinion, the Court stated:

> As respects the Pennsylvania gas we think it must be held to be in intrastate commerce only. Feeding it into the same pipe line with the West Virginia gas works no change in this regard. Of course after the commingling the two are undistinguishable. But the proportions of both in the mixture are known and that of either readily may be withdrawn without affecting the transportation or sale of the rest. So, for all practical purposes the two are separable, and neither affects the character of the business as to the other. [270 U.S. 554–5.]

We understand the *Peoples* case to hold no more than that Pennsylvania's regulation of a pipeline located entirely within that state did not burden interstate commerce as long as that regulation did not affect a volume of gas greater than that purchased by the pipeline within the state. It did not rest upon any fictitious attribution of Pennsylvania produced gas only to the purchaser involved.

The *Humble* case involved the transportation of oil produced in Texas and in New Mexico to a tank farm in Texas. Subsequently, the oil was freighted for ultimate consumption to various points all within Texas. In that case, the Texas Court adopted Humble's position that the freight rates applicable to the transportation from the tank farm to other Texas points were interstate or intrastate depending on the point of origin of the respective volumes produced in Texas and New Mexico. The determinative fact in *Humble* is point of origin. Commingling and ultimate consumption were not significant factors because all the oil was used within Texas. Here, however, where the contract purports to cover gas for the purchaser's resale in North Dakota only, the question of ultimate use is decisive, and it cannot successfully be contended that a subsequent commingling serves to render the question of ultimate use irrelevant. Furthermore, the *Peoples* and *Humble* cases do not deal with a sale to the transporter, but rather with a sale by the pipeline to a distribution company in the one case, and the transportation by the carrier in the other.

The applicable authorities were considered at length by the Commission in the *Lo-Vaca* case, and there appears to be no need to repeat the Commission's analysis of the cases here. The conclusions reached by the Commission in *Lo-Vaca* would seem to be equally valid on the facts of the present case. We find no merit in the purported distinction that the North Dakota contracts are worded to apply only to the quantities of gas removed from the commingled stream within the State of North Dakota, rather than to a particular quantity of gas injected into the system at the point of delivery and to be utilized wholly within the state. Essentially the same argument was presented and rejected in *Lo-Vaca*. Since the Amerada and Signal gas is injected into a stream including gas purchased from Texaco and Hunt-Herbert, there is no way of telling whether the gas drawn off of MDU's line in North Dakota is gas purchased from Amerada and Signal or gas purchased from Texaco and Hunt-Herbert. Although the applicants and MDU may wish to account for all gas delivered in North Dakota as though it were gas sold to MDU by the applicants under the North Dakota contracts, under *Lo-Vaca* this contractual arrangement cannot be used to deprive the Commission of jurisdiction over the sales where part of the gas in reality flows across the state lines.

In its *Lo-Vaca* opinion, the Commission noted that the earlier *Montana-Dakota* case was distinguishable stating that "The *North Dakota* case presents a far more limited situation with a single source of supply within the state than that presented here." In view of the additional source of supply now provided by Texaco and Hunt-Herbert, MDU's operations have changed significantly from those before us in the previous case. Thus, *Lo-Vaca* rather than the earlier *Montana-Dakota* decision should now be the controlling authority. Furthermore, we believe that Commission jurisdiction attaches regardless of the additional source of supply. In our opinion, the previous *Montana-Dakota* decision failed to take appropriate account of the fact that the gas as sold and delivered into MDU's pipeline by Amerada and Signal cannot be identified as gas for interstate use or gas for intrastate use, but constitutes a commingled and indistinguishable flow through an integrated interstate pipeline system in interstate commerce. In our judgment all of the gas sold and delivered to MDU by Amerada and Signal at Tioga is sold in interstate commerce, and the sales and the contracts under which they are made are subject to our jurisdiction.

In their exceptions, the applicants allege three factual errors in the examiner's decision. They first refer to his statement that gas well gas may be sold only under the interstate contracts. There is nothing, they argue, in the North Dakota contracts which limits sales thereunder to oil well gas; and even though only the interstate contracts impose an obligation to develop gas reserves, such reserves once developed may be sold under the North Dakota contracts. Staff treated the gas well gas sales as being permissible only under the interstate contracts, and the examiner evidently adopted staff's view. There is no real discussion of this question in the decision, and there is no substantial evidence of record to support a finding one way or the other. In any event it does not appear that this question has any direct bearing on the determination of the jurisdictional issue.

Objection is also made to the examiner's description of the method of measurement to be employed with respect to gas sold under the North Dakota contracts, specifically to his failure to refer to meters at the points of consumption in North Dakota. Although the examiner did in fact fail to refer to such meters in his description, his explanation of the method of accounting for gas sold under the North Dakota contracts is sufficiently clear. The exception would seem to be immaterial.

Finally, the applicants except to the examiner's observation that there is no record support for the assumption by all of the parties that all Texaco and Hunt-Herbert gas will flow westward from Tioga. The examiner apparently overlooked the testimony of MDU's engineer to this effect. Nevertheless, he assumed the fact as accepted by the parties for the purpose of his decision, and his error is immaterial insofar as the substance of his decision is concerned.

The Commission finds:

(1) Sales by Amerada and Signal to MDU under the North Dakota contracts are subject to the jurisdiction of this Commission as sales in interstate commerce of natural gas for resale.

(2) The recommended order of the presiding examiner requiring the filing of the North Dakota contracts as rate schedules should be adopted.

The Commission orders:

(A) Amerada Petroleum Corporation shall in accordance with Section 4 of the Natural Gas Act and Sections 154.91–154.102 of the Commission's Regulations Under the Natural Gas Act file its contract of December 21, 1960, with Montana-Dakota Utilities Co. as a Rate Schedule, and shall in respect of such Rate Sched-

ule comply with all the requirements of the Natural Gas Act and the Commission's Regulations thereunder.

(B) Signal Oil and Gas Company shall in accordance with Section 4 of the Natural Gas Act and Sections 154.91–154.102 of the Commission's Regulations Under the Natural Gas Act file its contract of January 16, 1961, with Montana-Dakota Utilities Co. as a Rate Schedule, and shall in respect of such Rate Schedule comply with all the requirements of the Natural Gas Act and the Commission's Regulations thereunder.

Commissioner Woodward *dissenting*, joined by Commissioner O'Connor. [Map of facilities relating to interstate-intrastate issue printed *infra*, p. 213.]

WOODWARD, Commissioner, joined by *O'Connor*, Commissioner, *dissenting:*

Though more recently breached than observed, there is still a statute which excludes the sales in question from Commission jurisdiction. Section 1(b) of the Natural Gas Act gives the Commission jurisdiction over "the sale in interstate commerce of natural gas for resale," with "interstate" being defined by Section 2(7); and excludes from coverage "any other * * * sale of natural gas," i.e., any intrastate sale. Section 2(7), to the extent pertinent, defines "interstate commerce" as "commerce between any point in a State and any point outside thereof * * *." These provisions conclusively establish that Amerada Petroleum Corporation (Amerada) and Signal Oil and Gas Company (Signal) sales to Montana-Dakota Utilities Company (MDU) are not in interstate commerce and so are not jurisdictional under Section 1(b). These sales do not involve "commerce between any point in a State and any point outside thereof," within the terms of Section 2(7), but only commerce between *two points* in the *same* state. Congress in 1(b) of the Act not only prescribed the intended reach of the Commission's power, but also specified the area into which this power was not to extend.[1] That the Act does not embrace intrastate commerce is clear from the Act itself and from judicial interpretation thereof.[2]

The majority's decision that sales by Amerada and Signal to MDU under the North Dakota contracts are subject to the jurisdiction of this Commission as sales in interstate commerce for resale is without adequate basis in law. The explicit terms of the statute exclude Amerada's and Signal's intrastate sales from Commission jurisdiction. Again the majority misapplies the statute and fails to give effect to numerous court decisions holding that such sales are clearly intrastate. I dissent for reasons hereafter stated.

The Commission's decision in *Montana-Dakota Utilities Co.*, 16 Federal Power Commission 401, affirmed in *State of North Dakota* v. *Federal Power Commission*, 247 F. 2d 173 (CA8), held that sales by these same producers to MDU under a firm sales contract for resale in North Dakota were intrastate sales, even though the gas was commingled in the pipeline with gas sold to MDU by the producers under a "dump" sales contract and *intended for delivery outside of the state.* [Emphasis supplied.] There the court stated, "We think, then, the gas sold pursuant to such 'firm gas' contracts for consumption in North Dakota is clearly distinguishable from the 'dump gas' sold in interstate commerce. There is no commingling of interstate with intrastate gas within the State of North Dakota in the sense of loss of identity because the intrastate gas going to the four North Dakota communities named is separated from the gas stream in the main line and metered before any portion of the gas stream has left the

[1] *Federal Power Commission* vs. *Panhandle Eastern Pipe Line Company*, 337 U.S. 498 at 502–503.

[2] *Colorado Interstate Gas Co.*, vs. *Federal Power Commission*, 142 F. 2d 943, 958, affirmed in *Colorado Interstate Gas Co.*, vs. *Federal Power Commission*, 324 U.S. 581, 585, 588.

State of North Dakota. Accordingly the quantities of intrastate gas purchased by Montana-Dakota under the 'firm gas' contracts are easily identifiable and determinable." Referring to the sales the court said, "They do not constitute interstate commerce in any sense of the word. The Federal Power Commission has properly refused to accept jurisdiction over what is purely intrastate commerce." The language of the Court of Appeals discloses beyond doubt its complete awareness of the fact that interstate gas was flowing through the pipeline yet its mere presence did not serve to transform a non-jurisdictional sale into a jurisdiction sale.

That case involved the identical issue presented here and was litigated by the identical parties as those before us now. The sole factual distinction in the instant case is the presence of additional interstate gas. In any event, this cannot be a controlling difference for the 8th Circuit made it abundantly clear that the presence and commingling of interstate gas did not alter the intrastate character of this sale.

Thus the jurisdictional question has been decided by this Commission and the 8th Circuit Court of Appeals. Surely we are not free to re-examine or reverse each prior decision with the advent of every change in the makeup of the Federal Power Commission. We are bound by our own decision and the mandate of the *North Dakota* decision under the doctrine of res judicata.

Completely apart from the fact that this exact issue has been resolved by the Commission and the courts with findings opposite to those reached by the majority here, consideration of the merits *de novo* reveals that this sale under the statute is intrastate.

The fact that other gas for some other sale may subsequently be transported outside the state so that the sale is "interstate" does not control the question of the character of the particular sales with which we are concerned in the instant proceeding. The crucial question is whether mere commingling in the same pipeline of gas sold for consumption within the state of production, and gas being transported for interstate sale, converts the entire stream into an interstate sale. Law and precendent support the view that the gas is not so converted.

In *Peoples Natural Gas Company* v. *Public Service Commission of Pennsylvania*, 270 U.S. 550, 554 (1926), the court considered a pipeline producer who purchased approximately two-thirds of its gas from a producing company in West Virginia and, in turn, commingled the gas with one-third which was produced in Pennsylvania. Holding that mere commingling of fungible goods does not confer jurisdiction over goods produced and sold in the same state, the court declared, "Feeding it into the same pipeline with the West Virginia gas works no change in this regard. Of course after the commingling the two are undistinguishable. But the proportion of both in the mixture are known and that of either readily may be withdrawn without affecting the transportation or sale of the rest. So, for all practical purposes the two are separable and neither affects the character of the business as to the other."

Further, in *Humble Oil and Refining Company* v. *The Texas Pacific Railway Company*, 155 Texas 483 (1956), the court considered whether crude oil produced within the state and sold within the state for consumption within the state lost its intrastate character when commingled with crude oil shipped interstate. The court held, "The fact that Humble was also shipping from New Mexico should not change the character of its shipments originating in Texas. Accordingly we hold that the oil produced in and shipped in from New Mexico to East Texas takes an interstate rate and the oil produced in West Texas and shipped to East Texas takes on an intrastate rate, and this irrespective of its being commingled with other oil en route."

In the *Shreveport Rate Cases, Houston, E. & W.T.R. Company* v. *U.S.* 234 U.S. 342, the Supreme Court approved the postulate that railroad traffic between two points in Texas was intrastate although the train and railroad lines which carried the intrastate traffic went to and served markets outside the state.

To perpetuate its error, the Commission relies on its decision in *Lo-Vaca Gathering Company*, et al., 26 Federal Power Commission 606 (Opinion 348), thereby disclosing the true artificiality of its position. If "The conclusion reached by the Commission in *Lo-Vaca* would seem to be equally valid on the facts of the present case, and if *Lo-Vaca* rather than the earlier *Montana-Dakota* decision should now be the controlling authority," [p. 206] by what principles of constitutional law and statutory construction does the majority equate their position with the mandate of the Supreme Court of the United States and other Federal and State courts that sales, such as those involved in the instant proceeding are intrastate and not subject to Commission jurisdiction? Clearly there is no basis in fact or in law for the majority's finding that the sales involved herein are subject to Commission jurisdiction. "The determinative question is not what the [Commission] thinks it should do, but what Congress has said it can do," *Civil Aeronautics Board* v. *Delta Air Lines*, 367 U.S. 316 (1961).

I have pointed out in detail that Commission and court decisions have firmly established that the physical commingling of gas which is not the subject of a jurisdictional sale with gas destined for consumption in interstate commerce does not, of itself, change the character of the former transaction. The final test is whether the two transactions are separable so that one may be distinguished from the other by whatever contractual and physical means possible. Legal precedents recognize that, as a purely physical matter, gas molecules initially attributable to each sale became unidentifiably intermixed.

The contracts of Amerada and Signal cover only gas which is produced in North Dakota, transported in North Dakota, resold in North Dakota and consumed in North Dakota and the amount of gas thus produced, sold, transported, resold and consumed will be accurately measured. Indeed staff in its brief admits "Purchases from Amerada and Signal are all purchases from the tailgate of one processing plant which has separate meters to measure intrastate and interstate volumes of gas." [Staff brief p. 82.]

The metering off in the producing state of the contract quantities of intrastate gas before any of the gas stream crosses a state line has been held to be a clearly distinguishable separation despite commingling with other gas destined for interstate transportation, *State of North Dakota, supra.* "That the commodity almost certainly or even inevitably, will be shipped out of the state does not make all of the activity interstate commerce even though it is done in the course of a part of that movement."[3] Further, "Practical continuity does not always make an act a part of interstate commerce," *Southern Pacific Company* vs. *Gallagher*, 306 U.S. 167 at p. 177.

The majority is troubled by the fact that the amount of gas sold under the North Dakota contracts cannot be measured as it passes the point of delivery to MDU, but must be determined retroactively, i.e., at the point of consumption in North Dakota. The point of measurement is no moment in determining the question of jurisdiction. What is important is the fact that accurate measurement of intrastate and interstate volumes is accomplished. The majority's quest for pure molecular identification is fallacious.

The majority would have to concede that sales made under the North Dakota contracts would be non-jurisdictional if the gas were transported in a separate

[3] See *Coe* v. *Town of Errol*, 116 U.S. 517, 525; *Superior Oil Co.* v. *State of Mississippi*, 280 U.S. 390, *Southern Pacific Co.* v. *Gallagher*, 306 U.S. 167.

pipeline. However, merely because the gas to be sold under the intrastate contracts is to be transported in the same pipeline as the gas to be sold under the interstate contracts, the majority finds that intrastate gas assumes an interstate character and is thus subject to Commission jurisdiction.

The statement by Commissioner O'Connor in the Lo-Vaca case *supra* is equally applicable here; "the decision of the majority would effectively preclude the use of interstate pipeline company facilities for intrastate transmission of natural gas within the producer states for the use of the consumers and industries in those states without the producers of such gas being subject to the jurisdiction of the Federal Power Commission. It seems to me this is an unnecessarily harsh imposition on the consumers in the producing states whose resources and statutes have been availed of to permit the construction and operation of these interstate lines."

The quick and dispositive answer to all majority arguments is that the Commission is powerless to regulate intrastate sales.

We must ever keep in mind that the basic concept of our society is the rule of law—law exercised in conformity with constitutional principles and by democratic processes. Thus the Constitution provides for the division of power between the state and Federal governments, and between the three branches—legislative, judicial, and executive—of the Federal government. And Congress, acting under the Commerce Clause and by the democratic process through the peoples' elected representatives, provides laws, of which the Natural Gas Act is an example, designed to reconcile diverse and conflicting interests in our nation and society in the interest of the whole people. It is essential to the attainment of the objectives of such legislation that the commands of Congress, and the court's interpretation thereof, be vigorously obeyed. It is equally essential to the preservation of our basic concepts, our constitutional system, and our democratic processes, and to the preservation of the public respect for law which is their indispensible foundation, that we do not permit either our desire for what we may deem high achievement, or our misgivings concerning the quality of others' achievements, to lead us to assert authority or exercise functions which a preponderance of the guiding considerations shows are not ours.

INITIAL DECISION
ON REMAINING ISSUE UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY IN CONTESTED DOCKETS

(Issued September 5, 1962)

WESTON, *Presiding Examiner:* On August 28, 1962, the Commission issued its order disposing of the "initial price" issue in this proceeding; the order being based on acceptance by Amerada and Signal of the 16-cent price for which Staff had contended. The Commission, by order of June 1, 1962, having adopted the decision of May 16, 1962, on the first issues, there remains for decision only the issue as to whether certain amounts of the gas to be sold and delivered by Amerada and Signal to MDU will be "in interstate commerce" and therefore subject to the jurisdiction of the Commission.

THE JURISDICTIONAL ISSUE

Amerada and Signal propose to furnish MDU with gas under two sets of contracts. First, they will supply gas which they intend to be destined only for intrastate consumption in North Dakota. This supply will be pursuant to an Amerada-MDU contract of December 21, 1960, and a Signal-MDU contract of January 16, 1961—denominated by the parties and hereinafter called the "North

Dakota" contracts. Second, Amerada and Signal will supply gas which they intend to be destined for transportation across the border into Montana. This supply will be pursuant to contracts of January 10, 1961, and January 18, 1961, respectively, which have been filed as rate schedules with the Commission and which admittedly cover gas flowing in interstate commerce—denominated by the parties and hereinafter called the "interstate" contracts. The question is whether the gas sold under the North Dakota contracts is sold "in interstate commerce" with attendant regulatory consequences of the Natural Gas Act.

Objection to consideration of jurisdictional issue.—Amerada and Signal contend *in limine* that the jurisdictional issue is not properly before the Commission in this proceeding, because the North Dakota contracts have not been filed as rate schedules with the Commission, and because the Commission did not specify in the notice of hearing that the status of these contracts would be considered during the course of the proceeding.

The contention is overruled. The jurisdictional issue necessarily inheres in this proceeding from the outset. The North Dakota contracts, as well as the interstate contracts, were properly filed with MDU's application herein as a part of MDU's necessary showing of gas supply. The North Dakota contracts, like the interstate contracts, were entered into in specific contemplation of the pipeline construction for interstate gas involved in this proceeding, and the North Dakota contracts state that such construction is necessary "in order to take delivery of the gas" to be supplied under such contracts by Amerada and Signal. (Exh. H to applications; identical par. 2.01 of contracts.) The Commission must, therefore, at the least determine how much, if any, of the new construction costs which are a condition precedent to all of the contracts should be allocated to what Amerada and Signal claim is MDU's "intrastate" business, and thus excluded from MDU's jurisdictional accounts. To do this, the Commission must examine the legal basis for the claim that some of the contracts and gas are nonjurisdictional.

The fact that the jurisdictional issue was not spelled out in the notice of hearing is of no importance. The issue was litigated by extensive cross-examination without objection. During the course of the hearing, it was in substance accepted by stipulation of all counsel as an issue for decision herein (Tr. 525–532).[1] Amerada and Signal may not at this late date withdraw the stipulated issue from the matters to be decided herein.

Analysis of contracts and provision for measuring gas.—So far as the contracts and accounting go, a careful segregation is to be maintained between North Dakota gas and gas to be transported across the Montana state line.

According to the North Dakota contracts, MDU (Buyer) will purchase up to the total quantities of gas which it supplies each year in North Dakota from Amerada and Signal.[2] The contracts recite that "All gas purchased by Buyer under this agreement shall be transported, used and consumed entirely within the State of North Dakota." The contracts further recite that "* * * all gas produced in the Contract Area [*i.e.*, the Tioga fields in the Nesson Anticline, entirely within northwestern North Dakota] which is delivered" by Amerada and Signal to MDU and is used or consumed by MDU within North Dakota

[1] Staff Counsel there submitted for decision the interstate commerce and price issues; the submission being "on the record jointly by the Applicants in this proceeding and the staff of the Federal Power Commission," with multiple references to the joint and agreed-on nature of the submission. Amerada and Signal made no qualifications, limitations, or objections to this submission of the substantive issue.

[2] Except for gas supplied by MDU from a spur in the southwestern corner of the State, which consists of a small diameter lateral direct from the Baker Field in Montana. This exception makes the so-called "Market Area" as defined in the contracts somewhat less than the entire State. The exception is irrelevant to this proceeding, and will not be further referred to herein.

"* * * without being transported beyond its boundaries shall be sold" under the North Dakota contracts. The contracts are subject to cancellation by Amerada and Signal if the Federal Power Commission asserts jurisdiction over the gas sales and prices there established.

Since, as will be seen, all gas will be supplied from a single point—the tailgate of the Amerada-Signal Tioga plant—on a continuous interstate loop of pipeline, it is apparaent that between the parties the amounts of gas considered to be sold under the "North Dakota" contracts must be determined retroactively on the basis of careful measurement of gas consumed along the North Dakota sections of MDU's integrated system. This will be accomplished by metering.

Two meters will measure the amount of gas delivered to MDU at the tailgate of the Tioga plant. One will measure the amount that flows west from Tioga towards Williston and the rest of MDU's interstate system. [See map accompanying this decision.] The other will measure gas flowing east from Tioga to Minot, thence south over the new facilities to Bismarck, and thence westward to Cabin Creek, Montana. The tailgate measurement will be the "* * * sole metering of the residue gas" purchased from Amerada and Signal, but "* * * will not be the final accounting method of the volume under the two contracts." [Tr. 19.] The accounting method will be based on further metering of the gas at points on the northern and southern segments of the loop near the western border of North Dakota. Depending on North Dakota requirements for the given time being—essentially, winter peak days contrasted with summer days—gas may actually flow either into or out of North Dakota over MDU's two Montana border crossings, as will be seen. Therefore, North Dakota consumption of gas attributed to purchases from Amerada and Signal will be determined mathematically, based on meter readings of gas flowing east and west from Tioga in relation to meter readings in the vicinity of each of the border crossings.

Except for quantities of gas and a few other presently immaterial details, Amerada and Signal's North Dakota contracts with MDU are in identical terms. The interstate contracts of each of the oil companies with MDU are likewise identical so far as is presently relevant. In the case of each company, both the North Dakota and the interstate contracts must be consulted, and therefore are parts of one transaction, and in substance one instrument as regards the vital matter of gas supply and gas take obligations.

Thus, the Amerada-MDU interstate contract provides that MDU must take-or-pay-for 13,687,500 Mcf per calendar year "* * * less the quantity of gas which Buyer shall pay for the with respect to such calendar year under the Amerada North Dakota Contract." This yearly quota derives from the stipulated daily volume: "* * * each day of each such calendar year Buyer shall be obligated to purchase and take delivery of a minimum quantity of Contract Gas equal to the quantity of all Contract Gas available for delivery to Buyer during such day which is derived from gas produced from Oil Wells, not to exceed in any day 37,500 Mcf less the quantity of gas which Buyer shall pay for with respect to such day under the Amerada North Dakota Contract."

The Signal-MDU interstate contract is in identical terms, except that the annual minimum quantity is 3,421,875 Mcf and the daily maximum obligation is 9,375 Mcf; again, less deliveries under the Signal North Dakota Contract.

Remitted to the respective North Dakota contracts, we find that MDU must buy at least 53⅓ percent of its annual North Dakota requirements from Amerada and at least 13⅓ percent thereof from Signal (with an immaterial exception in case of under-supply). In a provision which apparently deals with the split of gas assigned to North Dakota as between Amerada and Signal, and not

to MDU's purchase obligations,[3] 80 percent of Tioga deliveries used in North Dakota are attributed to Amerada and 20 percent thereof to Signal.

Thus, amounts of gas purchased under the interstate and North Dakota contracts, respectively, must be ascertained retroactively, and depend entirely on MDU's deliveries within that State from time to time. Taken either on an annual or a daily basis. MDU's purchase obligations are allocated between amounts of gas in a common, indistinguishable flow on the basis of computed North Dakota gas usage.

As North Dakota requirements grow, estimated purchases attributed to the North Dakota contracts will increase and purchases attributed to the interstate contracts will proportionately decrease (Item B by reference; Exh. X–1, p. 1).

The initial price of the gas, as provided for in all four contracts, is 17 cents per Mcf at 14.73 psia, plus production tax reimbursements.[4] The contracts provided for fixed escalations of one cent each five years, as well as escalations geared to the Bureau of Labor Statistics Index of Wholesale Prices. The initial price has now been reduced to 16-cents per Mcf in accordance with the stipulation of the producers and the Commission order referred to at the outset of this decision.

The intent that North Dakota requirements, or at least two-thirds thereof, be supplied under the so-called North Dakota contracts, and that gas flowing out of the State to be supplied under the so-called interstate contracts, is made clear by a number of additional contract provisions, including provisions in the interstate contracts to the effect that it covers all gas delivered by Amerada and Signal "* * * which is transported outside of the State of North Dakota and resold." However, the realities of the situation which will exist when MDU starts taking deliveries under the contracts are known to the parties. The Amerada and Signal interstate contracts recite that—

> * * * in order to enable Buyer to take delivery of gas in accordance with this agreement, Buyer contemplates the construction and installation of (a) an extension of its pipeline system from Minot, North Dakota, to Bismarck, North Dakota, (b) a connection of such extension at Bismarck to that branch of its pipeline system which runs westward from Bismarck into the State of Montana, and (c) other facilities. * * *

MDU, in pursuance of the recital, agrees to proceed diligently towards the Federal Power Commission approval obtained June 1, 1962, herein and the construction of the new segment of pipeline. Somewhat disingenuously, the North Dakota contracts make similar provision, but do not mention Montana.[5]

In addition to gas derived from Signal's gas processing plant at Tioga, Amerada will supply MDU with gas-well gas produced from other formations. All of this gas is purchased only under the Amerada-MDU "interstate" contract. As we have seen, MDU is obligated to take a maximum of 46,875 Mcf of residue gas per day from Amerada and Signal's combined supply at the processing plant if produced in conjunction with oil. However, MDU expects to take

---

[3] Total sales will be 19,160,000 Mcf per year, of which Amerada will sell 14,788,396 Mcf (77.2 percent) and Signal will sell 4,371,604 Mcf (22.8 percent), or approximately an 80–20 split. See Exhibit 14, and see Tr. 92–94.

[4] In effect, the provision is for reimbursement of the 4¼ percent of wellhead value tax rate which existed on June 24, 1955, and for 50 percent reimbursement of new or increased taxes. The tax rate went up to 5 percent of wellhead value on July 1, 1957. The June 24, 1955, date apparently continues a reimbursement provision in a previous intrastate supply contract, as to which see *Montana-Dakota Utilities Co.*, 16 FPC 401, 404; affirmed, *State of North Dakota* v. *F.P.C.*, 247 F. 2d 173 (CA8), and discussion, *infra*.

[5] Buyer MDU there is said to contemplate a Bismarck connection "* * * which runs westward."

delivery of 19,160,000 Mcf per annum, or an average of 52,493 Mcf per day, from the two oil companies combined. (Exh. 14.) Presumably, the difference of 5,618 Mcf between the quantity of residue gas available from oil production and total deliveries will be supplied from Amerada's gas-well gas.

Realities of gas flow.—The Village of Cabin Creek, in eastern Montana, where a large compressor station and the Baker storage field are located, is described as the "heart" (Tr. 22) of MDU's interstate pipeline system. As shown on the map incorporated in this decision, several lines emanate from Cabin Creek for service of natural gas in Montana, Wyoming, North Dakota, and South Dakota. Of particular importance to this proceeding is the loop shown on the map serving North Dakota.

Starting at Cabin Creek, the line proceeds northwest to Williston and Tioga, North Dakota. Here it connects with a previously separately operated "intrastate" section of line running eastward from Tioga to Minot. At Minot, the new construction (106 miles of 12-inch pipe) authorized herein on June 1, 1962, runs southward to Bismarck, where it connects with what was previously a southern lateral for supply of gas from Cabin Creek to Bismarck.

On a peak day in the winter of 1962–1963, MDU will take about 55,000 Mcf of Amerada-Signal gas at the tailgate of the Tioga plant. There will also be available at Tioga some 15,000 Mcf from the Texaco and Hunt-Herbert sources authorized by the June 1, 1962, order herein. The parties to the record postulate on the basis of a flow diagram, but without record evidence as to the physical facts, that all 15,000 Mcf of Texaco and Hunt-Herbert gas will commence and continue its journey westward on the MDU line; Texaco and Hunt-Herbert accept without question the interstate nature of their contracts; for present purposes, we may assume that all Texaco and Hunt-Herbert deliveries always flow to the west, thus reducing the Amerada-Signal deliveries flowing in that direction.

Of the combined gas, 50,000 Mcf will flow *eastward* on the loop towards Minot and beyond; apparently all of this gas will be consumed in North Dakota on peak days by deliveries to Minot and other communities along the line, ending with deliveries made to Bismarck, Hebron, and the New England group of communities along the southern branch of the loop.[6] (Exh. 1.)

Of the combined gas, 20,000 Mcf will on peak days flow *westward* on the loop towards Williston; 10,200 Mcf will be served off the line in North Dakota and at the Montana border, and 9,800 Mcf will arrive at Sidney, Montana, where 5,570 Mcf will be served for local consumption. The remainder of the Tioga gas, 4,230 Mcf, will merge with 12,660 Mcf arriving on the lateral line (shown on the map herewith) from MDU's Bowdoin gas field in northwestern Montana, for service to Glendive, Montana, and further circulation through Cabin Creek to the rest of MDU's system. (Exh. 1.) Even under the theory that all Texaco and Hunt-Herbert gas flows westward, there is no indication that on peak days it is this gas which arrives at Sidney, Montana, and ultimately merges with MDU's general system gas, while the Amerada-Signal gas is used locally. On the contrary, out of the common stream of gas flowing westward from Tioga, of which 15,000 Mcf is assumed *arguendo* to be furnished by Texaco and Hunt-Herbert and 5,000 is therefore to be furnished by Amerada and Signal, the mathematical situation is as follows:

[6] On such days, Exhibit 1 shows importation of gas along this branch from Cabin Creek.

Delivery point	Combined Mcf	Texaco & Hunt-Herbert (Mcf)	Amerada-signal (Mcf)
North Dakota	10,200	7,650	2,550
Sidney Montana	5,570	4,177.5	1,392.5
Merged into system gas	4,230	3,172.5	1,057.5
Total	20,000	15,000	5,000

Thus, on a peak day, 2,450 Mcf of Amerada-Signal gas will enter Montana despite contract provisions, unless the mathematics of the situation are ignored.[7]

On average summer days, about 80 per cent of the gas supplied to MDU at Tioga will ultimately wind up in Cabin Creek, Montana, for injection into the Baker storage field and ultimately redelivery to all parts of the MDU system. It is calculated that of the 45,000 Mcf supply furnished by Amerada and Signal during non-peak periods, 32,000 Mcf will flow eastward on the loop towards Minot and 13,000 Mcf will flow westward towards Williston. With a North Dakota summer market of about 8,750 Mcf, a remainder of 36,250 Mcf will flow across one or the other of MDU's state border crossings and ultimately wind up, for the most part, in MDU's Baker storage field in Montana.[8] This gas is, of course, allocated to and accounted for under the Amerada-Signal "interstate" contracts.

Decisive Considerations on Jurisdictional Issue

Background.—The jurisdictional issue in the proceeding at bar is unusual, in that it reflects new aspects of a similar issue heretofore litigated, in respect of prior contracts between the parties and on facts as they then existed, in *North Dakota* v. *F.P.C.*, 247 F. 2d 173 (CA8), affirming *Montana-Dakota Utilities Co. et al.*, 16 FPC 401, 415, decided July 2, 1956.

At that time, the Commission certificated (1) a new line extending MDU's then existing system from Williston to Tioga, (2) four laterals from the extension to serve four North Dakota communities between Tioga and Williston, (3) an emergency connection 6-feet in length, joining the new line to Tioga with a then separate MDU intrastate line between Tioga and Minot,[9] and (4) sales of "dump gas" from Amerada and Signal to MDU at Tioga for 9-cents per Mcf.

Also at that time, Amerada and Signal each had two contracts with MDU. First, there were contracts for supply of "firm" gas intended for intrastate use only in the MDU market area between (but excluding) Williston, North Dakota, and (including) Minot, North Dakota. These 20-year contracts for firm gas carried an initial price of 16 cents per Mcf, which escalated to 17 cents per Mcf before the commencement of the proceeding at bar. They were replaced by the "'North Dakota" contracts now in issue and discussed on preceding sections of this decision. Second, there were the above-mentioned contracts for the supply of "dump" gas westward on the line for sale in Williston, small markets downstream therefrom, to markets in Montana, and, for the

[7] Of course, as a matter of accounting, this portion or more of the gas in the common stream can be and perhaps is assigned to gas-well gas supplied under Amerada's interstate contract.

[8] Other and apparently more exact estimates are that 24,720 Mcf of the gas flowing toward Minot and 11,320 Mcf of the gas flowing toward Williston on an average summer day will end up in the Baker storage field (Tr. 72–73).

[9] This is the same line that now forms the Tioga-Minot section of the continuous loop shown on the map herewith, p. 213, *supra*.

most part, for integration into MDU's system at Cabin Creek and the Baker storage field.

In practical effect, the great portion of the firm "intrastate" gas (369,290 Mcf in 1956) was to have moved over the Tioga-Minot line, which was physically separate and distinct from the MDU integrated system lines.[10] The rest of the firm "intrastate" gas (11,120 Mcf in 1956) would move westward intermixed with the "dump" gas, and would be metered on the four laterals mentioned above serving four communities en route to Williston.

The Examiner, in language affirmed by the Commission and adopted by the Eighth Circuit, said:

> At the outset it should be noted that this Commission clearly has no jurisdiction over the sales made by Signal and Amerada under the 16-cent "firm gas" contracts. Under Section 1(b) of the Natural Gas Act this Commission has jurisdiction only over the transportation of natural gas in interstate commerce, or the sale in interstate commerce of natural gas for resale. It has no authority to regulate *intrastate* sales. The gas sold under the instant 16-cent contracts is admittedly produced and consumed wholly within the State of North Dakota, both in the communities served from the Tioga-Minot line and in the communities served from the Tioga-Williston line. The conclusion that they are accordingly *intrastate* contracts is so obvious as to require no extended discussion.* The fact that this gas travels over the Tioga-Williston line in one stream, along with the gas purchased under the 9-cent "dump gas" interstate contracts does not convert the 16-cent "firm gas" contracts into interstate contracts. [See 16 FPC at 408–409; 247 F. 2d at 176.]

Insofar as this language covers the 11,120 Mcf of gas sold in the four communities en route to Williston, the situation, except for great disparity in volumes making the intrastate service in 1956 almost *de minimis*,[11] is the same as that now presented in the case at bar. However, two points must be noted in this connection:

(1) Gas sales in the four North Dakota communities along the line to Williston were nonjurisdictional in any event, because the distribution service to the ultimate consumers was performed by MDU. Since MDU "sells the gas directly to the ultimate consumers in these communities," the sales were not "for resale," and were "accordingly nonjurisdictional, entirely apart from any question of interstate commerce." [16 FPC at 413.]

(2) The off-line service in North Dakota under the firm contracts involved deliveries to named, definite, established customer communities rather than a general retroactive assignment of volumes under indefinite contract provisions covering an entire service area. The question now presented was not sharply defined by the facts of the prior case.

Analysis of governing principles.—On the one hand, Amerada, Signal, and MDU earnestly "intend" that the amounts of gas sold under the North Dakota

---

[10] Except for the "emergency" interconnection. For present purposes, we should specifically reserve the question of whether or not such an interconnection in practical effect and in law would now be held to integrate the Tioga-Minot section of line with the rest of the MDU system. In the *Jersey Central* case, *infra*., the fact that a few kilowatts of energy supplied within the State from A to B escaped from the State over an emergency interconnection between B and C was held sufficient to base full Commission jurisdiction over A.

* Footnote 11 omitted from original quotation.

[11] It is doubtful that the *de minimis* doctrine applies to the "in interstate commerce" issue of Commission jurisdiction. It was pressed on the Commission and courts in the *Jersey Central* case, *infra*, and, no doubt, in other similar cases where the jurisdictional volume has been utterly insignificant, but the doctrine has not been applied in any case involving jurisdiction over electric and gas energy or facilities. See, *e.g.*, *Connecticut L. & P. Co.* v. *F.P.C.* 324 U.S. 515, 535–536.

contracts be for use in North Dakota, and not for interstate sale. These parties have worked out a practical, business-like method to effect their intention. The motivation is unquestionably the avoidance of regulation of rates and service of "intrastate" gas by the Federal Power Commission; yet, this is not invidious or improper even in a case where, as here, gas consumed under the North Dakota contracts would escape all regulation of the contract price as fixed between the producers and MDU. For the State of North Dakota, if it so desires, could presumably subject an intrastate sale of gas to regulation by its own Public Service Commission. (If disability exists, it is not because of Federal limitations on State power.) Amerada, Signal, and MDU can well argue that the furnishing of North Dakota gas to consumers within North Dakota is not a matter of national public interest and not a matter of concern to the Commission if the Natural Gas Act is to be construed in accordance with the practical realities of business life—*i.e.*, commerce between enterprises for local service of local gas.

On the other hand, some of the gas furnished by Amerada and Signal at Tioga will undeniably and concededly flow over both branches of MDU's North Dakota loop, and will wind up at burner tips in other States. All of the gas furnished to MDU will flow in a common stream serving indiscriminately MDU customers in several States. MDU is a very sizeable integrated pipeline system which cannot rationally function in segments separated by the accidental (from the economic view) occurrence of State lines. Neither Amerada, Signal, nor MDU know where a given cubic foot of gas sold at Tioga will be resold on MDU's integrated system. The perspective is set in the light of existing and increasing inter-relatedness between all sections of a given interstate gas or electric energy system, such as occurs in this case as Minot is linked with Bismarck. The public authorities protecting the North Dakota consumer interests in price control may well argue that the commercial realities are sales of gas at Tioga for MDU system-wide use. In this view, the distinction between interstate and intrastate gas set up by the two sets of contracts is actually illusory and artificial.

The answer depends on the *nature of reality* as interpreted in this controversial area by the courts, and especially by the Supreme Court. Is the controlling reality to be that contemplated by the parties to a businesslike contract assigning portions of an indivisible flow of gas or electricity, in accordance with statistical facts, to local service within the given State? Or is the controlling reality that of the physical flow of energy untrammeled by State boundaries?

The issue is no longer open for extended discussion; the issue has been definitively and finally settled. The controlling reality is that of physical flow across State lines.

> * * * Federal jurisdiction was to follow the flow of electric energy, an engineering and scientific, rather than a legalistic or governmental test. * * *[12]

The governing reality, in other words, is that of the engineer or technician rather than that of the trader or businessman. If gas, or any part of a given gas supply, ostensibly sold under and attributed to an intrastate gas contract, physically flows or is capable of flow across State lines, the gas is sold in interstate commerce.

Arguments to the contrary have so often been presented to and rejected by the courts that the doctrine is now unshakeable. Each of the arguments and most of the authorities presented by Amerada and Signal were presented to the Commission as early as December 3, 1938, in the briefing of the case ultimately affirm-

[12] *Connecticut Light & Power Co.* v. *F.P.C.*, 324 U.S. 515, 529. The relevant provisions and sweep of the Federal Power Act and the Natural Gas Act are for present purposes identical.

ed in *Jersey Central Power & Light Co.* v. *F.P.C.*, 319 U.S. 61. It was there elaborately argued that Congress had not in words or in purpose committed the full sweep of possible jurisdiction on the Federal Power Commission over sales or transfers of energy "affecting" interstate commerce, and that those who consign, destine, and mean their energy to be for use within the State of origination to which the volumes are contractually assigned are not subject to the Commission because of subsequent accidental or casual flow of some portion thereof to another State. The Supreme Court used the engineering test to determine the actuality of flow, and said that there is no basis for a conclusion that the statutory definition of interstate commerce—

> * * * means less than it says and applies only to the energy at the instant it crosses the State line and so only to the facilities which cross the line and only to the company which owns the facilities which cross the line. The purpose of this act was primarily to regulate the rates and charges of the interstate energy. * * * [319 U.S. 61, 71.]

The arguments applicable to the contention that the intent of the parties with regard to the destination of gas flowing in a commingled stream, some destined intrastate and some destined interstate, are of importance in determining Federal Power Commission jurisdiction have recently been summarized and vigorously advanced by Circuit Judge Brown, dissenting, in *Deep South Oil Co.* v. *F.P.C.*, 247 F. 2d 882 (CA5), commencing at 889. Judge Brown there sets forth a logical and persuasive approach to the issue of Congressional intent on the issue of subjection to Commission regulation of wellhead sales to a processing plant, in language that is, for the most part, applicable to the facts in the case at bar.

The majority in that case, on its own analysis of the Congressional intent in the light of the purpose to protect consumers, found that if the seller were free from regulation such a result would " * * * permit it, if it were so inclined, to engage in the very exploitation which the Act was designed to prevent." [247 F. 2d at 887.] The majority found a continuous movement of the gas to an interstate destination and held that "* * * when the gas was sold by petitioner it had commenced its journey in interstate commerce." [247 F. 2d 888.] The holding in *Deep South* was held to govern the situation in a companion case, *Shell Oil Co.* v. *F.P.C.*, 247 F. 2d 900 (CA5), in which certiorari was denied, 335 U.S. 930. The reasoning of the majority perhaps does not meet all of Judge Brown's logic, but the result reached by the majority fully accords with currently accepted doctrine.

With the possible exception of *North Dakota* v. *F.P.C.*, *supra*, all recent decisions have found that Federal jurisdiction attaches to all sales of energy whenever some part of the energy sold ultimately finds its way across State lines. See, in addition to cases cited *supra*, *F.P.C.*, v. *East Ohio Gas Co.*, 338 U.S. 464; *Interstate Natural Gas Co.* v. *F.P.C.*, 331 U.S. 682; *Phillips Petroleum Co.* v. *Wisconsin*, 347 U.S. 672; *Eureka Pipe Line Co.* v. *Hallanan*, 257 U.S. at 272; *California Electric Power Co.* v. *F.P.C.*, 199 F. 2d 206 (CA9), cert. denied, 345 U.S. 934; *Oklahoma Natural Gas Co.*, 23 FPC 291, 531; *Lo-Vaca Gathering Co.*, 26 FPC 606, Opinion No. 348.*

As the Commission observes in the *Lo-Vaca Gathering Co.* case, *supra*, the holding in *North Dakota* v. *F.P.C.* "* * * runs counter to the whole stream of the decisions of this Commission as to what constitutes a jurisdictional sale in interstate commerce and to the decisions of the Supreme Court construing this and other legislation." [p. 10.] That holding was held by the Commission to present a "serious problem of distinction," and the Commission ruled that to

*See Ed.'s note, *supra*, p. 201.

the extent it may be inconsistent with *Lo-Vaca*, "* * * it was erroneously decided." [*Id.*]

Conclusion.—There is a single flow of gas in interstate commerce in respect of all gas supplied by Amerada and Signal to MDU at Tioga. All contracts with respect to such flow must be filed as rate schedules with the Commission. Price and other provisions of all such contracts are subject to price and other regulations by the Commission under the Natural Gas Act.

In respect of the order to be issued pursuant to the foregoing, it is noted that in connection with the concession of the price issue, Amerada and Signal have provisionally and without prejudice filed their "North Dakota" contracts as supplements to their respective Rate Schedules 95 and 8, pending final determination, presumably judicial, of the jurisdictional issue. Accordingly, there are no considerations of timing, or other practical factors, to be resolved herein.

ORDER

Wherefore, it is ordered, subject to review by the Commission, that:

(A) Amerada Petroleum Corporation shall in accordance with Section 4 of the Natural Gas Act and Sections 154.91–154.102 of the Commission's Regulations Under the Natural Gas Act file its contract of December 21, 1960, with Montana-Dakota Utilities Co. as a Rate Schedule, and shall in respect of such Rate Schedule comply with all the requirements of the Natural Gas Act and the Commission's Regulations thereunder.

(B) Signal Oil and Gas Company shall in accordance with Section 4 of the Natural Gas Act and Sections 154.91–154.102 of the Commission's Regulations Under the Natural Gas Act file its contract of January 16, 1961, with Montana-Dakota Utilities Co. as a Rate Schedule, and shall in respect of such Rate Schedule comply with all the requirements of the Natural Gas Act and the Commission's Regulations thereunder.

ROBERT M. WESTON,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

HUNT OIL COMPANY, DOCKET NO. G–9065, ET AL.[1]

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSALS, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued July 16, 1963)

We have before us for consideration a Motion for Approval of Settlement Proposal and Termination of Proceedings and an Offer of Settlement filed on April 11, 1963, by Hunt Oil Company (Hunt) encompassing the rates for thirty-two of Hunt's currently effective gas rate schedules.[2]

In summary, the settlement proposal as submitted by Hunt provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings, with two exceptions hereinafter discussed;

(2) Hunt waives the right to file for contractually authorized increased rates

[1] The additional dockets involved herein are set forth in the Appendix hereto.

[2] The motion for approval encompasses thirty-one of Hunt's rate schedules, and the Offer, which was filed simultaneously covers one schedule, and was made jointly with H. L. Hunt. Hereinafter, they will be discussed as one proposal.

until October 1, 1965, except for its rate schedule No. 50, for which it waives such rights until April 1, 1968. Hunt reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels determined through area hearings or by amendment of the Commission's Statement of General Policy No. 61–1, or any contractually authorized increase in tax reimbursement;

(3) Amendment of Hunt's rate schedule Nos. 11, 26, 28, 32, 35 and 52 to eliminate any favored nation or price redetermination clauses contained therein. In addition, Hunt will amend its rate schedule No. 32 to eliminate the fixed price escalation provision contained therein, and will revise the schedule of periodic price escalations contained in its rate schedule No. 52;

(4) Extension of the make-up period under the take-or pay provision in Hunt's rate schedule No. 50 from the present period to four years;

(5) Refunds, with interest at the applicable rates, under each rate schedule where the collection was made subject to refund, of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with April 1, 1962, to the date of issuance of this order;

(6) Within thirty days of the issuance of this order Hunt will withdraw its petitions to review certain orders of this Commission in Cause Nos. 20320 and 20392 in the United States Court of Appeals for the Fifth Circuit, and in Cause No. 17579 in the Court of Appeals for the District of Columbia;

(7) Exclusion from the Settlement Proposal of all Permian Basin sales, a sale for which Hunt's rate is dependent upon the purchaser's rate which is now under suspension,[3] and one sale which is presently in litigation.[4]

In support of its proposal, Hunt states that the settlement rates, refunds, moratorium periods and other provisions thereof, some of which are not specifically noted herein, with the added benefit of withdrawal of litigation, are in the public interest in that the rates are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the various parties to the settlement conferences utilized cost-of-service studies. Their studies revealed that during the first-half of 1962, increased sales, and higher initial rates started to equalize Hunt's revenue-cost relationship. In view of that, and all the terms of the settlement proposal, it is appropriate that refunds should be computed for sales made on and after April 1, 1962, to the date of issuance of this order, with interest to be paid on the refunds to the date the refunds are made to the purchasers. The refunds will be approximately $600,000, exclusive of interest. Hunt's future revenues will be decreased approximately nine percent as a result of the settlement.

The two exceptions to the applicable area ceilings are proposed by Hunt with respect to a sale in South Louisiana in the Duck Lake Field, St. Martin and St. Mary Parishes, to United Gas Pipe Line Company (United), and a sale in Mississippi in the Gwinville Field, Jefferson Davis and Simpson Counties, to Southern Natural Gas Company (Southern). The sale to United is made under Hunt's rate schedule No. 5. On April 22, 1963, the Pennsylvania Public Utility Commission (PUC) filed its objection to Hunt's proposed settlement rate for this sale. However, on April 24, United, which participated in the settlement conferences, advised the Commission that it concurred in the settlement rates for sales by Hunt to it. Additionally, we note that the circumstances surrounding this sale are identical with those set forth in our order in *The Ohio Oil Company, et al.*, Docket No. RI60–92, *et al.*, 27 FPC 1373, 1374, and cited in our

[3] Rate schedule No. 51.
[4] Rate schedule No. 55.

order in *Cities Service Company*, Docket No. G–8921, et al., 28 FPC 1108 (December 26, 1962). In those proceedings we approved the same settlement rate as Hunt proposes herein. Therefore, we consider the reduction of the presently effective rate of 22.95¢ per Mcf to the settlement rate of 18.0¢ per Mcf to be proper, and approve the settlement rate.

The sale to Southern is made under Hunt's rate schedule No. 37. Subsequent to Hunt's filing its proposal, on April 19, 1963, Alabama Gas Corporation, and on April 22, Southern each filed a protest and objection to the proposed rate of 17¢ per Mcf for this sale. Each contended that the circumstances surrounding this sale were similar if not identical to those surrounding the sale to Southern at Gwinville by Tidewater Oil Company. They point out that in our order approving the settlement in *Tidewater Oil Company, et al.*, Docket No. G–13310, *et al.*, 27 FPC 1267, 1275, we approved a rate of 14¢ per Mcf for Tidewater's sale to Southern at Gwinville. We find no basis for approval of a rate for this sale in excess of the applicable area ceiling of 14¢ per Mcf and accordingly we shall condition our approval of Hunt's proposal by requiring it to reduce the rate under its Rate Schedule No. 37 to 14¢ per Mcf.

Additionally, on April 22, 1963, PUC filed an objection to the settlement of a sale to Transcontinental Gas Pipe Line Corporation (Transco) in Southern Louisiana. Hunt's proposed settlement of this rate, under its rate schedule No. 50, is identical in terms with settlements we have approved involving sales to Transco by other producers, *Texaco Inc., et al.*, Docket No. G–13169, *et al.*, 28 FPC 247. However, in view of PUC's objection and the fact that this matter is involved in a certificate proceeding, we shall exclude this sale from the settlement, and it shall remain in the consolidated proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*

The settlement proposal includes two rates for which issuance of related permanent certificates is pending (rate schedule Nos. 52 and 53, Docket Nos. CI60–11 and CI60–457, respectively). Section 7 of the Act requires a hearing on such certificate applications. We propose, therefore, to set these certificate matters for abridged hearing, indicating that the proposed initial price is the settlement price.

The foregoing has discussed all of the major comments filed by PUC, Alabama Gas, Southern and Philadelphia Electric Company subsequent to Hunt's filing its settlement proposal. We believe the settlement proposal, as herein modified, and in other particulars not specifically noted or set forth herein, meets the criteria previously set forth in other of our recent settlement orders and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

There is one other problem here. United Gas Pipe Line Company is under a requirement to flow-through to its jurisdictional customers the proportionate share of the amount it will receive by way of refunds from Hunt. But those customers include a number of other pipelines who may take the position that they are not presently under a similar obligation. Thus, if United makes refunds to them, they may in the absence of action by us now, be in a position to hold these sums for their own use or distribution to their stockholders, even if they are, in the absence of such refunds, earning a reasonable rate of return on their invested capital. The Commission is disturbed by this gap in the refund line and intends here, and in other cases where it may be appropriate, to take steps to insure that a determination is made of the parties entitled to receive the refunds before refunds are made to pipelines which claim they are not obligated to pass these refunds on to their jurisdictional customers. See *F.P.C.* v. *Interstate Natural Gas Co.*, 336 U.S. 577; *Northern Natural Gas Co.* v. *F.P.C.*, 215 F. 2d 892 (CA8), *cf. Mississippi River Fuel Corp.* v. *F.P.C.*,

281 F. 2d 919, certiorari denied 365 U.S. 827. As the first step in implementing such a procedure here, we shall order United to retain the refunds (without further interest obligation by it) and to submit a report setting forth how refunds would be made by it to its jurisdictional customers, assuming (without presently deciding) they are entitled to receive such sums. On the basis of this report, we shall then decide whether further Commission proceedings are required with respect to those customers of United which are themselves natural gas companies subject to the Commission's jurisdiction and do not agree to pass such refunds to their customers. These proceedings would determine whether under such circumstances these natural gas companies or their customers are entitled to the funds. The Commission does not intend itself to determine the refund obligations of distribution company customers, which are subject to the regulatory authority of the states rather than this agency. We will consider, however, at an appropriate time, suggestions by the states or other appropriate entities, as to the feasibility of our withholding payment of refunds to distribution companies until the authorized state agencies can determine the parties entitled to receive such sums.

Refunds in varying amounts will also be made hereunder to Texas Eastern Transmission Corporation, Southern Natural Gas Company and Northern Natural Gas Company. For the reasons set out hereinabove we shall also require that these companies submit a report indicating their proposed disposition of such refunds and that they shall hold such refund amounts in a special fund (without further interest obligation to them) pending Commission action on such proposed dispositions.

Our action herein should not be construed as constituting approval of any future rate increase, if any, that may be filed under the subject rate schedules, and is without prejudice to any findings or order of the Commission in any future proceedings, including area rate proceedings, involving Hunt's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal filed on April 11, 1963, as herein modified, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be conditionally approved and conditionally made effective subject to the modifications hereinafter ordered, and good cause exists for approving the settlement rates, for terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The Settlement of these proceedings on the basis of the Settlement Agreement, filed April 11, 1963, as herein modified, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in the appendix hereto are approved and such rates shall be effective as of the date of issuance of this order.

(C) The pending certificate proceedings indicated in the appendix hereto shall not be terminated on the basis of the approval of the Settlement Proposal, but shall be determined after hearing in accordance with Section 7 of the Natural Gas Act.

(D) Within 90 days from the date of this order, Hunt shall make such filings under its rate schedules as are required to make effective the terms of the Settlement Proposal, as modified herein.

(E) Within 90 days from the date of this order, Hunt shall (1) refund, with interest as specified in each docket computed to the date of actual re-

fund, the difference between the rates collected subject to refund, on and after April 1, 1962 and the related settlement rates to the date of this order; and (2) report to the Commission, in writing, the amount of refunds made to each of its purchasers, showing separately the amount of principal and interest so paid, and the bases used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the Settlement Proposal as modified and approved herein.

(F) Within 90 days of the date of issuance of this order Hunt shall withdraw each of its petitions to review orders of this Commission in Cause Nos. 20320 and 20392 in the United States Court of Appeals for the Fifth Circuit, and Cause No. 17579 in the Court of Appeals for the District of Columbia Circuit.

(G) Docket Nos. G–13157, G–13191, G–14082, G–16422, G–16479, G–18464, G–18555, G–18668, G–20009, G–20531, G–20532 and RI60–202 (related to sales made by Hunt in the Permian Basin) are hereby severed from the consolidated proceedings in Docket No. G–9065, *et al.*

(H) Within 15 days from date of receipt by it of the refunds herein provided, United Gas Pipe Line Company shall submit a report to the Commission, and serve a copy thereof upon each of its jurisdictional customers, setting forth a plan for distribution of such refunds to its customers. The report shall show separately the amount of principal and interest, together with a computation showing the manner in which such distribution was determined. United shall retain the refunds received pursuant to this order, subject to further order of the Commision, provided, however, that United shall not be required to pay interest on such funds.

(I) Within 15 days from the date of receipt by each of the following of the refunds herein provided, Texas Eastern Transmission Corporation, Southern Natural Gas Company, and Northern Natural Gas Company shall each submit a report to the Commission and serve a copy on their respective jurisdictional customers, setting forth the amount of refund received and their proposed disposition of such amount. Pending Commission action and further order respecting such proposed dispositions, the aforementioned companies shall hold such refund amounts in a special fund (without further interest obligation to them).

(J) Hunt shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order applicable to it.

(K) Any other party to the proceeding or settlement negotiations having objections to the terms of this order shall within 30 days from the date of issuance of this order set forth such objections in writing to the Commission of (original and one copy), and by serving copies itself on the other parties.

(L) If as a result of other objections filed pursuant to Paragraph K hereof, the Commission by subsequent order changes Hunt's duties and obligations hereunder, Hunt's acceptance of this settlement order shall not be binding upon it without its express agreement.

(M) Upon full compliance by Hunt with all the terms and provisions of this order applicable to it, the Section 4(e) proceedings listed in the appendix hereto and the Section 5(a) proceeding in Docket No. G–10414 shall terminate.

(N) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Hunt, the Commission Staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Hunt or any other companies, person or parties affected by this order.

Commissioners Morgan and Woodward *not participating.*

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 16, 1963)*

Syllabus

1. Producer certificates conditioned on initial price of 27 cents. P. 229.
2. Since evidence shows 27 cents is dominant prevailing price for wellhead sales of gas in Pennsylvania, it is not necessary that Commission pass on appropriateness of broadening area of comparison to include West Virginia. P. 229.
3. Commission *restates Skelly* holding that Producer's reliance on Policy Statement price level is not sufficient in itself to justify an initial price at that level in face of record evidence that preponderance of comparable sales have been certificated at lower initial price. P. 230.
4. While mindful of importance of administering initial price regulation in even-handed fashion, Commission cannot avoid findings compelled by this record by reference to result in single proceeding where no such record was before it. Pp. 230–231.
5. Considering escalation provisions and other claimed premium features, Commission *observes* that consistent application of "in line" comparision requires consideration of any additional feature of proposed sale which is of objectively measureable value. Pp. 231–232.
6. Permitting producers to maintain existing contract escalations will more than amply provide for whatever additional market value six-months peaking feature gives contracts over and above prevailing forms of contract in the area. P. 232.
7. Since Medina [gathering company] will engage in a jurisdictional sale and transportation it is a "Natural Gas Company" within the meaning of Section 2(6) of the Act—no other classification of overall nature of company's activities is relevant to determination of extent of Commission jurisdiction. P. 233.
8. Commission jurisdiction over Medina's facilities does not depend on economic function of company as a whole but on nature of specific facilities, considered item by item. P. 233.
9. Feasibility of Medina's project cannot be judged by same standards as that applied to major pipeline expansion—rather that applied to producer's proposed sale. P. 234.
10. In order to spare consumer risks of inadequate production, Commission imposes rate condition with respect to Medina's charges to pipeline. P. 234.
11. Commission *issues* certificates of public convenience and necessity, under Section 7, of the Natural Gas Act. Pp. 235–236.

*Initial decision appears on p. 236.

* Hunt proposed a 17.5¢ per Mcf escalation rate which has not been placed into effect and also to a rate suspension under Rate Schedule No. 51, which is not included in this settlement.

Bradford Ross, Sherman Poland and *Lewis Carroll* for Medina Gathering Corporation and Producers

Allan R. Squires, Herbert E. Squires and *Federick D. Cornelius* for Pennsylvania Public Utilities Commission

Charles E. McGee and *James D. McKinney, Jr.* for Pennsylvania Gas Company and United Natural Gas Company

Edwin F. Russell and *Harry G. Hill, Jr.* for the Brooklyn Union Gas Company

Bernard Hulkower for Long Island Lighting Company

G. Kirby Herrington, Norman A. Flaningam, Thomas F. Brosnan, Jacob Goldberg and *Richard B. Gordon* for New York State Natural Gas Corporation

George C. Williams, Norman A. Flaningam, Thomas F. Brosnan, Jacob Goldberg and *Paul Binkley* for the East Ohio Gas Company and Lake Shore Pipe Line Company

William W. Bedwell and *Thomas B. Taylor, Jr.* for Tennessee Gas Transmission Company

David S. Lichtenstein and *John J. Mullally* for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

O'CONNOR, *Commissioner:*

In late 1961 and early 1962, Medina Gathering Company and a number of independent producers filed certificate applications with the Commission in order to implement a plan to sell gas to Tennessee Gas Transmission Company from newly developed fields in Erie and Crawford counties in northwestern Pennsylvania and the adjoining Ashtabula County in Ohio. The producer applicants have to date completed about eighteen successful wells in the area, tapping a rather thin layer of sandstone known as the Medina sands, some 3,500 feet below the surface. Because of a relatively new development in the technology, known as hydraulic fracturing, the applicants believe that it is once again economically feasible to extract gas from the region in which the American petroleum industry originated over a century ago.

The main line of Tennessee's system traverses northwest Pennsylvania quite near the eastern extremities of the areas of anticipated production. Medina Gathering Company proposes to purchase the gas at the wellheads and deliver it to Tennessee at its main line at a point near the Erie-Crawford county line. Medina estimates that it will be necessary to construct about 28 miles of 10 or 12 inch pipe, at an estimated cost of $960,000 and as much as 78 miles of smaller lateral and well lines extending to the well heads, at an estimated cost of $2.5 million.

The proposals of Medina and the producers were subjected to intensive scrutiny at a lengthy hearing during the fall of 1962. Operating companies of the Natural Fuel Gas System and the Consolidated Natural Gas System, both of which are currently purchasing gas in the area, were active as intervenors. On May 3, 1963, the Presiding Examiner issued his initial decision recommending that all of the applications (except one producer application which was not prosecuted and apparently has been abandoned) be granted, subject to certain conditions. Of all the parties, only the Commission staff has filed exceptions to the Examiner's decision; the producers, Medina, and Tennessee have submitted replies to the staff exceptions.

THE ISSUE OF PRODUCERS' PRICES

The first of the staff exceptions relates to the initial-price condition imposed by the Examiner.

The producers' contracts with Medina were executed in the late summer and fall of 1961. They are of 20 years duration although the producers reserve the right to cease production from any well which they deem incapable of producing gas in paying quantities under normal methods of operation. The contracts provide for an initial price of 30¢ per Mcf (at 15.025 psia),[1] 31¢ on and after November 1, 1964, and two further 1¢ escalations at five year intervals.

The question of whether or not the price terms of these contracts are "in line" with those of the area which is relevant for comparison was one of the principal issues presented to the Examiner for decision. The staff sponsored an exhibit showing the initial rate for all jurisdictional sales currently being made in Pennsylvania and Ohio under contracts dated prior to September 1961. The number of certificated sales in Ohio (only one of which was subsequent to 1954) is so small as to be insignificant for these purposes. As to Pennsylvania, the Examiner found "the staff evidence is overwhelming to the effect that 27¢ is the dominant prevailing price for deliveries in Pennsylvania, in interstate commerce, that is, half the number of contracts and 84% of the volume." Considering next only the Pennsylvania contracts executed in the period from 1959 to 1961, the Examiner found that 27¢ was still the dominant price, "covering 60% of the sales and seven-eighths of the volume." All but one of the remaining sales were at 28.1¢. The only other evidence of comparative prices submitted by any of the parties related to certain nonjurisdictional intrastate sales being made by intervenor East Ohio Gas Company in Ohio and intervenor Pennsylvania Gas Company in Pennsylvania.

Despite his evaluation of the staff evidence, the Examiner decided that the appropriate "in line" price to which the intial rates should be reduced as a condition to the issuance of certificates, is 27.45¢. This is the price set forth in the Commission's Statement of General Policy No. 61–1, 18 C.F.R. 2.56, as the ceiling on the initial prices of new sales in West Virginia. As we read the Examiner's decision, he believed that certain actions by the Commission have indicated a judgment that the 27.45¢ West Virginia area price should be applied to the entire Appalachian region. The Examiner pointed to the recent certification without initial price condition of a 27.50¢ sale in Fayette County, Pennsylvania, the county immediately adjacent to West Virginia. *Texaco, Inc.*, Docket No. G–4614, *et al.*, order issued April 3, 1963 (sale by William E. Snee, *et al.*, Docket No. CI61–1743). In addition, the Examiner referred to the Notice of Proposed Rulemaking in Docket No. R–218, issued June 11, 1962, 27 Fed. Reg. 5714, wherein we proposed to establish, for purposes of applying Statement of General Policy No. 61–1, a single Appalachian area which would include West Virginia, Ohio, the eastern portion of Kentucky, the Western portions of Maryland, Pennsylvania, and New York, and Buchannan County, Virginia. Finally, the Examiner relied on certain language in *Allegheny Land & Mineral Co.*, 25 FPC 886, suggesting that the Commission there regarded the entire Appalachian area as an indivisible entity.

The staff has filed an exception to the Examiner's decision on the initial-price issue contending that the record in evidence of this case will not support an initial price in excess of 27¢ per Mcf. We have concluded that the staff's exception should be sustained and that issuance of certificates should be conditioned on the producers' charging an initial price not in excess of 27¢. In our view it is not necessary for a proper resolution of this issue that we pass upon the appropriateness or inappropriateness of broadening the area of comparison for these sales to include West Virginia. For though we may assume for present purposes

[1] All of the prices to be referred to in this opinion are computed on the pressure base of 15.025 psia.

that it was not improper to include West Virginia, the Examiner's fundamental error lay in terminating his inquiry as soon as he had made reference to the ceiling price for West Virginia listed in the Statement of General Policy.[2] This fails to take account of our decision in *Skelly Oil Co.*, 28 FPC 401, and later cases, where we held that a producer's reliance on the Policy Statement price level is not sufficient in itself to justify an initial price at that level in the face of record evidence that the great preponderance of comparable sales in the area have been certificated at a lower initial price.

As we recognized in *Skelly* the mandate to this Commission under *Catco* and the later courts of appeals decisions is clear: to impose a suitable condition limiting a producer's initial price to the level of prior certificated sales which are comparable and which are not "under a cloud". In this case, according to the Examiner's explicit findings, the record does contain evidence (substantially un-refuted) of a price line for comparable sales below the 27.45¢ Policy Statement price for West Virginia, namely the evidence of a preponderance of Pennsylvania sales at 27¢.

To be sure, we did in *Skelly* afford those producers who entered into contracts subsequent to the promulgation of the Policy Statement an opportunity to demonstrate the effect which should be given to the Policy Statement price, especially since numerous temporary authorizations had been issued at that price. However, still assuming for purposes of *this* discussion that sales in West Virginia would be relevant to these Pennsylvania sales, we note that the producers here expressly disclaimed any intention to rely upon the Policy Statement price for West Virginia. In an answer to staff's exceptions filed on behalf of Medina Gathering Company by the counsel who have represented the producer applicants as well, it is stated:

> Both staff counsel and the Examiner fail to perceive correctly the area which will be affected by Medina. That area is Northeast Ohio, Northwest Pennsylvania and the adjacent New York area.

Since the producers are content to stand upon the record of Pennsylvania and Ohio sales (the record reveals no evidence, nor are we aware, of any certificated New York sales) and since we are satisfied that our obligations under *Catco* do not require in this instance that we *sua sponte* order reopening of the record for evidence of West Virginia sales[3] it remains only to assess the evidence of Pennsylvania prices. The Examiner appeared to be of the view that the overwhelming evidence of 27¢ as the predominant price in Pennsylvania could be taken as no more than proof of the line for "the central Pennsylvania counties," in view of the fact that the Commission on April 3, 1963, certificated without condition a sale in Fayette County, Pennsylvania (adjacent to West Virginia) at an initial price of 27.5¢. Contrary to the Examiner's impression, this action did not amount to the establishment of a "south Pennsylvania price" at 27.5¢. Our certification of the Fayette County sale, which involves an estimated daily volume of about 1250 Mcf, was the result of an uncontested proceeding, wherein we did not have the benefit of the extensive evidence of Pennsylvania prices that were introduced into the record of this fully litigated case. It is doubtful whether we could have reached that result if such evidence had been before us. While we are fully mindful of the

[2] We should note also that our proposed rule establishing a single Appalachian area for purposes of administering Statement of General Policy No. 61–1, to which the Examiner referred, has no direct bearing on the price question. It is not to be implied from the proposed rule that the current West Virginia price would necessarily be established as the price for the Appalachian area.

[3] None of the intervenors, including the Pennsylvania Public Utilities Commission, Long Island Lighting Company, and Brooklyn Union Gas Company, has suggested the necessity of referring to West Virginia prices.

importance of administering the initial price regulation of producers in an even-handed fashion, we cannot avoid the findings that this record compels by reference to the result in a single proceeding in which no such record was before us.

Thus we find the staff exception to be well taken, and indeed we have given serious consideration to the question of whether it is necessary to go still further in order to bring these proposed prices into line. As we have noted, these twenty-year contracts provide for three fixed escalations of 1¢ each, the first of which is as early as November 1964. This is in decided contrast to the prevailing practice in the area, as revealed by the evidence, which is to have contracts for the life of the lease without future escalation provisions of any sort, either fixed or indefinite. We have had frequent occasion to give recognition to the evident proposition that the comparison of contract prices cannot be confined to initial prices alone. Buyer and seller quite obviously evaluate their bargain in terms of the price provided for over the contract life; future escalation provisions have a present value and unusually generous provisions for future escalations could cause general price rises in the market just as much as an excessive initial price See, *e.g.*, *Gulf Oil Corp.*, 23 FPC 664. In view of the substantial premium that the fixed escalation provisions appear on their face to give to the producers here, it is arguable that some adjustment is required to keep these contracts in line with the prevailing contracts providing for an initial 27¢ price, either through a condition further reducing the initial price or possibly a condition requiring modification or elimination of the escalations. See *Peoples Gulf Coast Natural Gas Pipeline Co.*, 24 FPC 106.

We note, however, that at the hearing the parties' attention was not focused on the fixed step escalations. Probably as a consequnce, the record is not as informative as it might be on such matters as the actual experienced duration of the contracts which run for the life of the lease and the practices of the pipeline purchasers in agreeing to price renegotiations, although not contractually required to do so. Because the existing contracts in the area are so different from the usual forms of contract with which we have become familiar in the more active producing areas of the country, we would be hesitant to evaluate the precise significance of the escalations on the present record. A remand for the taking of additional evidence would, in the circumstances, be unduly burdensome on the applicants.

Moreover, we need also to consider certain claims by the producers that their contracts give Medina the benefit of certain premium features. We agree entirely with the Examiner that the alleged option of Medina to acquire storage rights in the wells upon cessation of production does not justify a bonus above the "in line" price since the prevailing practice in the area is to include an option to acquire storage rights as part of the contract package. See *e.g.*, *Texaco Seaboard, Inc.*, 29 FPC 593, Opinion No. 383; *Standard Oil Co. of California*, 27 FPC 1153, *aff'd sub nom. California Co., Western Division* v. *F.P.C.*, 315 F. 2d 652 (CA10, 1963). The producers' second claim is that their contracts give Medina the right to take all of the gas during the six winter months (as Tennessee has the corresponding right to make all its purchases from Medina during the six winter months) and that this constitutes a peaking service of substantial additional value. The Examiner evidently was of the view that the claim of an additional peaking value raised a somewhat more difficult question. While a large number of the contracts for certificated sales permit some reduction in summer takes (such as the summer cutback to 33⅓% which appears to be characteristic of Manufacturers Light and Heat Company's contracts), so far as the record re-

veals, none permits the complete elimination of summer takes.[4] The Examiner was of the view that it was unnecessary to resolve this and other questions surrounding the alleged premium feature since the claim could more appropriately be raised in defense of the justness and reasonableness of any increased rate that the producers might file. We believe, however, that a consistent application of the "in line" comparison requires that we give consideration at the stage of certification to any additional feature of the proposed sale which is of objectively measurable value. In this case we think it is sufficient to say that permitting the producers to maintain the existing contract escalations will, in our judgment, more than amply provide for whatever additional market value the six-months peaking feature gives these contracts over and above the prevailing forms of contract in the area.

THE ISSUE OF MEDINA'S STATUS

The staff's exceptions question one other aspect of the Examiner's decision. One of the highly controverted issues in this case was whether Medina's proposed program of constructing some $2.5 million of facilities to transmit the gas from the various well heads to Tennessee's pipeline is a feasible one in the light of the present evidence of the likely reserves. The Examiner resolved the issue of feasibility in favor of the applicants, expressing the view that Medina was not obliged to make the same kind of showing of feasibility that would be required of a long-line transmission company. At least in part the Examiner appeared to reach this conclusion because of a belief that certain conditions that he imposed at the suggestion of the staff and with the acquiescence of Medina guaranteed that Medina and not the consumers would bear the risks of insufficient gas production. The staff has no disagreement with this. But to some extent the Examiner's acceptance of a lesser showing of feasibility here seems to have derived from his view that Medina's proposed operations basically would be "gathering" within the meaning of Section 1(b) of the Natural Gas Act and thus exempt from the Commission's certificating jurisdiction. The following passage from the Examiner's decision reveals his reasoning:

> It is not necessary to rest upon the conclusion—although it seems entirely supportable—that the Medina program from beginning to end is functionally and economically a gathering program which the law exempts from the jurisdiction and therefore the responsibility of the Federal Power Commission, upon which basis no finding of feasibility should or even could be required for a certificate to permit Medina's sales and also to permit whatever incidental transportation takes place at the end of its technical gathering. In other words, the actual activity whose feasibility is inherently uncertain is the very activity which the statute exempts. Rather, in the staff's view and in its obviously sensible, proposed solution, the jurisdiction point does not become critical or controlling. Since the sale by Medina (as distinguished from its gathering) is clearly and fully jurisdictional (the very point of *Phillips*), the staff's solution is to limit Medina's sale price to its own proposal, that is 7¢ plus the cost of the gas.

The staff, while not objecting to the result reached by the Examiner, takes exception to the discussion quoted above and several others of similar purport. The staff argues that Medina will be primarily engaged in the transmission of natural gas in interstate commerce and that therefore the question of feasibility cannot be avoided on the ground that Medina's activities are basically of an exempt nature. In a reply to staff's exceptions, Medina states that the questioned portions of the Examiner's decision should merely be regarded as dicta which

[4] The six-months privilege is a feature of some of East Ohio Gas Company's intrastate purchases in Ohio at an initial price of 27¢.

would not be binding in future cases. Medina acknowledges that it will be a "natural gas company", within the meaning of Section 2(6) of the Natural Gas Act and that most of its facilities will be jurisdictional facilities. It suggests that the Commission simply issue a certificate covering all of those facilities to be constructed which will be jurisdictional under the applicable law, without now pausing to draw hypothetically the fine line between the facilities for "gathering", which will be exempt from our jurisdiction, and all the remaining facilities, which will be subject to it.

While we believe that these candid statements by Medina are most helpful, it may avoid some confusion in the future if we indicate briefly wherein we think the Examiner erred. In suggesting that "the Medina program from beginning to end is functionally and economically a gathering program," the Examiner enters upon a kind of classification which has no purpose or utility in determining the extent of this Commission's jurisdiction. Under Section 7(c) of the Natural Gas Act, this Commission (1) certificates those transportation or sales of natural gas which are subject to its jurisdiction and (2) certificates the construction, extension, and operation of those facilities which are subject to its jurisdiction. Since Medina will engage in both a jurisdictional sale and jurisdictional transportation, it is a "natural gas company," within the meaning of Section 2(6) of the Act. No other classification of the overall nature of a company's activities is relevant in determining the extent of this Commission's jurisdiction.[5]

When we turn to the question of the Commission's jurisdiction over Medina's facilities, the answers depend not on the economic function of the company as a whole but rather on the nature of the specific facilities, considered item by item. In general, all the facilities to be used for the sale to Tennessee must be certificated, except those which are used solely for "gathering", within the meaning of Section 1(b) of the Act. As Medina suggests, the determination of the point at which gathering ends is not without its difficulties. The Commission's decisions in *Barnes Transportation Co.*, 18 FPC 369, and *Texas Gas Corp.*, 18 FPC 397, indicated some guidelines for making that determination.[6] We are aware that some persons have questioned the practicality of the *Barnes* formulation, and we should not wish to foreclose any party in an appropriate case from suggesting a guideline which in its judgments is clearer and easier of application.

But plainly it would not be appropriate to venture upon such an inquiry in this case. The record reveals very little detail of the facilities to be constructed by Medina for the understandable reason that the precise number and location of the well lines, lateral lines, etc., will largely depend on the results of the producers' drilling program. In substance the authorization which Medina requests here is similar to the "budget-type" certificates which we frequently issue to pipelines pursuant to § 2.58 of the Rules of Practice of Procedure, authorizing the construction of unspecified facilities, within a stated dollar limit, for the purpose of connecting the pipeline's system with additional sources of supply. Since Medina has manifested a clear understanding that all of its facilities will be subject to our jurisdiction except those which are solely for "gathering", it will

[5] We should note that, pursuant to the power conferred by Section 16 of the Natural Gas Act, the Commission has established two principal classifications of "natural gas companies"—generally referred to as "pipelines" and "independent producers"—which are subject to some varying requirements with respect to the form of certificate application, rate schedule and increased rate filings, annual reports, etc. In this case, Medina acknowledges that it will be obliged to follow the "pipeline" form of regulation.

[6] There would appear to be some doubt whether the Examiner correctly applied the *Barnes* test in the discussion which appears at footnote 19 of his opinion. Because of the view we have taken of the case, however, we have not found it necessary to consider the question fully.

suffice to issue the certificate in the usual form, authorizing the sale "together with the construction and operation of all facilities subject to the jurisdiction of the Commission necessary therefor". The periodic reports filed by Medina pursuant to Section 157.20(c) of the Natural Gas Regulations should state in detail the description, location, cost, etc. of *all* the facilities actually constructed. If there is then any controversy over which of the facilities are subject to our jurisdiction, it can be resolved at that time.

While we cannot pass over the question of feasibility in this case as being beyond our jurisdiction, we do appreciate that the feasibility of Medina's project cannot be judged by the same standards that we would apply, for example, to the proposed expansion of a major long-time transmission system. In effect, Medina is proposing to share with the producers (any one of whom would probably be unable either to interest Tennessee in picking up his gas or to transport it to Tennessee's line himself) the risk that the Medina sands will not be as productive as they now hope. As long as it is guaranteed that Medina will not, in turn, shift these risks to the consumer by filing increased rates which are based upon a claimed inadequate rate of return, we think it is appropriate that our scrutiny of the economic feasibility of this project be closer to the kind of examination we would give a producer's proposed sale and related construction of jurisdictional facilities.

Medina's contract with Tennessee provides for an initial price of 33¢ per Mcf plus a payment of 4¢ per Mcf which is alleged to be consideration for the transfer by Medina of storage rights in the wells when depleted. The contract also provides for three 1¢ periodic escalations which exactly correspond to the escalations provided for in the producers' contracts with Medina. Medina submitted a study showing that if it is able to sell the full contract quantity to Tennessee, it will earn a return on its investment of more than 8% in the third year of operations. This calculation is based upon a 7¢ spread between the price paid to the producers and the rate charged Tennessee, the spread which Medina would receive under the initial-rate provisions of the contracts as they now stand. We agree with the Examiner that, in order to spare the consumer the risks of inadequate production, it is necessary to impose a condition that Medina shall at no time charge a rate higher than the sum of 7¢ plus whatever rate may then be lawfully in effect for any one of the producer's sales to Medina. By application of this condition, Medina will be required to file an initial rate of 34¢ per Mcf. Despite our staff's suggestion, we do not believe that it will be necessary to require Medina to amend the contract with Tennessee in order to incorporate the seven-cent limitation. The Examiner's decision, which we are adopting in this respect, provided quite clearly that the seven-cent limitation is to be a continuing condition applicable for the entire duration of the sale unless modified by the Commission. Since Medina has not filed any exceptions to the Examiner's decision, it is apparent that it is content to accept a certificate subject to this limitation. In order properly to implement the condition we are imposing, it is necessary to modify the direction contained in Ordering Paragraph (D) of the Examiner's Decision that Medina should file its contract with Tennessee as a special rate schedule. Because the contract with Tennessee designates part of the actual compensation to be received by Medina as a per Mcf payment for transfer of storage rights, we think that Medina should file a tariff in accordance with §§ 154.31–41 of our Natural Gas Regulations, showing as the rate the full compensation to be received by Medina per Mcf of gas sold, in accordance with the contract and the conditions herein imposed.

The Commission further finds:

(1) The following applicants:

Benedum-Trees Oil Company, Operator, *et al.*,

Benedum-Trees Oil Company, *et al.*,
Paul Benedum,
Great Lakes Natural Gas Company, Inc.,
The Grantley Company,
Paul L. Britton, Jr., Operator, *et al.*,
Worldwide Petroleum Corporation,
Russell McConnell,
Flanigan Brothers, Operator and Agent, *et al.*,

are each, or upon initiation of the proposed sale to Medina will be, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and are or will be "natural gas companies" within the purview of the Natural Gas Act.

(2) Upon initiation of its proposed service and sale, the Medina Gathering Corporation will be a "natural gas company" subject to the jurisdiction of the Commission and a pipeline company for purposes of the Commission's regulations.

(3) The sales of natural gas proposed by all of the producer applicants above-named and the sale by the Medina Gathering Corporation, together with the construction and operation of all facilities subject to the jurisdiction of the Commission and necessary therefor, are subject to the requirements of Section 7(c) of the Natural Gas Act. The sales are required by the public convenience and necessity, and certificates therefor should issue to each of them, subject to the conditions herein stated, such conditions being required by the public convenience and necessity.

(4) The several applicants named are able and willing to do the acts and to perform the services proposed and to conform to the Natural Gas Act and to the requirements and regulations of the Commission thereunder.

(5) The public convenience and necessity requires that the initial prices charged by the applicants named in paragraph (1) above for the sale proposed in their certificate applications in this proceeding be not greater than 27 cents per Mcf at 15.025 psia.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to the applicants named in paragraph (1) above for the sale of natural gas in interstate commerce for resale as proposed in the respective applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission, necessary therefor upon the terms and conditions of this order.

(B) The certificates issued to the producer applicants are hereby conditioned to prohibit any total initial price, including all reimbursements and charges, greater than 27 cents per Mcf at 15.025 psia, from the date of the issuance of this order until such prices may be lawfully changed in the manner provided by the Natural Gas Act.

(C) The certificates issued herein are conditioned upon their acceptance in writing by the respective producer applicants within 30 days of the issuance of this order.

(D) The certificates issued herein are not transferable and shall be effective only so long as each of said applicants continues the acts and operations herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission.

(E) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the Commission's Regulations under said Act requiring the filing of rate schedules

for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose nor prejudice any further proceeding or objection relating to the operation of any price or related provisions in the gas contracts here involved.

(F) A certificate of public convenience and necessity is hereby issued to Medina Gathering Corporation for the sale of natural gas to Tennessee Gas Transmission Company, together with the construction and operation of all facilities subject to the jurisdiction of the Commission and necessary therefor, all as described more fully in the application and amendments thereto.

(G) The general terms and conditions set forth in Section 157.20 of the Commission's Regulations under the Natural Gas Act shall attach to the certificate issued to Medina.

(H) The certificate issued to Medina is further conditioned to require that its rate for sale to Tennessee Gas Transmission shall not at any time exceed the sum of seven cents per Mcf (at 15.025 psia) plus any rate lawfully in effect for the sale of gas to Medina by any one of the producer applicants.

(I) Medina shall, within 90 days after the first two years of operations, file detailed data setting forth its costs upon the basis of actual experience.

(J) The certificate is further conditioned upon Medina's revising its plan of financing so that the long-term debt ratio will not exceed 75 percent of the total capitalization at the end of the second year of operation.

(K) Medina shall file a tariff in accordance with Sections 154.31–41 of the Commission's Regulations under the Natural Gas Act, which shall show as the rate in effect the full compensation to be received by Medina per Mcf of gas sold, as provided for by the contract and the conditions herein imposed.

(L) The application of Atlas Exploration Company, Operator, in Docket No. CI62–760 is dismissed.

(M) The examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this opinion and order.

(N) All exceptions not granted herein are hereby denied.

INITIAL DECISION

UPON THE PRODUCERS' AND GATHERER'S APPLICATIONS FOR A CERTIFICATE UNDER THE NATURAL GAS ACT

(Issued May 3, 1963)

ELLIS, *Presiding Examiner:*

I. Nature of the Case

Twelve hundred yards below the surface of the earth in the neighborhood of Erie, Pennsylvania, there is claimed to be found a thin layer of sandstone, spread over an area of many miles and containing natural gas in an uncertain

quantity, significant in itself but rather small in relation to many cases from other parts of the country. Certain local interests, also some producers from the southwest, have undertaken a progam to drill through the earth's crust to this putative productive area, capture the gas there hoped to be found, and market it (through an intermediary) to the Tennessee Gas Transmission Company, whose main line to the New England states crosses nearby. This is the initial decision on their certificate application to market the gas to the gathering company and on the latter's application to sell it to Tennessee.

The program has been quite stoutly contested and opposed by certain present companies who produce, purchase and distribute gas in the immediate area. Not entirely without equivocation, the FPC staff has recommended that if a certificate is to be issued for this program it shall only be under certain stringent conditions as to price, both for the producers' sale and for the gathering rate. In general, the issues raised question the reality of the gas reserves claimed, the feasibility of the entire program, the ability of the various promoters to accomplish it, the availability of the capital to get it started, the "public convenience and necessity" of the project even if it should work, and, most of all, the 30¢ price to be paid to the producers.

There was besought every urgency available to conclude the proceeding because, the market being interstate, the project cannot begin without the Federal permit, no temporary certificate has been issued, and each day it continues costs the producers $333 for delay rentals to their lessors.[1] The application was filed in February a year ago, but was revised a number of times in the next few months and many more times during the course of the hearings as various deficiencies or indeterminables developed.

II. Procedural History

August-November 1961: The several producers contracted to produce, sell and deliver their gas to what is now the Medina Gathering Corporation.

December 1961-February 1962: Applications were filed by ten producers requesting a certificate under Section 7 of the Natural Gas Act to authorize their sales to what is now the Medina Gathering Corporation.

February 1962: What is now the Medina Gathering Corporation contracted to gather and deliver the gas to a point on the line of the Tennessee Gas Transmission Company. Two weeks later Medina filed with the Federal Power Commission its application for a certificate of public convenience and necessity, requesting "such authorization as is necessary for it to gather, sell and deliver natural gas to Tennessee for resale in interstate commerce," and suggesting that its operations come within the FPC regulations which govern filings by producers and gatherers (Section 154.91). At the same time, the application purported to attach all the information which would be required of a pipeline natural gas company.

March 1962: Medina's application was amended to supply additional information requested by the staff, including cost data, reserve estimates, etc.

April 1962: Medina's application was further amended to set forth a revised plan of financing.

May 1962: Medina's application was further amended to supply additional matters requested by the staff. On May 18, the Commission's notice of application issued, calling for a hearing under what is known as the "shortened procedure," which is provided for non-contested cases.

June 1962: The hearing scheduled for June 26 was postponed to a date to be later fixed, and a number of intervention petitions were filed.

---

[1] 12T1263. But half of this is on acreage not regarded as proved up and not included in the reserves estimate.

July 1962: Additional petitions for leave to intervene were filed.

August 1962: Notice issued of the producers' applications, which were set for hearing on October 2.

September 1962: Medina's application was consolidated for purposes of hearing with the producers' applications, which was designated to begin October 2. On September 18, the several applicants filed a motion for a prehearing conference and, by the Examiner's order of the following day, the prehearing conference was called for September 26. At this conference the applicants' case, including exhibits and testimony, was made available to all parties and the case of the potential interveners was outlined and in some respects limited. By concession, the hearing was scheduled to open on October 4, cross-examination to take place on October 4, 5, 11 and 12, the staff's exhibits to be served on October 4 and the interveners' case in opposition to be served on October 12 and to be ready to be cross-examined on October 15.[2]

October 1962: The Commission's order of October 5, 1962, announced the intervention of the Pennsylvania Public Utility Commission and granted the petitions to intervene which had been filed by the following:

East Ohio Gas Company
Lake Shore Pipe Line Company
New York State Natural Gas Corporation
Tennessee Gas Transmission Company
Brooklyn Union Gas Company
Long Island Lighting Company
Pennsylvania Gas Company
United Natural Gas Company

October-December 1962: The hearing continued on twenty-two separate days, with only such recesses and postponements as were required by the parties, including the applicants, in order to permit them to prepare cross-examination and present further testimony and their rebuttal case.

January-February 1963: Briefs were filed by the several applicants and their supporting intervener. Four weeks later, briefs were filed by the F.P.C. staff and by the interveners opposing the application, also a motion to dismiss by the Pennsylvania Gas Company and the United Natural Gas Company. Two weeks later, there were filed reply briefs by the applicants and by their supporting intervener (Tennessee).

III. Motion to Dismiss for Lack of Producer Witnesses

Calling upon one law firm to represent both of them, the interveners, Pennsylvania Gas Company and United Natural Gas Company, have filed a motion to dismiss the applications of all the independent producers who called upon one of them (Mr. Paul Britton) to represent all of them. It is said that his appearance as a witness for and on behalf of all the producers[3] does not furnish the forum competent and adequate testimony to support the respective applications, that the applicants have failed to sustain their statutory burden of proof (14 FPC 134, 145), and that the procedure selected deprives the interveners of their right to cross-examine the eight producer applicants. Their brief adds the suggestion, or perhaps something more than a suggestion, that the Examiner can lawfully

[2] Prehearing transcript, page 147.

[3] There is one exception. The Atlas Exploration Company, Operator (Docket CI62–720), so the forum was advised by the attorney designated in their application, has decided not to prosecute its application and it was not represented at the hearing (1T43 and Prehearing transcript, pages 4–5). Accordingly, the motion to dismiss as to that applicant is granted. 23 FPC 364, 377. The order here subjoined so provides.

consider only Mr. Britton's own case. "To do otherwise would be clear reversible error." [p. 56] The Commission has directed that the motion to dismiss be referred to the examiner for disposition in the initial decision in this matter.

The nine producer applicants, all of whom plan to operate in this immediate geographic area, have signed separate contracts for the sale of gas to the Medina Gathering Corporation and have filed separate applications here for the certificates permitting the proposed sales. All the applications and contracts appear to be in like form, with like conditions, stipulations and agreements. All contracts call for the identical price (30¢ per Mcf initially, with an option on the part of the buyer to take the gas during the six winter months only, that is, November through April), and all were executed during 1961, on various dates between August 16 and November 21. All but one estimate the same monthly volume; that of Great Lakes Natural is one-third lower. The delivery point in each case is the same, that is, at the wellhead.

The witness appearing for the eight other applicants and for his own firm was Mr. Paul Britton, whose partnership, as operator, has filed its own application under CI62–732. He testified that he has been authorized by each of the other eight producer applicants to testify on their behalf (1T80, 100).[4] It was related that Britton had been in touch with other producers in the group to discuss their common problem of a gas sales outlet in the area. They organized a meeting of many of the major leaseholders and producers in the three-county area to begin negotiations with the proposed gatherer and explore the feasibility of the undertaking. At the first meeting, Britton was appointed representative of the northern producers. Most of the present applicants were represented; others joined later. At later meetings of the group, a proposed gas sales contract was worked out and the sale of storage rights discussed. At a final meeting in July 1961, representatives of all the parties who have filed in the proceedings met and received an explanation of the terms of the contracts and of the buyer's program, including the filing of its application with the Federal Power Commission (1T90–96). Their joint negotiations with respect to the price were explained at length, including the felt need to reduce the price from 32¢ to 30¢.

The case of the producers other than Mr. Britton is moved for dismissal, without consideration upon the merits, purely for failure of the producers themselves to appear at the hearing.[5] Even if it be found that testimony on behalf of the several applicants is specifically required,[6] it seems to be clear that the nine producers have a very distinct community of interest, they are acting in concert, and their designated attorney confirms the specific averment by Mr. Britton that he was and is authorized to speak for them and to present whatever testimony and answer whatever questions may be required. In that view, the motion to dismiss loses force because each several applicant did have a witness here to

---

[4] This was confirmed by the attorney for the applicants referred to by name in each application (15T1874; Preh. T. 14).

[5] By way of comparison, note there seems to be no objection to Mr. Britton's representation of the three co-owners with whom he is making his own sale, since he files for all of them as required by the Commission's regulations, paragraph 154.91. Likewise, in CI62–695 the applicant is listed as the Benedum-Trees Oil Company and the application is signed and sworn to by its president, a Mr. Floto. Yet it is shown that company itself has only a one-sixth ownership, that two other companies also have a one-sixth ownership each, while the Arkansas Louisiana Gas Company has a 50% ownership. Apparently it would have been thought quite all right (indeed required) for Mr. Floto to appear and represent his three co-owners (none of whom signed anything here), but it is thought *not* all right for Mr. Floto and associates to ask Mr. Britton to represent them.

[6] The interveners quote the following dictum from the case of *El Paso*, 23 FPC 369, 377: "As a general matter, in a contested case of this character, a producer must present the witnesses to support its own certificate application."

speak for him and support his certificate application, and that witness was Mr. Britton.

But this is not all. The written application, sworn to and verified by a responsible official of each applicant company, was in each case admitted in evidence as an item by reference with, however, the understanding that its acceptance as probative evidence is subject to the basic requirement of cross-examination (1T38–48). It is in this context that the interveners cite section 7(c) of the Administrative Procedure Act which insures to every party "such cross-examination as may be required for a full and true disclosure of the facts." But there must be read in this connection the sentence following in section 7(c): "In * * * determining * * * applications for initial licenses any agency may, where the interest of any party will not be prejudiced thereby, adopt procedures for the submission of all or part of the evidence in written form." Also the following subsection, 7(d), to the effect that the transcript and all papers and requests filed in the proceeding shall constitute the exclusive record for decision. Thus the question is whether, in the language of the statute, the interest of the interveners has in any way been "prejudiced" by the action of the forum in admitting as evidence the formal applications and the gas purchase contract with each, which is about all that appears of any consequence in and with the formal applications. In the first place, nobody denies that the papers filed are true copies of the contracts; neither is there challenged *any* specific averment in the four-page applications.[7] In the second place, there was offered to the intervener the opportunity to propose for consideration a subpoena for any witness really wanted, but none was requested (15T1873).

In the third place, the Commission has held that the intervener who complains of the lack of opportunity for cross-examination must show what line of testimony was thereby frustrated.[8] Only two items of possible inquiry are mentioned in the motion to dismiss, namely, the nature of the producers' drilling program and the source of the considerable financing obviously necessary to engage in it. But such questions relate purely to production, and the production of natural gas is quite outside the Commission's jurisdiction and responsibility under the Natural Gas Act and is of no greater recognizable concern to the interveners. The Commission, while undertaking to regulate, as the law says, the actual *sales* by independent producers, has, not once but a number of times, assured the courts that it has no program, purpose, or jurisdiction to regulate the activity of production.[9] That same assurance was given to the Congress when the exempting phrase "production or gathering" first appeared in the legislative history of the Natural Gas Act. See memo of April 2, 1936, from FPC Solicitor, now Judge

---

[7] Of course they do announce in the applications "that natural gas from the following sources will be involved," followed by a reference to the gas purchase agreement where the leases are merely listed. If it be the point that cross-examination should cover the quantity of gas in reserve, it will be recalled that the producers in each case adopted as their own the reserve evidence submitted by the Medina Gathering Corporation (1T99), as to which the cross-examination was full, in fact at great length.

[8] *Natural Gas Pipeline Company of America*, Opinion No. 367–A, 28 F.P.C. 737, November 15, 1962. Note that in the case cited by the interveners, *El Paso Natural Gas Company*, 23 F.P.C. 369, 377, the evidence adduced by certain other parties was held sufficient to warrant a certificate to the absent producers, their sales already being under way under a temporary authority. Presumably, however, in that case the temporary authorities which had issued contained the usual provision disclaiming any prejudging of the action to be taken on the final certificate.

[9] See the briefs filed for and by the Federal Power Commission in the following:

Continental Oil Co. v. *F.P.C.* (CA 5, 1959) 266 F. 2d 208 (p. 20)
Cities Service Gas Co. v. *State Comm.* (1958) 355 U.S. 391
Continental Oil Co. v. *F.P.C.* (denial of cert.) 361 U.S. 827 (p. 9)
F.P.C. v. *Panhandle Eastern P. L. Co.* (1949) 337 U.S. 498 (pp. 12–33)

DeVane, printed in House Hearings on H.R. 11662 of the 74th Congress, at page 17. The Supreme Court has said a number of times that the exemption means what it says, and removes from the Commission's certificate responsibility the physical activity of production,[10] which is quite meaningless indeed if it does not cover such questions as the drilling program and the financing of the process. In fact, it will be recalled that, in one of the court cases sustaining Commission jurisdiction over the sales by the producers, it was the well-expressed apprehension of Judge Brown of the 5th Circuit, in dissent, that control over the sales would soon be expanded to include control over production.[11]

If, here the producers are to be questioned on the nature of their drilling program or how they are to finance it, it can be relevant only in the apparent view that the Commission's certification of the sale comprehends an approval of, or would be denied upon the disapproval of, the program of drilling and financing the wells. Bearing in mind that here the producers have not asked for a certificate to authorize their production or their drilling, but have asked only for approval of their proposed sale (which, as explained below at p. 248, appears to amount to a program of selling only whatever quantity their wells produce), it seems clear that the two subjects tentatively suggested for cross-examination of the absent producers are not necessary and relevant, their resolution to the satisfaction of the Commission and to the interveners is not essential to the findings required for a certificate of convenience and necessity under Section 7 of the Natural Gas Act, and the only interest to be served by hearing the eight or nine coveted witnesses would be the further delay of the proceeding.

But three examples are enough to demonstrate that this is indeed the Commission's actual (even if unexpressed) policy in the certification of producers' sales in interstate commerce made at the wellhead. That is, while the price and all other terms of the sale are very distinctly the Commission's responsibility and the subject of inquiry, the means and methods of production are not, at least in a case such as here, where the contract has no definite quantity, the pipeline buyer has disclaimed any present reliance, and there is no pipeline construction or marketing program to be certificated in dependence upon the new supply (3T474; 13T1570). The three exemplars that the Commission's policy is as stated are as follows:

(1) The guiding decision in these cases is known as *Catco*, 360 U.S. 378, where the production program was to deliver four or five times as much gas as here is suggested, but in the opinions and findings in that case (17 FPC 563, 732 and 880) not one word appears as to the ability of the applicants to finance the obviously considerable cost of the off-shore drilling to produce the great quantity of gas proposed. There, as here, the area dedicated was in the neighborhood of 100,000 acres and the number of wells drilled at the time of the hearing was very small, 22 in the case of *Catco* and 18 in the case of Medina. There it was mentioned that further development by drilling will occur in subsequent years, but (even though the producers' ability to perform the service proposed was placed in issue by one of the interveners, 17 FPC at p. 566) there was no suggestion that it was or is the Commission's responsibility to determine how the drilling would be financed. Indeed, under the present rules that cost of production is not in issue in a producer certificate case,[12] it

[10] *Phillips:* 347 U.S. 672, 678; *Colorado Interstate:* 324 U.S. 581, 598; *Hope:* 320 U.S. 591, 612.

[11] *Continental Oil Co.* v. *F.P.C.* (1959) 266 F. 2d 208, at p. 221.

[12] From Opinion No. 383, *Texaco Seaboard Inc.*, March 27, 1963, 29 F.P.C. 593, 595; "We held [in *Skelly*, Op. No. 362] that cost of service and financial requirements evidence normally is not relevant in producer certificate cases * * *" *Cf. California Oil Co.* v. *F.P.C.*, 315 F. 2d 652 (CA10, March 28, 1963).

is not perceived that the question of ability to finance the drilling could ever be determined when evidence of the cost has been excluded. Thus the Commission's opinion in the *Catco* case does not reflect upon, or even suggest awareness of, the cost of the offshore drilling or how the money is to be raised, and the Supreme Court's full and careful review of the Commission's program and policy in the certification of sales by independent producers of natural gas makes no suggestion that any such inquiry is necessary or even pertinent.

(2) Quite different from the rules applicable to pipeline applicants, the Commission's regulations for applications by independent producers for the FPC's permission to sell their gas make it quite evident that the applicant is not expected to demonstrate what wells he has or expects to have, or how he expects to finance them. This is in distinct contrast to paragraph 157.14 of the regulations, which governs the application by a *pipeline* to establish or extend its system and requires the pipeline company to show in detail its proposed financing, how its securities are to be sold, to whom and for what price. But, turning to section 157.23, which regulates filings by independent producers for certificates of convenience and necessity covering their proposed sale of natural gas, it is notable that not one word appears about financing or about a well drilling program. As to the sources of the gas to be produced, the applicant is to give "the approximate location of the fields and the points of delivery" (section 157.24), and furnish a map showing the production properties only in sufficient detail to give their general geographical location (section 157.25). Instead of drilling and financing, the Commission's concern is obviously with the single subject which the law directs the Commission to regulate with respect to producers, that is, their sales and the facilities necessary therefor. Thus the only real detail the regulations seem to require is a showing of the point of delivery and a conformed copy of each contract for sale. It is in the light of that very limited information which the Commission expects of any producer applicant that the Supreme Court could say in *Catco*, "The witnesses tendered developed little more information than was included in the printed contracts." (360 U.S. 378, 392.) It is evident that the showing of facts upon which the Commission is to make its finding that the producer is "able and willing" to make the sale proposed, as required by Section 7 of the Natural Gas Act, and to issue the certificate or license for the sale, does not require a recitation as to the number of wells drilled or to be drilled or the means of their financing. The necessary finding that the applicant is "able and willing" to sell gas does not presuppose an inquiry into whether he can first produce it, because production is specifically exempted from the purview of the Federal law, Section 1(b), N.G.A.

(3) To exemplify actual current operations under these regulations, there may be referred to as typical a recent uncontested case in which the Commission has just "certificated" a total of 132 separate sales by independent producers to numerous pipeline buyers in many states. In Docket G–4324 and many others, the Commission's order of February 27, 1963, has issued its license or certificate for the sales in the many dockets there consolidated. Out of the total, 56 cover contracts for delivery of gas in West Virginia.[12] There have been examined the official files pertaining to nine of the West Virginia 25¢-sales, which involve two different buyers, and official notice is taken of the contents of these public files. In none of the files does there appear a single word on the subject of the number

[12] As to price: 45 are at a base price of 25¢ (at 15.325), 11 are in West Virginia but at other prices (only one above 25¢ and that is at the rate of 27.5¢ for a delivery in Lewis County, West Virginia), and 76 cover sales in other states at various prices "at or below established ceiling prices." It is adverted to below that each of the contracts examined has a special condition calling for the summer schedule to be at the buyer's option.

of wells drilled or to be drilled or of the financing, if any, required for the production. Not a scintilla of evidence was offered or required to show the amount of the gas underlying the acreage reported as dedicated, or what drilling has taken place, or what drilling is expected to be required or is scheduled, or what expense is to be faced to accomplish the production, or how the financing, if needed, is to be effected. Under the heading of "gas supply—own production" there is shown in each case only the number of acres controlled and their location.[14] It is true of course that, like many others, this omnibus certificate was uncontested except for its examination by the FPC staff and no interveners appeared at the hearing, the applications being received in evidence upon motion of the Commission's staff counsel. But it would be undiscerning, indeed irresponsible, to suggest that the basic evidentiary facts which the *Commission* must have to make *its* statutory findings and conclusions are any the less or any the greater due merely to the happenstance that an intervener appears for one reason or another to make a contest.[15]

Limited of course to the special facts here present, namely (a) where the pipeline buyer does not depend upon the offered supply for any expansion of the pipeline system or of its markets and (b) where the several producers appear not legally bound to sell more gas than they find themselves able to produce, it is the view, accordingly, that the certification of the producer's sale is not required to depend upon a showing of his drilling program or of financing the proposed production. Since these subjects are not relevant and necessary to be covered in the proofs, it follows (reverting to the language of Section 7(c) of the Administrative Procedure Act) that the interest of the interveners is not prejudiced by the lack (if any such there was) of opportunity to cross-examine the producers on those matters[16] or by the submission of the evidence in the form of the written applications. The motion to dismiss for lack of opportunity to cross-examine is accordingly denied.

IV. The Project Described

The Producing Area: Although the "Medina Sand" to be tapped by the producers in this case is quite extensive, running many miles wide in a geological stratum from Kentucky to New York State and Ontario, the "area of interest," as it came to be described, is limited to three counties near Erie, Pennsylvania, that is, Erie and Crawford Counties in the northwest corner of Pennsylvania, and the adjoining Ashtabula County in Ohio. The 124,000 acres dedicated to the producers is located in those three counties, within a triangle running from Erie to Meadville, Pennsylvania, to Ashtabula, Ohio, and back to Erie. The main line of the Tennessee Gas Transmission Company running northeastwardly to New England crosses the state near Meadville. Hence the genesis of the Medina project involves connecting with the Tennessee line at a point 20 miles northeast of Meadville, building a 10-inch or 12-inch line straight west

[14] The docket numbers of which official notice is taken are as follows: CI63–540, CI63–541, CI63–542, CI63–543, CI63–552, CI63–553, CI63–562, CI63–568 and CI63–571.

[15] See the strong dissent by Commissioner Connole in *Seaboard Oil Co.* (1958), 19 FPC 416, 429 (the substance of which now appears to be the law in view of the later decisions in *Catco* (1959), 360 U.S. 378, and in FPC Opinion No. 383 of March 27, 1963, in *Texaco Seaboard*, 29 FPC 593, 596):

> The Commission, however, has more than the right to investigate a *prima facie* record to determine whether in its judgment the case on which Applicant relies satisfies the statutory standard, regardless whether anyone has questioned it or attempted to rebut it. In addition, we have the duty to do so. (Paraphrasing and quoting further from *Isbrandtsen Co.* v. *U.S.* (3-j. D.C., 1951, J. Frank) 96 F. Supp. 883, 892, affirmed 4–4, 342 U.S. 950, and quoted with approval by the Ninth Circuit in *Anglo-Can. Shipping Co.* v. *U.S.* (1959) 264 F. 2d 405, 411.)

[16] *N.L.R.B.* v. *Greensboro Co.*, 180 F. 2d 840 (CA4, 1950).

from that point for 28 miles, and adding laterals, perhaps five or six, of varying sizes, distances and directions, which will diverge into well lines to reach the individual wells of the producers as they develop and where they may develop.

The program calls for the producers to drill several hundred wells, sell whatever they produce to the Medina Gathering Corporation, and for Medina, after gathering and carrying the gas to the Tennessee pipeline, to sell it to the Tennessee Gas Transmission Company at 37¢ per Mcf, or 7¢ over the price Medina has agreed to pay the producers. As the map herewith demonstrates, the interveners have similar lines now in use in the general area (but not directly to the producers' potential well sites); one of them is operated by United Natural only a few miles to the south and the other by the Pennsylvania Gas Company only a few miles to the north.

Those companies are in the business of producing, purchasing, gathering, transporting, distributing and retailing gas in the communities in the area of interest. They are affiliates of the National Fuels System, and the controversy in this case arises from this new program of outside interests to build the new line directly between the two present lines and enter the market for the purchase of locally produced gas. The older companies have engaged in this business for upwards of 75 years and hold considerable acreage under lease which (at some expense for delay rental[17] they have held for periods up to 20 years (18T2258). Their purchase policies have been extremely conservative, that is, first of all to require the seller to complete his drilling and "prove up" his gas before they agree to buy it and then only when there are shown to be available a respectable quantity at an adequate pressure and rate of flow and, frequently, a producer who is able to gather the gas and bring it toward their connecting line (16T1895–2037). With small exceptions, the producers here applicant have not been able to meet those conditions, have been unable to find any other market for their gas and have been unable to negotiate for sale of their gas now or later on to the two companies, or even to discuss it (1T84; 12T1261, 1375; 13T1446–84). Until now, there has been a distinct lack of competition among buyers, United purchasing in Crawford County, its affiliate, Pennsylvania, in Erie, and another affiliate in Ashtabula (14T1617; 17T2178). With their standards high and requirements strict, the two companies may appear to be taking up the cream of the market—for example, in the Bushnell and Indian Springs parts of the Medina sand which are believed to be rather productive.

The present producer applicants control perhaps less attractive acreage, a little away from the present lines but in the immediate area and interspersed with the leaseholds of the two intervener companies (18T2235). After waiting often for several years for a market, the producers have now been approached by the Medina organization, have agreed to sell to them at 30¢ and have filed their applications here for certificates approving their proposed sale. When the Medina promoters first entered the area two years ago, they were shown 38 "shut-in" wells which lacked a market (1T210). The producers who joined the Medina program, signed contracts and applied for certificates control 124,000 acres, on which they have 18 productive but shut-in wells ready to operate. They claim substantial gas in reserve in the acreage dedicated to them in order to meet Medina's commitment to Tennessee, as set out in Part V below. But Medina also expects a great deal of development from the latent market as soon as their certificate issues and their connecting lines take form and reality,

[17] Delay rentals now cost up to $1 per acre per year for as long as the lease is held up until the time drilling begins; the older leases are at a much lower rate. In the new competition for gas acreage, there is said to be this imbalance: the established utility can charge its delay rental expense to its customers, as a part of its cost of service, while a new gathering company, having no market as yet, must finance its own.

that is, potential acreage not yet committed to anyone. Evidently it is all "dry gas"; oil production is not a factor (19T2470).

There is an explanation for this new-found interest in an old producing area. Properties which have for years been regarded as uneconomical because their rate of production is too low (due to lack of "permeability") have now become attractive to the industry because of a new geological process called hydrostatic fracturing. That is, through the well bore an hydrostatic pressure is exerted on the sand face, causing the formation to "fracture," which seems to mean to crack open somewhat, and this provides considerably more permeability and allows the wells to produce in a more effective and economical manner. Though the gas reserves are the same as before, the new technique provides a better access for the gas from far back in the formation up to the well bore (17T2074–81). As a dramatic example, the Roberts well was shown on Exhibit 38 to have an initial open flow of 300 Mcf per day, but in the course of the hearing it developed that this figure was taken before the well was fractured; after that operation, the initial open flow was recorded at 2,304 Mcf per day (22T2851).

The Medina gathering program for marketing this reserve of otherwise unapproachable natural gas consists of bringing together three diverse elements, that is (a) the agreement of enough producers to sell an adequate quantity, (b) the agreement of Tennessee to buy at an adequate price, and (c) designing, financing, and acquiring a certificate for a gathering system to bring the gas so produced to the market so found. These arrangements are described as follows:

The Producer's Sale Contract: The several producers have signed substantially identical contracts with the company which is now known as the Medina Gathering Corporation. Their sale price is 30¢ per Mcf until November 1964, at which time it escalates 1¢, and another cent each five years thereafter until it reaches 33¢. The quantity agreed to be bought and sold in each case is the seller's pro-rata share of whatever Medina resells to Tennessee, the ratio being determined by the relative deliverability of the several producers. The net effect seems to be that each producer sells whatever quantity he produces. See Part V, below. Two features of the sale are relied on as having special significance: the sale is primarily to be for winter service, meaning that the eventual buyer (Tennessee) may buy from Medina (and therefore Medina from the producers) the entire annual quantity during the six winter months, November through April, which seems to imply that, at Tennessee's option, no gas at all need be delivered and sold in the summer months. Secondly, the contract quite plainly transfers to Medina the gas storage rights, that is, the seller agrees to assign to the buyer whatever gas storage rights the seller has.

Medina's Sale to Tennessee: The quantity agreed to be sold is most indefinite (see Part V below), but it seems to amount to a sale of whatever gas is available up to 60,000 Mcf per day, with the buyer's option to take it all during the six winter months. The price amounts to 7¢ more than Medina's purchase price from its producers, but it is not put so simply in the contract. Instead, the base price is stated as 33¢ (or 3¢ more than the producer's price) with an escalation of 1¢ in 1964 and in each fifth year thereafter. Also, however, the storage rights just referred to are reassigned to Tennessee and the price for this assignment is 4¢ for each Mcf of gas produced and sold to Tennessee under the contract. Note there is no necessary relation between the 4¢ price and any particular lease—the 4¢ is for the assignment of the storage potential under all of Medina's leases and the 4¢ is paid on all gas sold to Tennessee by Medina.

Thus the total price for the gas, whether delivered to Tennessee entirely in the winter or not, but including whatever storage rights Medina has, works out to be 37¢ per Mcf plus the escalations noted, or 7¢ more than Medina pays

to its producers. The Commission, by regulation, has established area ceiling price levels governing or at least guiding the price question in certificate cases, but none has been provided for sales in Pennsylvania. The nearest area so regulated as to initial price is West Virginia, where the General price Policy Statement No. 61–1 (Regulations, Section 2.56) calls for a price of 26.8¢ when figured at 14.65 psia, following which there appears "(28.0 cents at 15.325 psia)." There is said to be currently pending a proceeding to revise the general policy statement so as to include western Pennsylvania and New York, West Virginia, and Ohio within one price area for the purposes of that statement (Docket R–218). In any comparison of these various rates, it is important to check the pressure base at which the rate is stated. Tennessee's 37¢ payment to Medina is to be computed on gas at a pressure base of 15.025 psia. The producers' sale to Medina is figured the same way, and this puts their rate about 2.5¢ over the ceiling rate for West Virginia.[18]

Medina Facilities: Medina's tentative program for a pipeline facility to gather the producers' gas and deliver it to Tennessee is illustrated but *not* defined by the map herewith. The only line that is pretty definite is the 28-mile east-west line connecting at its east end with the main line of the Tennessee company, and even this gathering-transmission line may be shifted a little if conditions so dictate at the time this certificate becomes final (10T1030). It is important to note that the rest of Medina's system has not yet been finally designed and will not be until about the time construction begins (2T263; 4T546; 10T1019; 11T1232; 15T1838). The forum was furnished with three or four different versions of suggested gathering lines and one of the more recent versions has been outlined on the map. But this is highly tentative and it is quite important that it be so, since the lines must go where the producers decide to drill *and* where they find gas (10T1032–1056). A recent, tentative version of the gathering system calls for 78 miles of pipe in various sizes from two inches to eight inches, which will join the main gathering-transmission line at points C and D shown on the map. The acreage shown surrounding the eastern or discharge end of the main gathering-transmission line is not to be served through this line (11T1190), hence the "gathering" may be said to end at point C, which is the first point at which all of Medina's gas is gathered centrally for transmission and delivery to Tennessee.[19] The total cost of construction is estimated at $3,469,300, but it is obvious this is a most tentative figure (2T356; 10T990). The main line is to cost less than a million dollars (11T1185) and that will be the subject of the first construction to take place during the opening year of the project, with the rest of it to follow gradually. Some compression stations are to be provided, but note they are not permanent installations. Rather, being mounted on "skids," they will be subject to be moved from place to place (10T1081). Medina's method of financing is discussed below under Part VII, where also is contained some reference to the obvious jurisdiction question as

[18] The contract's 30¢ equates to 29.25¢ at 14.65 psia and 30.6¢ at 15.325 psia.

[19] From Examiner Purdue's decision of April 1, 1963, in Tennessee Gas Transmission Company, CP61–106, at p. 16: "At the central point in the field where all the gas going to Tennessee and United Gas has been assembled in a pipeline as a commingled mass, gathering has been accomplished." See also: *Huber*, 14 FPC 340, 348, affirmed, CA 3, 236 F. 2d 550—gathering ends by the time the gas reaches the point of final commingling; *Barnes Transportation Co.*, 18 FPC 369, 372—the "central point" where gathering ends is "the point of final commingling." As in the case of Medina's line A–C, Barnes' jurisdictional transportation is from *that* central point to its delivery to the interstate pipeline; while upstream from that point is non-jurisdictional gathering (see page 372, par. 2).

Smith-Wimberley Report, G–580, p. 83.

Manual of Oil & Gas Terms (Williams-Meyers), p. 109.

it relates to the Medina *Gathering* Corporation. The same question as it relates to the producers' sales is covered in Part III.

Medina's Buyer—Tennessee Gas Transmission Company: Grasping at every straw, the interveners seem to assert that the certificates should be denied because Tennessee has not taken up the time of the hearing to demonstrate at length and with particularity that it needs this reputed supply. It was not thought enough that the Tennessee witness pointed out that under its current program it is depleting its gas reserves at nearly one trillion cubic feet per year and this program has been increasing at an average of fifty billion cubic feet each year (1T127). Any utility having a program, in fact the statutory duty, to supply a trillion units of anything every year should hardly be called upon for further proof of its need to replenish their supply to the extent of just one percent of their annual sale, as in this case, especially where the increased supply is only one-fifth of the annual increase in Tennessee's delivery program. Tennessee requires no certificate for its transaction since it is buying, not selling. and it is satisfied that it may proceed to establish the minuscule facility, in the shape of a pipeline connection to receive the gas, under its annual budget-type authorization which is currently in force (13T1555); CP63–85, order issued January 30, 1963, 29 FPC 184.

V. Gas Reserves

If there is a requirement that a gathering company seeking a certificate from the Federal Power Commission to validate its proposed sale to a pipeline must demonstrate the existence, underlying its committed acreage, of the full number of Mcf of natural gas which are mentioned in its contract, there might be some manifest difficulty in providing such a certification here. It is true that the program seems to call for 10,800,000 Mcf annually, all of which may, at the pipeline buyer's option, be taken during the winter months from November 1 through April 30, which figures out to just under 60,000 Mcf per day, the rate of deliverability which Medina appears obligated to maintain. But the reality is that the gathering company agrees to deliver to Tennessee only such quantity as Tennessee elects to purchase "up to the total quantity per day that the wells on the leases are capable of producing."[20] The contract goes on to say that if the gathering company should fail to have available for delivery the quantity set out, then the consequence is that the Tennessee company may reduce its agreed contract quantity to 75% of what the gathering company did make available (this is from page 6). According to their statement of position, Tennessee regards the contract as requiring the delivery of 60,000 a day, but if that figure cannot be met, the contract reduces the minimum take-or-pay-for obligation on the part of the Tennessee company to "approximately a 70% requirement"[21] and no other penalty against Medina for non-performance appears (13T1530), nor provision for liquidated damages, should it develop, as the interveners ap-

[20] The data herein comes from the contract with Tennessee which was filed with the Medina application. For clarity, the detail is here omitted to be discussed to the effect that the figures given are annual figures after the first year; for the first year, the quantities are one-half those stated. As to the nine producers' sale to Medina Gathering Corporation, their sale is whatever Medina sells to Tennessee, divided among them in the proportion of the deliverability maintained by each (15T1784). Note, also, as an example, the following addendum appearing in the Benedum-Trees contract with Medina (CI62–694):

> 11. Regardless of any provisions to the Agreement to the contrary * * * it is the basic intent and purpose of said Agreement and it shall at all times be so construed, that it shall be the obligation of you to buy and of the undersigned to sell at the prices therein applicable from time to time, for all of the gas recovered from the leases described in Exhibit "A" attached to the Agreement and made a part thereof.

[21] 22T2875. Evidently this results from the later language in the contract as to the gathering company's representation of the number of wells that will be drilled.

prehend, that the gas in reserve will not supply the quantities tentatively outlined in the "contract".

Thus, while the figures in the contract lead to the suggestion that the reserves to be demonstrated should total 216,000 MMcf (that is, 10,800,000 Mcf per year for the 20-year term) and the various protests are eloquent, indeed hyperbolic, to the effect that no such quantity has been shown to exist, one obvious answer is that the alleged uncertainty of the supply is quite recapitulated in the uncertainty in the promise set forth in the contract. In other words, the quantity actually needed to fulfill the net actual legal undertakings of the contract is quite as variable and unknown as are the reserves thus far demonstrated to be available to fulfill it. All that is clear is that whatever is produced, Medina agrees to sell. The program, or at least the hope, is for 60,000 per day, but there is no guarantee of it, nor any reason necessarily to deny a certificate for lack of it. With that reservation, we turn to examine the highly divergent geological reports furnished to the forum by the applicant, the interveners, and the FPC staff, respectively. Based in part on the helpful summary in the brief of the Pennsylvania Public Utility Commission, they are as follows:

Conflicting Claims as to Gas Reserves

	Acreage	*MMcf*
I. *Medina's* geologist Linn (Ex. 16, 8T843):		
Proven—within 5 miles of a well	38,389	115,167
Semi-proven—between 5 and 10 miles from well	23,162	69,486
Total	61,551	184,653
II. *Intervener's* geologist Meury (Ex. 24, based in part on above):		
Proven	38,400	38,400
Semi-proven	23,567	23,567
Total	61,967	61,967
III. *Staff's* geologist Lessig (Ex. 38, 21T2645):		
Proven:		
Developed	2,880	14,991
Undeveloped	23,166	60,674
Total proven	26,046	75,665
Possible	23,247	64,510
Total proven and possible	49,293	140,175

The Applicants' Case for Reserves: The geology witness for the gatherer and for the producers, Mr. Linn of Pittsburgh, is obviously experienced and capable. For some time he was chief geologist with one of the oil companies and, most importantly, has been actively engaged in this work in this immediate area for several years and even on the days of the hearing of this case he continued actively to be drilling in the area, both for his account and for others.[22] However, as a result of numerous questions raised and corrections made in his report at the hearing, it became necessary to revise the case considerably and the second showing was on a somewhat different basis than the first.[23]

[22] Linn has himself drilled 30 wells in the three-county area, 28 of them successful, and perhaps more than anyone else (7T731, 8T824).

[23] The intervener's brief complains of the leniency of the Presiding Examiner in permitting so many changes, saying it made the case an evidentiary farce. However, if leniency, as a help in the search for actualities, requires justification, the precedents supply it. See for example page 8 of the initial decision in *Pioneer Gathering System*, G–16550, as adopted by the Commission on February 1, 1960, where a proposed gathering system was entirely revised at the hearing in the light of new developments and, as here, the applicants were permitted to conform their application to the proof. 23 FPC 260, 268. See also *Atlantic Seaboard* v. *F.P.C.* (CA 4) 201 F. 2d 568.

The applicants' first presentation, that is the one contained in the report submitted with the Medina application and first testified to at the hearing, claimed a total of 203,000[24] MMcf, most of it regarded as proven but over a third of it listed as "semi-proven." Also, 90,000 MMcf was thought to be available from other acreage in the area but still remaining uncommitted. These figures (203,000 plus 90,000) are to be read in relation to the 216,000 MMcf that the contract with Tennessee more or less tentatively calls for. But all of the figures were shown to be based on many uncertainties and estimations. For example, the net acreage claimed (after discounting the total by 25% to take account of the drilling success ratio of 75%) was multiplied by the figure 3 MMcf per acre as the amount of gas believed to be in reserve under each proven and semi-proven acre. That figure (a variation in which would manifestly greatly affect the result) was shown to be based on a complicated-appearing formula[25] which seems to amount to a finding of the cubic foot volume, of the producing sand underlying each acre multiplied by three factors, namely .09 x .65 x 88, to allow, respectively, for (a) the average porosity of the gas sand, that is the amount of the porous space in the sand rocks in which the gas may be expected to be found, (b) 35% connate water, that is, the proportion of the porous space that is found to be occupied by water instead of gas, and (c) the extremely high reservoir pressure, the somewhat high reservoir temperature and a compressibility factor (so as to state the gas volume at standard temperature and pressure). Since all of these factors are multiplied together to produce the answer of 3 MMcf per acre it is obvious that a substantial error in any one is enough to cast doubt upon the whole. The three multiplying factors seem not to have aroused a great deal of opposition since they were based on the tests made from the 18 holes that have been drilled in the immediate area and some others from the same reservoir, but a great deal of question was raised about the average of 15 feet in the vertical thickness of the sand which, being multiplied by the square footage of an acre and the three factors just explained, produces the result of 3 MMcf.

It was agreed by all that the entire "Medina Sand" is a highly lenticular formation throughout its length from Kentucky to western New York and Ontario (15T1810–29), which is taken to mean that instead of a single continuous producing pool, the productive sands are to be found in a series of quite varying, lens-shaped areas whose true sand thickness and gas productivity will never be *known* until every possible plot has been tested by actual drilling (15T1812).

But far more serious at the opening of the case was the question raised as to the amount of the acreage to be multiplied by the reserve figure of 3 MMcf per acre. It was said that the proven acreage is that lying above a certain geological line and between producing or proven wells, that is, within 3 to 4 miles of such wells (3T429), but it was shown by the exhibits that the proven acreage was found instead by outlining on the map the four most productive areas (some as large as 14 by 5 miles), discounting the total acreage in each area for the 75% success ratio, then multiplying the net total by the percentage of the total acreage in the area which is dedicated to the Medina Gathering Corporation. As to the semi-proven acreage, at one point it was said to be that lying in the proper geological stratum and within 5 to 10 miles from existing wells (3T471) but a few pages later the acreage over 5 miles from one of the wells was defined as wildcat acreage (3T489). A little later on the witness seemed to say that any eligible[26] acreage within 5 miles of a well is to be regarded as proven acreage

[24] All figures herein are rounded off for clarity.
[25] See Exhibit E to Exhibit H to the original application.
[26] That is, under which the thickness of the Medina sand is within tolerable limits.

(6T621, also 6T631), and from 5 to 10 miles is semi-proven (8T827). In short, as it was put by the witness in answer to the question as to how the proven areas were derived:

> That area lying a bit north of the 350 foot isopach line as shown on Exhibit 17 here and it is also determined by the net sand isopach map of Exhibit F to the original Exhibit H and also determined from—determined by distance from other wells that are either providing gas from the Medina sand or shut-in Medina gas wells capable of producing gas. This distance is defined as five linear miles. (6T642–3)

It was with such sources that the witness determined the number of acres which (subject to the 25% discount)[27] could be certified as overlying 3 MMcf of gas each, thus resulting in the new total of 181,925 MMcf of gas said to underlie the acreage committed to Medina (3T455). There were also several revisions or corrections to the figures hitherto given for the gas available but in acreage not yet committed.

Thus, in addition to the uncertainty as to the vertical thickness of the sand at any given point and a possible question as to the 6% figure for the net effective porous space in the sand rock whose thickness was estimated (that is, 9% porosity reduced by 35% for water saturation), both of which directly affect the claimed figure of 3 MMcf per acre, there is to be added the manifest uncertainty as to how many miles of acreage surrounding each well are to be regarded and certified as proved, or at least as potentially productive, and therefore to be used as the multiplier in the basic formula of the Linn exhibit (that is, acreage x 3 MMcf per acre). To this there is now to be added the further uncertainty that a part of the acreage hoped to be productive and to be relied upon to the extent of 3 MMcf per acre, is also not yet committed to be leased to Medina at all and as to such supposedly productive acreage, there is nothing but the broad estimate that from 25 to 40% of this acreage will eventually "sign up" and become part of the Medina enterprise (page 7 of Exhibit H to the application). The new net result of all of these estimations, averages, percentages and multiplications is the figure 267,189 MMcf of reserves, including the proved, the semi-proved, the committed and the uncommitted (3T455–470).

Thereafter a new exhibit (16) was brought in to take account of the corrections and revisions required, also to bring in certain new developments subsequent to the preparation of Exhibit H eight months before, which slightly change the basis for the acreage computation. After certain changes of the newest exhibit during the course of the cross-examination upon it (7T660), it develops that about half of the total committed acreage (124,109 acres) is to be regarded as either proven or semi-proven (that is, 38,389 and 23,162 respectively, after taking off the 25% discount), or a total of 61,551 productive acres which, multiplied by Mr. Linn's confident figure of 3 MMcf per acre, results in a total claimed committed reserves of 184,653 MMcf. This time the acreage figures were derived, not by a broad percentage applied to an entire area, but by an individual listing under each producer of the number of acres committed to each in each township in the three counties comprising the area in interest *which* acreage complied with Mr. Linn's test as to either proved or semi-proved, the first being the acreage within five miles of an existing well but also overlying the proper geological stratum (which is termed not "south of the 350 foot isopach line") while the second is from five to ten miles from a proven well but also within the isopach line measured "parallel to the depositional strike of the Medina formation." (Ex. 16, p. 7.) These tabulations were brought in as

[27] For the semi-proven acres in the original presentation this correction did not occur until it was called to attention during the course of the hearing, at which time the 84,000 MMcf claimed for the semi-proven acreage was reduced to 63,000 (3T454).

Exhibits 18, 19 and 20, and after certain corrections that took place during the cross-examination (7T660), they were presented to establish the total committed acreage that is to be regarded as either proved or semi-proved and therefore to be credited, so to speak, with 3 MMcf for each acre (8T843). For the explanation of the various misunderstandings, uncertainties and controversies that gave rise to the new exhibit, see the transcript from 5T570 to 5T599.

There is much criticism that the second presentation entirely revised the basis of and demonstrates the weakness of the first one. But the difference seems to be more mathematical than geological, one more of method of presentation than of substance. In the first presentation, we were given the acreage of the four areas, each from 5 to 14 miles long, regarded as productive, discounted by 25% to allow for the 75% success drilling ratio, and multiplied by the percentage of the total acreage in each of the areas which is dedicated to Medina. The net total acreage was multiplied by 3 MMcf to get the reserve figure. In the second presentation, the individual leaseholds which had produced the Medina percentage figure mentioned above were instead totalled up in the separate categories, then the total was discounted for the success ratio factor, and the proven and semi-proven acreage was multiplied by 3 MMcf. The result is that the corrected answer from the first method was 181,925 MMcf and the corrected revised answer from the second method was 184,653—different mostly because, during the intervening eight months, there was a great deal of adding and subtracting of acreage as leases were lost or new leases were signed to enter into the program.

The entire presentation is roundly criticized by the opposition, not only on its merits and demerits, but also for its vacillations and assumptions. Mostly it is flatly denied that the success of a well at point X is any basis for assuming and computing that 3 MMcf (or any other number) will be found under an acre three or five or ten miles away—they point to some dry holes already drilled within five miles of existing wells. To this the rejoinder would be that Linn discounted 25% for dry holes (8T848). But it is true all sides comment on the manifest lenticularity of the "Medina sand"—the pools are lens-shaped, thus greatly varying in pay depth from one point to another.

The further criticism of the 75% drilling success ratio itself seems to draw a thin line indeed—there was, it is true, some data leading to a 65% figure, but some other figures are as much on the other side. The doubts on this score were especially unacceptable to the applicants' geologist, Mr. Linn, whose own drilling success average in this very area is now 28 out of 30, likewise to the producers' witness, Mr. Britton, whose own drilling to date has proved out at the championship ratio of 13 out of 13 (8T824; 12T1356, 1395). On the whole the objection to the 75% figure is not convincing (*cf.* 8T785–90, 818). Anyway the interveners' geologist seemed to accept 69% in the Pennsylvania counties, which is satisfactorily close (19T2439).

There was more of a mixup as to the bottom hole pressure of the wells, which is a prime ingredient of one of the multiplying factors above. The original exhibit tells us that the "average reservoir pressure" is 1314.73#. The reduction of this pressure to the standard measurement pressure base of 14.73# would seem to increase the effective volume roughly 89 times. But the worksheets underlying the exhibit were said to show that the average reservoir pressure was 1146, not 1314.73, which would give a multiplying figure of 78 instead of 89. Later on, it was explained that the witness used the median instead of the average, but there was even basis for doubting this explanation—with the exhibit there were furnished 38 individual well reports and on none of them does the rock pressure or the shut-in core pressure come up as high as 1314.73#.

The only explanation given was that the witness used a bottom hole pressure for each well and it still produced an average figure of 198 Mcf per acre-foot (15T1819–22, 1878). The trouble is that multiplying this new-found figure of 198 Mcf per acre-foot times the sand thickness of 15 feet in the witness' Exhibit E "Material Balance" gives a result of 2.97 MMcf per acre instead of the 3.36 MMcf per acre which the exhibit spells out with such a great appearance of exactitude and reliability.

But the objections of the various interveners, including the Pennsylvania Public Utility Commission, to the issue of a certificate upon the ground that adequate reserves have not been proved, go mainly to the areal extent to which to apply the figures—in other words, having measured more or less exactly the gas in the well core itself (88 x 6% x the sand volume), just how far out, in feet or acres or miles is it reasonable to assume *both* (a) that the amount of gas per cubic foot of sand will be the same, and (b) that the vertical thickness of the sand will be the same. "The Pennsylvania Commission believes that applicant's views of 'proven' and 'semi-proven' acreage are unrealistic and the dedicated reserves related thereto deserve little or no consideration." (Brief, p. 4.)

There appears no serious objection to the figure of approximately 3 MMcf for the single acre in which each of the 18 wells has by now been drilled and a depth of 15 feet actually found. There appears slightly more of a problem in applying this figure throughout the area of 160 acres surrounding each well that has actually been drilled and found successful, but that is the more or less normal total which will be drained or will feed into a well in this highly lenticular area (19T2460). In fact, there is nothing affirmatively to *disprove* the applicants' hopeful assumption that three-quarters of the wells to be drilled within five or ten miles of existing wells and within the sand plane will turn out to be similarly successful and productive. On the other hand, nothing really tangible *supports* the basic assumption to that effect which seems to underlie Exhibit 16.

Secondary references are perhaps more reliable than geological inferences—thus the applicants and their geologist Linn live and work in the area and have been drilling for years, they have already risked about a half a million dollars or more on the drilling of the 18 wells in being and they stand ready to invest at their own risk some millions of dollars more. What is more, the interveners who are most vehement and full of invective about the reserve showing have themselves for years engaged in production and purchase of gas in this immediate area; their present reserves are interspersed, and are often adjacent with, Medina's (10T951, Ex. 21), and they continue to operate some wells, and to buy gas in the vicinity after the producers have undertaken the risk of drilling for it and proving its availability. Also, both the producers and Tennessee (the pipeline buyer) say they have used their own sources, besides Medina's geologist Linn, or have otherwise satisfied themselves that the reserves are there and available (12T1387; Tenn. Brief, p. 10)—and after all, it is the producers who plan to risk their capital for drilling and it is Tennessee that has promised to pay for the gas.

The Interveners' Case: It is possibly true that the proceeding was lengthened by the intervention of an entirely separate geological reserve study on behalf of the Pennsylvania Gas Company and United Natural Gas Company, the National Fuels group affiliates who are already occupying the area, but while their study may be subject to question upon its method, it does have the special virtue of comprehensibility and its witness, the helpful virtue of articularity—qualities which were not shared by all the other witnesses. The net result of the two studies is to agree that successful wells in the Medina sand will produce about

1 MMcf per acre, not 3 MMcf as relied on by the applicants, but there is no agreement at all as to how many acres to apply the 1 MMcf ratio to.

The first proof of the 1 MMcf figure is to be found in an exhibit on the adjacent pool called Bushnell, where the actual production by months since the pool opened three years ago is charted showing a gradual rise during 1959, 1960 and for a short time in 1961, and then a gradual decline more or less steady from the middle of 1961 to the middle of 1962. Projecting the declining production through nine years to come, it is said to demonstrate that this pool will produce a cumulative total of 14,000 MMcf, and since that is about the same as the number of acres supposed to be in the pool, it shows the average acre can be expected to yield 1 MMcf, not 3.

Next the interveners' witness, geologist Meury, presented a study to show, as to the productive Indian Springs pool, located "in the heart of the area of interest" and very near the west end of Medina's proposed main line, that the reserves in the entire pool average 1 MMcf per acre. This is proved by what is known as the pressure decline method which says, in short, that since the pool, during its four and one-half years of production, has lost about half its original rock pressure, there is presumed to remain in reserve about the same quantity of gas which has been produced from the pool in that time. Dividing the acreage by the sum of those two, there results a total reserve figure of 1 MMcf per acre. Another witness for the Pennsylvania Gas Company presented a similar study for five wells of that company which have been drilled in the Medina sand in this same immediate area; the first well was completed late in 1961. Their average time of production until August 30, 1962, was just under eight months and during that period the average pressure declined about one-third. Figuring, therefore, that the remaining reserves are approximately double the amount of production until the end of August, and allocating 160 acres to each well, it was computed that their total original reserves amounted to .7 Mcf per acre.

These presentations find little favor with the geologists and other experts otherwise engaged in the proceeding. For example, the Pennsylvania Public Utility Commission says that the estimates based on this production-pressure decline method, while ordinarily more reliable, are here of doubtful utility because the wells had been produced for such short periods and had been "shut-in" for pressure measurements for too brief a period to achieve stabilized pressures. The reaction of the Commission's staff, equally unfavorable, is set out below.

The principal point of all the objections to these two methods is one of time, that it is unscientific and improper to plot the much-vaunted "actual", "true", etc. data derived from the very short period the wells in this new area have been operating and then to extrapolate the indicated decline for years to come. That is, that no one can predict the variables and indeterminates, and (to borrow the language of the financial pages) no one can be sure that the indicators of a decline today may not become the harbingers of a rise tomorrow, or, indeed, vice versa. To counter this unanimous objection, the interveners have analyzed some of them to show that, even giving full effect to them, they do not markedly change the net result. For example, Exhibit 22 shows the monthly production in the adjacent Bushnell pool rose in two years to a peak of 300 MMcf but fell to one-half that figure in the last year and a half, from which a curve is projected to show that by the end of the present decade the production from the field will be below 50 MMcf per month.

These proofs are not offered by the interveners to show there are no gas reserves in the area but rather to show that the gas reserves to be found will be wholly insufficient to support the project and could more efficiently be utilized by the pipelines already operating in the area (Brief, p. 38). Further light on their real significance is offered by what is really the program of the intervener

companies from whom comes this dolorous showing—United (through its affiliate, Sylvania Corporation) is now operating seven wells in the Medina sand in the two counties concerned in Pennsylvania and all were completed in 1961 and 1962, one about the time this hearing was announced. Pennsylvania Gas Company completed one in 1959 and five more in 1961 and 1962. Thus the interveners find themselves in the rather difficult position of sustaining the proposition that the Medina gas reserves may be useful to them but will be found uneconomical to anybody else. Alternatively, they present the paradox that the reserves should be saved for themselves, already in the area, but they suggest no program or even plan to buy any of the gas; in fact, they have declined to buy the gas or even to discuss it or to suggest any program for extending their well lines to take it out. Anyway, it is not for sale to the interveners; it has been sold to Medina and Tennessee.

Deliverability: There is a similar but less profound difference as to the deliverability to be expected from the wells to be drilled. The applicant's geologist Linn, after some backing and filling, settles for an average of 2.00 MMcf per day of open flow per well, from which Exhibit 16 calculates a deliverability curve, and from this curve there is calculated an exhibit to show the number of wells needed to be drilled (Exhibit I to Exhibit H with the original application), which turns out to be 75 wells needed per year in the first, second, third and fifth years, 38 in the sixth, eight and ninth, and 19 or so a year in the tenth, eleventh and twelfth years, to make a total of 477. When there is added one-third to this number (to account for the 75% success ratio), the total wells needed would be 636, which at $32,000 apiece (8T768) indicates a drilling program in the neighborhood of $20,000,000, spread out over a period of 12 years or so.[38] The interveners suggest acceptance of their open flow figure of 1.49 MMcf per well per day (instead of 2.00) as developed on Exhibit 25 from an average taken of 57 flowing wells in the Medina sand in the two Pennsylvania counties, all but eight of which were completed in 1960, 1961 or 1962. Even accepting the 1.49 figure as reasonable (in fact, agreed—20T2489), that is said to result in a need for a total of 640 successful wells or 853 wells drilled (19T2459), which means a drilling program of $25,000,000 (Brief, p. 59) instead of $20,000,000. But all of these figures are designed to show the program really needed to deliver 60,000 Mcf per day to Tennessee, and seem to be based upon the assumption, indeed the false premise, that unless the program is proved up to the hilt to be ready to produce 60,000 Mcf per day for twenty years it should be denied an F.P.C. certificate, which does not seem to follow at all. Anyway, as demonstrated in Part III above, insofar as the deliverability question is presented merely to assail the feasibility of the producers' project, no such feasibility finding is required for a producer's sales certificate, none is here made or even implied, and the objection is to that extent irrelevant. Its relationship to Medina's feasibility is reviewed below in Part VII.

Summary: As stated, all other parties, including the staff, object with varying vehemence to the volumetric method of the applicants' geologist Linn. That is, there is little disagreement about the 3 MMcf claimed to be available in the acre in which each of the 18 wells has been drilled (15 feet of vertical thickness times 200 Mcf per acre); there is somewhat greater disagreement with projecting that figure to 160 acres for each of those 18 wells. But there is unanimous disagreement with the "broad brush" approach of the applicant which seems to presuppose that (subject to a 25% discount to allow for some dry holes) *most* any acre within 10 miles of a proven well and "north" of the proper isopach line may be employed to locate a new and successful well which will produce 3 MMcf

[38] For comparison, the reserves already developed and supposed to be proved by the drilling of only 18 wells (Ex. 38) would be worth (at their 30¢ price) $4.5 million.

from each of the 160 acres surrounding it. The interveners say this is wildcatting; the staff say that the success ratio is only an exploratory budgetary control tool, not closely related to reserves, and this approach pays entirely too little attention to the trends of the net effective sand thickness. Particularly the staff objects to the assumption that an average of 15 feet of net sand thickness may be counted on over the acres dedicated to Medina (Brief, pages 36 and 51). The Pennsylvania Commission seems equally appalled. In short, Mr. Linn and Medina set for themselves the impossible task of measuring the volume of anything in terms of acres and cubic feet when there is nothing tangible from which to derive its length, its width, or its heighth.

The staff brief indicates an even greater pessimism as to the results of the interveners' study. While conceding that the production-pressure decline method has its utility in a proper place, it was concluded here to be entirely unreliable for ten separate reasons,[29] the most important being the very brief average life of the pools from which the data was taken, also the lack of stabilized well pressures, uniform well spacing and line pressures, the ill-defined field boundaries, and several other deficiencies and lack of controls (Staff brief, p. 52). The interveners' brief makes much of the point that their data, so far as it goes, comes from actual well experience. But actual data loses its aura when it is too early in the cycle—it takes many pinpoints to augurate a trend.[30] And most significantly, the same companies that bring these dire reports continue themselves to operate in the Medina pool, including some drilling in 1962 (Exs. 28 and 34).

The Staff Report: At the apparent completion of the applicants' case, but with the record left with numerous doubts, and the proofs not at all satisfying, and in view of the entire disparity in the methods and results of the several studies, the hearing was recessed while the staff undertook a new and independent field investigation of its own,[31] visiting the area of interest and examining in the offices of both sides the original records, so far as there were any, of the drilling in the Medina sand. The study was conducted by two professional geologists of the Commissions' staff, one of whom testified fully at the hearing and presented an exhibit summarizing the results, all of which withstood cross-examination for two days. The staff report is well summarized in their brief, from which the following is taken at page 54:

> *Staff Estimates of Gas Supply:*
>
> 1. *Introduction*
>
> Throughout the record of this proceeding there developed a tendency on the part of both Applicant and Intervener to change their respective estimates, and, to alter and develop different versions of the opposition's estimates until a climate of confusion and state of fluidity became apparent. Certainly one had the feeling that as this situation of fluidity developed, where would the business of changing figures, data, etc., end? This was, in itself, a compelling reason for the staff to enter an independent reserve estimate into the record.

---

[29] Quoting at this point from the AIME, Society of Petroleum Engineers "Oil and Gas Property Evaluation and Reserve Estimates, 1960."

[30] The staff brief at page 44 makes a telling comparison between the "actual" experiences as reported by two companies—one of the interveners, Pennsylvania Gas Company, has completed 20 wells in the Medina sand in the two Pennsylvania counties and their Exhibit 28 reports an average original open flow of 874 Mcf per day. But the staff examined the records of the 18 Medina producers' wells and computed an initial open flow on the average of 1,740 Mcf per day (Ex. 38, 22T2851).

[31] Two weeks and two days were allowed, the staff testimony to be served after one week so that cross-examination could begin at once upon reconvening on December 6 (20T2567, 2607).

2. *Method of Staff Analysis:* Volumetric formula, [*] data derived from electric log data.

3. *Source:* Dedicated Wells of Applicant.

4. *Approach:*

(a) *Proven-Developed:* Those reserves that have actually been uncovered by the drill and have been assigned a reasonable drainage pattern of 160 acres to each well.

(b) *Proven-Undeveloped:* Those reserves developed from a net effective sand isopach map overlying the dedicated acreage. All acreage assigned reserves lay within one mile of a dedicated well. Contour interval of isopach map was 10 feet and any acreage assigned reserves had to have at least 10 feet of net effective sand to be considered. From this reserve estimate, the Proven-Developed estimate was subtracted to give the Proven-Undeveloped reserve estimate. These reserves are not to be confused with "semi-proven" reserves, as "semi-proven" could be defined as "half proven", the meaning of which is not entirely clear or understandable.

(c) *Possible:* Those reserves which may be developed through future drilling. This estimate is based on a conservative analysis using extended well control, including wells other than the dedicated wells, and the net sand isopach overlay. Reserves attributable to this section should not be confused with the term "probable" reserves. This estimate excludes acreage apart from well defined control. It also excludes acreage of other operators in the immediate area who may dedicate reserves to Medina at some future date.

5. *Estimates:*

Reserves	*M'cf*
(a) Proven-Developed	14,991
(b) Proven-Undeveloped	60,674
(c) Possible	64,510
Acreage	*Acres*
(a) Proven-Developed	2,880
(b) Proven-Undeveloped	23,166
(c) Possible	23,247
Total Dedicated Acreage	124,109

The staff found its calculated numbers for porosity, water saturation, bottom pressure, and formation temperature of the Medina to be comparable with those numbers used not only by the Applicants, but by the East Ohio Gas Company and United Natural Gas, Interveners, as well. The basic difference seemed to lay in counting net feet of sand.

6. *Deliverability:* The establishment of a 160 acre drainage pattern to Medina's wells to develop a reserve estimate is a drainage factor which the staff feels is reasonable to expect a Medina well to develop. It is common knowledge that some wells are drilled on tracts as small as 80 acres, in the area of interest.

It is not to be construed from this 160 acre drainage factor that only a limited number of wells can be drilled on Applicants' dedicated acreage simply by using the means of arithmetic division. Other factors too will determine the number of wells finally drilled, on the current dedicated acreage, some of these are:

(1) Size of individual leased drilling tracts.

(2) Configuration of individual tracts.

* Volume, recoverable gas = Available reservoir space times percent pore space times percent gas saturation times formation temperature and pressure times molecular factors.

(3) Pooling or unitization of tracts, if applicable.
(4) Terrain, topographic features.
(5) The individual producers or operator's annual economic position.
(6) Need for deliverability—more wells simply means more deliverability.
(7) Terms of lease agreements or gas purchase contracts.

Inasmuch as the dedicated wells to Medina are shut-in and no production data available from them, a valid deliverability study on these wells is not possible at this time. Also, the open-flow information on these wells is not information taken under controlled and standardized conditions, [33] but by various operators, at various times, under varying circumstances. Therefore, any deliverability study based on such open-flow data is speculative and artificial.

The Staff exhibit No. 40 is merely a computation for illustrative purposes only. However, if the estimated Proven reserves of Medina are realized through development, then the project could have a deliverability life of seven to eight years. In the event the estimated "possible reserves" are completely realized, the project could have a deliverability life of 12–13 years.

7. *Conclusion:* In the final analysis, to settle this "family quarrel" over reserves, the Staff resolved to take the numbers with which it could feel reasonably secure, place them in the volumetric formula, turn the crank, record the answer, and let the chips fall where they may.

* * * * * * *

The difficulty of resolving conflicting interpretations of data by the witnesses compounded with the lack of controlled, standardized well tests and no basic reservoir information, [34] was a formidable problem for the staff.

Medina seems to accept the staff conclusions, perhaps begrudgingly, since they do not result in a recommendation against the issue of a certificate. Linn's point is that, within five or ten miles of a proven well, he credited only the acreage which is located geologically within the true isopach "fairway". But in order to avoid the many traps with which this fairway abounds, the staff seems to refine this a great deal by certifying within one mile of a well only the acreage which is believed to demonstrate an actual pay sand thickness of ten feet or more. The interveners are quick to point out that the staff conclusion on proven reserves is much closer to their witness' report than to Mr. Linn's conclusion for the applicants. Nevertheless, they say, reliance on the staff's volumetric method holds considerable danger, the reserve figures as reported in the staff exhibit bringing from the interveners' reactions in verbiage such as "fantastic", "absurd", "amazing", and "astronomical". However, their two specifics are much less than conclusive, the one referring to a single well the figures from which could indeed be out of line, and the other referring to the lack of final production figures on wells that have not yet been produced. On the other hand, their negative reaction is not without some foundation, since the staff exhibit attributes to the 18 Medina wells an average total reserve of 833 MMcf each (counting 160 acres to be produced for each well), while the interveners' Exhibit 27 claims only 113 MMcf for the average of the five most recent Medina sand wells of the Pennsylvania Gas Company, and their Exhibit 23 claims only 140 MMcf for each of the 19 wells in the Indian Springs pool, which lies in the heart of the Medina area. But these two studies, it will be recalled, are the results of a methodology which all others in the case unanimously discredit as premature and unreliable.

[33] Tr. 2852.
[34] 'Unique for a gas producing area,' (Tr. 2852, 2853).

Conclusion: To epitomize, the net result is to demonstrate that significant but not substantial gas reserves have been proved to be available from the small number of wells (18) that the Medina producers have completed to date, that a supply for a number of years (the staff say seven or eight) is probably available from other acreage within a mile of those wells, and that an equal amount is possibly or perhaps available farther out. The only definitive and conclusive finding that can be made is to concur fully in the staff geologist's conclusion (21T2805) that, "I think it quite early in the life of these wells to make any determination of this ultimate production."

VI. Producers' Price—30¢

Despite the feuds and factions about the gas reserves, the impression is that the major issue is the producers' price. The details were set forth under Part IV above; briefly, their contracts call for an initial price of 30¢ per Mcf (subject to later escalation), the nearest FPC area ceiling rate (the one for West Virginia) equals 27.45¢, and the FPC staff's evidence of the "in-line" rates for sales in interstate commerce in certain other nearby areas leads toward a conclusion that 27¢ is the prevailing price. The principal contention of the interveners—that is, the East Ohio Gas Company, Lake Shore Pipe Line Company, New York State Natural Gas Corporation (all of the Consolidated system), the Long Island Lighting Company and the Pennsylvania Public Utility Commission, as well as the National Fuels interveners referred to above—is that *if* a certificate must issue, then a condition is required limiting the producers' price to one or the other of those two lower rates, that is 27.0¢ as recommended by the FPC staff or 27.45¢, the nearest FPC area ceiling. The staff would recommend a denial of the certificate without such a condition.

The applicants' rejoinder is double barreled. First, pointing out that the search for the "in line" price [35] is for the price of similar sales, and if the search be so limited, the 30¢ price will not be out of line. Second, reversing its field, the applicants rely on two special and supposedly unique features of their service which are thought to entitle them to the claimed margin of 3¢ over the reported prevailing price of 27¢. These specialties are (1) the storage option, that is, the dedication to the buyers (through the gathering company) of the privilege to use the wells, when they shall be depleted, for the purpose of gas storage, and (2) the "winter peaking," that is, the provision which permits Tennessee to take its entire annual volume during the six winter months of each year, November through April, which option, if exercised, results in a 50% load factor service. To these two latter claims the surrejoinder is also double barreled: first, it is said that the two rights have no infallibility—they may not be realized in actual fact, and second, it is said that the predominant classes of sales now going on in the area, whose prices comprise the prevailing or "in line" price, themselves transfer to their buyers substantially the same privileges, hence their cost or their value is already recognized in the price fixed.

The data to be used in evaluating the prices comes from many sources and is hard to compare because there are four different pressure bases in use or to be considered, and the prices must be reduced to a common denominator for a valid comparison. For convenience, the figures cited from the various sources have been tabulated as follows, and since the Medina sale is stated at 15.025# basis, references given in the following paragraphs to other data have been adjusted to that same pressure base in order to facilitate weighing their differences:

[35] Subjection to, or at least correlation with, which is essential, under *Catco*, to the finding of public convenience and necessity.

Producer rates (in cents per Mcf) for reference with the Medina contracts for sales in Ohio and Pennsylvania

	Pressure base—P.s.i.a.				Reference
	15.325	15.025	14.73	14.65	
	Cents	*Cents*	*Cents*	*Cents*	
Medina producers' contracts	30.6	30.0	----	29.25	1
FPC area ceiling for West Virginia	28.0	27.45	26.9	26.8	2
FPC staff's "in line" evidence	----	27.0	----	----	3
Penn. Gas intrastate purchases	----	30.6	30	----	4
United Nat. intrastate purchases	----	28.05	27.5	----	5
N.Y. Nat. *interstate* purchases	27.5	26.90	----	----	6
Felmont "jurisdictional" sale to U. Nat.	----	28.05	27.5	----	7
Producer Britton's sale to Lake Shore	----	27.0	----	----	8
East Ohio's purchases in N.E. Ohio	----	27.0	----	----	9
45 sales in West Va. recently certificated	25	24.5	----	----	10
Snee sale in Pennsylvania (4-3-63 order)	----	27.5	----	----	11

NOTE: The underlined rate in each line is from the sources cited below; the other rates are calculated from it.

(3) 1T135. This is only from interstate sales in Pennsylvania and Ohio. Ex. 11; 9T914; 16T1996.
(4) See page 261, ftn. 38.
(5) 17T2115-8. With 33% summer-take clause, but actually taken all year around.
(6) Ex. 12. Most all are purchased at wellhead (14T1668), from the "Oriskany" sand, not Medina. This is year-around purchasing (14T1718). Ex. 12 lists 65 such sales to N.Y. Natural covered by rate schedules on file with FPC, some dated in 1960 and 1961.
(7) Ex. 11, (C-1); G-18627, July 14, 1960. Summer take @ 33%. Item AC.
(8) 14T1652. Without storage conversion clause.
(9) 10T979. Some purchases before 1960 are at 24¢.
(10) G-4324, Feb. 27, 1963. See p. 242 above. Summer schedule is at the buyer's option.
(11) Certificate issued April 3, 1963, CI61-1743, for a 1961 sale.

Is their 30¢ "in line?": Noting that staff's Exhibit 11 shows that half the certificated sales in interstate commerce on record in Pennsylvania are at the 27¢ rate, and that this rate covers 84% of the volume of such sales, Medina first objects that this evidence should be disregarded because it reflects the monopoly price of the two dominating buyers in the area, the Consolidated and the National Fuels systems, whose policies, it is evident, leave little room for bargaining as to price by individual sellers. It is quite true that, contrary to the voluble writings of the non-believers in *Phillips*, one of the clearly indicated purposes of Congress in calling for control of wellhead sales under the Natural Gas Act[36] was to insure fair prices for producers, i.e., to correct prices that are too low as well as those which may become too high; also that *pipeline* monopoly, as it affected producers, was a part of the problem considered by Congress. See *Hope Natural*, 320 U.S. 591, 610. But that is a long way from saying that a certificate proceeding of an independent producer is necessarily the medium for the exercise of this jurisdiction. Rather, from recent court decisions (including two since this hearing ended), it is evident that the Commission's function at the certificate stage should, so far as price is concerned, be severely limited, the inquiry being solely to find the comparable prevailing price, and the effort being to hold to it.[37] Such allegations casting doubt upon the legitimacy of the price admitted to be prevailing in fact belong in a com-

[36] See the statements of Chairman Wheeler and Senator Connally in the Senate debate on the bill which became the Natural Gas Act of 1938, 81 Congressional Record, 9314-6.

posite area proceeding, or perhaps in a "just and reasonable" rate case under other sections of the Natural Gas Act.

With that point aside, the applicants are hard put to it to find any actual sales to point to at 30¢. The producers (Brief, p. 16) cite only the Pennsylvania Gas purchases at 30¢ set out on line 4 of the table above,[28] and they are relied upon notwithstanding (a) they are intrastate and have not been certificated here, (b) their total volume is small—the annual total would come to only five days of Medina's putative program, and (c) the gas is reported to be 22% richer in BTU content than Medina's. Their reply brief says, "The Commission has certificated 12 purchases by National Fuel at prices over 30¢ per Mcf," citing the staff exhibit of 208 listings, but without page reference. After some search, it develops that these 12 include eight dated in 1954 (before prices were considered at the certificate stage), one was in 1949, one in 1947, one is a sale made after extensive gathering, and the twelfth (the only relevant one of the group) was a 1958 sale of a total of 1,080 Mcf per month, which at 32.64¢ means a revenue of $11.80 per day, hardly a material item of reference. Medina's brief (p. 29) seems to refer to the same 12 discreditable sales; otherwise nothing is shown of any sale in interstate commerce in Pennsylvania at 30¢ or higher. If, notwithstanding several court opinions cited above, the sales intrastate are relied upon, the only ones actually shown to be at 30¢ or more and of any significance are those to Pennsylvania Gas Company which are not comparable. Manifestly, it has not been shown that 30¢ is the prevalent, governing, definitive rate for the sale of gas in interstate commerce in the Pennsylvania-Appalachian region.

What is the prevailing price in the area?: By way of preface, no one knows where the "area" begins and ends. If the boundary is the geological stratum, we were told that the Medina sand runs from Kentucky to Ontario, crossing the very western end of Pennsylvania. A hundred times in the course of the proceeding the "area of interest" was referred to and defined as the northwestern two counties in Pennsylvania and the adjoining county in Ohio, where this particular layer of the Medina sand is found productive. But the staff, searching the record for all certificated sales, found only one in that three-county area, the Belmont sale at 28.05¢, cited on line 7 of the table above. Staff's Exhibit 11 reports the data for all the 169 finally certificated, jurisdictional sales anywhere within the borders of the state of Pennsylvania, but gas knows no state boundaries and it was agreed there is "nothing scientific" about the adoption of the Commonwealth as the relevant area (17T2211). The Commission has adopted area ceiling rates for most of the producing areas in the country, including the adjoining state of West Virginia, but not for Pennsylvania sales. There is pending a proceeding proposing to extend the West Virginia ceiling price to the entire "Appalachian area," to include western Pennsylvania, New York and Ohio (Docket R–218). Hence the present search for the prevailing price in the area is equally an inquiry into *what* area is relevant and controlling. Most sales listed in the staff's exhibit are located one to five counties east of the

[28] This 30¢ is the mean between Pennsylvania Gas' winter price of 35¢ and the 25¢ price at which they may take in the summer, at their option (16T1907). Also, this price normally calls for gas delivered to their pipeline, unless the well is of such size as to justify laying a gathering line (16T2037). However, the company's annual report to FPC (Item T here; also their testimony, 16T1983), refer to their 28 local purchases received at the "Well Mouth, Appalachian Area, Pa." at an average cost for 1961 of 30.1¢ and a total cost of $92,000. It is not stated to what extent their price of 30¢ (35¢ in winter only) is the result of the unusually high BTU content reported—1224 cu. ft., or 22% higher than Medina's agreed 1000 BTU gas (Item B, page 11). This purchase represents less than 1% of their total gas purchase cost; the rest is all at about 40¢ or more.

"area of interest"; some, it is noted, are in Green County on the border of West Virginia, which makes some West Virginia areas closer to the "area of interest" than are some of the counties relied upon in the staff exhibit.

The staff evidence (Ex. 11) is overwhelming to the effect that 27¢ is the dominant prevailing price for deliveries in Pennsylvania in interstate commerce, that is, half the number of contracts and 84% of the volume. The only Ohio sale listed since 1954, the year of the *Phillips* case, is the Felmont sale @ 28.05¢ shown on line 7 of the above table.[39]

Staff relies heavily on the great number and volume of 27¢ sales in Pennsylvania, but only six (out of the 101) were made in 1960 or 1961 and during this period there were four others at higher prices. Much less weight must attach to the 95 sales in prior years, most of them 1954 and before, since the Medina contracts were all made in the latter part of 1961.[40] The following table illustrates that, confining attention to the three most recent years shown, it is still apparent that 27¢ is the rate in the central Pennsylvania counties, covering 60% of the sales and seven-eighths of the volume.

Number of sales and monthly gas volumes, Pennsylvania

Price	1959	1960	1961	Total
28.1¢ Mcf	(2) 101,780	(2) 107,840	(1) 14,705	(5) 224,325
27.5¢ Mcf			(1) 38,294	(1) 38,294
27¢ Mcf	(5) 150,238	(4) 1,424,771	(2) 76,074	(11) 1,651,083
	(7)	(6)	(4)	(17)
Total Mcf	252,018	1,532,611	129,073	1,914,602

Source: Ex. 11, Sched. D, in CP62-194. Omits one very small sale in 1959.

Obviously, if the central Pennsylvania counties are the sole guide, the in-line rate for *that* area, as found and testified by the staff witness, is 27¢ per Mcf at 15.025.

But there is other evidence to be considered which suggests that the rate may in fact be a half cent greater. Only the other day, that is on April 3, 1963, the Commission acted to issue its final certificate to the one remaining sale listed in the staff's Exhibit 11 which had not already been certificated. This is the Snee sale in Fayette County to the Manufacturers Light & Heat Company at the rate of 27.5¢, or ½¢ higher than the staff's "in line" conclusion drawn from the same exhibit, but it is only one-twentieth of a cent above the announced ceiling price for the adjacent West Virginia territory. This contemporary action of the Commission in certificating a Pennsylvania contract executed in 1961 (six months before the Medina contracts) must be taken as the most recent and controlling expression of the approved price prevalent in the Pennsylvania area, and to that extent supersedes the recommendation of six months ago at ½¢ lower.[41]

Applicants rely heavily on the Commission's order of May 2, 1961, on the sale by the Allegheny Land and Mineral Company to Hope Natural, 25 FPC 886, where the full ceiling price of 28¢ was allowed for certain sales in West Virginia which, because of special circumstances, were treated as initial sales (as here) and therefore just come within the area ceiling price for sales in that state.

[39] Felmont was certificated by order of July 14, 1960, G–18627, a year after *Catco*, but no price is mentioned in the order, which may have been in view of the temporary authorization which had issued in that case in June 1959.

[40] See *Skelly*, FPC Op. No. 362, 28 FPC 401 (1962).

[41] That this case was uncontested—except as the public is a contestant in every case—is quite irrelevant. See p. 243, above, at n. 15.

The Commission noted that "Allegheny's producing fields [like Medina's] are strategically located near the heart of industrial America with its huge densely populated areas." It was the Commission's conclusion that 28¢ [27.45¢ at Medina's pressure base, or nearly one-half cent over the present 27¢-recommendation] "is neither out of line for the locality where Allegheny's subject wells are located *nor for the Appalachian gas producing area as a whole.*" There follows in the order certain comment on the cost of production "throughout the Appalachian area."

In other words, accepting the staff evidence that 27¢ predominates in the *central* Pennsylvania counties, there is equally compelling evidence for adoption of the *south* Pennsylvania rate approved by the Commission on April 3, 1963, at 27.5¢, or the announced adjacent area ceiling for West Virginia, which is 27.45¢ and, as the Commission says, appears equally appropriate to the Appalachian area as a whole.[42] This approach finds support in the recent Utah case, *California Oil Company* v. *F.P.C.* (CA10, March 28, 1963), 315 F. 2d 652, where the area ceiling for Wyoming was applied to a sale in Utah for which no area ceiling had been announced. Here, if only Pennsylvania prices are to be considered, a price condition of 27¢ might be claimed to be required, but it is evident from the Commission's action of April 3, 1963, and from the Allegheny and Utah decisions just cited, that the relevant area is not to be regarded as beginning and ending at the state line. The Commission's prescription of a ceiling price for West Virginia may be quite as relevant to these sales in Ohio and northwestern Pennsylvania as are the slightly lower rates from central Pennsylvania. It is not the suggestion that these three regions comprise three separate pricing areas; rather it is the view that all three regions have a geographic and economic unity near the large eastern market end of the lines and should be treated as one, for which purpose the predominating indication of the current or 1961 prevailing price is found to be that already announced by regulation for West Virginia, that is 27.45¢ at 15.025 (derived from the regulation calling for 28.0¢ at 15.325). It remains only to consider whether the circumstances mentioned justify an exception to that prevailing price.

Do storage and peaking warrant exceeding the 27.45¢?: It is claimed that two special and unique features of the Medina producers' contracts fully justify certificating the sales at the full rate of 30¢ upon the basis that the margin, if any such there be, over the prevailing price merely gives appropriate recognition to these features. The first one is the transfer of the storage rights, the second one is the privilege of the buyer to take only during the winter months.

(a) *Storage:* Staff (p. 31) says the applicants' claim with respect to storage seems virtually to have been abandoned, Medina saying that even without storage, their 30¢ is in line (Brief, p. 28) and the producer's briefs seeming to suggest that their real reliance is on the other item discussed below. Hence it needs no extensive treatment here except as it may help to show why this case has taken so long. All during the early stages, the indication was that the transfer of the storage rights was the real basis, or at least an equal basis, for the 30¢ price (Preh. T. 135; 1T67). At that time it was explained that the producers thought their storage potential was worth 2¢ or 3¢, in terms of the Mcf of gas now to be produced, and this explained their originally requested price of 32¢. When it developed that Medina could market the gas to Tennessee for not over 37¢, and required for its own economy a margin of 7¢ leaving only 30¢ for the producers. the latter (except for a few, who dropped out) concluded to accept the 30¢ price anyway, their final contracts calling for the sale of both the gas and the storage rights for

[42] According to *1962 Gas Facts*, at p. 34, marketed production of natural gas in West Virginia nearly doubles that in Pennsylvania—208,757 MMcf to 113,928 MMcf in 1960.

one lump sum price of 30¢ per Mcf of gas produced. By the time the gas gets to Tennessee the sale contract separates the two, since Medina sells to Tennessee at 33¢ per Mcf for the gas plus 4¢ per Mcf for the eventual storage rights.

What that storage right is needs some explaining. It seems to be more nearly an option, that is, a right or privilege granted by the landholder to the producer, by the producer to Medina, and by Medina to Tennessee, eventually (or when the gas is nearly all produced) to use the same wells thereafter for an indefinite period for the purpose of storage of gas by Tennessee. But the storage at that time is not to be free, as it developed only after most extensive questioning. Instead, Tennessee may or may not make a payment to the producer for the salvage value of the well which it concludes to be useful for storage and thereafter it will pay the lessor for the storage on an annual basis as it is utilized, paying from $1 to $2 per acre, or from $100 to $200 per well, each year (12T1309; 19T2357). What is currently transferred, therefore, is the option later on to enter into the storage arrangement *if* the particular well is determined to be of practical value for that purpose and *when* it is convenient to Tennessee's program to make that use.[43]

Perhaps inspired by the 4¢ price in the Tennessee contract for storage by itself, there was a great deal of dispute as to what the storage potential of a well can be worth at this early stage, before it is even drilled. It seemed to wind up to a concurrence that a proven, developed, and ready-to-use storage area is obviously of great value,[44] that the presence of a considerable number of wells from which substantial gas has been removed or is about to be removed suggests or indicates that some storage potential will be found, but does not measure it because a well that has produced gas may or may not be a well that will store gas (8T764; 10T972). From this it results that the transfer of the storage right is plainly a cognizable asset but not one of such precision that the claimed prices of 2¢ or 3¢ or 4¢ can be certified to be its value.[45] Perhaps, on this score, it is enough that Tennessee (along with most of the others in the case) is constantly active in promoting storage projects in this general area and from the costs they have incurred in so doing, they are satisfied that their valuation is a fair one (13T1539–74).

More to the point is the flat answer given by the staff and by the Consolidated interveners to the effect that all or nearly all of the jurisdictional sales in the Pennsylvania area, already priced at about 27¢, contain a clause which operates to transfer the storage rights, that is an option to buy the well. A provision to that effect appears in the New York State Natural's sandard oil and gas lease (Exhibit 13–14; while East Ohio asserts that 95% of their gas purchase contracts contain such an option (14T1608, Ex. 30). United Natural believes that its right to purchase the well carries with it the storage provision, if the producers' lease has one (17T2083). Finally the staff witness testified that 82 "approximately" out of the 101 jurisdictional sales in Pennsylvania, from which he derived his recommended 27¢ rate, contain an option provision which appears to transfer the eventual storage right to the buyer (7T658, 9T902).

It is true that transfer of storage potential is not quite universal. As to the existing deliveries by the several producers to various other buyers, Mr. Britton

[43] Note that these certificates do not cover the actual, eventual storage program by Tennessee, *nor* the transfer to Tennessee (which the present contracts provide for) of the gas "in place" at that time. Each of these items will require an FPC certificate to be obtained only after a new and current application.

[44] On January 18, 1963, the Commission authorized a $10 million investment by Tennessee, New York Natural, and United Natural to develop jointly the Ellisburg storage pool in Pennsylvania, which is proposed to contain 21,600,000 Mcf of top storage gas (CP62–275).

[45] *Cf.* p. 72 of the initial decision approved in *Panhandle,* Opinion No. 350, January 15, 1962, 27 FPC 35.

says, "Some do, some don't." (12T1346) But there is adequate evidence that the predominant, referable sales in the area do transfer the storage option, directly or indirectly, and without an extra bonus over the established price of 27¢ or 28¢. In that view, the storage option in the Medina contracts does not give warrant for a surcharge over the prevailing price of 27.45¢, as found above, since the storage is, in effect, included in the price so paid.

(b) *Winter peaking:* Much simpler, but perhaps more effective, is the applicants' claim which predominated the latter half of the proceeding, and now seems to be their main reliance, to the effect that their margin (now at 2.55¢) over the prevailing price is warranted and should be approved because their sale is provided to be made during the winter months only, from November through April, at Tennessee's option. It seems clear that Tennessee can, if it chooses, call for their entire annual quantity during the winter half of each year and, by turning their valves, effectively shut down for the six summer months the wells dedicated to them. There was pointed out the very serious possibility that the producers might incur considerable loss because of summer drainage from their areas caused by neighboring wells of other interests which are not shut down. The competing companies already in the area seem to shut down their wells only when there is ample protective acreage around them, that is, a sort of *cordon sanitaire* composed of sufficient undrilled acreage to insure that the pressure differentials build up during a period of several months' shutdown will not cause gas to seep over into the neighboring lands. This circumstance, together with the lack of an absolute assurance that Tennessee will take only in the winter (13T1532), gives some basis for the claim that the winter peaking program will not work out in actual practice.

But there can be no doubt that Tennessee's privilege to take the gas during the six months of its greatest need is an item of real value to Tennessee even if, like the potential storage, it is hard to measure. Its net effect of course is to operate the fields as a ready-made storage facility, with the benefit that no gas need be injected at first since, hopefully, it is already there. Except only by most general references, it was not developed to what extent this privilege is a detriment to the producers, although it was mentioned that perhaps one-fourh of their costs necessarily go on the year around, they will receive no income during the summer months, and their revenues are in effect discounted by the resulting extension of the period of their receipt over so many additional years. There was some effort to measure the value of this service to Tennessee by comparison with pipeline selling rates in the area and the differential between the rate for 100% load factor service (which would compare to year around delivery by Medina) with that for 50% load factor service (which compares to Medina's six-month sale). This is said to show that the winter sale provision is worth 6¢ to 8¢ per Mcf (1T118). The opposition (Con. Brief, p. 28) notes that this reliance on the value of service concept is most unusual indeed in the public utility field.

Perhaps the most dramatic evidence of the relevance of the winter peaking question is the practice of one of the local lines (intervener Pennsylvania Gas Company), which is the intrastate purchaser noted on line 4 of the first table above, p. 260. Their average price results from a winter rate of 35¢ and a summer rate of 25¢ for that quantity taken in the summer *up to* the amount of the winter take (Ex. 3, p. 4).[48] However, as explained above, the Pennsylvania Gas contracts are rather small in volume and for various reasons are not referable.

[48] The Public Utility Commission of the Commonwealth of Pennsylvania does not explain the policy under which it recommends that FPC hold to the 27¢ rate for interstate sales in Pennsylvania while at the same time their local law permits the intrastate sales to Pennsylvania Gas at the 30¢ to 35¢ rate.

The first answer to the claim for a 2½¢ margin or premium based upon winter peaking is that this is not a Medina invention at all. Exhibit 11 is the staff compilation of existing jurisdiction sales in Pennsylvania and Ohio, something over 200, and about half of the listings appear to provide for a distinct reduction in the quantity required to be taken during the summer season, usually calling for either one-third or one-half of the winter delivery rate to be maintained all summer. From this exhibit the Pennsylvania Commission has provided a helpful summary designed to show that the contracts which do not require summer deliveries command no higher initial prices than those with summer-take requirements. These partial provisions are not of course as favorable to the buyer or as detrimental to the seller as Medina's 100% winter delivery clause, but there was evidence of some other sales that do equate to this practice, such as those to East Ohio, which takes the entire output of their producers' wells for the 180 days of the winter season (14T1585). Their price is 27¢. Others, as might be expected, complicate their provisions somewhat, calling for the annual volume, for example, to be taken in 180 days or, if not taken, then in an additional 90-day make-up period (12T1321). Some others (including United Natural, 17T2085) have a provision to cut back in the summer to one-third of the winter quantity but in practice do not use it and take the entire production the year around. In none of those noted (except the Pennsylvania Gas purchase just described) does there appear a premium price paid for this partial peaking service, nor any margin over the established rate of 27¢ or 28¢. On the other hand, none of the remaining contracts cited, except East Ohio's and Lake Shore's, seem to call for 100% winter "take."

It may well be that this winter peaking is the type of disparate service which the 9th Circuit [47] tells us should be specially considered in relating proposed sales prices to the prevailing price, but this brief outline of its nature, its problems, its effects, and its policy implications would tend to demonstrate only that such a question does not belong in the proceeding at the certificate stage. After all, the producers will be free, even when conditioned back to the prevailing price of 27.45¢, to file for increases up to their contract price and collect them currently, subject to refund if it be not proved that, because of the winter peaking or the storage or otherwise, the higher price is just and reasonable. This approach—to defer such questions at this stage—seems to be commanded particularly by the more recent court decision cited above.

Finally, the policy response which seems to require that the certificate be conditioned at 27.45¢, without allowance for winter peaking, is well expressed by the staff brief from which the following is quoted:

> Fundamentally, the problem here is one of Commission policy in holding the line. Clearly the in-line price for the area is 27¢ per Mcf for pipeline quality gas. Over the years producers have used every conceivable and ingenious argument for attempting to break the line on the ground that they should be granted an allowance over and above the wellhead price for certain services beyond the wellhead. The Commission has consistently rejected these efforts (see Opinion No. 359, Standard Oil Company of California). The argument that a differential should be offered beyond 27¢ is predicated on the false assumption that 27¢ is a just and reasonable price and that peaking and other services should be compensated for on top of the just and reasonable price. But this (27¢) is an initial rate by which the Commission holds the line until such time as the just and reasonable rate for the area can be determined. To build up a series of differentials for various alleged services above the prevailing rate in the area is merely a method of

[47] *U.G.I. v. F.P.C., supra.*

defeating the principle laid down by the Supreme Court in the *Catco* decision. It may also be added that allowing the purchaser to take lesser quantities during the summer is part of the prevailing pattern in the area [48] and there is no reason to assume that the producers are not adequately compensated for such services by the payment of 27¢, since, for all we know, the just and reasonable rate may be substantially less than 27¢ per Mcf.

In short, it is simply impractical, unnecessary and illogical to program quick action and early disposition of producer certificate cases if each producer is free to select the special features of his sale and make a case for allowing a premium on those features. Instead, let the sale go through at the prevailing or the prescribed ceiling price or lower, the premium question to follow in an immediately-filed rate case. At *that* stage the premium features will be to be weighed and (for all that appears here) perhaps be canceled out or off-set against various deficiencies or points of undervalue or other circumstances which might have a countervailing influence on the just and reasonable rate. For example, in such a rate case, or in a general, area-rate, rule-making proceeding, it might feasibly be explored whether the existing and historically high price of Appalachian gas (8¢–10¢ over the Gulf Coast rates which, we were told, reflects its proximity to the metropolitan markets) does not already contain in the present in-line price a built-in premium for the two features here relied upon—storage and winter peaking. After all, both of those features get their special value from the same factual premise, the Eastern or market-end location of the facility.

VII. Feasibility of the Gatherer's Project

In the sense of a normal pipeline project—the standards for the certification of which were spelled out explicitly in the *Kansas Pipe Line* case over 20 years ago, 2 FPC 29—it would be difficult, perhaps out of the question, to apply such standards and issue a certificate to the Medina gathering company. Nearly all of the 87-page brief filed by the intervening Pennsylvania Gas Company and United Natural Gas Company (the National Fuel affiliates who now occupy the area of interest) is devoted to a series of questions about Medina's facilities, reserves, financing, program, and economic feasibility, without, however, first establishing *what* pipeline standards are required to be applied. In the following review of these questions, that reservation is withheld for discussion below. The obvious jurisdiction question is also reserved for the moment because the case was tried without pre-conclusion as to what part, if any, of Medina's program is within the statutory exemption of "gathering"—this in view of the absolute unanimity of disagreement on where the exemption begins or ends, also in view of the applicant's conclusion not to raise the technical jurisdictional question at all, but merely to seek such flexibility in the certificate as a gathering function requires (10T1045).

No final design of facilities: It was repeatedly made evident that the only gathering facility pretty definitely planned and designed is the 28.5-mile east-west "header" (A–D on the map, p. 245) which is to cost $960,000 out of the total planned investment of the Medina gathering project of $3,469,300 (spread over a two-year period, 11T1185). United-Pennsylvania gas point out there is still no definite plan for the remaining 78 miles of gathering lines, since they are not

[48] The *Allegheny Land and Mineral Company* case, Docket No. G–19030, 25 FPC 886, shows that 27½¢ at 15.025 psia is in-line for the area *and includes the peaking privilege.* The revelant area for comparison of prices is obviously not limited to the counties in which the dedicated acreage is located. The appropriate area under the Commission's Statement of General Policy No. 61–1 includes West Virginia as well as all the counties in the western tier of Pennsylvania. (Docket No. R–218) Proposed Revision-Pricing Areas.

to be located until the reserves are determined by actual drilling, that the first tentative program changed three times during the course of the proceeding, and the final design was obsolete when it was submitted (Ex. 31). Their brief concludes on this point that if a gathering company can get its certificate on this kind of a showing, then "Little statutory burden rests upon a pipeline gatherer when it applies for a certificate under Section 7 of the Natural Gas Act." (p. 61) Just what that statutory burden is does not seem to be explained, nor the effect of the total exemption of the gathering function itself by Section 1(b) of the statute cited, relied upon, and here to be applied. A reflection of this rather cavalier attitude toward the flat exemption the statute so plainly gives appears also in the staff brief: "Perhaps a gathering system should be treated differently than a major pipeline." (p. 22)

The objection is that the gathering system has been only tentatively outlined, is not settled upon; hence, its utility, feasibility and adequacy cannot be examined, determined or certificated. The first answer is that (except for 18) the wells have not yet been drilled and manifestly the gathering lines cannot be located until after the wells are spotted, drilled *and* determined to be productive. What instead was designed was a tentative system to reach all the dedicated areas where it is most logical to expect the first 225 wells to be drilled (10T1029, 11T1171). (Note this is the number of wells thought to be needed during the first three years, according to the original plan, Exhibit I with the application.) The second is that the dedicated acreage changes from time to time, including several amendments filed since the application came in a year ago, and there may be more by now. The result is the tentative, possible plan shown on the map, a total of 78 miles of gathering lines of various dimensions branching off the main gathering line (points C–Q, C–P, D–M, D–N, D–O). This much line, together with the necessary movable compression facilities, can be built for $2.5 million dollars, and the only plan that is now before the forum is to spend that much for gathering lines of that general character and description at whatever points may prove to be most desirable at the time of construction. Quite apart from any jurisdictional doubts, no reason is perceived to require that the plan be any more definite. This plan, or something like it, will carry the maximum load and can be built for the money to be provided. It is essential that the tentative status of the design remain.

Financing: The interveners take particular umbrage that financing witnesses were not provided, neither the policy officer of the company to explain its debt and equity fund-raising program, or the underwriter's representative to assure that the money could be raised. This second point brings up the hardly surprising fact that the financing plan went through several changes—first it was to be all equity without borrowing, the second one called for a loan which was then being sought from an insurance company, and the last presentation was a plan for mortgage bonds to the amount of $2,900,000, 15-year basis, to be sold through an establishment known as the Broad Street Associates, Inc., whose letter of just one year ago says the bonds to that amount can be placed privately. Evidently it is thought that without such testimony the finance-ability of the project cannot be determined or certified (United Natural brief, pp. 66–72). Again, the reference is to the practice where there is involved a major pipeline expansion, with many millions of dollars to be raised through public offering. It would be quite optimistic, perhaps out of the question, to expect for a project of this character, uncertain and necessarily with some speculation,[49] to furnish the same type of solid, well-ordered and fully underwritten financing that is

[49] "* * * a large element of risk * * * " (11T1147; 12T1400). Broad Street "understands" there will be 25% equity capital. The order subjoined so provides.

available to a public utility pipeline whose program is all worked out, plans complete, and consumers in position to indemnify whatever costs occur. Anyway, if the money is not raised the gathering system will not get built and no harm to the interveners or to the general public will be wrought. Finally, it is quite possible no financing will be required at all (4T544).

Market needs: The claim that Tennessee has shown no need for the gas is hardly an acceptable objection, as pointed out above, and, as Tennessee responds, is quite contrary to the findings in a number of recent orders of the Commission. The claim is also repeated that interveners Pennsylvania Gas and United Natural can themselves provide the market for these producers—to whom this information must come somewhat as a surprise in view of the producers' long-continued and repeated efforts to meet the interveners' terms and make sales to them, unsuccessfully except for a few and notably rather recent exceptions. The staff can locate no legal basis for denying Medina's application upon this ground (Staff brief, p. 19). It will be recalled that the Commission has said (13 FPC 221, 237):

> Certain interveners opposed the granting of a certificate to Pacific to take gas from the San Juan Basin on the grounds that this gas should be reserved for them if and when it should be desired * * * we find no merit to these interveners' contentions.

Economic feasibility: The pro-forma balance sheet, income statement and cash flow appear as revised schedules submitted with the applicant's letter of April 27, 1962, which is treated as an amendment to its application. They disclose a projected annual net income for the third and later years of $108,000, which is a little less than one-seventh of their revenues remaining after allowing for the cost of purchased gas. This net revenue figure is after allowing for state and federal income taxes, also $156,000 for depreciation and $165,000 for interest. The same schedules compute an average net return of 8.8%. With a sinking fund payment of $212,000 beginning the third year (based on borrowing only $2,750,000, not the full amount first discussed) the debt service ratio appears to be 1.25.

But it is painfully evident that all of these hypothese begin and end with the amount of gas that flows through the Medina system. The entire revenue which results in the net income of $108,000 is figured from the sale of 10,800,000 Mcf per year which, it will be recalled, comes from the maximum program of 60,000 Mcf per day throughout the winter season. It is evident that if the deliveries and thus the gross revenues were reduced by as much as one-fourth, the operation might tend to become marginal indeed. To illustrate this, the intervener witness, Mr. Comet of United Natural, using the same basic cost figures but forecasting sales volumes of only one-third of the amount of Medina's program, produced Exhibit 26 to demonstrate that sales at that volume level, with the same expenses, depreciation and interest, will result in a net loss of $261,000 for the third year. Thus the question of feasibility depends entirely upon the annual quantity of sales.

It was demonstrated above under the heading of "Reserves," Section IV, that the sales volume will depend entirely upon the number of wells drilled and found successful,[80] upon their deliverability and upon their potential reserves. The staff conclusion as quoted above is that "the project could have a deliverability life of seven to eight years," and counting the "possible reserves" it could be 12 to 13 years. Upon that basis, the showing made does not conclude unquestionably that the project is economically feasible, but neither does it negate that it may become so.

---

[80] Exhibit 40 as revised by the staff witness, 22T2259, suggests that 86 wells will be needed in each of the first three years.

However, consideration of Medina's program, and perhaps of any gathering program, necessarily has an aura of unreality—only part of the bond issue will be sold the first year, the lines will not be built until there is far more clear direction as to where the wells will be drilled and which ones turn out to be successful, only part of the steel pipe will be ordered at the beginning, and both the extent, sizes and direction of the various lateral lines will be determined and redetermined currently as conditions develop, as more or less wells prove out, and as new blocks of acreage may be added anywhere in the area. The patent infeasibility of determining feasibility results more from the inherently volatile nature of a gathering program than from any obvious deficiencies of the present one. What is most obviously demonstrated is that pipeline standards can hardly apply to what is predominantly *not* a pipeline program.[51] Derived from the custom and precedent that call for a finding of feasibility in a certificate case, which gives no regard to the special and perhaps inherently risky nature of any gathering program, it seems to have been assumed that no certificate could issue unless the Federal Power Commission first apply pipeline standards of feasibility in the findings required for a certificate of convenience and necessity. But Section 7 of the Natural Gas Act contains no such requirement.

Feasibility is to be proved, in the case of a long line major pipeline, because its costs properly incurred and its investment prudently made are the measure of its rates which, found just and reasonable, will be allowed and charged to the consumers. But Medina's rates are limited to its contract price of 37¢[52] which, as explained many times during the hearing, consists, so far as Medina is concerned, of 30¢ for the producer, leaving a margin of 7¢ for Medina. In the case of a pipeline, if its costs go up, its rates go up accordingly until, at least, they reach the point of no return. But, under *Mobile*, 350 U.S. 332, whether Medina's unit gathering costs turn out to be 7¢ or 70¢, there is no provision for the filing of a rate increase by Medina to exceed the contract price. Hence the risk and uncertainty and speculation, which are the foundation of the interveners' objections, are solely upon Medina and its investors and cannot redound to the harm of the gas consuming public. Whatever gas enters Tennessee lines will be at 37¢ or below (34.45¢ if no rate increase is filed and 37¢ is about 10% lower than Tennessee's full load factor sale price at that point (1T122).

In that view of the case, the solution is clear. It is not necessary to rest upon the conclusion—although it seems entirely supportable—that the Medina program from beginning to end is functionally and economically a gathering program

---

[51] It is believed this concept of the limits on the Commission's responsibility for what are predominantly (measured either functionally or financially) gathering systems synthesizes the decisions in this field, as listed below, in all of which one or more of the elements of deficiency here made issue of are omitted from any affirmative finding that they have been proved or otherwise examined and satisfactorily established:

Pacific Northwest Pipeline Corp., 22 FPC 117.

Lone Star Gathering Co.; CP62–179, September 7, 1962.

Barnes Transportation Co., 18 FPC 369.

The gathering companies in *Ben Bolt*, 26 FPC 825 (see especially page 10 of the Commission's brief in the pending review of this case in the Fifth Circuit, No 19587).

Oil, Inc., 25 FPC 1178.

The Joint Venture in *Skelly's* case, Opinion No. 362, August 30, 1962, 28 FPC 401; rehearing ordered October 26, 1962; opinion on rehearing 28 FPC 1065.

Pioneer Gathering System, Inc., 23 FPC 260.

Redlands Pipeline Co., G–9215, June 1, 1956.

West Texas Gathering Co., G–14302, June 27, 1958.

Valley Gas Trasmission Inc., 25 FPC 233.

[52] The 37¢ escalates, in 1¢ steps, to a ceiling of 40¢ over 12 years.

which the law exempts from the jurisdiction and therefore the responsibility of the Federal Power Commission, upon which basis no finding of feasibility should or even could be required for a certificate to permit Medina's sales and also to permit whatever incidental transportation takes place at the end of its technical gathering. In other words, the actual activity whose feasibility is inherently uncertain is the very activity which the statute exempts. Rather, in the staff's view and in its obviously sensible, proposed solution, the jurisdiction point does not become critical or controlling. Since the sale by Medina (as distinguished from its gathering) is clearly and fully jurisdictional (the very point of *Phillips*), the staff's solution is to limit Medina's sale price to its own proposal, that is 7¢ plus the cost of the gas. Their object, in keeping with the highest purpose of the FPC, is to foreclose potential injury to the public interest, to divert the inevitable risks from the consuming public to Medina itself. The rationale of the staff conclusion appears as follows at page 33 of the brief;

Medina has no right to pass its risks on to the public.

In the first place, Commission policy on this matter has already been established (Opinion No. 362, *Skelly Oil Company, et al.*). Medina in its entirety, will be regulated as a pipeline company within the meaning of Section 154.91(a) of our Regulations. Medina will have to file its contract with Tennesssee as a special rate schedule under Section 154.52. Medina has offered evidence to justify its transportation charge of 7¢ per Mcf. What their actual experience will be cannot be determined until two years after service is commenced, when they will be required, under the Commission's order, to submit their actual costs of operation. Unit cost of transportation may, in fact, be less than 7¢ Mcf. Due, however, to the speculative nature of much of the evidence submitted in this proceeding as to the amount of money required for laterals, and the considerable doubt as to the deliverability of 60,000 Mcf per day over a 12-year period, it might turn out that the unit cost of transportation, when the deliveries are substantially less than 60,000 will be higher than 7¢ per Mcf. This risk, however, is not one which should be borne by the public. We have given the Applicant the benefit of every doubt as to reserves, deliverability, and the amount of investment required in pipeline facilities, but we see no reason to go beyond that and to underwrite the Medina project by making the public pay for a speculative venture. In short, we recommend to the Examiner and the Commission that a fixed ceiling for the duration of the contract with Tennessee of 34¢ [34.45¢] be incorporated into any certificate to Medina. Without such a condition the staff recommends that Medina's application be rejected.

As indicated above, Medina will have to report its actual costs wtihin two years after service commences and whatever the unit cost of transportation may be, it should be added to the 27¢ [27.45¢] cost for purchased gas up to the maximum of 34¢ [34.45¢] per Mcf.

Medina's reaction appears in its reply brief (p. 11)—"Medina would not object to the attachment of this type of rate condition to its certificate, applicable to its *initial* rate." Its effect is to conclude the feasibility question by leaving entirely to Medina the full risks and consequences, if any such there be, of the infeasibility apprehended.

Further Findings and Conclusions

Upon consideration of the whole record, including the applications and the evidence, as well as the briefs filed, it is further found and concluded that:

(1) Tennessee Gas Transmission Company, a pipeline natural gas company subject to the jurisdiction of the Federal Power Commission, has stipulated it

will not rely upon the Medina reserves, so far as proved on the present record, as any part of its capacity for future expansion of its facilities or markets.

(2) Benedum-Trees Oil Company, Operator, *et al.;* Benedum-Trees Oil Company, *et al.;* Paul Benedum; Great Lakes Natural Gas Company, Inc.; The Grantley Company; Paul L. Britton, Jr., Operator, *et al.;* Worldwide Petroleum Corporation; Russell McConnell; Flanigan Brothers, Operator and Agent, *et al.;* are each, or upon initiation of the proposed sale to Medina will be, engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and are or will be "natural-gas companies" within the purview of the Natural Gas Act.

(3) Upon initiation of its proposed service and sale the Medina Gathering Corporation will be a "natural gas company" subject to the jurisdiction of the Commission.

(4) The sales of natural gas proposed by all of the producer applicants above-named and the jurisdictional transportation by the Medina Gathering Corporation and its sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are subject to the requirements of Section 7(c) of the Natural Gas Act. The sales are required by the public convenience and necessity, and certificates therefor should issue to each of them, as herein ordered, subject to the conditions herein stated, such conditions being required by the public convenience and necessity.

(5) The several applicants named are able and willing to do the acts and to perform the services proposed and to conform to the Natural Gas Act and to the requirements and regulations of the Commission thereunder.

ORDER

Accordingly, it is ordered, with the specific conditions herein specified, and subject to review by the Commission, that—

(A) Certificates of public convenience and necessity are hereby issued to the producer applicants named in (2) above, for the sales of natural gas in interstate commerce for resale as proposed in their several applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor.

(B) Certificate of public convenience and necessity is hereby issued to the Medina Gathering Corporation for the proposed transportation of natural gas in interstate commerce subject to the Commission's jurisdiction, and for the sale of natural gas to the Tennessee Gas Transmission Company, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor.

(C) Until their price or prices may be lawfully changed under authority of the Natural Gas Act, the certificates issued to the several producers (Dockets CI62-694 to 696, CI62-730 to 732, CI62-761-2, CI62-999) are hereby conditioned to prohibit any total initial price greater than 27.45¢ per Mcf at 15.025#. Before beginning its sale each producer shall file a rate schedule to that effect with the Commission.

(D) Medina Gathering Corporation's rate for its sale to Tennessee shall not at any time exceed seven cents per Mcf (at 15.025#) in addition to (a) 27.45¢ or (b) any future rate lawfully in effect for sale of gas to Medina by the producer applicants. Medina shall file as a special rate schedule a copy of its contract with Tennessee together with a statement of its effective rate in accordance with this certificate and its conditions herein stated.

(E) Medina shall, within 90 days after the first two years of operations, file detailed data setting forth its costs upon the basis of actual experience, and a revised rate schedule, if necessary, reflecting such costs up to 7¢ per Mcf. Further, the certificate is conditioned upon Medina's revising its plan of financing so that the long-term debt ratio will not exceed 75% of the total capitalization at the end of the second year of operation.

(F) These certificates are not transferable, and each is effective only so long as the applicant named therein shall continue the operations herein authorized subject to the Natural Gas Act and the applicable regulations and orders of the Commission. The certificates shall be accepted in writing within thirty days of the date on which this order is final and effective.

(G) The application of Atlas Exploration Company, Operator, in Docket CI62–760, is dismissed.

WILLIAM L. ELLIS,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

CITY OF PASADENA, CALIFORNIA, PROJECT NO. 1250

ORDER GRANTING EXEMPTION FROM PAYMENT OF ANNUAL CHARGES

(Issued July 16, 1963)

Application was filed on April 1, 1963 by the City of Pasadena, California, licensee for Project No. 1250, for exemption from payment of the net amount of annual charges under the license for the project for the calendar year ended December 31, 1962, pursuant to the provisions of Section 10(e) of the Federal Power Act (Act) and regulations of the Commission thereunder, on the ground that the balance of the project power not used for municipal purposes was sold to the public without profit.

The statement of annual charges rendered by the Commission for the year involved amounted to $151.92. The application sets forth that the project operations for the year 1962 resulted in a net loss, and that the power was sold by the licensee to ultimate consumers without profit.

The Commission finds:

(1) The licensee is a municipality within the meaning of Section 3(7) of the Act, and is entitled to claim exemption from payment of annual charges under Section 10(e) of the Act.

(2) The licensee is entitled to exemption of the net amount of annual charges for which it was billed for the year 1962.

The Commission orders:

The licensee is hereby exempted from liability under the license for Project No. 1250 for payment of the net amount of annual charges for which it was billed for the calendar year 1962.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

PENNSYLVANIA POWER & LIGHT COMPANY, PROJECT NO 1881

ORDER DETERMINING NET CHANGE IN ACTUAL LEGITIMATE ORIGINAL PROJECT COST AND ACCRUED DEPRECIATION, AND PRESCRIBING ACCOUNTING THEREFOR

(Issued July 16, 1963)

Pennsylvania Power & Light Company, Licensee for Project No. 1881[1] filed statements pursuant to Section 4.1 of the Commission's Regulations under the Federal Power Act, claiming for the period from June 1, 1955, through December 31, 1959, project additions and retirements resulting in: (1) a $1,310,154.82 net increase in project cost over the previously determined amount of actual legitimate original cost of the project, $16,773,419.71 as of June 1, 1955;[2] and (2) a resulting total claimed actual legitimate original cost of the project as of December 31, 1959, of $18,083,574.53.[3] The claimed net increase of $1,310,154.82 results from claimed and recorded project gross additions of $1,927,818.83 and retirements of $617,664.01, as more specifically shown in the attached schedule I.

Licensee also claimed a net addition to the project depreciation reserve account of $632,833.17 over the previously determined amount of accrued depreciation, $6,028,251.66, as of June 1, 1955,[4] resulting in a total claimed accrued depreciation as of December 31, 1959, of $6,701,084.83, as more specifically shown in the attached schedule.

The Commission's staff made a field examination of the books and records of the Licensee for the purpose of ascertaining the correctness of the foregoing amounts. Following the study an agreement, subject to Commission approval, was reached between the staff and Licensee's representatives with respect to certain adjustments involving: (1) the elimination of $285,593.25 from the claimed and recorded project cost as of December 31, 1959; (2) a net decrease of $262,937.79 in the claimed and recorded project reserve for depreciation as of December 31, 1959; and (3) the accounting disposition of all amounts involved in the proposed adjustments.

---

[1] The project, generally described as the Holtwood project, is located on the Susquehanna River, in Lancaster and York counties, Pennsylvania. The license authorizing operation and maintenance of the project issued pursuant to Section 4(e) of the Federal Power Act, effective as of January 1, 1938, and terminating as of June 30, 1970 (10 FPC 1162, 1368). Pennsylvania Power & Light Company became the Licensee in 1955 through transfer of the license (14 FPC 713).

[2] 17 FPC 98.

[3] Article 13 of the license and Section 4 of the Federal Power Act provide that the Commission shall determine the actual legitimate original cost of the project and accrued depreciation applicable thereto as of the effective date of the license, the difference being the net investment of the Licensee in the project as of that date. These provisions also require the determination of the changes in the actual legitimate original cost and related depreciation thereafter.

[4] 17 FPC 98.

The proposed eliminations from claimed project cost are shown in attached Schedule II and are associated with the following items:

Excess labor and overhead on E.R.* 300002	($5, 434. 52)
Excess overheads on E.R. 300005	(836. 53)
Excess labor and overhead on E.R. 300017	(11, 686. 34)
Excess labor and overhead on E.R. 300022	(3, 721. 95)
Excess labor and overhead on E.R. 300033	(8, 248. 61)
Delayed recording of retirements	(255, 665. 30)
Total	(285, 593. 25)

*Expenditure Requisition.

The accounting disposition of amounts included in the proposed adjustments required to bring the recorded project costs and accrued depreciation into agreement with the recommended amounts of project cost and project depreciation as of December 31, 1959, all as tentatively agreed to between Licensee and staff, is shown by the following composite journal entry.

	Debit	Credit
Account 250, reserve for depreciation, Project No. 1881	$262, 937. 79	
Account 538, miscellaneous income deductions	28, 520. 89	
Account 100.1, electric plant in service, Project No. 1881		$285, 593. 25
Account 144, retirement work in progress		** 5, 865. 43

**The account designations are those of the Commission's Uniform System of Accounts effective January 1, 1937.

By letter dated May 3, 1961, Licensee confirmed its agreement with staff's proposed adjustments, accounting dispositions, and resulting project costs and reserve for accrued depreciation applicable to project properties as described above.

The Pennsylvania Public Utility Commission was advised by letter of this Commission dated June 15, 1962, of the proposed adjustments, accounting dispositions, and resulting project costs and reserves for accrued depreciation and the views of the Commission were requested. By letter dated June 20, 1962, that Commission stated it has "no objection to the adjustment relative to the proposed decrease in the project original cost by $285,593.25.", and further stated that "No comment is made in the matter of the proposed decrease of the project depreciation reserve by $262,937.79."

The Commission finds:

(1) Licensee, by its tentative agreement to the staff recommendations, and the Pennsylvania Public Utility Commission, by its letter dated June 20, 1962, have obviated the necessity for notice and opportunity to protest provided by Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act.

(2) The foregoing adjustments, including the accounting dispositions, are reasonable and appropriate for the purposes of the Federal Power Act and therefore should be approved and directed as hereinafter provided.

(3) The net increase or change in the actual legitimate original cost of the project for the period from June 1, 1955 through December 31, 1959, is $1,024,-561.57, comprised of gross project additions of $1,897,890.88 and project retire-

ments of $873,329.31. The net increase or change in the reserve for accrued depreciation applicable to inservice project properties of Project No. 1881 for the period from June 1, 1955 through December 31, 1959, is $369,895.38. The actual legitimate original cost of Project No. 1881 as of December 31, 1959, is $17,797,981.28; and the reserve for accrued depreciation applicable to inservice project properties of Project No. 1881 as of that date is $6,438,147.04; all as more specifically set forth in the attached Schedule I.

The Commission orders:

(A) The provisions of Sections 4.4 and 4.5 of the Commission's Regulations under the Federal Power Act are hereby waived for the purpose of this order.

(B) The foregoing adjustments including the accounting dispositions, as proposed by staff and agreed to by the Licensee are hereby approved and directed to be made by the Licensee.

(C) Licensee, to the extent that it has not already done so, shall:

(a) establish and maintain control and detailed project plant accounts for Project No. 1881, showing the debit amount of $1,024,561.57 as the net increase or change in project cost during the period from June 1, 1955 through December 31, 1959, and the amount of $17,797,981.28 as the actual legitimate original cost of the project as of December 31, 1959; all classified by primary plant accounts of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, and more specifically shown in the attached Schedule I; and

(b) establish and maintain a reserve account for accrued depreciation for Project No. 1881 showing the credit amount of $369,895.38 as the net increase or change in the reserve for accrued depreciation applicable to inservice project properties for the period from June 1, 1955 through December 31, 1959; and a total reserve for depreciation applicable to inservice project properties of $6,438,147.04 as of December 31, 1959, as more specifically shown in the attached Schedule I.

(D) Licensee shall within 90 days from the date of issuance of this order file three certified copies of its journal entries showing compliance with this order.

PENNSYLVANIA POWER & LIGHT COMPANY

SUMMARY BY DETAILED PLANT ACCOUNTS OF PROJECT COSTS AND PROJECT RESERVE FOR DEPRECIATION AS OF JUNE 1, 1955; CLAIMED CHANGES FOR THE PERIOD FROM JUNE 1, 1955 TO DEC. 31, 1959 WITH STAFF PROPOSED ADJUSTMENTS THERETO AND BALANCE ALLOWED AS OF DEC. 1, 1959

NATURAL GAS PIPELINE COMPANY OF AMERICA, ET AL., DOCKET NO. CP62-243, ET AL.

ORDER DENYING APPEAL FROM ACTION OF THE COMMISSION'S SECRETARY

(Issued July 17, 1963)

By letter of June 14, 1963, the Secretary of the Commission rejected a joint appeal from rulings of the Presiding Examiner in the above-entitled proceeding, tendered for filing by Oklahoma Illinois Gas Pipeline Company (Oklahoma Illinois) and The Gas Service Company (Gas Service). The appeal related, in the main, to the Examiner's rulings excluding specified evidence submitted by the Appellants. We now have before us an appeal from the Secretary's rejection.

Questions relating to the admissibility or exclusion of evidence during the course of a hearing must, of course, be determined initially by the presiding officer. These rulings, when properly excepted to, are subject to our review at the time of our consideration of the Examiner's initial decision. To examine on appeal every interlocutory ruling made by a presiding officer with respect to the admissibility of proffered evidence would require piecemeal examination of voluminous exhibits and testimony proffered.[1] This Commission has consistently indicated, even as recently as July 8, 1963[2], that barring extraordinary circumstances, it is a much better practice to review such material at a time when it can be considered in relation to all other evidence in the record.

Section 1.28(a) of the Rules of Practice and Procedure, as amplified by the Commission's "Order Rejecting Appeal From Ruling of Presiding Examiner Excluding Evidence," issued December 5, 1962, in United Fuel Gas Company, *et al.*, Docket No. G-20270, *et al.*, permits interlocutory appeals to the Commission from a presiding officer's rulings only under extraordinary circumstances where prompt decision by the Commission is necessary to prevent detriment to the public interest and the presiding officer refers his ruling to the Commission for determination. In the instant proceeding the Presiding Examiner refused to find that there existed extraordinary circumstances as to warrant referral of his rulings to the Commission. Our study of the pleadings fails to disclose anything which would indicate that the Examiner's ruling was other than the normal type of determination which it is his function to make in the course of his duties or that any other circumstances exist which would warrant our passing on this evidentiary matter at this time. Consequently the rejection of the appeal was proper and we sustain the action of the Secretary.

The Commission orders:

The Appeal by Oklahoma Illinois and Gas Service from the action of the Secretary rejecting an appeal from the Presiding Examiner's rulings tendered for filing by said Appellants, is hereby denied.

---

[1] An offer of proof was made as to all evidence excluded by the Presiding Examiner. See answers filed in opposition to the appeal pending before us.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7108

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS AND PREFERRED STOCK

(Issued July 17, 1963)

Pacific Power & Light Company (Applicant), a corporation organized under the laws of the State of Maine and doing business in the States of Oregon, Washington, Wyoming, California, Montana and Idaho, with its principal business office at Portland, Oregon, filed an application on June 13, 1963, and supplements thereto on June 18 and 20, 1963, for authorization, pursuant to Section 204 of the Federal Power Act, to issue and sell at competitive bidding $30,000,000 principal amount of First Mortgage Bonds, ——% Series due 1993 and 100,000 shares of Serial Preferred Stock, par value $100 per share.

Applicant proposes to issue the Bonds under its Indenture of Mortgage and Deed of Trust between Applicant and Guaranty Trust Company of New York (now Morgan Guaranty Trust Company) and Oliver R. Brooks (Wesley L. Baker, successor), dated as of July 1, 1947, as heretofore supplemented and as to be further supplemented by a proposed, new Sixteenth Supplemental Indenture to be dated as of August 1, 1963.

The Applicant proposes to issue 100,000 shares of new Serial Preferred Stock, par value $100 per share, total par value $10,000,000. The new Preferred Stock will be issued under and pursuant to the applicable provisions of the Applicant's By-laws, as heretofore amended and as to be further amended by an appropriate amendment thereto creating the new series and establishing its distinctive characteristics. The new Preferred Stock will be entitled to cumulative dividends at a rate per annum to be fixed by competitive bidding, and the holders thereof will be entitled to one vote for each share held, together with certain additional voting privileges during any periods when preferred stock dividends may be in arrears.

Applicant further proposes, on or about July 18, 1963, to invite sealed, written bids for the purchase of the proposed Bonds and Preferred Stock by newspaper publication and by distribution of a Public Invitation for Bids, together with a statement of terms and conditions relating thereto and a form of purchase contract.

Each bid, whether made by a single bidder or a group of bidders, must be for the purchase of all of the Bonds, or all the Preferred Stock and must be in writing on the Form of Bid provided by the Applicant. Each bid for the Bonds must specify: (1) the coupon rate to be borne by the bonds, which rate shall be a multiple of ⅛ of 1%; (2) the price exclusive of accrued interest to be paid to Applicant for the Bonds, which price shall be expressed as a percentage of the principal amount of the Bonds and shall not be less than 98½% nor more than 102¾% thereof; and (3) that Applicant shall be paid the amount of accrued interest on the Bonds from August 1, 1963 to the date of payment therefor and delivery thereof. Each bid for the Preferred Stock must specify the dividend rate to be borne by the Preferred Stock, which shall be a multiple of 1/25 of 1%; and, (2) the price to be paid to the Applicant, which price shall be not less than $100, nor more than $102.75 per share.

Each bid for the Bonds must be accompanied by a certified or official bank check or checks in the aggregate amount of $900,000 and for the Preferred Stock in the amount of $300,000.

Unless postponed, all bids for the purchase of the proposed Bonds or Preferred Stock must be received by Applicant before 11:00 a.m. for the Bonds and 12:00 noon for the Preferred Stock, New York Time on July 30, 1963 at Room 2033, Two Rector Street, New York 6, New York. Unless Applicant rejects all bids for the proposed issuance of Bonds and all bids for the Preferred Stock (which it reserves the right to do) or excludes a bid or bids for reasons specified in the statement of terms and conditions, it will accept the bids which provide it with the lowest annual cost of money.

Upon issuance of the new Preferred Stock, the Applicant proposes to call its 90,000 shares of 6.16% Serial Preferred for redemption at a redemption price of 106.625% of $100 par value, plus unpaid accumulated dividends to the date of redemption. The redemption of the presently outstanding 90,000 shares of 6.16% Preperred Stock at 106.625% will require $9,596,250, plus unpaid accumulated dividends.

The Applicant proposes to use the remaining proceeds of the Preferred Stock and the net proceeds of the First Mortgage Bonds for:

(1) retirement of the $17,996,000 of promissory notes (Docket No. E–7061) used in part to refund and retire First Mortgage Bonds originally issued by California Oregon Power Company and assumed by the Applicant in a merger, and

(2) the balance to retire approximately $13,000,000 of an estimated $27,000,000 of short-term unsecured promissory notes under a $45,000,000 credit agreement (Docket No. E–7052) which are expected to be outstanding at the time of the consummation of the issuance and sale of the new Bonds and new Preferred Stock. The Applicant states that any amounts required for such purposes not provided through the issuance and sale of the new Bonds and new Preferred Stock will be provided from treasury funds.

Applicant's construction expenditures for 1963 are estimated at $57,200,000 of which $12,500,000 had been expended on April 30, 1963. Applicant proposes to finance said expenditures through the issuance of additional Promissory Notes under the $45,000,000 credit agreement (Docket No. E–7052) which will have an estimated unused balance of $31,000,000 after completion of the transactions proposed herein.

Of the $57,200,000 estimated for 1963, $18,500,000 is allocated to the installation of a 200,000 kw unit at Applicant's Dave Johnston steam plant at Glenrock, Wyoming. Other major projects of the company for 1963 include:

(1) 230-kv line—Klamath Falls, Oregon, south into California to interconnect with system of Pacific Gas and Electric, $2,000,000.

(2) 230–kv line—Walla Walla, Washington to Wanapum Dam, $650,000.

(3) 230–kv line—Rock Springs, Wyoming to Flaming Gorge Project, $1,300,000.

(4) 230–kv line—Thermopolis, Wyoming to Muddy Ridge, Wyoming, $700,000.

(5) 230–kv line—Frannie, Wyoming to Oregon Basin by way of Garland Dome, $1,235,000.

Total expenditures for generation facilities are $19,886,000, for transmission facilities are $12,991,000, and for distribution are $16,444,000. Proposed additions to non-electric plant total $1,909,000 and proposed expenditures for other plant facilities, surveys and investigations are $5,970,000.

Written notice of the application has been given to the Public Utilities Commissioner of Oregon, the Wyoming Public Service Commission, the Washington Utilities and Transportation Commission, the Public Utilities Commission of the State of California, the Public Service Commission of Montana, and the Idaho Public Utilities Commission and to the Governor of each of those States.

Notice has also been given by publication in the Federal Register on June 26, 1963 (28 F.R. 6602), stating that any person desiring to be heard or to make

any protest with reference to the application should file a petition or protest on or before July 10, 1963 with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission, as heretofore determined and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, in Docket No. E-7025, 27 FPC 620.

(2) The proposed issuance and sale of Bonds, and Preferred Stock as described above, will constitute issuances of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issues here involved are regulated by a State commission within the meaning of Section 204(f) of the Act; and the proposed issuances of securities are, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, and Preferred Stock as hereinafter authorized will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably necessary and appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, and Preferred Stock upon the terms and conditions and for the purposes specified in the application, as described above, are hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds and Preferred Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2 (h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and Preferred Stocks and the interest rate and dividend rate respectively, thereof.

(C) This authorization shall expire unless the transactions hereby authorized are consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States with respect to any securities to which this order relates.

OPINION AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 17, 1963)*

Syllabus

1. Economic and financial evidence, whether on individual or area-wide basis, is irrelevant to initial price question. P. 287.
2. Post *CATCO* field price statistics provide no valid basis for determination of proper price line in Southern Louisiana area. P. 289.
3. 18.5 cents per Mcf, exclusive of tax reimbursement, is proper public interest initial price applicable to instant sales. P. 289.
4. Record fails to establish that a tax reimbursement greater than 1.5 cents per Mcf is warranted by statutory standard. P. 290.
5. Although original certificates were unconditioned as to price, reissued certificates require producers to refund, with interest, difference between sums received under prior authorization and sums which would have been received under instant conditioned rate. P. 290.
6. Superior was not prejudiced by non-inclusion in listing of parties to which notice of refund obligation was given in previous order, since no rights had been adjudicated prior to joinder of Superior by subsequent order. P. 291.
7. Once permanent certificate is granted, temporary authorization ceases to have any prospective application and is, in effect, automatically cancelled. P. 292.
8. Since deliveries had already begun and termination thereof had not been authorized under Section 7(b), rejection of temporary authorization was without force or legal effect. P. 293.
9. Where producing properties have been sold to third party while application is pending and potential refund liability exists, [to date of such sale] refund obligation falls upon immediate successor of first applicant. P. 293.
10. Rate condition and refund requirements made applicable to all volumes paid for from date of contracts—refunds for prepaid gas to be made in kind over life of contract. P. 294.
11. Citing *Amerada* as controlling, Commission *rejects* suggestion that producers be permitted option to reject proposed replacement certificates containing price condition where unconditioned temporary certificates had been issued, facilities constructed and flow of gas begun. P. 295.

---

*Initial decision appears on p. 304. Opinion 398–A, issued September 11, 1963, denied rehearing; granted stay, etc., 30 FPC 682. Order issued September 30, 1963, rejecting offer of settlement, 30 FPC 884. Reversed and remanded, *sub nom Callery Properties, Inc.* v. *F.P.C.*, 335 F. 2d 1004 (CA5–1964.) Affirmed, *U.G.I.* v. *Callery Properties, Inc.*, 382 U.S. 223 (1965).

12. Since it does not appear that any past prepayment will necessarily be forfeited, Commission does not require total refund as to all prepayments for gas not taken. P. 296.
13. *Concluding* that public interest *requires* certificates be conditioned to preclude future escalations triggering favored nation clauses, Commission *orders* moratorium on increases in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, pending final decision in South Louisiana area proceeding, or until July 1, 1967, whichever is earlier. P. 298.
14. Upon remand, Commission *reissues* certificates of public convenience and necessity conditioned as to price. Pp. 299–301.

Commissioner O'Connor, *concurring in part; dissenting in part.*

Commissioner Ross, *concurring in part; dissenting in part.*

Commissioner Morgan *joined* in Commissioner Ross' statement.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

WOODWARD, *Commissioner:*

This is a reopened proceeding of an originally large number of dockets[1] consolidated for hearing under Section 7(c) of the Natural Gas Act "for the limited purpose of determining the public interest initial price, or prices, applicable to these proceedings."[2] Previously the Commission had issued permanent certificates of public convenience and necessity without rate condition in separate consolidated proceedings, all of which were returned for review on judicial remand disclosing error in the original proceedings or on rehearing granted by us upon the basis of the principles laid down in such court decisions. An outline of the essential facts is contained in the Commission's orders of January 10 and March 7, 1962, and the history of the proceeding is adequately summarized in the examiner's decision. Subsequent to the aforementioned consolidation, 34 dockets were severed from the reopened proceeding and permanent certificates of public convenience and necessity were reissued to the applicants in those dockets by order issued July 30, 1962, in *Texaco Inc., et al.*, Docket No. G–13169, *et al.*, Order Approving Proposed Settlements and Conditionally Reissuing Certificates of Public Convenience and Necessity, 28 FPC 247. Nineteen additional dockets were accounted for by other severance orders issued prior to June 18, 1962, when the hearing began.

The 21 dockets remaining at the time of hearing involved requests for Commission authorization of sales of gas produced from fields located in or offshore Southern Louisiana at initial contract prices ranging from 21.4 cents per Mcf[3] with no tax reimbursement to 23.8 cents per Mcf for those subject to the taxing authority of the State of Louisiana. Since the hearing, final settlements have been negotiated in an additional eight dockets,[4] leaving 13 dockets in which the initial price is now to be determined by the Commission. These dockets, and the various court decisions rendered thereon, are as follows:

(1) *The Transco-Seaboard case:* sales to Transcontinental Gas Pipe Line Corporation.

Docket No. G–	Contract date	Field	Rate schedule
13183	Aug. 13, 1957	Thibodaux	19
13184 [5]	Aug. 13, 1957	Raceland	18
13197	Aug. 12, 1957	N. Thibodaux	4
14109	Nov. 1, 1957	Rousseau	19

[5] Placid Oil Co., applicant in Docket No. G–13184, states that sales commenced March 18, 1959, but that the reserves underlying the dedicated acreage were depleted within 3 months. Abandonment of the sale was permitted by order issued January 12, 1962, in Docket No. CI61–1459. See footnote 27, *post*.

Opinion No. 315 and Order issuing permanent certificates, 20 FPC 264, affirmed *U.G.I.* v. *F.P.C.*, 269 F. 2d 865, judgment vacated and cases remanded to the Court of Appeals with directions to remand the cases to this Commission

[1] The proceeding at one time involved 74 applications for certificates of public convenience and necessity by 42 independent producers.

[2] *Texaco Seaboard Inc., et al.*, Docket No. G–13169, *et al.*, order issued March 7, 1962, ordering paragraph (B), 27 FPC 482.

[3] All prices are at 15.025 psia.

[4] *Sun Oil Co.*, Docket Nos. (4) Sales by the Superior Oil Co. to Transcontinental Gas Pipe Line Corp.

Docket No. G-	Contract date	Field	Rate schedule
16380	Sept. 17, 1958	Vermilion, Blks. 71 and 76	78

Order, 22 FPC 369, issuing permanent certificates set aside and cause remanded for further proceedings, *U.G.I.* v. *F.P.C.*, 290 F. 2d 147, cert. den., *sub nom. The Superior Oil Co.* v. *U.G.I.*, 366 U.S. 965.

On December 7, 1962, the presiding examiner issued an initial decision granting permanent certificates to the applicants herein subject to certain conditions. These conditions require (a) the filing of an initial price of 18.5 cents per Mcf, except that an additional 1.5 cents per Mcf might be charged in areas where the production is subject to State tax; (b) refund to the pipeline purchasers, with 7 percent interest, of the difference between the amounts received by the producers under their original temporary or permanent certificates and the initial price now determined to be required under Section 7 of the Act; and (c) modification of the take-or-pay requirement in each contract to be subject to the final order in the Docket No. R–199 rulemaking proceeding as of the effective date of that order. The examiner also (1) rejected a staff proposal for adoption of a 16-cent triggering line on certain of the sales on the ground that recent settlements in cases involving sales from the same "triggering area" have been made at prices in excess of both the proposed triggering line and the 18.5-cent price found by him to be required for these sales; (2) rejected a recommendation by staff for

refund of all monies received by the producers under take-or-pay provisions as payment for gas not delivered; and (3) concluded that a proposal by staff and The United Gas Improvement Co. that the producers be given an option to reject the conditioned certificates could not be justified.

Exceptions to the decision have been filed by all nine remaining producers as well as by Transcontinental Gas Pipe Line Co., U.G.I., and staff. In general, the producers have excepted to each condition imposed by the examiner which operates to grant to them a less favorable certificate, and to the imposition of a refund requirement with respect to the past payments. Transco, which had taken no position on the question whether a price condition should be imposed, excepted only to the examiner's direction of a refund applicable to all volumes "delivered" by the producers, noting that in the case of at least one sale it has made prepayments for gas which it has been obligated to take-or-pay for. It requests that if a refund condition is imposed, the condition be extended to include all gas for which payment has been made at the contract prices. A similar exception was filed by staff and U.G.I. In addition, staff excepted to the examiner's refusal to order total refund of the prepayments for gas paid for but not taken, while U.G.I. excepted to the refusal to give the producers an option to reject the new certificates. No exception was taken to the rejection of the staff's "triggering line" proposal.

The controversy in this proceeding, as exemplified in the exceptions, centers on five basic questions:

(1) Is the Commission required to consider cost-type economic and financial evidence in determining the initial price question in producer certificate cases generally, and in this proceeding in particular?

(2) Is the Southern Louisiana "in-line" price of 18.5 cents per Mcf, where State taxes are not applicable, and 20 cents per Mcf, where subject to the State tax, determined by the Commission in the remanded *CATCO*[6] proceedings also the public interest initial price applicable to the sales involved in this proceeding?

(3) May the Commission redetermine its prior orders in these dockets and grant conditioned certificates effective as of the dates of the original orders; if so, should the producers be required to refund the amounts collected by them in excess of the amounts that would have been payable if certificates conditioned as to initial price had been issued?

(4) If conditioned certificates are ordered, should the producers be accorded an option to reject?

(5) Should total refunds be ordered as to all prepayments made for gas not taken?

Upon review of the record, we find we are in almost complete accord with the decision of the presiding examiner and, except for certain modifications, conclude that the decision as therein entered should, with this decision, constitute the decision of the Commission. In particular, we affirm the decision as to its holding that economic and financial evidence, whether on an individual company or on an area-wide basis and whether of the type characterized as cost-of-service studies, cash flow studies, demand-supply, cost, profit and market price trends, area cost-revenue trends, comparative well cost data and gas replacement costs, plays no part in and is irrelevant to the determination of the initial price question in independent producer certificate cases;[7] that the

[*Continued on page 288.*]

"in-line" price of 18.5 cents per Mcf was properly determined as the price required for initial service under these contracts; that conditioned certificates should be issued effective as of the dates of the original orders and refunds required; and, finally, that there can be no option allowed the producers to reject the conditioned certificates, even under the particular circumstances involved in this proceeding. Since the exceptions serve primarily to reargue the determinations made by the examiner and present little, if any, material not adequately disposed of in that decision, our discussion of the above issues will be limited to those few points concerning which the examiner's decision should be modified or amplified. In addition, it is our conclusion that the present and future public convenience and necessity requires that the permanent certificates issued to the producers be further conditioned to hold in abeyance, beyond a level as herein determined, the price escalations provided in the contracts and related rate schedules for a period pending the determination of just and reasonable rates for these sales.

The Post-CATCO Line

Beginning with the Commission's redetermination in *CATCO* of 18.5 cents and 20 cents as the in-line price for 1956 contracts and the area rate of 19.5 cents and 21.25 cents fixed in the Fourth Amendment to the Policy Statement for the initial service from and after October 31, 1961, the examiner stated that the only question was whether the in-line price for instant 1957 and 1958 contracts should be fixed at the 19.5-cent level for contracts executed after October 1961 or at the 18.5-cent level of *CATCO*. Although the producers pointed out that 25 percent of the 1957 Southern Louisiana contracts not subject to court or Commission review were priced at 21.3 cents or more, and 25 percent had a price 22 cents or more in 1958, the examiner rejected this argument, stating "there can be no doubt" that these contracts were affected by the *CATCO* price and that such prices "though not currently under review ought to be regarded as suspect" and could not be relied upon in determining the in-line price. He noted that the producers made no attempt to show that the 1957-8 "suspect like" prices at levels above 18.5 cents were not subject to the same infirmities which produced the *CATCO* reversal.

After eliminating all prices above 18.5 cents as suspect, the examiner found that there were 47 contracts executed in 1957 with volumes of 56,500 MMcf and 59 contracts executed in 1958 with volumes of 70,500 MMcf[8] at initial prices of 18.5 cents or less. Also, out of a total 1958 deliveries of 241,200 MMcf from Southern Louisiana under contracts made prior to the initial erroneous *CATCO* order, only 63,900 Mmcf was sold at prices above 18 cents. He thereupon concluded that "If the Commission's originial *CATCO* order of June 1957 had correctly drawn the initial price line for Southern Louisiana at the 18.5-cent level finally established retroactively in Opinion No. 351, thus avoiding the fatal errors which led the court to nullify the original unconditioned certificate *ab initio*, it is reasonable to assume that the line would have been held at 18.5 cents per Mcf in a substantial portion of the *other* contracts executed in 1957 and 1958."

[*Continued from page 287.*]

April 22, 1963, 29 FPC 784; *El Paso Natural Gas Company, et al.*, Opinion No. 390, issued June 19, 1963, 29 FPC 1175. For court decisions upholding the Commission's refusal to examine relative production costs for comparative purposes in determining in-line prices, see *U.G.I.* v. *F.P.C.*, 283 F. 2d 817; *California Oil Company, Western Division* v. *F.P.C.*, No. 7148, 315 F. 2d 652, (CA10, March 28, 1963); *Atlantic Refining Company* v. *F.P.C.*, 316 F. 2d 677, No. 17166 (CADC, March 21, 1963).

[8] Although not stated in the decision, the exhibits show that 116 contracts were executed in 1957 with delivery volumes of 207,000 MMcf and 139 were made in 1958 with 261,100 MMcf to be delivered.

In our opinion, the evidence previously presented in the course of the initial proceedings in these dockets and expanded upon in this reopened proceeding confirms the long-developing conclusion that the field price history in Southern Louisiana was decisively influenced by the *CATCO* transaction, our original decision in *CATCO*, and the widespread attention which that decision received. Post-CATCO there was a new floor to prices at 21.4 cents per Mcf and pipelines either had to meet this price or go without the reserves needed for their expansion programs. The Supreme Court's admonition[9] to the effect that the Commission's determination of a proper price in *CATCO* would set the pattern for the Southern Louisiana area is yet to be finally confirmed.[10] What is now certain is that our erroneous order in June 1957 set a pattern of prices substantially in excess of any prices previously existing in the area.

In Opinion No. 351, we recognized that in the years from 1957 through 1959 a number of contracts were executed in the range between 20 and 23 cents, although observing that "even in those years there were many contracts around 18 cents and below and a scattering below 15 cents." It must also be noted, however, that many of the contracts referred to in that Opinion as having initial prices of 20 cents or more are the very same sales which are involved in the instant proceeding. In formulating the price line applicable here, the producers would have us rely upon a presentation which, to a large extent, not only incorporates the complete number of contracts originally involved in this proceeding, but likewise includes the *CATCO* contracts, and all at the original contract prices. The decision of the Ninth Circuit remanding one of the dockets involved in this proceeding,[11] which was followed by other courts in setting aside other orders of the Commission granting certificates for sales from Southern Louisiana at prices of 21.4 cents and above,[12] has made it clear that sales which are under Commission or court review are not legally relevant for purposes of determining an in-line price. The same decision also makes plain that like prices in the same area, even though themselves not under review, are equally suspect and "ought not to be relied upon in fixing a line except upon evidence and findings to the effect that they are not subject to the same infirmities which are under test in the pending proceedings."[13] We agree with the finding by the examiner that the record does not show that the 1957–1958 "suspect like prices" at levels above 18.5 cents were not subject to the same infirmities which produced the *CATCO* reversal. It is our opinion, therefore, that the post-*CATCO* field price statistics relied upon by the producers to support their contract prices provide no valid basis for determination of a proper price line in the Southern Louisiana area. For the reasons set out herein and in the initial decision, we conclude that 18.5 cents per Mcf, exclusive of tax reimbursement, is the proper public interest initial price applicable to the instant sales.

Tax Reimbursement

In addition to the 18.5-cent base price, the examiner allowed a 1.5-cent tax reimbursement on the sales subject to the Louisiana severance tax.[14] A footnote to the decision shows that the allowance "follows the Commission's tax treat-

[13] 283 F. 2d 824–825.

[14] It appears that the only sales involved in this proceeding which are not subject to the State tax are those in Docket No. G–16380.

ment in *CATCO*", but that evidence submitted by the producers indicates that the weighted average tax reimbursement for Southern Louisiana contracts executed in 1957 and 1958 and which provided for a base price of 18.5 cents or less was 1.69 cents. Exception has been taken by several of the producers to the failure to allow the tax reimbursement of either 2.05 cents or 2.3 cents as provided in their contracts. One producer, Superior, contends that the "error" is even greater than indicated in that the weighted average tax reimbursement under contracts comparable with the price fixed by the examiner was 1.85 cents.

In connection with the applications for rehearing of our Opinion No. 351, we had occasion to reconsider the tax reimbursement allowance granted the producers in that proceeding.[15] At that time we indicated that "We did not intend the 1.5-cent tax reimbursement as an in-line tax provision as of the time of the contract, but because Louisiana taxes, if applicable, were increased on December 1, 1958, we are of the opinion that the partial tax reimbursement of the tax increases provided in the contracts were in the public interest and required by the public convenience and necessity." In our opinion the evidence presented in this record fails to establish that a tax reimbursement greater than 1.5 cents per Mcf is warranted by the statutory standard or that the conclusion quoted above is not equally applicable to the contracts involved in this proceeding.

Refunds

As in the *CATCO* decision, the examiner's decision would require the producers to refund, with interest, the difference between the sums received from the pipeline purchasers and the sums that would have been received under the conditioned rate. Insofar as the general obligation of the producers to make refunds is concerned, we conclude that refunds should be required for the reasons set out in the examiner's decision. All arguments of the producers against their imposition, whether on the basis that we have no power to order reparations, that the original certificates are still outstanding and thus, it is contended, distinguish the Commission's refund action in *CATCO*, or that such a requirement at the present time would amount to "entrapment", have been fully and carefully considered in the initial decision and, we are convinced, correctly decided. Our review gives us no cause to overturn or otherwise disturb the determination made therein. Additional discussion is necessary, however, on certain of the exceptions by Superior and J. R. Frankel, *et al.*, as well as on various ancillary matters bearing on the refund requirement which leads to modification of the order with respect to the computation of interest payments and to the volumes of gas subject to refund requirements.

Superior has excepted to all findings and conclusions based upon or made in reliance on our orders of January 10 and March 7, 1962. It will be recalled that in the first order referred to the Commission, "to the extent that we are empowered to do so", imposed a refund obligation on the producers as to all amounts collected by them in excess of the amounts finally determined herein to accord with the requirements of the public convenience and necessity. Superior's contention is stated as follows:

> The error in relying on such orders, from Superior's viewpoint, is readily apparent from the orders, themselves. The January 10, 1962, Order was entered in a docket in which Superior was not a party. Superior's rights were not involved or affected thereby. The March 7, 1962, Order, denying rehearing on the January 10, 1962, Order necessarily did not consider Superior's dockets, and, but for the matter of consolidation in the hearing therein ordered, clearly is related to dockets and proceedings to which

[15] *Continental Oil Company, et al.*, Docket No. G–11024, *et al.*, Order Denying Rehearing and Clarifying Opinion, issued March 22, 1962, 27 FPC 592.

> Superior was not a party. Superior is denied every element of due process of law guaranteed by the *Fifth Amendment* to the *Constitution* of the *United States* if its rights are to be determined in administrative decisions to which it is not a party.

We agree that Superior's rights were not involved or affected by our January 10, 1962 order. Nor, in our opinion, were the rights of any other producers adversely affected by that order. The order did not purport to establish an absolute obligation to make refunds with respect to the certificates involved but merely included a caveat that, in the circumstances of the cases, the Commission could and would order refunds at the conclusion of the proceedings if the initial certificate rates ultimately approved turned out to be less than the rate then being collected. As such, it neither added a "rate condition" nor changed the rate schedules of the producers concerned; it simply gave notice of the Commission's view that a contingent refund obligation existed because of the timely challenges which had been filed to the orders originally granting certificates for the sales involved. Since no obligation was added with respect to the rates that would not have existed absent the expression of our views, and since the order was addressed solely to the potential effect of future administrative action, it was not reviewable as a final order of the Commission.[16] We conclude, therefore, that Superior was not prejudiced by its non-inclusion in the listing of parties to which the notice of the refund obligation was given in the January 10, 1962 order for the reason that no rights respecting the obligation had been adjudicated prior to joinder of Superior by our order of March 7, 1962. Superior's exception, accordingly, will be denied.

Superior also alleges error in requiring that refunds to be made on the sales to Transco in Docket No. G–16380 from Vermilion Block 76 field. It contends that this sale was commenced and has continued under a temporary authorization without price condition issued October 22, 1958, the validity of which has never been challenged on appeal, and therefore, the sale is not factually distinguishable from the *Skelly* case[17] where we held that refunds should not be ordered for the period prior to the effective date of the permanent certificates then being issued.

A review of the prior history of this sale shows that an unconditioned temporary certificate was in fact issued to Superior on October 22, 1958, pursuant to applications filed September 23 and 24, 1958. Thereafter a hearing was held and, on February 19, 1959,[18] an initial decision was issued granting a permanent certificate. Ordering paragraph (C) provided that "The certificates issued to The Superior Oil Company and to Transcontinental Gas Pipe Line Company shall be deemed accepted and of full force and effect, unless refused in writing and under oath by these applicants within 30 days from the date of issuance of this order * * *." No notification was received that the certificate was not acceptable to Superior; rather, the company submitted a motion for expeditious consideration and disposition of exceptions filed by U.G.I. On August 10, 1959,[19] the Commission issued an order adopting, with modifications not now material, the decision of the examiner. Rehearing was denied by order issued October 7,

[16] *Sunray Mid-Continent Oil Co.* v. *F.P.C.*, 270 F. 2d 404, 407 (CA10), and cases there cited. Numerous petitions for review of the Commission's order of January 10, 1962, in this proceeding were filed and four of these petitions are still pending in the Fifth Circuit, but have not been acted upon. The only court to have actually considered the question of finality of the Commission's order has been the Third Circuit, which, on October 2, 1962, dismissed the petition in *Shell Oil Co.* v. *F.P.C.*, No. 14031, for lack of jurisdiction. [Not reported.]

[17] *Skelly Oil Company, et al.*, Opinion 362 (28 FPC at pp. 412–413).

[18] 22 FPC 372.

[19] 22 FPC 369.

1959.[20] The order was vacated by a decision rendered February 22, 1961,[21] and certiorari was denied on June 19, 1961.[22] Thereafter, Superior submitted an application for a temporary certificate to continue the sales from Block 71, indicating that the sale had been discontinued upon the vacating of the Commission's order. In response thereto the Commission dispatched a telegram indicating that no authorization had been granted for discontinuance of the sale in Docket No. G–16380 and stated that "Deliveries should be immediately resumed." The telegram was followed up by a letter order dated August 2, 1961, which stated:

> The Superior Oil Company is hereby authorized to continue the sale of natural gas, in interstate commerce to Transwestern [sic] Gas Pipe Line Corporation, produced from the Offshore Block 71 and 76 Fields, Vermilion Parish, Louisiana as proposed in Docket No. G–16380. This authorization is subject to the condition that the total rate of 21.4¢ per Mcf at 15.025 psia thereunder shall be subject to such conditions as the Commission shall lawfully prescribe in issuing a permanent certificate in Docket No. G–16380, including any provision for refund thereby imposed. The above specified rate and the condition attached thereto shall remain in effect until changed by further Commission order in the proceeding, Docket No. G–16380.

Superior, however, replied that the foregoing authorization "was neither requested nor desired insofar as Block 76 Field is concerned. As to that field, this Company was authorized by your letter of October 22, 1958, to commence and continue that sale. For this reason the authorization in letter of August 2, 1961, is superfluous and neither accepted nor acted upon as to Block 76." The final word in this chain of events, prior to the present discussion, is contained in the Commission's reply of August 16, 1961, where we stated:

> The order of the Fifth Circuit Court of Appeals vacating this Commission's order issued August 10, 1959, 22 FPC 369, in Docket No. G–16380 covered not only the August 10, 1959 order, but also all previous actions taken in Docket No. G–16380. For this reason, the temporary authorization for the continued sales of natural gas to Transcontinental issued August 2, 1961, covers sales from both Offshore Block 71 and Offshore Block 76 Fields.

In our opinion, once we granted Superior a permanent certificate in Docket No. G–16380, the temporary authorization ceased to have any prospective application and was, in effect, automatically cancelled. Assuredly the two charters did not coexist, providing duplicate authority for the same sale. Had the permanent certificate imposed a condition rendering inoperative certain contract provisions, the parties certainly could not have relied on the temporary authorization subsequent to August 10, 1959, to support their continued observance of the original provisions. This is so for the reason that a temporary authorization which may be (and here was) granted without notice or hearing cannot predetermine the Commission's prospective action after notice and hearing, to the end that any temporary authorization can only be effective *pendente lite*. Section 157.28 of the Commission's Regulations under the Natural Gas Act, pursuant to which the temporary authorization was granted to Superior, specifically provides that under such an authorization an independent producer may "continue such sale or transportation pending final Commission action under Sections 4 and 7 of the Natural Gas Act. * * *" The Commission's order of August 10, 1959, constituted such final action in both respects, granting a permanent certificate and continuing acceptance of the rate schedule previously

---

[20] 22 FPC 655.
[21] *U.G.I.* v. *F.P.C.*, 290 F. 2d 147.
[22] *Superior Oil Co.* v. *U.G.I.*, 366 U.S. 965.

filed. Under Section 1.13(c) of the Commission's Rules of Practice and Procedure, the August order became effective when issued.[23]

It is clear, therefore, that from and after August 10, 1959, when the permanent certificate was issued, any sales made by Superior from Block 76 under the contract in question could only have been pursuant to that permanent certificate and not the superseded temporary authorization.[24] Whatever rights might have accrued to Superior under the ensuing permanent certificate were wiped away by the court's action, leaving Superior as a practical matter operating without certificate authorization. The court's judgment that the permanent certificate was void did not and could not reinstate the temporary authorization nor restore its vitality; a new temporary authorization was needed and was granted by our August 2, 1961 order. Since deliveries had already begun and termination thereof had not been authorized under Section 7(b) of the Act, Superior's rejection of the temporary authorization was without force or legal effect, and that authorization is the basis for the continuation of the sale pending the redetermination made herein on the permanent certificate.

J. R. Frankel, *et al.*, *de facto* successors to the Berkshire Oil Company, applicant in Docket No. G–13197,[25] has excepted to the examiner's findings and conclusions on the ground that, effective November 2, 1961, the producing properties there involved were sold to Continental Oil Company. Frankel contends that Berkshire is, therefore, no longer "engaged in the sale of natural gas" nor is Berkshire now "able and willing" to perform the acts originally proposed.

By order issued May 6, 1963,[26] we approved, to the extent therein specified, a proposed settlement by Continental Oil Company and issued a permanent certificate, effective November 2, 1961, for continuation of the sale by Continental. However, no action was taken to vacate Docket No. G–13197 in view of the potential refund liability for the period prior to November 2, 1961.[27] In line with the decision reached herein, this refund obligation now falls to J. R. Frankel, *et al.*, with interest thereon to be computed in the manner hereinafter specified.

While not brought out in the body of the initial decision, ordering paragraph (D) imposes a 7 percent interest charge upon the entire refund. As several of the producers point out in their exceptions, at the time deliveries began in 1958 and 1959 the Commission's Regulations under the Natural Gas Act (Sec-

[23] Section 16 of the Act provides that "Orders of the Commission shall be effective on the date and in the manner which the Commission shall prescribe." Section 1.13(c) of the Rules of Practice and Procedure specified that "Orders of the Commission shall be effective as of the dates of issuance unless otherwise specially provided in the orders." No different date is specified in the August 10 order. Moreover, under Section 19(c) of the Act, neither the filing of an application for rehearing nor a petition for review operates as a stay of a Commission order.

[24] Since the original temporary authorization for the Vermilion Block 76 sales did not contain a refund condition, no refund will be required for gas delivered or paid for prior to the issuance of the August 10, 1959 certificate.

[25] A motion to substitute J. R. Frankel, *et al.*, as parties to this Docket in the place and stead of Berkshire Oil Company was filed January 11, 1963, but has not been previously acted upon. The motion states that Berkshire Oil Company has disposed of all of its producing properties and was dissolved and fully liquidated as of September 28, 1962. The motion also states that the only stockholders of Berkshire were J. R. Frankel, *et al.*, and who, insofar as this proceeding is concerned, succeeded to all the rights and obligations of Berkshire as evidenced by a letter from their counsel to the Commission dated October 22, 1962. Based on the averments contained in the motion, the succession of J. R. Frankel, *et al.*, is hereby approved.

[26] *Continental Oil Company*, Docket No. CI62–1508, Order Conditionally Approving Proposed Settlement and Conditionally Reissuing Certificate of Public Convenience and Necessity, 29 FPC 887.

[27] *Cf.*, *Sohio Petroleum Company, et al.*, Docket No. CI61–343, *et al.*, *Placid Oil Company*, CI61–1459, Finding and Order Permitting and Approving Abandonment of Service, etc., issued January 12, 1962.

tion 154.102(c)) provided for interest on refunds at the rate of 6 percent per annum. It was not until March 1, 1960, that the 7 percent rate was imposed. Although the provision contained in the Regulations concerns the refunding of excess charges in proceedings arising under Section 4 of the Act, the percentage of interest as specified in that section likewise constitutes our best judgment as to the interest to be charged in this proceeding. Accordingly, in the exercise of our responsibilities under Section 7, we shall require that interest on the refunds be computed at the rate of 6 percent per year up to March 1, 1960, and 7 percent thereafter.

In addition, U.G.I., Transco, and staff have noted that the refund obligation imposed by the examiner would apply only to volumes delivered to the pipeline purchasers from the date of initial delivery and that, under this provision, there would be no refunds made for gas paid for but not taken. Superior's sales to United in Docket No. G–16388 and to Transco in Docket No. G–16380 apparently are the only sales in which prepayments have actually been made and are currently outstanding. The request in the exceptions that the rate condition and refund requirement be made applicable to all volumes paid for from the date of the contracts would, we believe, afford greater justice and will be adopted.[28] Transco has indicated that they would have no objection to a provision that the refund with respect to the prepaid gas be made in gas rather than in money. To the extent that the recommendation is limited only to the quantity of gas paid for but not taken we have no objection to the recommendation and shall include a provision in our order permitting the refund to be made in kind over the life of the contracts without further payment.

The settlement agreements approved by the Commission in the *Transco*, *United* and *Hope* rate proceedings[29] require that the refund and interest payments to be made by the producers as a result of our decision herein will be passed on to the pipeline's customers and further provide that, subject to certain limitations, these pipelines will file reductions in their rates to reflect the reductions in rates of their suppliers. Accordingly, no further action is necessary in this proceeding to assure that the pipelines will not be unjustly enriched as a result of these refunds. Although Transco and United may, if agreeable to Superior, elect to take the refund on the prepaid gas in kind as stated above, the intent in the settlement agreements that the refunds by the pipelines to their customers be in money remains unchanged. For purposes of the flow-through provisions of those agreements, we shall require that Transco and United treat these refunds as though received concurrently with the refunds made by Superior on the gas actually delivered.

Option To Reject

The examiner denied a suggestion by staff and U.G.I. that the Commission allow the producers an option, after making appropriate refunds, of rejecting a conditioned certificate. In essence, both parties argue that there is no "need" for the gas involved in this proceeding. Hope Natural Gas Company and Transco, two of the three pipelines involved, objected strenuously to the recommendation on the ground that the gas represented in this proceeding is needed by them to meet their customers' requirements, that extensive investment in pipeline facilities have been made, and that termination of the sales would establish a dangerous precedent in the administration of the Act. The examiner held that

[28] See footnote 24, *supra*, for differing treatment with respect to sales from Vermilion Block 76.

[29] *Transcontinental Gas Pipe Line Corporation*, Docket No. RP61–13, order issued February 2, 1962, 27 FPC 187; *United Gas Pipe Line Company*, Docket No. G–9547, *et al.*, order issued March 12, 1962, 27 FPC 504; *Hope Natural Gas Company*, Docket No. G–5474, *et al.*, order issued December 7, 1962, 28 FPC 958.

"Where the producers under such circumstances [commencing of deliveries while initial price was under litigation] have permitted their pipeline customers to construct facilities to obtain such supplies of gas, which since then have become a significant part of the latter's total gas supplies required for continued service to their customers, the producers must be regarded as having assumed and accepted the risk that their initial contract prices might ultimately be reduced as a result of such review proceedings. It would be inequitable under such circumstances to permit the producer applicants to now discontinue that service, merely because they might be dissatisfied with the Commission's action in carrying out the remand of the reviewing courts."

Only U.G.I. excepted to the refusal to grant the option, arguing: (1) that since the Commission's function in these remanded proceedings is to fashion an equitable remedy that will most nearly restore the parties to the position they would have occupied in the absence of the Commission's original erroneous orders, the producers should be accorded the same opportunity to accept or reject certificates as they would have had had the Commission originally issued price conditioned certificates; (2) that the "dangerous precedent" can be avoided merely by pointing out that granting of the option to reject is based on the particular equities and circumstances presented here and is not to be construed as a waiver of the Commission's authority under Section 7(b); (3) that Transco has already included in its rate base any facilities that might be affected by termination of the sales and is receiving a return thereon; (4) that no producer has indicated that it would choose termination; and (5) that the option would forestall claims as to future deliveries that the price condition is confiscatory.

As recently as February 5, 1963, in an order in *Amerada Petroleum Corporation, et al.*,[30] we rejected a similar suggestion by U.G.I. and others that the producers in that proceeding be permitted an option to reject proposed replacement certificates containing a price condition where unconditioned temporary certificates had been issued, facilities constructed, and the flow of gas had begun. Although the situation was factually distinguishable in that only temporary authorizations were involved, our decision as there expressed is controlling with respect to the present exception. We may note that the qualification regarding "extraordinary conditions" has been met precisely by the circumstances in these proceedings. Furthermore, any question as the need for this gas is beyond the scope of the present inquiry as established by us in our March 7, 1962, order.

Prepayments

Staff alone has urged that the producers be required to refund, *in toto*, all monies received by them on account of payments for gas not taken. The justification for this request lies in the contention that the operation of take-or-pay provisions may "in practical effect increase the stated price for gas." The examiner rejected the request on the observation that few, if any, prepayments have ever been forfeited through failure to take make-up volumes; he did, however, condition the certificates to render the take-or-pay provision subject to ultimate determination in the Docket No. R–199 proceeding, the same approach as taken in the *Skelly* opinion. Staff excepted on the basis of lack of evidentiary support for the finding regarding lack of forfeiture of prepayments and that there is no assurance "forfeiture will clearly be avoided here." Exception also was taken by some producers to conditioning the certificates to the Docket No. R–199 proceeding.

[30] Docket No. CI62–1544, *et al.*, Order Denying Motion To Impose Price Condition in Temporary Certificates, 29 FPC 218.

As previously noted, Superior's sales to United and Transco apparently are the only ones having prepayments. Transco's Form 2 Annual Report shows prepayments to Superior of $1,297,914 as of the end of 1961, while United had prepaid $138,726 as of the same period. Filings by Superior subsequent to submission of the exceptions reveal that the make-up period has been extended from one year to two years in the sale to United[21] and from two years to five years on a portion of the Transco sale.[22] At the present time it does not appear that any past prepayment will necessarily be forfeited. Therefore no action will be taken on the exception by staff. The matter of the take-or-pay provisions, however, is appropriately the subject of consideration in Docket No. R–199 and the producer certificates issued herein were rightfully made subject to the results of the rulemaking proceeding.

Price Increases

To this point our discussion has concerned only those matters on which exceptions have been taken to the determinations made in the initial decision. We now come to the consideration of a question which, though raised in the brief of the New York Public Service Commission and discussed by the examiner, was not the subject of an exception.

The contracts submitted with the certificate applications and the various rate schedules filed with the Commission at the time of the initiation of service provide for periodic increases in the price of the gas to be delivered to the pipeline buyers. In general, the contracts call for a base initial price, exclusive of tax reimbursements,[23] of either 21.4 or 21.5 cents per Mcf with increases of 1 or 2 cents per Mcf each four years until a stated maximum is attained. In the majority of the contracts, the date fixed for the first escalation above the initial price is July 1, 1962. In one, the date is March 1, 1963. In others, no precise date is stated, the time for the first escalation being computed as four years after the commencement of initial deliveries. In all cases, the time limitation on the applicability of the initial price has passed and the producers could, under their contracts, file applications with the Commission to put into effect the first of the increases. These rate increases would, of course, be open to suspension for a maximum of five months but then could be collected by the producers subject to refund under Section 4(e) of the Act as to all amounts not ultimately proven to be just and reasonable.

In *CATCO* the Supreme Court wrote: (360 U.S. 378, 391–392)

> Where the application on its face or on presentation of evidence signals the existence of a situation that probably would not be in the public interest, a permanent certificate should not be issued.
>
> There is, of course, available in such a situation, a method by which the applicant and the Commission can arrive at a rate that is in keeping with the public convenience and necessity. The Congress, in § 7(e), has authorized the Commission to condition certificates in such a manner as the public convenience and necessity may require. Where the proposed price is not in keeping with the public interest because it is out of line or because its approval might result in a triggering of general price rises or an increase in the applicant's existing rates by reason of "favored nation" clauses or

---

[21] Rate Schedule No. 89, Supplement No. 2, effective March 21, 1963.

[22] Rate Schedule No. 78, Supplement No. 3, filed February 18, 1963. This filing has not yet been accepted by the Commission.

[23] Depending on the percentage of tax reimbursement in the individual contracts, the total initial price for the on-shore sales is either 23.55 cents or 23.8 cents per Mcf. Superior's off-shore sale in Docket No. G–16380 is within the Federal domain and carries an initial price of 21.4 cents per Mcf.

otherwise, the Commission in the exercise of its discretion might attach such conditions as it believes necessary.

This is not an encroachment upon the initial rate-making privileges allowed natural gas companies under the Act, *United Gas Pipe Line Co.* v. *Mobile Gas Service Corp., supra*, but merely the exercise of that duty imposed on the Commission to protect the public interest in determining whether the issuance of the certificate is required by the public convenience and necessity, which is the Act's standard in § 7 applications. [The Commission] * * * so conditions the certificate that the consuming public may be protected while the justness and reasonableness of the price fixed by the parties is being determined under other sections of the Act. Section 7 procedures in such situations thus act to hold the line awaiting adjudication of a just and reasonable rate. * * * On the other hand, if unconditional certificates are issued where the rate is not clearly shown to be required by the public convenience and necessity, relief is limited to § 5 proceedings, and, as we have indicated, full protection of the public interest is not afforded.

While it is true that the decision spoke primarily in terms of holding the price line through a certificate issued at the contract price but conditioned upon payment of refunds if a lower just and reasonable price was subsequently fixed (with the producers reforming contract rights to file further increases also subject to refund), nothing therein suggests that such action would exhaust the Commission's power under Section 7(e) "to attach to the issuance of the certificate *and the exercise of the rights granted thereunder* such terms and conditions as the public convenience and necessity may require." Although dictum in the opinion, the quoted language clearly states that the Commission, at least in the circumstances described, one of which being where unconditioned approval "might result in a triggering of general price rises," not only may but should exercise its conditioning power to hold the line until a just and reasonable rate can be determined. The examiner's rejection of the staff's proposed 16-cent "anti-triggering" line was correct to the extent that no triggering would occur at the 16-cent level. Consequently, there would have been no blocking of a triggering price rise. This, however, is not true of the escalated prices. Obviously, the line cannot be held simply by conditioning the initial price where, as here, the producers would be at liberty to file price increases immediately on certification at a level which will have a widespread triggering effect in South Louisiana, resulting in the redetermination of many outstanding prices and a general increase in the "asking price" level within the area.

Moreover, the fact that any rate increases, including those adequate to cause triggering and price redeterminations, would themselves be subject to the refunding provisions of Section 4(e) would not, we believe, afford to the consuming public "the complete, permanent and effective bond of protection" which the court has described as the purpose of the Act. That the refund remedy is itself not adequate in many situations to protect the public was specifically recognized by the Supreme Court in its recent decision in *F.P.C.* v. *Tennessee Gas Transmission Company, et al.*, 371 U.S. 145, 154, where it stated:

* * * True, the exaction would have been subject to refund but experience has shown this to be somewhat illusory in view of the trickling down process necessary to be followed, the incidental cost of which is often borne by the consumer, and in view of the transient nature of our society which often prevents refunds from reaching those to whom they are due.

This general inadequacy of the refund remedy is additionally highlighted in this

proceeding by the extensive repercussions which could flow from the very collection of the increased rates provided in the rate schedules.

We conclude that the present and future public convenience and necessity militates against any grant authorizing the collection of rates in excess of the level at which triggering of favored-nation clauses will occur or which may serve as a basis for price redeterminations at a higher rate under gas purchase contracts in the Southern Louisiana area. Accordingly, it is our opinion that the public interest requires that the certificates now issued to the producers be conditioned to preclude such escalations in the price of the gas here involved. An examination of the applicable contracts of Transco, Hope and United reveals that triggering and price redeterminations will take place at a price in excess of 23.55 cents per Mcf.[24] Since hearings soon will begin in the Docket No. AR61–2 area rate proceeding, which has as its purpose the fixing of a just and reasonable rate on production in Southern Louisiana, a moratorium will be ordered on all price increases in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, pending our final decision in that proceeding or until July 1, 1967, whichever is earlier. In ordering such moratorium, we note that all permanent certificates issued in Southern Louisiana since the decision in the remanded *CATCO* proceeding have contained a similar provision and that the inclusion of the provision has been a major factor in our decision to issue those certificates.

The exceptions submitted by five of the producers include a request for an opportunity to present oral argument before the Commission. We conclude that no useful purpose would be served by such argument and that the requests should be denied. The exceptions not discussed herein are disposed of by the examiner's discussion or are immaterial to the result in this case. Except to the extent herein granted, all the exceptions filed are without substantial support or reasonable basis in law and should be denied. The examiner's decision should be modified in accordance with this opinion and as so modified should, with this opinion, be adopted by the Commission as its decision in this case.

The Commission further finds:

(1) Placid Oil Company, J. R. Frankel, *et al.* (successor to Berkshire Oil Company), Hassie Hunt Trust, the Superior Oil Company, J. Ray McDermott and Company, Inc., Kilroy Properties, Inc., *et al.*, Callery Properties. Inc., Ocean Drilling and Exploration Company, individually and as Operator, and Caroline Hunt Sands, *et al.*, are or, at times material herein, have been engaged in the sale of natural gas in interstate commerce for ultimate public consumption and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Subject to the requirements of our order herein and the conditions attached to the certificate herein issued, the applicants are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

---

[24] While a few prices higher than 23.55 cents are being collected in Southern Louisiana, it appears that those sales are not applicable to the line we are drawing here.

(4) The sales of natural gas by the independent producers referred to in the above paragraph (1), together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are and have been required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) Except as herein granted, the exceptions to the examiner's decision should be denied.

The Commission orders:

(A) Permanent certificates of public convenience and necessity are hereby issued, upon the conditions hereinafter set forth, authorizing the sales and services proposed by:

(1) Placid Oil Company in its contracts with Transco dated August 13, 1957, and filed as Placid's FPC Gas Rate Schedule No. 18, Supplements No. 1, 2, 3 and 4 and Rate Schedule No. 19, Supplements No. 1, 2, 3, 4 and 5;

(2) J. R. Frankel, *et al.*, successor to Berkshire Oil Company, in the contract with Transco dated August 12, 1957, and previously filed as Berkshire's FPC Gas Rate Schedule No. 4, Supplements No. 1, 2, 3 and 4.

(3) Hassie Hunt Trust in its contract with Transco dated November 1, 1957, and filed as Trust's FPC Gas Rate Schedule No. 19, Supplement No. 1;

(4) J. Ray McDermott and Company, Inc. in its contract with Hope dated November 14, 1958, and filed as McDermott's FPC Gas Rate Schedule No. 12, Supplement No. 2;

(5) Kilroy Properties, Inc. in its contract with Hope dated December 8, 1958, and filed as Kilroy's FPC Gas Rate Schedule No. 3, Supplements No. 1 and 2;

(6) Callery Properties, Inc. in its contracts with Hope dated December 10, 1958, and December 16, 1958, and filed respectively as Callery's FPC Gas Rate Schedule No. 2, Supplements No. 1, 2, 3, 4, and 5 and Rate Schedule No. 9;

(7) Ocean Drilling and Exploration Company in its contracts with Hope dated October 23, 1958, and December 13, 1958, and filed respectively as Ocean's FPC Gas Rate Schedule No. 1, Supplement No. 1 and Rate Schedule No. 2, Supplements No. 1 and 2;

(8) Caroline Hunt Sands in its contract with Hope dated August 13, 1958, and filed as Sands' FPC Gas Rate Schedule No. 5, Supplement No. 1;

(9) The Superior Oil Company in its contracts with United dated September 8, 1958, and Transco dated September 17, 1958, and filed respectively as Superior's FPC Gas Rate Schedule No. 89, Supplements No. 1, 2, and 3, and Rate Schedule No. 78, Supplements No. 1, 2, and 3;

and, in each instance, the operations and construction reasonably necessary thereto.

(B) Each certificate issued severally as provided in paragraph (A) above is hereby conditioned so that the base price effective under each of the contracts, from the effective date thereof, and until lawfully changed in the manner provided by the Natural Gas Act, shall be 18.5 cents per Mcf at 15.025 psia, except that the applicants may charge an additional 1.5 cents per Mcf for gas produced in any area subject to the taxing authority of the State of Louisiana, subject to refund to the pipeline purchaser, with interest, if it is finally adjudicated that such area is not subject to the taxing authority of the State of Louisiana. Within 30 days from the date of issuance of this order the applicants shall file supplements to their presently filed rate schedules reflecting the conditioned price as their initial price in lieu of the initial prices provided in their contracts; provided that the notice provisions of Section 154.94(b) and the detailed submit-

tal provisions of Section 154.94(f) of the Commission's Regulations Under the Natural Gas Act are waived insofar as they apply to the reductions in rate hereby ordered.

(C) Each certificate issued in Paragraph (A) above is further conditioned to provide for a moratorium on the filing of all price increases in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, pending the issuance of a final decision in the area rate proceeding in Docket No. AR61–2 or until July 1, 1967, whichever is earlier.

(D) Each of the applicants shall, within 60 days of the date upon which this order shall become effective, refund to the pipeline purchasers, with interest, a sum equal to the difference between the price charged to and collected from such purchasers and the base price set forth in paragraph (B) above, applied to all volumes paid for by such purchasers under the contracts which form the subject matter of this proceeding from the date of the contracts until the effective date of this order; provided, that no refund is required with respect to the sales made by Superior from the Vermilion Block 76 Field prior to August 10, 1959. The interest charge specified herein and in paragraph (B) above shall be calculated at the rate of 6 percent per annum for all gas paid for prior to March 1, 1960, and at 7 percent per annum thereafter, until full refund has been made.

(E) With reference only to that portion of the refunds which shall involve the outstanding prepayments made by Transco and United under the contracts set forth in Superior's FPC Gas Rate Schedules No. 78 and 89 as required by the take-or-pay provisions of such contracts, Superior may refund, over the life of the contracts a volume of gas attributable to the difference between the conditioned price of 18.5 cents per Mcf and the contract initial base prices. The volume of such refund gas shall be calculated at the initial price fixed herein, and no interest shall be charged. In all other respects the provisions of the contracts pertaining to quantity shall be unaffected. For purposes of the flow-through provisions of Transco's and United's rate settlements, the refunds made under this paragraph shall be treated as though received concurrently with the refund made by Superior on the gas actually delivered.

(F) Within 10 days of the date of the refund provided in paragraph (D) above, each of the applicants shall file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, the interest payments related thereto, and a statement from the purchaser acknowledging receipt thereof.

(G) The certificates herein issued are granted upon the further express condition that the allowance of the take-or-pay for provisions in the applicants' contracts is subject to our ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R–199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, the applicants shall within 30 days file amended rate schedules in conformity therewith, acceptable to the Commission. The producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any changes or modifications to be made in accordance with this paragraph shall be prospective only.

(H) The certificate herein issued to J. R. Frankel, *et al.*, in Docket No. G–13197, shall be deemed to have been effective as to all deliveries made from the acreage therein concerned from the date of the contract through and including November 1, 1961. Further, the certificate herein issued to Placid Oil Company in Docket No. G–13184 shall be deemed to have been effective as to all deliveries made from the acreage concerned therein from the date of the contract through and including January 12, 1962. Upon the submission to, and acceptance by, the Commission of the material required in paragraph (F) above, the cer-

tificates so issued and the related rate schedules shall be held vacated and without further force or effect.

(I) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(J) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or order which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objections by the Commission relating to the operation of any price or related provision in the gas purchase contracts here involved.

(K) The motion for opportunity to present oral argument before the Commission is denied.

(L) Except as herein granted, the exceptions to the examiner's decisions are hereby denied.

(M) The examiner's decision, to the extent not inconsistent herewith, is hereby adopted as part of this opinion and order.

Commissioner O'Connor, *concurring in part* and *dissenting in part*.

Commissioner Ross, *concurring in part* and *dissenting in part*.

Commissioner Morgan, *concurring in part* and *dissenting in part*, joined in Commissioner Ross' statement.

O'CONNOR, Commissioner, *concurring in part* and *dissenting in part:*

The Commission is here concerned with contracts executed in 1957 and 1958 by a number of producers for the sale of gas from the Southern Louisiana area. The contracts range in initial price from 21.40 cents per Mcf, involving no tax reimbursement, to 23.8 cents per Mcf including tax reimbursement. Permanent unconditioned certificates were granted at these prices by the Commission in 1959. Appeals were taken by various intervenors, and the Commission's decisions granting permanent certificates were reversed and/or remanded by the courts. In the remanded proceeding the examiner determined that the in-line price of 1957 and 1958 to which the certificates in these cases should have been conditioned was 18.5 cents plus 1.5 cents tax reimbursement, for a total of 20 cents. He further determined that the Commission's error in granting the 1959 certificates should be corrected retroactively and that the producers should be required to make refunds back to 1959 of all excessive amounts collected under the erroneous certificates. In this order the Commission affirms the examiner on both points.

I am in agreement with the determination by the examiner and Commission of the in-line price of 20 cents inclusive of taxes and with the conclusion that this must be made effective as to these producers retroactive to the date certificates were granted. However, I believe that equitable considerations compel this Commission at the same time to permit the producers to file for rate increases up to their contract price and to place these increases into effect retroactively.

Whatever technical characterization might be used for the effect of the Courts of Appeals mandates and our duty thereunder, it is quite clear that the practical effect of our order is to turn back the clock to 1959 in order now to give consumers the protection from and after that date to which they are entitled. It is my opinion that we are required by fundamental fairness to do the

same for the producers. If the Commission in 1959 had correctly granted certificates to these producers conditioned down to a total price of 20 cents, the producers would have had the right under their contracts and under the statute to file for rate increases up to the contract price. After the 30 day notice provision, these would have been suspended for five months and then placed into effect subject to refund. As a result, for the intermediate years 1959–1963 the producers would have collected the higher rate subject to refund; and if the just and reasonable rate ultimately proves to be in excess of 20 cents, they would receive the full benefit of this amount to which they are entitled under their contracts and the Natural Gas Act.

Were the Commission to fail to correct the initial price to 20 cents effective as of the date the certificates were issued, the consumers would be deprived the protection which the Act affords. Correspondingly for the Commission to reduce retroactively the initial price yet fail to allow a retroactive increase by the producers to their contract price would be to deprive permanently the producers of their contractual and statutory right to collect (subject to refund) the increased rate over a four year period. A resolution which gives full protection to the rights of all interests is to be found, I believe, in giving retroactive effect to all elements of the transaction. Two consumer-oriented parties in this proceeding—the Commission staff and United Gas Improvement Company—seem to sense that if turning back the clock is sauce for the consumer goose, it is equally good gravy for the producer gander—for each in its initial brief before the examiner suggests (with certain qualifications) that the Commission permit a retroactive increase for the producers.

In conclusion, the problem posed by the determination that the certificates here were issued initially at an excessive price can be answered in one of three ways. The first, proposed by the producers, would enable the Commission to correct the in-line price error at this time but in a prospective manner only, leaving the consumer to bear the burden from 1957 to 1963 of the Commission's earlier error. The second, adopted by this order, enables the Commission to correct retroactively its earlier error but permits the producers to exercise their rights under their contracts and Section 4(e) of the Act only in a prospective manner, thereby placing a possible permanent loss on them for the 1957–1963 period as a result of the Commission's earlier error. The third approach, suggested by staff and UGI before the examiner as proposed herein, permits a correction of the earlier error with no loss to any party by turning back the clock for all interests. It correctly establishes the in-line price at which the initial sale will be made in 1959, permits an increase by the producers up to their contract price, and subjects that increase to suspension and a refund obligation covering any amount in excess of the just and reasonable price which will be determined in the newly initiated Southern Louisiana area rate proceeding.[1]

Thus, while I agree with all other aspects of the majority's opinion, I cannot join an unconditional order of refunds without provision for a retroactive price increase to effect evenhandedly the correction of the earlier error.

Ross, Commissioner, *concurring in part* and *dissenting in part:*

I dissent only to that portion of the order which limits the refund obligation of Superior Oil Company in Docket No. G–16380 to the period covered by the permanent certificate. In my opinion, Superior should be required to refund the difference between the previously authorized rate and that found proper herein beginning at the time deliveries of gas under the contract commenced.

---

[1] Since the majority of the Commission has determined not to order refunds for sales made under temporary permits, there is no occasion to consider whether retroactive increases would be appropriate in such circumstances.

The facts relevant to this Docket are set forth at pages 291 through 293 in the majority opinion. Briefly, Superior filed an application to make a sale of gas to Transco at a price of 21.4¢ per Mcf which was docketd as G–16380. Superior requested temporary authority to make the proposed sale and, without notice or hearing, was granted such authority. Superior's application was set for hearing after which it was issued a permanent certificate to make the sale at the requested rate. The Fifth Circuit Court of Appeals vacated the Commission's order granting Superior's application in Docket No. G–16380 and remanded the proceeding for further appropriate action.[1]

Section 7(c) of the Natural Gas Act provides, in part, that "* * * the Commission may issue a temporary certificate * * * pending the determination of an application for certificate." The temporary issued to Superior in this docket stated: "This authorization and the acceptance of the rate schedule are without prejudice to such final disposition of the application for certificate as the record may require. * * *"

It therefore seems apparent, as the majority has intimated, that Superior's rights and concomitant responsibilities under the temporary were merged into the permanent certificate subsequently granted on the same application and in the same docket. Accordingly, when the Court vacated the Commission's order granting the permanent certificate, it also effectively repudiated the Commission's prior grant of temporary authority. Under this view, there is no basis for limiting Superior's refund responsibilities to the period covered by its permanent certificate.

This interpretation of the Court's action is clearly consistent with the Commission's earlier letter of August 16, 1961, in this matter in which we stated:

> The order of the Fifth Circuit Court of Appeals vacating this Commission's order issued August 10, 1959, in Docket No. G–16380 covered not only the August 10, 1959 order [which granted the permanent certificate], but also *all previous actions taken in Docket No. G–16380.* [Emphasis added.]

This all-embracing language certainly must be held to include the issuance of temporary authority in that docket.

In addition, the exclusion of the period covered by temporary authority in requiring refunds unjustifiably and improperly ascribes a vitality and legal effect to temporaries, which are considered on an *ad hoc, ex parte* basis, greater than that accorded permanent certificates issued only after all interested parties have had their day in court. The majority is holding that while all of Superior's rights under the Commission's order granting the permanent were extinguished by the Court's reversal, the interim rights which were embodied in the temporary, somehow survived. Because of the summary fashion in which applications for temporary authority are granted, temporary certificates should be given substantially less—not greater—weight than the ensuing permanent certificates.

A unanimous Commission stated in CATCO:[2]

> In our opinion the examiner acted properly in ordering refunds, although we have no power to order reparations. Here we granted CATCO a certificate and approved the proposed 21.4 cent rate. That certificate was subject to challenge when issued and was challenged successfully. The proceedings were remanded by the Supreme Court, and our order of June 24, 1957 was "vacated" by the mandate of the Court of Appeals. We now find that the rate should have been 18½ cents. If CATCO were permitted to

[1] *United Gas Improvement Company* v. *F.P.C.*, 290 F. 2d 147 (1961), cert. den., 81 S. Ct. 1926.

[2] *Continental Oil Company, et al.*, 27 FPC 96 (1962).

> retain what its has collected under the 21.4 cent rate and file the 18½ cent rate prospectively only, CATCO would be permitted to retain the portion of the rate found unlawful, the Supreme Court's decision and the subsequent hearing would be rendered in part futile, and CATCO would be unjustly enriched because of procedural delays. * * * To require restitution of the difference between the two rates, in our opinion, is a reasonable condition of issuing permanent certificates to the CATCO companies under the provisions of Section 7(e) of the Natural Gas Act. [27 FPC 110.]

To the extent Superior is not obliged to make refunds for the period covered by its temporary, it would be permitted to retain a portion of the rate found unlawful, the court's decision and the subsequent hearing would be rendered in part futile. and Superior would be unjustly enriched because of procedural delays.

For these reasons, I would adopt the Examiner's proposed ordering paragraph (D) to the extent that it provides for refunds equal to the difference between the price charged to and collected from the pipeline purchasers and the base price with respect to all volumes paid for under the contracts here in question.

Commissioner O'Connor properly states the principle which I believe should govern our disposition of this matter, i.e., to give retroactive effect to all elements of the transaction. His suggestion, however, falls far short of this goal. While he would insure against any unfair loss to producers in this case, pipeline purchasers would not enjoy equiavlent protection under his position ennunciated in other proceedings.

In order to give full retroactive effect with respect to producer sales, it is necessary to provide for refunds from the time the sales begin in order to protect consumer interests in those situations where the initially authorized price exceeds that ultimately found just and reasonable. However, a majority of the Commission, composed of Chairman Swidler, Commissioners O'Connor and Woodward explicitly have held that refund provisions *will not normally be imposed in temporary certificates.*[3] How then would his proposal give "full protection to the rights of all interests?" Until such time as a majority of this Commission is willing to go both ways, adoption of Commissioner O'Connor's suggestion would only aggravate an already lopsided situation favoring the producers.[4]

I concur with the imposition of the condition in these certificates which precludes the filing of a rate increase above the triggering line. Such a condition may be helpful in view of the majority's position on the triggering question in *Shell Oil Company, et al.*, Docket No. RI61–515, *et al.*, Opinion No. 382, order dated March 15, 1963, 29 FPC 498. However, that condition would have been unnecessary if the minority position in *Shell, supra*, of which I was a part, had been adopted.

Commissioner Morgan has authorized me to state that he joins in this statement.

INITIAL DECISION

UPON APPLICATIONS FOR CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued December 7, 1962)

ZWERDLING, *Presiding Examiner:* These proceedings involve twenty-one producer certificate cases which are before the Commission upon remand as the

---

[3] *Amerada Petroleum Company,* Docket No. C162–1544, *et al.*, order dated February 5, 1963, 29 FPC 218.

[4] See *Skelly Oil Company,* Opinion No. 362, August 30, 1962, in which the Commission did not provide for refunds during the term of temporary authority, 28 FPC 401.

result of judicial review proceeding.[1] In such judicial proceedings the courts set aside prior Commission orders granting unconditioned permanent certificates to the instant producer applicants under Section 7(c) of the Natural Gas Act, for sales of natural gas to Transcontinental Gas Pipe Line Corporation (Transco), Hope Natural Gas Company (Hope), and United Gas Pipe Line Company (United) from leases offshore and onshore Louisiana—at initial contract prices ranging from 21.40 cents, involving no tax reimbursement, to 23.8 cents per Mcf, including tax reimbursement.[2] The contracts in question were executed in 1957 and 1958, and deliveries commenced in 1959.[3] The various applications here involved were originally consolidated into and heard in five groups, whose prior history is summarized in Appendix A to this decision.

The only controverted issue in this case is that of the proper public interest initial price or prices applicable to these sales, and the related question of whether refunds should be required in the event a rate condition is imposed.

The Commission originally consolidated these remanded and reopened proceedings for hearing with Docket No. AR61–2, the Southern Louisiana area rate proceeding. By order issued January 10, 1962 in *Texaco-Seaboard, Inc., et al.*, Docket No. G–13169, *et al.*, 27 FPC 15,[4] the Commission confirmed that initial prices at the levels proposed in the instant dockets

> are out of line and cannot be approved unless justified by compelling evidence after full hearing; such evidence has not been adduced to date. [Order, p. 16.]

The Commission further concluded that it would be fairer and wiser under the circumstances to offer the instant applicants a further opportunity to adduce evidence in Docket No. AR61–2, *et al.*, in support of their proposed prices. However, in order to provide the public with some interim protection the Commission directed that the amounts collected by the applicants

> shall be subject to such refund provisions as the Commission may lawfully prescribe by its final order in these proceedings * * * to the extent, if any, that the rate which has been collected exceeds the rate ultimately found to accord with the requirements of the public convenience and necessity. [Order, p. 17.]

Subsequently, numberous parties filed applications for rehearing of this order, attacking (among other things) the validity of the refund obligation therein imposed. On March 7, 1962 the Commission issued an Order Denying Rehearing, 27 FPC 482, but laid down new procedures for the handling of the instant applications "designed to abbreviate the duration of applicants' refund uncertainties". In this order the Commission concluded that the unconditioned certificates previously isued to these producer applicants

> were erroneously issued in the first place and as a result of the invocation of Section 19 have never assumed finality * * *. The courts having lain bare the errors, it remains our task equitably to correct them. * * * we have concluded that our 1958 order was erroneous, that the record does not show the price proposals of the producers to be in the public interest, and that the

[1] Since the conclusion of the instant hearing, a number of these producer applicants have submitted offers of settlement to the Commission. Offers of settlement have been approved by the Commission as to Sun Oil Company, The Pure Oil Company, and Mississippi River Fuel Corporation, and their respective dockets have been severed, or will shortly be severed from the instant consolidated proceeding. Those dockets have accordingly been dropped from the entitlement of this case.

[2] At 15.025 psia.

[3] With the exception of the Sun Oil Company sale to United in Docket G–15122, as to which deliveries commenced in February 1960.

[4] The original entitlement of the consolidated proceeding prior to orders severing a number of the consolidated dockets.

record shows, rather, that the proposed prices are out of line. [Order, p. 483.]

Although the Commission adhered to its earlier position that the producer applicants should be afforded further opportunity to be heard, it concluded that the initial price question in these cases should not be left to abide the outcome of the Area Rate proceeding, stating:

> We are anxious to expedite final resolution of proceedings which have already been heard and decided once, but which remain on our docket by virtue of Section 19 of the Act. We are also impressed by representations as to the practical problems posed by continuing pendency of these proceedings. As several producers observe, the uncertainties as to these initial prices complicate settlements with royalty owners and interfere with prudent budgeting and other financial matters. We are convinced that such uncertainties can quickly be dispelled in these proceedings as a result of the "ground rules," established by our recent *Catco* opinion, for certificate cases originally heard prior to issuance of our General Policy Statement. [Order, p. 485.]

Accordingly, the Commission severed the instant dockets from Docket No. AR61–2 and consolidated them for the limited purpose of determining the public interest initial price or prices applicable to such severed and consolidated proceedings.

Hearing in the instant severed and consolidated proceeding commenced on June 19, 1962 and concluded on June 22, 1962. Final briefs were filed by September 4, 1962 and the case is now ready for decision.

The producer applicants request approval of the initial contract prices, and object to the imposition of any price condition. The Commission Staff contends that the proper in-line public interest price to be applied here is the same as that determined in *CATCO*, Op. No. 351, 27 FPC 96—*i.e.*, 18.5 cents per Mcf plus applicable tax reimbursements. However, with respect to five of the instant applications involving sales to Transco (Docket Nos. G–13183, 13184, 13197, 13710 and 14109), the Staff recommends that a 16-cent "triggering line" (plus applicable tax reimbursements) be fixed as the appropriate initial price. Interveners The United Gas Improvement Company (UGI) and Philadelphia Electric Company contend that the price line found applicable by the Commission in *CATCO*, *supra*, is, by definition, applicable to the post-CATCO sales in the instant proceeding; that accordingly the proper in-line price to be applied here is 18.5 cents per Mcf, plus an additional 1.5 cents per Mcf for gas produced in any area subject to the taxing authority of the State of Louisiana. The Public Service Commission of the State of New York (PSC) contends that the proper in-line price to be applied here is 18 cents per Mcf, including tax reimbursement, and 16 cents or 17 cents excluding tax—these being the same initial prices for which it unsuccessfully contended in *CATCO*, *supra*.

I. Economic and Financial Evidence

At the outset of the proceeding the instant producer applicants offered in evidence a tremendous mass of cost-type, economic and financial evidence—consisting of approximately 70 exhibits and the testimony of 35 witnesses. This evidence, although taking a large variety of different forms, may be characterized roughly as falling generally into three basic categories, as follows:

(1) *Cost of service studies* of various types. It may be noted that substantial portions of this evidence were defective in that they employed methods and techniques inconsistent with those previously adopted by the Commission in *Phillips*, Op. No. 338, and *CATCO*, Op. No. 351.[5]

[5] A detailed analysis of such defects is set forth in the Motion to Strike filed by the Eastern Seaboard Intervenor group. (R–4 : 586–618)

(2) A number of *discounted cash flow studies*, similar to the one rejected by the Commission in *CATCO*, Op. No. 351.

(3) *Economic trend data studies* of various types, setting forth data related to drilling trends and costs, data related to supply, demand, revenues and profits, and market trend data.

Certain of these studies were identical in nature with similar studies which the Commission in the *El Paso* certificate case, *El Paso Natural Gas Co., et al.*, Op. No. 358 (June 11, 1962), found to have "no real probative value". (Op. No. 358, pp. 1137 and 1138)

If this mountain of cost-type, economic and financial evidence had been received in the instant proceeding the instant hearing would, in effect, have amounted to the trial of some 16 different individual producer cost-type cases, and the decisional process required would have involved, in effect, the writing of some 16 different individual producer rate decisions. Any such proceeding would plainly have amounted to an administrative monstrosity. It would obviously have been completely contrary to the objectives emphasized in the Commission's instant order of March 7, 1962—*i.e.*, to obtain a prompt determination of the initial price question (and of the refund obligations of the producer applicants), by a limited proceeding on the basis of the "ground rules" already established by the Commission in *CATCO*, Op. No. 351 [27 FPC 96].[6] In addition, any such procedure would have been completely inconsistent with the Commission's clearly expressed policy determination that producer rates are hereafter to be tried and decided on an area basis, rather than on an individual producer cost basis.

For the reasons indicated above, and for other reasons set forth at length on the record (R–1:106–119), the Presiding Examiner granted a motion by intervenor PSC to exclude all such cost-type, economic and financial evidence.

Since the date of this ruling, the entire problem has been squarely resolved by the Commission in *Skelly*, Op. No. 362 (August 30, 1962), 28 FPC 401. The Commission there held, in strong and unequivocal terms, that economic and financial evidence is generally not to be regarded as germane in resolving the initial price question in producer certificate cases. It will be useful here to quote the Commission's full discussion of this problem in *Skelly*, which is equally applicable and controlling with respect to all of the cost-type, economic and financial evidence offered by the applicants in the instant proceeding. The Commission there stated:

> Texaco's evidence is designed to show the replacement cost of the gas which it sells. It presents industry-wide cost trends and also data on the costs of replacing gas consumed for the United States as a whole and for the Texas Gulf Coast area, using a variety of statistical sources and employing a number of estimates based on judgment. To some extent the results depend on the future demand for gas, for Texaco introduces a factor so as to include not only the cost of replacing the present gas consumed but also additional gas necessary to meet future needs. Thus under Texaco's

[6] The Commission took note of the complaints made by the producer applicants as to the burdens imposed upon them by the extended period required for the final resolution of these problems, stating:

> As several producers observe, the uncertainties as to these initial prices complicate settlements with royalty owners and interfere with prudent budgeting and other financial matters. We are convinced that such uncertainties can quickly be dispelled in these proceedings as a result of the "ground rules," established by our recent *Catco* opinion, for certificate cases originally heard prior to issuance of our General Policy Statement. [27 FPC at 485.]

The Commission characterized the procedures laid down for the instant proceeding as "designed to abbreviate the duration of applicants' refund uncertainties." [27 FPC at 482.]

theory the present consumer would, in effect, be burdened not only with the cost of the already-discovered gas he now consumes, plus at least some of the cost of replacing it, but also with costs associated with the discovery of additional volumes of gas based upon future demand trends. From the country-wide and area-wide data Texaco then attempts to draw similar conclusions with respect to its own financial needs by comparing its exploration and drilling costs with the industry figures.

In support of its presentation Texaco quotes the *Phillips* case which states in effect that our ultimate objective will be the determination of fair prices for gas based on the reasonable financial requirements of the industry. It argues that by "reasonable financial requirements" we mean the revenues required by the producing industry from sales of natural gas in order to provide funds sufficient to search for, develop and produce gas supplies adequate to meet the continuing demands of the public for gas. In our opinion these observations and Texaco's evidence are not germane to this certificate proceeding. The principal criterion that should be employed here is whether the proposed prices were "in line" at the time of contract execution as required by the Supreme Court's CATCO opinion. Texaco's observations and evidence may have an important bearing on determinations to be reached in an area rate proceeding, or might be relevant in an individual company rate case although they fall short of showing Texaco's costs. However, we do not think it necessary or appropriate in a certificate proceeding to consider evidence of area costs or financial requirements, or of individual company costs or financial requirements. Any such approach is of limited utility and leads to complicated, long-drawn-out proceedings, detrimental to the public.

Questions concerning the cost of replacing present reserves, and more particularly whether such costs should be borne by present customers or by venture capital are not questions to be decided in a section 7 certificate proceeding. Rather, they are central questions to be decided in area rate proceedings.

We therefore hold that cost of service and financial requirements evidence normally is not relevant in producer certificate cases and that the initial price in such proceedings shall be determined by the "in line" price in the area at the time the producer contract in issue was executed and by our guideline ceiling price for the area. We do not mean to foreclose the possibility that a producer may present compelling circumstances in a particular proceeding to justify a higher price, but we wish to emphasize that with the guidelines herein established the price issue in certificate cases should be handled expeditiously and that before any evidence which would customarily be presented in establishing a just and reasonable rate can be admitted in evidence, a convincing showing must be made that such evidence is essential to the just disposition of the price question.

Obviously, we cannot permit every individual certificate case to be converted into a full-blown rate case; the proof in this proceeding demonstrates the lack of utility of a limited cost of service presentation.

* * * * * * *

To correct those defects would require a complete rate case, which we have found not warranted in a certificate proceeding. [Op. No. 362, pp. 410–411, footnotes omitted.]

II. The "In Line" Price

In its recent decisions in *CATCO*, Op. No. 351, and *Skelly*, Op. No. 362, *supra*, the Commission has laid down in clear terms the controlling principles

which are to govern the determination of the public interest initial price in producer certificate cases.

The Commission held in *CATCO* that the rate condition issue must be determined on the basis of the "in line" price as of the year when the contracts were executed, stating:

> The first question is as to the date of the "in lineness". This question should be determined as of a past date; *otherwise CATCO would be enriched because of procedural delays.*
>
> * * * * * * *
>
> In our opinion a sale would not meet the test of public convenience and necessity if the price at the time the contract was made was not "in line" with other prices in the area. [27 FPC 100; emphasis supplied.]
>
> In our opinion, if the price was out of line at the time it was first established in the contract, it is not consistent with the present or future public convenience and necessity, nor with the public convenience and necessity from the time deliveries commenced in 1958. [Order Denying Rehearing, issued March 22, 1962, p. 593.]

Similarly, in *Skelly*, the Commission held:

> Following the Supreme Court Opinion in *CATCO* we must determine the appropriate price "line" for District No. 4. This line should be determined as of the time the contracts were made * * * (Op. No. 362, p. 408)

It is also important to note that the Commission made it clear in *Skelly, supra*, that in determining the proper "in line" price, it is necessary to exclude from consideration all those contracts which were "under a cloud" or suspect because their initial rate was under court or Commission review, or because they fell into approximately the same price categories as those subject to review.

The fact is that the Commission in its order of March 7, 1962, in the instant proceeding has already made clear its views with respect to the determination of the proper public interest initial prices *for the instant sales*, as follows:

> In Opinion No. 351 (*Continental Oil Co.*, 27 FPC 96, issued January 22, 1962) we determined the proper initial price by considering old and new field prices in the south Louisiana area, as of the year of the sales contract, and excluding the prices which the courts have called into question. We held the proper price line to fall between the highest group of prices and the median price and concluded, on the basis of a comprehensive record, that the "in line" price for 1956 contracts would be not in excess of 18.5 cents per Mcf, where State severance tax did not apply, and 20 cents per Mcf, where such tax applies. It is our present opinion that the "in line" price is also the "public interest" price in these proceedings. The instant proceedings, however, involve contracts executed after 1956; and we recognize that some parties may wish an opportunity to show that the appropriate price line in these proceedings differs from that we determined in *Catco*. Furthermore, we shall not foreclose any party from presenting evidence which he believes would compel the conclusion that a higher price would be in the public interest. [P. 485.]

In the light of this Commission conclusion already expressed in the instant proceeding, and the subsequent clear holding by the Commission in *Skelly, supra*, that economic and financial evidence is not to be regarded as germane in resolving the initial price question in producer certificate proceedings, there is left for consideration here only the very limited question as to whether a higher price line is justified in this proceeding than the 18.5 cent price approved in *CATCO*, simply because the instant contracts were executed in 1957 and 1958.

At the threshold of this discussion, it is of interest to note the Commission's Fourth Amendment to its Statement of General Policy No. 61–1, issued October 31, 1961. The Commission there concluded that four Courts of Appeals, in decisions therein cited, had unanimously viewed the 21.5 cent area price level originally established by the Commission for South Louisiana in its First Amendment to the Statement of General Policy, issued October 25, 1960, as being "out-of-line". The Commission accordingly, by the Fourth Amendment, fixed new initial area rates for South Louisiana, from and after October 31, 1961, at the level of 19.5 cents per Mcf, exclusive of taxes, and 21.25 cents where tax reimbursement was applicable. Under these circumstances it is difficult to see how it could seriously be contended here that prices as high as 21.5 cents and above, exclusive of taxes, could now be approved as proper "in line" prices for contracts executed in 1957 and 1958. The only serious question here is whether the "in line" price for 1957 and 1958 contracts should be rolled back, as in *CATCO*, Op. No. 351, from the 19.5 cent level established in the Fourth Amendment for contracts executed after October 31, 1961, to the 18.5 cent level approved in *CATCO* for contracts which were executed prior to the Statement of General Policy.

The producer applicants here contend that even if the rate condition issue in the instant case is to be determined on the basis of the "in line" price as of the years 1957 and 1958, when the instant contracts were executed, the "in line" price for those years as correctly determined fully supports their initial contract prices. They rely, in this connection, upon Exh. X–42, Sched. 7, Sheet 1, par. 7,[7] which shows that out of the permanently certificated sales under 1957 and 1958 long-term South Louisiana contracts which are "not subject to Court or Commission review", 25% of such sales, on the basis of volume, were at prices of 21.3 cents or more during 1957 and 25% were at prices of 22 cents or more during 1958.

However, the difficulty with the Exh. X–42 tabulation is that although it does exclude (Sched. 7, par. 7) those contracts which were subject to court or Commission review, it nevertheless violates what the Commission in *Skelly* (Op. No. 362) referred to with approval as "a corollary principle stated by the Court in the *U.G.I.* case" (as reported in Op. No. 362, p. 409)—*i.e.*, that

> * * * where a substantial number of certificated prices are thus under court or Commission review, like prices in the same area though not currently under review ought to be regarded as suspect. In such circumstances it would seem that such similar prices ought not to be relied upon in fixing a line except upon evidence and findings to the effect that they are not subject to the same infirmities which are under test in the pending proceedings.[8]

The Commission itself applied this "corollary principle" in *Skelly*, *supra*, as a basis for excluding from its "in line" price study in that case certain upper-range prices under temporary certificates subsequently made permanent, and certain prices under permanent certificates for the years 1955–1957 relating to sales at 16 to 17 cents to Coastal Transmission Corporation. The Commission stated:

> The prices under temporary certificate fall into approximately the same price categories as those subject to review and thus under the court's reasoning must be regarded as suspect. The applicants have not shown that the prices under temporary certificates are not subject to the same infirmities as those which are under test in the *Skelly* proceeding pending before us. Specifi-

[7] Sponsored by witness Dr. J. Rhoads Foster.
[8] *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817, at 824 (CA9).

cally, no attempt has been made to show that these suspect like prices were themselves "in line" at the time they were made.

* * * * * * *

Likewise, the record does not show that the Coastal 1956–1957 sales were not subject to the same infirmities as those in the present proceeding. There is no showing that these earlier prices, which were markedly higher than any jurisdictional sales ever made in Texas District No. 4, established a valid new line for sales to established pipelines in the District. On the contrary, as the table shows in the succeeding three years the great majority of sales (including almost all not procedurally defective) were at less than 15 cents. [Op. No. 362, pp. 409–410.]

In addition, it is clear that the Commission applied this "corollary principle" from the *U.G.I.* case in its *CATCO* decision (Op. No. 351), as evidenced by the following statement therein:

> We shall rather determine the "in line" price using the field price evidence available in the record. This evidence includes prices at the time of the sale in 1956, and before, *which were not affected by initial prices which the courts have called into question.* [27 FPC 100; emphasis supplied.]

There can be no doubt here that those 1957 and 1958 contracts which were executed at price levels *higher* than the 18.5-cent "in line" price ultimately approved by the Commission in *CATCO*, Op. No. 351, "were * * * affected by initial prices which the courts have called into question"—i.e., by the initial CATCO price of 21.4 cents per Mcf, which the Commission certificated without rate condition in its original order of June 24, 1957 (17 FPC 880), which the Supreme Court subsequently "called into question" in its CATCO decision of June 22, 1959, reversing the Commission,[9] and which the Commission thereafter in Op. No. 351 branded as "out of line" and cut down to 18.5 cents per Mcf.

The Commission made this clear in Op. No. 351, where it noted that "there were few prices above a basic rate of 18 cents before the CATCO contracts", but that in 1957, 1958 and 1959 many contracts appeared in the range between 20 and 23 cents.[10] In addition, in its Order Denying Rehearing in that case the Commission noted that—

> in the period July 1, 1954 to June 30, 1956, all but five of 68 contracts contained base prices of 18.5 cents or below and included 88 percent of the gas. *It was not until 1957 and 1958 that the situation changed substantially.* [Order, 27 FPC 592, at p. 593; emphasis supplied.]

The impact of the initial CATCO 21.4 cent price unconditionally certificated by the Commission in its original order of June 1957, upon subsequent pipeline purchases in 1957 and 1958 in the South Louisiana area was made clear in testimony presented by Transco witness Stanwood in the *Transco-Seaboard* case, where the instant Docket Nos. G–13183 to G–14351 were originally certificated. Stanwood testified:

> Since Transcontinental was attempting to secure substantial volumes of additional gas supplies for its new market requirements, and since producers with available gas supplies generally equivalent in size to the Rayne Field reserves and the CATCO reserves were fully aware of these higher prices, it was obvious to me that Transcontinental would have to offer prices of this same magnitude in order to attract equivalent reserves. In other words, we were obliged to negotiate for the new gas reserves against the background established by these higher prices. [20 FPC 301.]

---

[9] *The Atlantic Refining Co., et al., v. F.P.C.*, 360 U.S. 378.
[10] 27 FPC 101.

The Supreme Court in its *CATCO* decision, *supra*, took note of the price impact of the Commission's June 24, 1957 unconditional certification of the *CATCO* 21.4 cent original contract price, as follows:

> * * * the initial price will set a pattern in an area where enormous reserves of gas appear to be present * * * The price certificated will in effect become the floor for future contracts in the area. This has been proven by conditions in southern Louisiana where prices have now vaulted from 17 cents to over 23 cents per Mcf. New price plateaus will thus be created as new contracts are made and unless controlled will result in "exploitation" at the expense of the consumer, who eventually pays for the increases in his monthly bill.
>
> * * * * * * *
>
> * * * The fact that prices have leaped from one plateau to the higher levels of another, as is indicated here, does not make price a consideration of prime importance. [360 U.S. 378, at 390–1.]

In view of the circumstances referred to above, it is clear that the substantial upward price changes which occurred in the South Louisiana area in 1957 and 1958 were the result of the Commission's original June 1957 unconditional certification of the *CATCO* 21.4 cent contracts; that we thus have a situation in which the 1957 and 1958 prices at levels higher than 18.5 cents "though not currently under review ought to be regarded as suspect", because they were "like prices in the same area" where "a substantial number of certificated prices were under court or Commission review" [11]—and where, in fact, the Supreme Court's review of the bellwether 21.4 cent *CATCO* contracts ultimately resulted in a finding that the unconditional certification of such 21.4 cent prices was improper, and that the proper "in line" price therefor was 18.5 cents per Mcf. Furthermore, no attempt was made in the instant proceeding to show that the 1957 and 1958 "suspect like prices" at levels above 18.5 cents were "not subject to the same infirmities" which were under test and ultimately proved fatal in the *CATCO* litigation, which was pending in the courts in 1957 and 1958.

If we therefore eliminate from our 1957 and 1958 comparative price consideration the "suspect like prices" at levels above 18.5 cents per Mcf, there will still remain, as prices which may properly be considered in fixing a price line, the following: 47 contracts executed in 1957, with volumes totaling 56.5 billion cubic feet, and 59 contracts executed in 1958, with volumes totaling 70.5 billion cubic feet, at initial base prices of 18.5 cents or less. In addition, as noted in *CATCO*, Op. No. 351, with respect to contracts entered into during the period July 1, 1954 to June 30, 1956, prior to the Commission's original erroneous *CATCO* order of June 1957 which triggered the general upward movement of prices in South Louisiana, it appears that out of the total 1958 deliveries amounting to 241.2 billion cubic feet, only 63.9 billion cubic feet were sold at prices above 18 cents, while the remaining volumes were sold at lower prices. (27 FPC 102) If the Commission's original CATCO order of June 1957 had correctly drawn the initial price line for South Louisiana at the 18.5 cent level finally established retroactively in Op. No. 351, thus avoiding the fatal errors which led the court to nullify the original unconditioned certificate *ab initio*, it is reasonable to assume that the line would have been held at 18.5 cents per Mcf in a substantial portion of the *other* contracts executed in 1957 and 1958.

Under all these circumstances, it is concluded that the proper public interest initial price applicable to the instant sales is a base price of 18.5 cents per Mcf, adjusted to 20 cents where tax reimbursements are applicable—and that such a price line for the instant 1957 and 1958 contracts is properly based upon and

[11] *U.G.I.* v. *F.P.C.*, 283 F. 2d at 824.

fully supported by the comparative prices under which a substantial amount of natural gas then moved in interstate commerce.[12]

Before closing the discussion of this particular point, it is of interest to note that the instant producer applicants, in opposing any such determination, have relied heavily upon the following language in the *U.G.I.* decision, *supra*:

> * * * we find without merit the contention that the price line must necessarily accord with the pre-CATCO line. We agree with the view expressed by the Commission in Texas Gas Transmission Corporation, *et al.*, 22 FPC 378, 388, that factors such as increased production costs since CATCO, comparative accessibility of field locations, and comparative depth of sands tend to make pre-CATCO prices irrelevant for comparative purposes in other cases. [283 F. 2d at 823.]

It must be clear, upon a reading of this case, that the quoted language amounted to *dictum*. The important thing to examine here is what the court really did. It should be noted at the outset that this case involved our instant Docket No. G–16388, being the Superior Oil Company sale to United under a 1958 contract, at an initial price of 21.5 cents per Mcf plus 2.3 cents tax reimbursement. The issue before the court was the validity of the Commission's original order of August 10, 1959, granting a permanent certificate for that sale without rate condition. The court held improper "the acceptance of questioned existing prices as a guide in setting the line", stating:

> When an order certificating an initial rate is under court or Commission review, it is possible that the certificate may be eventually denied or price conditions may be attached. In our opinion an existing rate subject to such a hazard does not provide a reasonably reliable basis upon which to predicate a price line.
>
> * * * * * * *
>
> We go further and express the view that where a substantial number of certificated prices are thus under court or Commission review, like prices in the same area though not currently under review ought to be regarded as suspect. [283 F. 2d at 824.]

The court then concluded that it was an abuse of discretion for the Commission in establishing a price line "to rely upon producer prices which are under such a cloud", stating:

> * * * with respect to the use for comparative purposes of prices presently under review * * * the criteria employed by the Commission in fixing a line by which to test the proposed initial rates * * * fall short of what is required under CATCO and the Act.

The court then held that in issuing a permanent and unconditional certificate upon the basis of a line so determined, the Commission had abused its discretion. Accordingly, the court vacated the Commission order and remanded the case to the Commission for further proceedings consistent with its opinion. (283 F. 2d at 826.) Such further proceedings have now been held in the instant case.

It seems clear that in relying upon the quoted *dictum* in the *U.G.I.* case, *supra*, as an argument sustaining the reaffirmation here of the identical unconditioned

---

[12] The 1.5-cent tax reimbursement allowance here provided follows the Commission's tax treatment in *CATCO*, Op. No. 351. In its March 7, 1962 order in the instant proceeding, the Commission described what it did in *CATCO* as follows:

> We * * * concluded, on the basis of a comprehensive record, that the "in line" price for 1956 contracts would be not in excess of 18.5 cents per Mcf, where State severance tax did not apply, and 20 cents per Mcf, where such tax applies. [Order p. 485]

It is of interest to note, in this connection, that Sched. 6 of producer witness Foster's Exh. X–42 shows that the weighted average tax reimbursement for South Louisiana contracts executed in 1957 and 1958 which provided for a base price of 18.5 cents and under was 1.69 cents per Mcf.

certificate, at the 21.5 cent base price, which the court in that very case set aside as an abuse of Commission discretion, the instant producer applicants seek to elevate pure *dictum* into the law of the case. This, of course, would amount to a nullification of the court's real holding, and the producer argument must therefore be rejected.

III. The Staff Proposal for Adoption of a 16-cent "Triggering Line" for Certain Sales to Transco

The Staff contends that certain of the instant consolidated dockets which were originally a part of the *Transco-Seaboard* case (*i.e.*, Docket Nos. G–13183, 13184, 13197, 13710, and 14109)[13] are "involved in the 'triggering' of favored-nation clauses of Transco"; that the appropriate initial price for these particular sales should be fixed at 16 cents per Mcf, plus applicable tax reimbursements; that the fixing of such a lower "triggering line" is now the "the only possible way of giving effect to the separate test regarding favored-nations clauses announced in *Atlantic Refining* v. *P.S.C.*, 360 379, 931." (Staff brief, p. 14.) In making this recommendation, Staff relies on the fact that the initial decision issued on June 17, 1958 in the original certificate proceeding involving these dockets[14] concluded that certification at that time at the initial contract price of 21.5 cents per Mcf would cause substantial triggering of Transco's first-party favored-nation clauses. Since the highest price paid by Transco in South Louisiana prior to the date of these contracts was 16 cents per Mcf, Staff contends:

> In order to obey the Supreme Court's injunction against allowing ever-higher initial prices to trigger off favored nations clauses, the Commission must fix a 16-cent initial price for these sales. [Staff brief, p. 15.]

The Staff's reference to "the separate test regarding favored-nations clauses", announced in the Supreme Court's *CATCO* decision, is based upon the criteria there laid down to the effect that a certificate should be issued without price condition only (1) if the proposed initial rates were not "out-of-line",[15] and (2) if their approval would not result in a "triggering" of general price rises or an increase of the applicants' existing rates.

It seems apparent, however, that the Supreme Court's "anti-triggering" criteria as laid down in *CATCO*, *supra*, were intended for use in determining whether a rate condition was required in the public interest in order to accomplish the *blocking* of a triggering price rise. As pointed out by Transco (reply brief, p. 8), by orders recently issued in certain of the dockets severed from the instant proceeding (on July 30, 1962 in *Texaco, et al.*, G–13169, *et al.*, and on August 24, 1962, in *Socony Mobil Oil Company, Inc., et al.*, G–13746, *et al.*) the Commission accepted settlements of producer certificate cases involving sales to Transco from this same "triggering" area, at prices in excess of Staff's alleged "triggering line"—*i.e.*, at 20.625 cents per Mcf including tax reimbursement where applicable, and 19 cents where tax reimbursement was not involved. Under these circumstances, whatever "triggering" impact could result for Transco's other gas purchases, triggering their price up from the 16-cent level which pertained prior to the Transco-Seaboard sales here involved, *has already occurred*—and at levels even higher than the 18.5-cent "in line" price here approved. The Staff proposal is thus meaningless in terms of any objective to "cure" or wipe out a "triggering" problem for Transco's general gas purchases in South Louisiana.

In addition, Transco contends that if a 16-cent "anti-triggering" ceiling is established for these particular contracts in South Louisiana, as distinguished

---

[13] See Group A in Appendix A to this decision.

[14] *Seaboard Oil Company*, 20 FPC 330.

[15] Or, if out-of-line, that the public convenience and necessity of certifying at those rates had been established.

from the 18.5-cent "in line" price which is otherwise generally being adopted here, it will not be able to compete on equal terms with other pipelines offering 18.5 cents for new gas in South Louisiana. In view of the fact that adoption of the Staff proposal could not in any event have any "anti-triggering" effect for the reasons set forth above, there does not appear to be any justification for placing Transco in such a damaging competitive position. The Staff's proposed 16-cent "anti-triggering" line is therefore rejected.

IV. Staff's Refund Proposal With Regard to Prepayments

Entirely apart from the general question (to be discussed *infra*) as to whether the Commission should here impose a refund obligation with respect to amounts collected in excess of the "in line" price herein approved, the Staff urges that the producer applicants should be required to refund, *in toto*, such monies as they may have received under take-or-pay provisions as payments for gas never delivered. Staff contends, in this connection, that the operation of take-or-pay provisions may "in practical effect increase the stated price of gas"; that payment for gas not taken really conceals an effective price which is even higher than the contract level; and that it is necessary to require that such prepayment amounts be refunded "so that the public interest line be held in fact rather than fancy". (Staff brief, pp. 16–17)

The producer applicants point out, however, that under the make-up provisions of the take-or-pay clauses the pipeline purchaser actually suffers no ultimate loss if within the make-up period, as provided or extended, it remedies its earlier partial default; that actually little, if any, money prepaid under a take-or-pay clause has ever been forfeited through failure of application against make-up volumes. Applicant Superior Oil Company, for example, points out that very recently purchasers have requested extensions of the make-up period to prevent any such forfeiture, and that it has granted such extensions to United and Transco. (reply brief, pp. 20–21)

It is pertinent to note that in a rule-making proceeding now pending in Docket No. R–199 the Commission is giving general consideration to the problem of take-or-pay provisions in producer contracts. In recent independent producer certificate cases the Commission has made a practice of conditioning the certificate so as to make its allowance of the proposed take-or-pay provision in the contract subject to its ultimate disposition with respect to such provisions in the Docket R–199 proceeding. That will be done in the instant order.

It is concluded here that the Docket R–199 rule-making proceeding is the proper forum in which this particular problem should be raised. It is noted in this connection that in *Skelly*, Op. 362, the Commission recognized that in *Michigan Wisconsin Pipe Line Company*, Op. No. 353 (March 7, 1962), 27 FPC 449, it had granted an allowance reflecting prepayments for gas by the pipeline purchaser in a rate proceeding. The Commission then stated:

> While we may allow such prepayments, such an allowance does not require us to approve take-or-pay provisions in producer contracts. This matter, however, is the subject of our Notice of Proposed Rule Making of May 22, 1961, in Docket No. R–199, so that it would be inappropriate to pass upon it now. However, we shall make the producer certificates issued herein subject to the results of the rule-making proceeding. [Op. No. 362, p. 413.]

It seems clear that the Commission intends to deal with the problems arising out of such take-or-pay provisions as a matter of *prospective* rule-making. It is not regarded as appropriate or fair to attempt in the instant proceeding to arrive at any general public policy conclusions with respect to the take-or-pay practice *per se*, and to then impose refund obligations upon the instant producer applicants on the basis of conclusions thus arrived at in the instant case alone.

V. The Refund Question

Substantial controversy has arisen in this proceeding as to whether the Commission should impose a refund obligation upon the producer applicants, in connection with the imposition of a rate condition reducing the initial price to 18.5 cents per Mcf. The producers contend strongly that the imposition of any such refund condition would be improper and unlawful.

The Commission's recent decisions in *CATCO*, Op. No. 351, and *Skelly*, Op. No. 362, have laid down the controlling criteria for disposition of the refund problem here. In the original *CATCO* proceeding the Commission on June 24, 1957, had granted unconditioned permanent certificates at the producers' proposed 21.4-cent rate. However, PSC and other intervenors initiated review, and the Commission order was subsequently vacated by the Court of Appeals in *P.S.C. of New York* v. *F.P.C.*, 257 F. 2d 717 (CA3). This action was subsequently affirmed by the Supreme Court in *Atlantic Refining Co.* v. *F.P.C.*, 360 U.S. 378, and pursuant to the Supreme Court order a "vacation and remand" was issued by the Court of Appeals on November 16, 1959. In Op. No. 351, issued January 22, 1962, the Commission conditioned the certificates theretofore issued to provide a base price, *effective from the date of initial service under the contracts*, of 18.5 cents per Mcf, exclusive of tax reimbursement. In addition, the Commission required the producer applicants to refund to Tennessee a sum equal to the difference between the base price thus approved and the original contract prices charged to Tennessee, applied to all volumes delivered under such contracts from the date of initial delivery until the effective date of the Commission order.

In *Skelly*, Op. No. 362, *supra*, after the first hearing the Commission had issued a decision on November 22, 1960 (24 FPC 979), finding that the proposed contract prices ranging from 9 cents to 17 cents per Mcf were "in line," and approving permanent certificates. However, upon application by PSC the Commission granted a rehearing. Following the rehearing the Commission issued Op. No. 362, in which it conditioned the certificates to prohibit any total initial price, including all reimbursements and charges, greater than 15 cents per Mcf, *from the date of issuance of such order*. Throughout the period prior to Op. No. 362, the producer applicants had operated under unconditioned temporary certificates.

The Commission in Op. No. 362 rejected a proposal for the imposition of refunds, on the ground that the producer applicants had there been operating under unconditional certificates, *validity of which had not been challenged on appeal in the courts*. The Commission distinguished *CATCO*, *supra*, on the ground that the unconditional price certificates *in that case* were subject to timely court review because challenged and appealed, stating:

> Unlike the situation in *CATCO* where all of the unconditioned price certificates by which gas was dedicated to interstate commerce were either subject to timely court review because challenged and appealed or (in one case) granted pending such review, the producers here have been operating, pending this hearing on their permanent certificate application, pursuant to effective temporary certificates containing no price condition, the validity of which have never been challenged on appeal. Under these circumstances we believe that there is no basis for ordering refunds for the period, prior to the effective date of the permanent certificates being issued herewith, during which the producers were receiving the higher prices unconditionally authorized in their temporary certificates. [P. 413.]

Our instant case falls squarely within *CATCO* criteria, in that the validity of the unconditioned certificates originally issued by the Commission to the instant producer applicants *was* subsequently, in due course, challenged on ap-

peal in the courts, and upon such appeal the Commission orders were reversed and remanded. (See Appendix A to this decision) It is thus clear that a refund obligation should properly be imposed here, under the precedent laid down by the Commission in *CATCO*, and that *Skelly* is not applicable on the refund issue in this proceeding.

Another controlling precedent is found in the Commission's order issued February 9, 1962, in *Socony Mobil Oil Company, Inc.*, Docket No. G–13780, 27 FPC 347, where the relevant facts were identical to those here involved. Socony was one of the producer applicants to which unconditioned permanent certificates were originally issued by the Commission on September 4, 1958 (at 22.8 cents per Mcf in Socony's case) in *Transcontinental Gas Pipe Line Corporation*, 20 FPC 264. Socony commenced deliveries to Transco under this certificate on September 17, 1959. The validity of this order was subsequently challenged on appeal in the courts, and the Supreme Court in *Public Service Commission* v. *F.P.C.*, 361 U.S. 195, vacated a Court of Appeals judgment affirming the Commission and remanded the case to that Court with directions "to remand the cases to the Federal Power Commission for reconsideration and redetermination in the light of *Atlantic Refining Co.* v. *Public Service Commission of New York.* * * *." After subsequent proceedings pursuant to the court remand, the Commission issued a final order of February 9, 1962, in which it determined that the correct "in line" price was 18 cents per Mcf, and that the certificate issued to Socony should be conditioned to provide a total price of 18 cents per Mcf "*effective* * * * *from the date of initial service*" under the contract. The order further directed that Socony should refund to Transco a sum equal to the difference between 22.8 cents and 18 cents per Mcf "applied to all volumes delivered to Transco under Socony's FPC Gas Rate Schedule No. 198 from the date of initial delivery to Transco until the first billing date under this order." (Order, p. 349)

Many of the basic arguments raised by the producer applicants against the imposition of refunds in the instant proceeding were similarly raised and fully considered by the Commission in *CATCO*, *supra*, and were there rejected. Those arguments have no greater validity in the instant proceeding. In Op. No. 351, the Commission stated:

> In our opinion the examiner acted properly in ordering refunds, although we have no power to order reparations. Here we granted CATCO a certificate and approved the proposed 21.4 cent rate. That certificate was subject to challenge when issued and was challenged successfully. The proceedings were remanded by the Supreme Court, and our order of June 24, 1957 was "vacated" by the mandate of the Court of Appeals. We now find that the rate should have been 18½ cents. If CATCO were permitted to retain what it has collected under the 21.4 cent rate and file the 18½ cent rate prospectively only, CATCO would be permitted to retain the portion of the rate found unlawful, the Supreme Court's decision and the subsequent hearing would be rendered in part futile, and CATCO would be unjustly enriched because of procedural delays. * * * To require restitution of the difference between the two rates, in our opinion, is a reasonable condition of issuing permanent certificates to the CATCO companies under the provisions of Section 7(e) of the Natural Gas Act. [27 FPC 110.]

In its *CATCO* rehearing order, the Commission further stated:

> CATCO argues that we have no authority to order refunds of the difference between the 18.5 cent rate determined in our opinion and order and the 21.4 cent rate actually charged. * * * The gist of CATCO's argument is that our certificate granted in June of 1957 allowing the 21.4 cent rate was voidable, not void, and that the rate schedule filed pursuant to our June

1957 order was the legal rate which the applicants were required to charge, citing *Montana-Dakota Utilities Co.* v. *Northwestern Public Service Co.*, 341 U.S. 246, 251.

In our opinion the original certificate was nullified *ab initio* insofar as it was found defective for lack of an appropriate price condition. The same holds true of the rate schedule filed under that certificate. Section 19(b) of the Natural Gas Act provides that the Court shall have authority to "affirm, modify or set aside" an order in whole or in part. Set aside means to annul, cancel, make void. Pursuant to section 19 the Court of Appeals "vacated" our original order and its action was affirmed by the Supreme Court. The situation differs in *Atlantic Coast Line R. Co.* v. *Florida*, 295 U.S. 301, 311 cited by CATCO. * * * Unlike the situation in the *Atlantic Coast Line* case we are not merely curing a defect of form in the first order and re-establishing the same rate; we have found that the first order arrived at the wrong initial price and that a lower rate is required by the public convenience and necessity.

As observed in the *Atlantic Coast Line* case the refund question must be examined in light of the equities. The equities are in favor of a refund here because the 21.4 cent price was charged by CATCO upon the authority of a certificate whose final validity had not been adjudicated, and which was eventually found to be inconsistent with the public convenience and necessity. We are not awarding reparations, in the sense of investigating an effective rate, finding it unlawfully high and ordering a refund; we are reissuing a certificate of public convenience and necessity in place of the certificate issued in June 1957, but with a price condition which in our opinion is consistent with the mandate of the Supreme Court. [Order, pp. 595–596.]

In an attempt to distinguish the Commission's refund action in *CATCO*, *supra*, the producer applicants here stress that the instant unconditioned certificates were not "set aside", and that the Commission itself has recognized that the instant certificates are "still outstanding".[16] It is contended that this represents an important distinction from the situation in *CATCO*,

> * * * where the certificates were vacated by the Supreme Court * * *. Thus, the discussion of "void" and "voidable" certificates at page 596 of the order denying rehearing in the *CATCO* case is not applicable here.[17]

It is concluded that this argument is without merit. Obviously, the Commission itself did not regard the formalistic act of setting aside the unconditioned certificate as a condition precedent to its authority to impose a refund obligation, in view of the following statement in its order of January 10, 1962:

> Recently, in *Socony Mobil Oil Company, Inc.*, Docket No. G–13780, when confronted with the same problem as is presented here, we set aside the permanent certificate and issued temporary authority properly conditioned. But upon further study of this problem, and particularly of the mandate of the District of Columbia Circuit covering Group II of these proceedings, we are now convinced that we can adequately protect the public by redetermining the price issue in the light of governing legal standards. This makes it unnecessary to set aside the certificates. [Order, p. 16.]

The various Court of Appeals decisions involved in the judicial remands of the original unconditioned certificate orders in the instant dockets all found that the Commission action approving permanent unconditioned certificates was erroneous. However, as a matter of form, the ordering paragraphs at the end of these court decisions varied in their precise language, from one case to another. For

[16] The January 10, 1962 order, 27 FPC at 15.

[17] Initial brief of Kilroy Properties, Inc., p. 27, footnote 20.

example, the Supreme Court decision in *Public Service Commission* v. *F.P.C.*, 361 U.S. 195 (relating to the Group A dockets in Appendix A to this decision) vacated the Court of Appeals judgment and remanded the cases to that Court "with directions to remand the cases to the Federal Power Commission for reconsideration and redetermination in the light of *Atlantic Refining Co.* v. *Public Service Commission of New York.*" The Court of Appeals decision in *Public Service Commission* v. *F.P.C.*, 287 F. 2d 146 (CADC), relating to the Group B dockets, reversed the Commission order and remanded the case to the Commission for further proceedings. The Court of Appeals decisions in *United Gas Improvement Co.* v. *F.P.C.*, 283 F. 2d 817 (CA9), and *United Gas Improvement Co.* v. *F.P.C.*, 290 F. 2d 147 (CA5), relating to the Group C and D dockets, respectively, *vacated the Commission order* and remanded the matter to the Commission for further proceedings. Finally, the Court of Appeals decision in *United Gas Improvement Co.* v. *F.P.C.*, 290 F. 2d 133 (CA5), relating to the Group E docket, held that the Commission order must be "set aside" and the proceedings remanded for further appropriate action by the Commission.

Surely it cannot seriously be contended that under such circumstances the propriety of a Commission order imposing refunds upon the producer applicants should hinge upon the precise formalistic language used by the reviewing court in its order reversing and remanding. If such a position were adopted, obligations involving the refund of millions of dollars would be governed not by the facts and the law, but would hinge upon variations in style in the ordering paragraph of the court's decision reversing the Commission. This producer contention is accordingly rejected, and it is concluded that the facts here presented in connection with the refund issue are not reasonably distinguishable from those involved in *CATCO, supra.*

In its March 7, 1962 order in the instant proceeding the Commission stated: "The remedial action to be taken by us in either event will turn on the equities presented." (Order, p. 483.)

The producer applicants contend that the equities here militate against the imposition of a refund obligation, emphasizing that they commenced deliveries of gas in good faith reliance upon the unconditioned permanent certificates originally issued by the Commission. In addition, they contend that the imposition of refund obligations at this time would create a multitude of operating and financial problems which would impose severe burdens upon them. It is alleged that they have paid substantial royalties on the basis of the Commission's original unconditional certification of their initial contract prices, and that any efforts to recoup any portion of such royalty payments would encounter serious complications at this time.

This precise question as to the "equities" involved in connection with the refund issue has now been resolved by the Commission, subsequent to its March 7, 1962 order in the instant proceeding, by its Order Denying Rehearing in the *CATCO* case, issued March 22, 1962. The Commission there stated:

> As observed in the *Atlantic Coast Line* case the refund question must be examined in light of the equities. *The equities are in favor of a refund here* because the 21.4 cent price was charged by CATCO upon the authority of a certificate whose final validity had not been adjudicated, and which was eventually found to be inconsistent with the public convenience and necessity. We are not awarding reparations, in the sense of investigating an effective rate, finding it unlawfully high and ordering a refund; we are reissuing a certificate of public convenience and necessity in place of the certificate issued in June 1957, but with a price condition which in our opinion is consistent with the mandate of the Supreme Court. [Order, p. 596.]

It seems obvious that the types of financial burdens cited here as flowing from the imposition of a refund obligation at this stage must have similarly been involved in the *CATCO* case, *supra*. In fact, similar contentions with respect to possible financial burdens could be made by a producer applicant in any certificate proceeding where, subsequent to the commencement of deliveries under an unconditioned certificate, the validity of the Commission order may be challenged on appeal and subsequently reversed. However, this argument was found not persuasive by the Commission in *CATCO*, *supra*, and it must be rejected here.

It should finally be noted that many of the arguments advanced in the instant produced briefs in opposition to a refund obligation have actually already been considered and rejected by the Commission *in this very proceeding—i.e.*, in its order of March 7, 1962.

In its earlier order of January 10, 1962, the Commission had directed that the amounts collected by the producer applicants during the interim

> shall be subject to such refund provisions as the Commission may lawfully prescribe by its final order in these proceedings * * * to the extent, if any, that the rate which has been collected exceeds the rate ultimately found to accord with the requirements of the public convenience and necessity. [Order, p. 17.]

Numerous producer applicants thereafter filed applications for rehearing of that order, characterizing it as a "refund order" and attacking the Commission's authority to impose refund obligations under such circumstances. In its order of March 7, 1962, rejecting these applications for rehearing, the Commission characterized its January 10 order as declaring "an obligation to make refunds on the part of the producer-applicants in those proceedings"; and described the new procedure laid down in the March 7th order as "designed to abbreviate the duration of applicants' refund uncertainties". (Order, p. 482.)

Certain of the instant producer applicants had attacked the validity of any such refund obligation as amounting to "entrapment," contending:

> * * * If such procedures were valid, the Commission could simply issue unconditional certificates, as it has done in this case, and then after the producer has commenced deliveries, summarily issue him a new temporary or permanent certificate subject to the condition that he refunds all amounts in excess of the initial rate ultimately determined to be proper in some later proceeding. Thus, the producer would be effectively denied a free choice to accept or reject such conditioned certificate and would be given no opportunity to present evidence to support his initial contract price prior to the imposition of the refund condition.

The Commission rejected this argument, stating:

> Our January 10 order asserts no such general power to modify final orders, properly issued after hearing pursuant to Section 7(c) of the Natural Gas Act. The special history of these three groups of proceedings defines the limited power of modification involved here. In every case the statutory hearing has already been held and the producers afforded an opportunity to adduce evidence supporting their price proposals. Our unconditional certificate orders under Section 7 were erroneously issued in the first place and as a result of the invocation of Section 19 have never assumed finality. (The provisions of Section 19 sharply distinguished this Act from the statute construed in *C.A.B.* v. *Delta Air Lines*, 367 U.S. 316) Obviously the substantive errors were ours in accepting the arguments propounded by the producer applicants; equally obvious, the New York Public Service Commission and the Eastern Seaboard Companies have consistently, publicly, and in the final analysis successfully urged the error of

these arguments. The courts having lain bare the errors, it remains our task equitably to correct them. [P. 483.]

The Commission noted that the instant producer applicants had accepted unconditional certificates and commenced deliveries in the face of a situation where they knew that their price proposals were being seriously and aggressively litigated. With respect to the Group A dockets in the instant proceeding, the Commission stated:

> Docket No. G–13169 *et al.* were heard and originally decided by us in 1958, prior to the Supreme Court's 1959 decision in *CATCO* (360 U.S. 378). The producers accepted the unconditional certificates prior to the expiration of the 30-day period prescribed by Section 19(a) of the Act for seeking rehearing, and commenced deliveries. No producer sought an extension of time in which to accept the certificates. But the record and the briefs show that the producers' price proposals were opposed throughout the 1958 proceedings. *Thus the producers have not been "entrapped"; rather, in presenting their cases and commencing deliveries, they took a calculated risk as to the outcome of any review proceedings which might be brought.* Such proceeding in fact resulted in the remand. *P.S.C. of New York* v. *F.P.C.*, 361 U.S. 195. [P. 484.]

In addition, with respect to the Group B dockets, the Commission noted:

> Docket No. G–17336, *et al.* were in hearing at the time of the Supreme Court's *Catco* decision. We issued unconditional certificates on August 10, 1959, largely in reliance upon the Court of Appeals' affirmance of our order in Docket No. G–13169, *et al.*, 269 F. 2d 865 (CA3, August 4, 1959), reversed 361 U.S. 195. The P.S.C. of New York actively contested the producer price proposals. The Court of Appeals held the record inadequate to support the initial prices proposed and remanded for further proceedings in which the producers might either augment the record or seek an appropriate price condition. [Order, p. 484; emphasis supplied.]

The situation with respect to the Group C and D dockets was the same.

Accordingly, for all the reasons indicated above, it is concluded that a refund obligation *should* be imposed in the instant proceeding.

However, it is noted that both the Staff and UGI direct attention, in this connection, to a recent decision of the Court of Appeals for the Fifth Circuit in *H. L. Hunt* v. *F.P.C.*, issued on July 19, 1962, subsequent to the close of the instant hearing. The court there held that where the Commission rate-conditions the contract price down to a lower initial price level, it may not include a condition prohibiting the producer from filing for his higher contract price under Section 4 of the Act. Staff recommends that, in the event the *Hunt* decision should be sustained,[18] those instant producer applicants who desire to contest the imposition of a refund obligation should be given the option to file retroactively for their original contract price under Section 4; that where this occurs, such increased rate should be retroactively suspended for the full statutory period, with subsequent collections to be held subject to refund under Section 4; that where this option is exercised by the producer applicants, the Commission should vacate the remanded certificates, deny the applications, and cancel the related rate schedules, "thus excluding this excessively-priced gas from jurisdictional commerce in the future and holding the line." (Staff brief, pp. 18–19)

Similarly UGI, referring to the *Hunt* decision, states:

> * * * in the event the decision is sustained and deemed applicable, UGI would have no objection to an order which would permit the refund ques-

[18] 306 F. 2d 334. The Commission's petition for rehearing, filed with the 5th Circuit on August 23, 1962, has not yet been acted on. [Certiorari granted 375 U.S. 810 (1963); Fifth Circuit reversed, 376 U.S. 515 (1964).]

tion, with respect to volumes delivered up to the date of the Commission order, to be determined in a proceeding in the nature of a Section 4(e) proceeding. [UGI brief, p. 34, footnote 18.] [19]

It is to be noted that if any such procedure were considered, the Section 4-type inquiry referred to in both the Staff and UGI proposals would have to be conducted as part of the Southern Louisiana Area Rate proceeding, if the Commission is to adhere to its already clearly expressed policy that producer rates are hereafter to be tried and decided on an area basis, rather than on an individual producer cost basis. The net effect would be that the refund issue, after almost a year of activity, would revert to the same posture it occupied at the time of the January 10, 1962 order—a posture which the Commission later concluded, in its March 7th order, was undesirable because it indefinitely prolonged the duration of the applicants' refund uncertainties.

In view of the fact that the *Hunt* decision, *supra*, is currently being appealed, it is concluded that it would be premature for the Presiding Examiner, in determining the appropriate relief to be provided here, to give any consideration to the possible implications of that decision or the extent to which the matters therein set forth may have a bearing upon the issue here involved. Accordingly, no further consideration will be given at this time to the Staff and UGI proposals referred to above.

VI. The Option to Reject Conditioned Certificates

The Staff suggests that, under the particular circumstances involved in this proceeding, the Commission might properly allow the producer applicants the option, after making appropriate refunds, of rejecting a conditional certificate. It notes that if the Commission had, in fact, imposed price conditions in the certificates as originally issued, the producers could freely (and arbitrarily) have rejected them. The Staff concludes that when the producers commenced deliveries under the original unconditioned certificates, they gave up any such absolute right *as a matter of law;* that nevertheless the Commissiion has the power to return such a right to the producers, in its discretion, and that the circumstances here involved present sound reasons for the Commission to so exercise its discretion. Staff notes, in this connection, that the producers in the Group A dockets accepted their original certificates before the Supreme Court in its *CATCO* decision "corrected a wide-spread misunderstanding of the Natural Gas Act"; and that the other producer applicants "may have acted upon the same misplaced reliance as the Commission on the court of appeals' affirmance of *Transco-Seaboard.*"

In order to accomplish this result, the Staff suggests that the Commission should vacate all outstanding certificates, reissue conditional ones, and specifically provide that the producers may either accept such certificates (subject to court review) or reject them out-of-hand; that where a producer exercised such option to reject, his application should be deemed denied and the related rate schedule should be cancelled. (Staff brief, pp. 17–18)

UGI makes a similar proposal. It recommends that conditioned certificates be issued, with a refund obligation; that the produced applicants be given 30 days within which to accept or reject such certificates; that where an applicant chooses *not* to accept such a conditioned certificate, service should be discontinued promptly, the applicable rate schedule should be cancelled, and appropriate refunds should be ordered.

[19] Under the UGI proposal, the producer applicants would be given an option to reject conditioned certificates. The proposal for determination of the refund question in a Section 4-type proceeding would come into play only where the producer elects to reject the conditioned certificate.

Both Transco, purchaser in the instant Group A and D dockets, and Hope Natural Gas Company, purchaser in the Group B dockets, object to any suggestion that the producer applicants be given the option to reject conditioned certificates in this proceeding. Hope Natural Gas Company alleges that ten of the instant applications involve contracts under which it purchases natural gas from producers in southern Louisiana. The gas under contract to Hope is gathered and transported to southern Ohio and Pennsylvania delivery points, for the account of Hope, through the facilities of Texas Gas Transmission Corporation and Texas Eastern Transmission Corporation. Hope states that the total package of gas which it has assembled in southern Louisiana for transportation to its market area permits the delivery of up to 100,000 Mcf per day to its customers; that approximately 54 percent of its total transportation gas purchased from independent producers is involved in the instant proceeding; that the Louisiana transportation gas has been flowing steadily to its customers since late 1959, and during this period has become a significant part of the total supply required by Hope, and by the Consolidated Natural Gas System of which it is a part; that if Hope were denied any substantial part of this package of Louisiana gas, it would be impossible to meet the requirements of its customers, under their present firm demands, without the construction of additional facilities or without contracting for a replacement supply to be delivered at the same points where the transportation gas now enters into Hope's markets. Hope finally contends that the adoption here of any proposal providing the producer applicants with an option to reject would create an undesirable precedent, in conflict with past Commission policy requiring the continuation of deliveries in interstate commerce, once initiated, and would threaten the entire scheme of firm, reliable and continuous service which the certificate provisions in Section 7 of the Act were designed to guarantee. Hope urges that, in the event an option to reject should nevertheless be granted to the instant producer applicants, it and the consumers dependent upon its supply must have interim protection *before* the gas flowing from such producers is cut off. It contends that at least a year's time would be the minimum required to find and arrange for a replacement supply for its Louisiana transportation gas.

Similarly, Transco argues that any attempt by the Commission to sanction the termination of sales by producers, in the absence of the procedures required by Section 7(b) of the Act, would establish a dangerous precedent in the administration of the Natural Gas Act. It contends that in reliance upon the Commission's consistent policy with respect to termination of sales, Transco has invested millions of dollars in pipeline facilities for the purpose of obtaining supplies of gas from producers, even though the producer certificates were not final in that the issue of price was being contested in the courts; that if the Commission were to change its policy at this juncture, for whatever reason, neither Transco nor any other pipeline could take the risk of constructing facilities until after the lengthy process of court review had run its course; that the result of such action would be to delay the expansion of pipeline facilities and to hamper pipelines and distributors in rendering adequate service to their markets.

It is concluded here that a proposal giving the instant producer applicants the option to reject conditioned certificates at this stage could not be justified by the equities of the situation, nor would it be an acceptable solution in terms of the public initerest. This seems clear from an examination of the language used by the Commission in rejecting the "entrapment" argument of the producer applicants in its March 7, 1962 order in the instant proceeding. The Commission there stated:

> The courts having lain bare the errors, it remains our task equitably to correct them.
>
> Taking such remedial action differs from the ordinary processing of certificate applications. The typical Section 7(c) case involves ultimately the broad question whether the applicant should be permitted to enter the field; review of proposed initial rates is but one facet of our certificate powers. *When an applicant first proposes interstate service (and prior to dedication under 7(c) of the Act)* he is not only entitled to the statutory processes, fairly administered; but *he is also privileged to reject, for whatever reasons he wishes, any tendered certificate, no matter how reasonable the terms offered. In these remedial proceedings, we are called upon to exercise only our rate review powers under Section 7;* no question arises as to the propriety of allowing the producers to introduce their gas into jurisdictional commerce. Thus nothing imperils the producers' "security of certificate." By the same token, *there can be no private option here to accept or reject the results of our initial rate review at the regulated company's whim,* any more than a company is free to accept or reject the results of a rate review proceeding under Section 4 or 5 of the Act.[20]
>
> [Order, p. 483; emphasis supplied.]

As already noted above, the Commission in its March 7, 1962 order emphasized that the instant producer applicants had accepted unconditional certificates and commenced deliveries in the face of a situation where they knew that their price proposals were being seriously and aggressively litigated. The Commission concluded, in this connection:

> Thus the producers have not been "entrapped"; rather, in presenting their cases and commencing deliveries, they took a calculated risk as to the outcome of any review proceedings which might be brought.

Where the producers under such circumstances have permitted their pipeline customers to construct facilities to obtain such supplies of gas, which since then have become a significant part of the latter's total gas supplies required for continued service to their customers, the producers must be regarded as having assumed and accepted the risk that their initial contract prices might ultimately be reduced as a result of such review proceedings. It would be inequitable under such circumstances to permit the producer applicants to now discontinue that service, merely because they might be dissatisfied with the Commission's action in carrying out the remand of the reviewing courts.

PSC makes a somewhat different proposal, which could similarly lead to discontinuance of deliveries under the instant producer contracts. PSC notes that under the recent decision of the Court of Appeals for the Fifth Circuit in *H. L. Hunt* v. *F.P.C., supra,* if certificates were here reissued rate-conditioning the contract prices down to the approved "in line" price level, the instant producer applicants could promptly file for their higher initial contract prices under Section 4 and could thereafter resume collection of such higher prices, subject to refund, following the statutory suspension period. PSC urges that any such result would undermine the entire point and purpose of the instant proceeding, and would frustrate the Commission's effort to achieve price stability. In order to avoid this, PSC proposes that after determining the proper "in line" initial price level for the instant sales and prescribing refund obligations on that basis, the instant applications should be denied—but without

[20] The point made here is that if a natural gas company files for a Section 4 rate increase, which is later rejected by the Commission, the company would not have the option, merely because of dissatisfaction with the Commission holding, to discontinue service under such rate schedules.

prejudice to the filing of new applications *based upon amended contracts*, in which the contract price should be fixed at the approved "in line" price level, and permitting no price changes until July 1, 1967 or until the determination of the applicable price for these sales in the AR61-2 Southern Louisiana Area Rate proceeding, whichever may occur first. As its rationale in support of this proposal, PSC suggests that the crucial factor which must now be critically reappraised in the light of the *present* and *future* public convenience and necessity is whether permanent certificates should now be reissued for the instant sales *at all*, at any initial price level. It contends that in connection with any such reappraisal the Commission should take cognizance of the fact that, as a result of settlements approved since the March 7, 1962 order, permanent certificates have now already been reissued for most of the sales and most of the gas originally involved in this remanded proceeding; and that there has been no showing that the purchasers have present or future needs for the *additional* volumes represented by the instant remaining applications.

This PSC proposal, of course, is completely inconsistent with the scope of the instant proceeding as clearly defined by the Commission in its order of March 7, 1962, as follows: "(B) The proceedings * * * are consolidated for the limited purpose of determining the public interest initial price or prices applicable to these proceedings." [P. 486.]

Furthermore, the PSC proposal represents a patent effort to avoid the holding of the Fifth Circuit in the *Hunt* case, *supra*. The proper course for dealing with any problems raised by the *Hunt* decision lies in a review of the decision itself, which the Commission is now pursuing, and not in attempts to accomplish by indirection what that decision prohibits.

FINDINGS AND CONCLUSIONS

Upon consideration of the entire record in this proceeding, the evidence adduced and the briefs filed, the Presiding Examiner finds and concludes, in addition to the findings and conclusions hereinbefore stated, that

(1) Placid Oil Company, Berkshire Oil Company (formerly J. R. Frankel and R. R. Frankel), Hassie Hunt Trust, Phillips Petroleum Company, The Superior Oil Company, J. Ray McDermott and Company, Inc., Kilroy Properties, Inc., *et al.*, Callery Properties, Inc., Ocean Drilling and Exploration Company, Caroline Hunt Sands, *et al.*, Sid W. Richardson d/b/a Richardson & Bass, Operator, *et al.*, and Shell Oil Company, independent producers of natural gas, are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(2) The sales of natural gas hereinbefore described, as more fully described in the applications, are made in interstate commerce, subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The independent producers referred to in the above paragraph (1) are able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act, and the requirements, rules and regulations of the Commission thereunder.

(4) The sales of natural gas by the independent producers referred to in the above paragraph (1), together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in the administration of the Natural Gas Act that the initial price charged by the independent producers referred to in the above paragraph (1) for the sales proposed in their certificate applications in this proceeding be not greater than a base price of 18.5 cents per Mcf at 15.025 psia, adjusted to 20 cents per Mcf where tax reimbursements are applicable; and that the take-or-pay requirement in their contracts be revised in accordance with the final order of the Commission to be issued in Docket No. R–199, commenced by Notice of Proposed Rule Making dated May 22, 1961.

ORDER

Wherefore, it is ordered, subject to review by the Commission on appeal, or upon its own motion as provided in the Commission's Rules of Practice and Procedure, that:

(A) Permanent certificates of public convenience and necessity are hereby issued to each of the applicants referred to in finding (1) for the sale of natural gas in interstate commerce for resale as proposed in their applications, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, upon the terms and conditions of this order.

(B) The certificates issued to each of such producer applicants are hereby conditioned so that the base price effective under each of the contracts involved in such applications, from the date of initial service thereunder, shall be, until lawfully changed in the manner provided by the Natural Gas Act, 18.5 cents per Mcf at 15.025 psia, except that the applicants may collect an additional 1.5 cents per Mcf for gas produced in any area subject to the taxing authority of the State of Louisiana, subject to refund to the pipeline buyer with interest at 7 percent per annum if it is finally adjudicated that such area is not subject to the taxing authority of the State of Louisiana.

(C) The certificates of such producer applicants shall be conditioned so that the take-or-pay requirement in each contract is subject to the provisions of the Commission's final order in Docket No. R–199 as of the effective date of that order.

(D) Each of such producer applicants shall, within 60 days of the date upon which this order shall become effective, refund to the pipeline buyers with 7 percent interest a sum equal to the difference between the price charged to and collected from such purchasers and the base price set forth in (B) above, applied to all volumes delivered to such purchasers under the contracts which form the subject matter of this proceeding from the date of initial delivery until the effective date of this order.

(E) Within 10 days of the date of refund provided in Paragraph (D), above, each of the producer applicants shall file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, and the interest payments related thereto, and a statement from the purchaser acknowledging the receipt.

(F) The certificates of such producer applicants are not transferable and shall be effective only so long as each of said applicants continues the acts and operations herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificates to the producer applicants herein is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants.

JOSEPH ZWERDLING,
Presiding Examiner.

APPENDIX A

PLACID OIL CO., ET AL., G–13183, ET AL.

SUMMARY OF REMANDED PROCEEDINGS

A. *The Transco-Seaboard case:* Sales to Transcontinental Gas Pipe Line Corporation.

Docket No. G–	Applicant	Contract date	Field	Rate schedule No.	Total price, ¢/Mcf at 15.025 psia
13183	Placid Oil Co	Aug. 13, 1957	Thibodaux	19	23.55 (base price of 21.5¢ plus tax reimbursement).

SIERRA PACIFIC POWER COMPANY, DOCKET NO. E-7100

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF DEBENTURES

(Issued July 17, 1963)

By order issued July 5, 1963, *supra*, p. 46, in the above-entitled matter, the Commission authorized Sierra Pacific Power Company (Applicant) to issue and sell at competitive bidding $8,000,000, principal amount of Debentures subject to the provisions, among others, set forth in Paragraph (B) of that order, as follows:

(B) The proposed issuance and sale of Debentures at competitive bidding in the manner set forth in the application shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the require-

ments of Section 34.2(k)(3) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(k)(4) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations.

(ii) The Commission, by further order, shall have approved the price to be received by Applicant for the proposed issuance of Debentures and the interest rate thereof.

Applicant, on July 17, 1963, filed an amendment, pursuant to the requirements of the aforementioned Commission order, in which it states, among other things, (1) that it proposes to accept, as representing the lowest annual cost of money to it, the bid of Francis I. duPont & Company to purchase the proposed issuance of $8,000,000, principal amount of Debentures, at the price of 101.5771% of principal amount, with an interest rate of 5% per annum.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements contained in Paragraph (B) of the Commission's order issued July 5, 1963, in the above-entitled docket; and under the bid it proposes to accept for the issuance of Debentures, the price to be received by Applicant for the Debentures and the interest rate thereof are reasonable.

(2) The proposed issuance and sale of Debentures, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Debentures and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Debentures referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of Paragraphs (C), (E) and (F) of the Commission's order issued July 5, 1963, in the above docket.

(Issued July 17, 1963)*

Syllabus

1. Record amply supports in-line price of 18.5 cents per Mcf, plus 1.5 cents tax reimbursement for total initial price of 20 cents. P. 332.

*Initial decision appears on p. 337. Order issued August 29, 1963 staying effectiveness, etc., 30 FPC 626. Order issued September 12, 1963, denying appeal from Secretary's action, 30 FPC 691. Settlement offer rejected; rehearing denied and stay granted, 30 FPC 1209. Respondent's motion to dismiss for want of venue granted March 9, 1964, in *Gulf Oil Co.* v. *F.P.C.*, 330 F. 2d 824 (CA5-1964).

2. Cost and financial requirements evidence has no utility in determination of initial price question and is in fact irrelevant in producer certificate cases. P. 332.
3. Commission *directs* refunds of all charges collected under temporary authorizations down to refund floor of 20 cents. P. 333.
4. Producer certificates conditioned to include a moratorium on all price increases in excess of 23.55 cents, inclusive of tax reimbursement, pending first decision in Southern Louisiana area proceeding or July 1, 1967, whichever is earlier. Pp. 334–335.
5. Commission *issues* certificates of public convenience and necessity under Section 7 of the Natural Gas Act. Pp. 335–336.

Commissioners Ross and Morgan *concurring* to the extent consistent with Commissioner Ross' statement accompanying Opinion No. 398.

Wilbert O. Crain, Vernon W. Woods, C. Huffman Lewis, Willis L. Meadows, and *John M. Madison* for United Gas Pipe Line Company

Jesse P. Luton, Jr., John E. Thomason, A. G. Riddlesperger, and *M. E. Minks* for Gulf Oil Corporation

Jack D. Jones, J. Evans Attwell, and *Clyde E. Willbern* for Tidewater Oil Company

J. David Mann, Jr. and *John E. Holtzinger, Jr.* for the United Gas Improvement Company

Joseph I. Lewis, Herbert E. Squires, and *Martin Toscan Bennett Associates* for Pennsylvania Public Utilities Commission

Barbara M. Suchow, Kent H. Brown, Martin L. Barr, and *Charles J. Cox* for New York Public Service Commission

Reuben Goldberg, George Spiegel, and *George E. Morrow* for Memphis Light, Gas and Water Division

David K. Kadane, Edward M. Barrett, and *Bertram B. Moll* for Long Island Lighting Company

Edwin F. Russell and *Harry G. Hill, Jr.* for Brooklyn Union Gas Company

Reuben Goldberg and *George Spiegel* for Mississippi Valley Gas Company

Vincent P. McDevitt, Samuel G. Miller, and *Henry P. Sullivan* for Philadelphia Electric Company

James O'Malley, Jr., Halcyon G. Skinner, and *John A. Lodge* for Consolidated Edison Company of New York, Inc.

Orson L. Huntsman for the Staff of the Federal Power Commission

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

WOODWARD, *Commissioner:*

This consolidated proceeding involves interrelated applications for certificates of public convenience and necessity authorizing (1) the sale of gas by Tidewater Oil Company (Tidewater) and Gulf Oil Corporation (Gulf) from jointly-owned leases in the Bastian Bay Field in on-shore Southern Louisiana to United Gas Pipe Line Company (United), and (2) the construction and operation of 59.4 miles of 36-inch pipeline and appurtenant facilities by United to enable receipt of the gas into its system. The cost of the requisite facilities was estimated at $16,917,010. Gulf's sale under the terms of a 20-year contract dated December 22, 1959, and Tidewater's under a similar contract dated December 28, 1959. The contracts provide for an initial price of 22.5 cents per Mcf[1] plus 2.3 cents per Mcf tax reimbursement, a total of 24.8 cents per Mcf; they also provide for a

[1] All prices are at 15.025 psia.

fixed escalation of 2.5 cents per Mcf on July 1, 1962, which has not been made effective, and for further price adjustments on July 1, 1967, and July 1, 1972.

On May 3, 1961, the Commission issued a temporary authorization to United to construct and operate the facilities proposed in Docket No. CP60–36, and also granted temporary authority to Gulf and Tidewater to commence the sale of gas to United at an initial price of 23.25 cents inclusive of tax reimbursement on condition that they agree to refund to United any amounts collected in excess of the price determined proper in this proceeding down to a refund floor of 20 cents per Mcf inclusive of tax reimbursement. The temporary authorizations were accepted by Gulf and Tidewater by notice filed May 22, 1961;[2] United's construction commenced August 14, 1961. Delivery of the gas began on June 22, 1962, and has continued to this date.

The only issue of substance raised in the proceeding was the initial price question.[3] Gulf and Tidewater maintain that certificates without price condition should be issued. Staff seeks a base price of 18.5 cents plus 1.5 cents tax reimbursement. The Eastern Seaboard intervenors[4] contend that permanent certificates should be issued only if conditioned on amendment of the sales contracts to provide for an initial price of 18.5 cents inclusive of tax reimbursement. Philadelphia Electric Company, which otherwise supports the position of the Eastern Seaboard intervenors, suggests that the Commission could properly conclude that the sales should be conditioned at a tax inclusive price of 17 cents on the ground that this was the predominant price in South Louisiana at the time the *CATCO*[5] contracts were executed. The New York Public Service Commission asks that a price condition of 18 cents inclusive of tax be imposed, the Pennsylvania Public Utility Commission urges an allowance of 13 cents, presumably plus tax reimbursement, and the Southern intervenors[6] submit that permanent certificates should not be issued at any price in excess of 12.3 cents per Mcf including tax reimbursement.

The examiner determined that the "in-line" price applicable to these sales, as revealed by the evidence, was not in excess of 20 cents per Mcf inclusive of an allowance for reimbursement of taxes and that the certificates issued to Gulf and Tidewater should be conditioned to that price. This, plus a finding that a certificate should be issued to United without qualification, was the only major conclusion reached by him, and is the only condition imposed in the initial decision on the producers' certificates. Exceptions have been filed by Gulf and Tidewater on the basis that a higher price is warranted by the evidence submitted in the proceeding, and by the Pennsylvania Public Utility Commission, Philadelphia Electric Company, and the Southern intervenors that the same evidence requires a price lower than the in-line level found by the examiner. Additional exceptions by the intervenors relate to the failure to order refund of a portion of the charges collected under the temporary authorizations, the lack

---

[2] The contracts are on file as Gulf's FPC Gas Rate Schedule No. 214, Supplements Nos. 1, 2 and 3, and Tidewater's FPC Gas Rate Schedule No. 108, Supplements Nos. 1, 2 and 3.

[3] Philadelphia Electric Company, in contending that the price should be conditioned at 17 or 17.5 cents inclusive of tax reimbursement, argues that the issue of United's need for the Bastian Bay gas cannot be divorced from the initial price issue, price mirroring the degree of urgency of the need. Its position, in essence, is that the system requirements of United are such that United does not "need" this gas at a price in excess of that recommended by it. The argument is basically one of price and does not go to the merits of the certification of United's proposal.

[6] Memphis Light, Gas and Water Division of Memphis, Tennessee and Mississippi Valley Gas Company.

of any condition to preclude a price escalation under the contracts, and to the allowance without modification of the take-or-pay provisions.

We conclude that the record amply supports an in-line price of 18.5 cents per Mcf plus 1.5 cents tax reimbursement, for a total initial price of 20 cents per Mcf. We also argee with the position of the interveners that the examiner erred in failing to direct refunds and not conditioning the take-or-pay provisions of the contracts upon our ultimate disposition of the rule-making proceeding in Docket No. R–199. We further agree that the price escalation provisions of the contracts, and the present ability of Gulf and Tidewater to file thereunder for an increase above the initial contract price, does not afford the necessary interim protection of the public interest which it is our duty to insure pending the determination of the just and reasonable price or prices for this gas. Accordingly, we shall condition the certificates issued to these producers in a manner believed by us to be required by the public convenience and necessity to hold in abeyance the price escalations provided in the contracts.

The gas production here involved is from the same geographical area, albeit several parishes removed, as concerned us in our determination in *Placid Oil Company, et al.*,[7] where a price of 20 cents per Mcf including tax reimbursement was fixed for initial service. Unlike the restriction applied in that proceeding on the material allowed into evidence, the record in this case is replete with voluminous cost, economic and financial requirements evidence prepared by the parties and accepted by the examiner. Thus both Gulf and Tidewater introduced detailed cost-of-service studies, system-wide as well as area-wide, some utilizing their own principles of allocation and others purporting to follow the methods set out in the *Phillips*[8] opinion. In addition, the producer applicants submitted evidence on industry demand-supply and cost trends, value considerations peculiar to their sales, area cost-revenue trends, comparative well-cost data, Bastian Bay Field and comparative data, current market prices and market price trends. System-wide cost studies of the producers also were presented by the Eastern Seaboard and Southern intervenors, as well as a composite Bastian Bay cost-of-service. As noted in the examiner's decision, the cost-of-service studies prepared by the intervenors indicate an average unit cost of 11.67 to 12.61 cents per Mcf at 14.65 psia; the same studies prepared by the producers range from a low of 14.88 cents for Gulf with the use of the allocation methods specified in Opinion No. 338, to 20.17 cents for Tidewater, and to a high of 27.4 cents for Gulf using methods recommended by it, including a 22 percent rate of return. The Bastian Bay cost-of-service introduced by the Southern intervenors indicated an area cost of approximately 10 cents per Mcf.

In our *Placid Oil* opinion we stated our conclusion that cost and financial requirements evidence has no utility in the determination of an initial price question and is in fact, irrelevant as a consideration in independent producer certificate cases. The various court and Commission decisions which have served to bring us to that determination are listed in the *Placid* opinion. The sterility and inappositeness of cost evidence in certificate proceedings has now been proven to our complete satisfaction, and, we believe, with a certainty beyond reasonable dispute. Just as a cost-of-service presentation limited to a single field has been found to be of no value in fixing the public convenience and ne-

[7] *Placid Oil Company, et al.*, Docket No. G–13183, *et al.*, Opinion No. 398, issued concurrently with this decision, *supra*, p. 283.

[8] *Phillips Petroleum Company*, Docket No. G–1148, *et al.*, Opinion No. 338, issued September 28, 1960, 24 FPC 537.

cessity initial price for gas produced from that field,[9] so can there be no value in the utilization of system-wide studies to determine the public convenience and necessity initial price for gas produced from a single field. Such studies, being addressed only to the alleged adequacy or inadequacy of the general level of revenues, cannot conceivably demonstrate the proper level of the initial price required by the public interest for only one of the producers many sales and, carried to their conclusion, would inevitably lead to the fixing of a price for the gas produced from the one field sufficient to take care of whatever deficiencies or excesses in revenue might have resulted from gas produced from other fields. As stated by staff counsel, this result would be illogical and absurd. We agree with this conclusion and take no cognizance of the cost, financial and related evidence submitted in this proceeding.

While our determination does not involve much of the material apparently considered by the examiner, our ultimate conclusion is the same, namely that the permanent certificates issued to Gulf and Tidewater should be conditioned to a base initial price of 18.5 cents per Mcf. Exhibit No. 19, and the testimony of the introducing witness clearly and convincingly establishes that the contract "in-line" price during 1958 and 1959 in the Southern Louisiana area, considering all applicable contracts not containing suspect prices within the criterion initially spelled out in *U.G.I.* v. *F.P.C.*, 283 F. 2d 817, 824 and implemented by us in our *Skelly* and *Placid* decisions, was 18.5 cents per Mcf exclusive of tax reimbursement. We shall, therefore, require that the rate schedules filed by Gulf and Tidewater be amended to substitute this price in place of the 22.5-cent price provided in the contracts. In conformity with our decisions in *CATCO* and *Placid*, we shall permit Gulf and Tidewater to collect an additional 1.5 cents per Mcf for partial reimbursement of the Louisiana severance tax.

Philadelphia Electric Co., The Southern intervenors, and U.G.I. excepted to the examiner's failure to order refund of all charges collected under the temporary authorizations down to the refund floor of 20 cents per Mcf. There can be no doubt as to our authority to direct refunds, since applicants expressly agreed to the condition in accepting the temporary authorities, nor are we able to envision any reason why the refunds should not be ordered. As noted by U.G.I., "* * * the error is so patent that we suspect it may have been inadvertent rather than a deliberate decision not to require refunds." The order appended hereto will direct that the refunds be made as requested in the exceptions.

Inasmuch as the minimum take-or-pay provisions to be allowed in producer contracts filed as rate schedules will be determined as a matter of general policy in Docket No. R–199, we shall condition our allowance of the provisions in the instant proceeding so as to make them subject to our determination in the rule-making proceeding, with the proviso that in no event shall we require Gulf and Tidewater to accept provisions for less than 80 percent of the annual contract quantities.

U.G.I. has pointed out that conditioning the base initial price to 20 cents per Mcf would leave in effect the outstanding provision in applicants' contracts authorizing them to file for a price increase immediately on certification to the level of 27.3 cents per Mcf. Establishment of this price, it alleges, even subject to refund, would have a widespread triggering effect in Southern Louisiana. It asks, therefore, that applicants be required to file substitute contracts providing

---

[9] *Socony-Mobil Oil Company, Inc.*, Docket No. G–13780, order issued February 9, 1962, 27 FPC 347.

for a 20-cent price for the life of the contracts with perhaps a 1-cent "cost of living" escalation each five years.[10]

U.G.I. recognizes that in the recent *Hunt*[11] case the court held that the Commission cannot condition the granting of a temporary certificate on a requirement that the producer not file for a contractually authorized price increase under Section 4, but has only the option of denying a certificate if it considers the price inconsistent with the public convenience and necessity. It attempts to distinguish *Hunt* on the ground that while there was no record underlying that action, the cost-of-service evidence in this case shows that a price higher than 20 cents per Mcf not only would be inconsistent with the public convenience and necessity, but also unjust and unreasonable. However, in view of the irrelevancy of the cost evidence in the determination of the initial price required for certification of these sales, it would seem at least questionable whether the same evidence could thereafter be relied upon in this certificate proceeding to preclude the escalation.

U.G.I. also suggests that if the Commission concludes that it cannot require the applicants to file substitute contracts as a condition to granting certificates, it could, as an alternative, deny certificates without prejudice to refiling their applications on a basis consistent with the Commission's findings. The denial could be grounded, it contends, on a finding that it would not be consistent with the public interest or the public convenience and necessity to authorize service at a price which could immediately escalate to a level unprecedented in Southern Louisiana.

This question of the price escalation is the same problem which concerned us in the *Placid* opinion, where we have ordered a temporary prohibition on the effectiveness of increases beyond a specified level. Although the collection by Gulf and Tidewater of the increased rate, assuming filings therefor were made, would not have an actual "triggering" effect since United's purchase contracts do not themselves contain favored-nation provisions and those of other Southern Louisiana buyers include only two-party clauses, the rates could be used in the redetermination of prices in other contracts, leading thereby to the establishment of a new price plateau in the area far in excess of any existing rate. The recent proceedings under Sections 4 and 5 of the Act with respect to both Gulf and Tidewater[12] and the settlements approved in those proceedings in April 1963 and June 1962 leads us to believe that any rate higher than the conditioned initial price herein determined could not be found just and reasonable. Moreover, as brought out in our opinion in the companion *Placid* proceedings, the fact that the increase would be collected under a refund obligation would not necessarily provide adequate protection to the public interest.[13] For these reasons, both as herein stated and as more fully set out in the opinion in *Placid Oil Company, et al.*, we shall order that the certificates issued to Gulf and Tidewater include

---

[10] The exceptions were filed prior to the issuance on March 15, 1963, of the *Shell Oil* Opinion No. 382. Therefore, U.G.I. did not have occasion to consider the effect on its position, if any, of the Commission's ruling that a favored-nation increase which is triggered by a rate later rejected loses its contractual basis for filing and must also be rejected.

[11] *H. L. Hunt* v. *F.P.C., et al.*, 306 F. 2d 334, No. 19065, *et al.*, CA5, July 19, 1962, petition for rehearing *en banc* denied April 16, 1963. On behalf of the Commission, the Solicitor General recently has petitioned the Supreme Court for certiorari. [Granted, 375 U.S. 810 (1963), CA5 reversed, 376 U.S. 515.]

[12] Examiner's decisions in *Gulf Oil Company*, Docket No. G–9520, *et al.*, issued September 24, 1962, and *Tidewater Oil Company*, Docket No. G–13310, *et al.*, issued September 14, 1961. [*Tidewater* and *Gulf* settlement orders printed at 27 FPC 1267 and 29 FPC 837, respectively.]

[13] The total annual sales volume in these dockets has been estimated at 33,000,000 Mcf. On this basis alone, an increase of 2.5 cents per Mcf would involve the collection of an additional $825,000 in one year's time subject to refund.

a moratorium on all price increases in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, pending our final decision in the Docket No. AR61–2 area rate proceeding or until July 1, 1967, whichever is earlier.

We find that no useful or constructive purpose would be served by granting the opportunity to present oral argument as requested by the Southern intervenors. The motion will therefore be denied.

The Commission further finds:

(1) United is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) United's proposed facilities hereinabove referred to, and more fully described in its application, will be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such facilities, together with the construction and operation thereof, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Gulf and Tidewater, independent producers of natural gas, are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and each is, therefore, a "natural-gas company" within the meaning of the Natural Gas Act.

(4) The sales of natural gas proposed by each of the producer applicants, as more fully described in their applications, are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Subject to the requirements of our order herein and the conditions of the certificates herein issued, United, and each of the producer applicants, are able and willing to properly do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of the facilities proposed by United, and the sales proposed by each of the producer applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates should be issued to each of them as hereinafter ordered and conditioned.

(7) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

The Commission orders:

(A) Certificates of public convenience and necessity are hereby issued to United Gas Pipe Line Company, for the construction and operation of the facilities proposed, as more fully described above and in its application; and, upon the conditions hereinafter set forth, to Gulf Oil Corporation and Tidewater Oil Company for the sale of natural gas in interstate commerce as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above and in their applications.

(B) The certificates herein issued to Gulf and Tidewater are granted upon the express condition that the base initial price for the proposed sales of gas to United from the effective date of the contracts and until lawfully changed in the manner provided by the Natural Gas Act shall be 18.5 cents per Mcf at 15.025 psia plus 1.5 cents per Mcf for tax reimbursement. Within 30 days from the

date of issuance of this order, said producer applicants shall file supplement to their presently filed rate schedules reflecting the conditioned price as their initial price in lieu of the initial price provided in their contracts; provided that the notice provisions of Section 154.94(b) and the detailed submittal provisions of Section 154.94(f) of the Commission's Regulations under the Natural Gas Act are waived insofar as they apply to the reduction in rate hereby ordered.

(C) Within 60 days of the date upon which this order shall become effective, Gulf and Tidewater shall refund to United, with interest, a sum equal to the difference between the price charged to and collected from United and the price set forth in paragraph (B) above, applied to all volumes paid for by United under the contracts which form the subject matter of this proceeding from the date of the contracts until the effective date of this order. The interest charge specified herein shall be calculated at the rate of 7 percent per annum, and shall be applied until full refund has been made.

(D) The certificates herein issued to Gulf and Tidewater are further conditioned to privide for a moratorium on the filing of all price increases in excess of 23.55 cents per Mcf, inclusive of tax reimbursement, pending the issuance of a final decision in the area rate proceeding in Docket No. AR61–2 or until July 1, 1967, whichever is earlier.

(E) The certificates herein issued are granted upon the further express condition that the allowance of the take-or-pay for provisions in the applicants' contracts is subject to our ultimate disposition with respect to such provisions in the rule-making proceeding in Docket No. R–199. Upon the establishment, by regulation or policy statement, of a general policy governing such provisions in producer contracts, the applicants shall within 30 days file amended rate schedules in conformity therewith, acceptable to the Commission. The producers shall not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantities. Any changes or modifications to be made in accordance with this paragraph shall be prospective only.

(F) Within 10 days of the date of the refund provided in paragraph (C) above, each of the producers shall file with the Commission an officially certified statement showing the amount of the refund, its manner of computation, the interest payments related thereto, and a statement from United acknowledging receipt thereof.

(G) The certificates herein issued are not transferable and shall be effective only so long as each of the applicants continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Regulations thereunder. Such grant is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against the applicants. Further, the action in this proceeding shall not foreclose nor prejudice any further proceedings or objection relating to the operation of any price or related provision in the gas purchase contracts here involved.

(I) The motion for opportunity to present oral argument before the Commission is denied.

(J) Except as herein granted, the exceptions to the examiner's decision are hereby denied.

Commissioners Ross and Morgan *concurring* in this opinion and order to the extent consistent with the statement by Commissioner Ross accompanying Opinion No. 398, Docket No. G–13183, *et al.*, Placid Oil Company, *et al.*, *supra*, p. 283.

INITIAL DECISION
UPON APPLICATIONS FOR CERTIFICATES OF CONVENIENCE AND NECESSITY

I. Preliminary Statement

FREER, *Presiding Examiner:* Involved herein are three related matters heard before this Examiner on a consolidated record. These proceedings encompass the following applications: (1) United Gas Pipe Line Company (United) filed an application and supplement on February 15 and March 31, 1960, respectively, pursuant to Section 7(c) of the Natural Gas Act, for a certificate of convenience and necessity authorizing it to construct and operate approximately 59.4 miles of 36-inch pipeline and appurtenant facilities, connecting with its existing Lirette-Mobile transmission pipeline, to enable it to transport natural gas to be purchased from Gulf Oil Corporation (Gulf) and Tidewater Oil Company (Tidewater) in interstate commerce for resale; (2) Gulf filed application on January 15, 1960, pursuant to Section 7 of the Natural Gas Act, for a certificate authorizing the sale of natural gas to United under terms of a gas sales contract dated December 22, 1959, providing for an initial price of 24.8 cents per Mcf, including tax reimbursement, 2.5 cents escalation on July 1, 1962, and subsequent price adjustments to be made on July 1, 1967, and 1972; and (3) Tidewater filed application on February 4, 1960, also pursuant to Section 7, for a certificate authorizing the sale of gas to United under terms of a gas sales contract dated December 28, 1959, containing similar initial price and 1962 escalation provisions to those in the United-Gulf contract.

II. Procedural Background

The separate applications herein were consolidated and set for hearing on January 4, 1961, by the Commission's order issued November 30, 1960. Also, on January 4, 1961, the Commission issued an order permitting the intervention in these proceedings of The Pennsylvania Public Utility Commission, New York Public Service Commission, United Gas Improvement Company, Memphis Light, Gas and Water Division of Memphis, Tennessee, Mississippi Valley Gas Company, Long Island Lighting Company, and Brooklyn Union Gas Company. By further order issued April 10, 1961, it permitted the intervention of Philadelphia Electric Company. The Pennsylvania Commission did not actively participate in these proceedings. An attorney for the New York Commission participated in cross-examination of part of applicants' witnesses, but that Commission presented no evidence in this case.

These proceedings convened on January 4, 1961, at which time the applicants' direct cases were presented (Tr. 46–492). United presented the witnesses

C. C. Barnett, L. C. Poindexter and W. G. Meece who testified about United's need for the Bastian Bay gas and the engineering, financial and economic feasibility of the facilities which they proposed to construct to take the gas. Gulf presented witnesses K. H. McLaughlin, B. L. Choate, D. L. Henry, Walter A. Morton, and John S. Trail. With Tidewater they also sponsored the testimony of J. Rhoads Foster and John P. Furman.

After cross-examination of applicants' witnesses was completed, Long Island Lighting Company (Long Island), Brooklyn Union Gas Company (Brooklyn) and United Gas Improvement Company (UGI) presented witness Charles H. Frazier. Joined by Philadelphia Electric Company (PEC), they also sponsored the testimony of the witness Charles A. Larson and incorporated into the record the testimony of E. S. Pettyjohn (Item F) and Holbrook G. Botset (Item H). These companies are hereafter referred to as the "Eastern distributors." Memphis Light, Gas and Water Division (Memphis) and Mississippi Valley Gas Company (Valley), hereafter referred to as the "Southern distributors," presented witness Melwood W. Van Scoyoc (Tr. 2713). The Commission Staff (Staff) offered two witnesses, Victor M. Hodge and Walter H. Beidatsch. In rebuttal, Gulf presented the testimony of Trail, Paul R. Keene and, with Tidewater, also sponsored Foster, Furman, and Herman H. Kaveler. Hearings were concluded on October 19, 1961 (Tr. 3499).

Before that, however, two significant events occurred. First, Pan-American Petroleum Corporation (Pan-American), a large interest owner in the Bastian Bay Field, sold its previously uncommitted interests in leases therein, and a pipeline company other than United commenced taking large volumes of gas from the field. To minimize possible serious drainage losses, at the request of the applicants pursuant to Sections 157.28 and 157.17 of the Commission's Regulations under the Natural Gas Act, the Commission on May 3, 1961, issued to United temporary authority to construct the facilities covered by its application herein. It also issued to Tidewater and Gulf temporary authority to commence the sale of gas to United herein proposed on condition that such temporary sales be at an initial rate of 23.25 cents per Mcf at 15.025 psia (inclusive of tax reimbursement) and that the producers agree to refund to United any amounts in excess of the initial price finally determined to be required by the public convenience and necessity in these proceedings down to 20 cents per Mcf at 15.025 psia (inclusive of tax reimbursement.)

Gulf accepted these conditions under protest. Its contract with United is now on file with the Commission as Gulf's Rate Schedule No. 214. Tidewater also similarly accepted its temporary authorization. United commenced the construction of its pipeline facilities to take the gas and they were scheduled to be completed and ready for operation as of December 31, 1961 (Tr. 3485).

Opportunity to file briefs was afforded to all parties. Initial briefs were filed by United, Gulf, and Tidewater. Interveners in the proceedings who have filed briefs are Public Service Commission of New York, Brooklyn Union Gas Company, Philadelphia Electric Company, Long Island Lighting Company, the United Gas Improvement Company, Memphis Light, Gas and Water Division, and Mississippi Valley Gas Company; briefs in response thereto were filed by United, Gulf and Tidewater. In response to the Presiding Examiner's further order issued April 6, 1962, directing the Commission Staff counsel to file a brief in these proceedings, the Commission Staff on May 14, 1962, has filed its "Statement of Position." Applicants replied thereto on or about May 26, 1962, as of which date the case was considered submitted for decision.

III. United's Project

United Gas Pipe Line Company is a Delaware corporation with its principal place of business in Shreveport, Louisiana. It is a wholly owned subsidiary of United Gas Corporation.

United is engaged in the business of purchasing gas from producers, transporting it through pipelines and selling it to distributors and other pipeline companies for resale, and directly to industries for their use. Its facilities are located in the States of Texas, Louisiana, Mississippi, Alabama and Florida and it transports and sells gas in both intrastate and interstate commerce. As a consequence, it is a natural gas company within the definition contained in the Natural Gas Act.

United was granted a so-called grandfather certificate of public convenience and necessity at Docket No. G–232, and it has since then obtained numerous certificates from this Commission under which it has enlarged its facilities and increased its sales substantially.

United introduced evidence showing the location of the proposed facilities and presented testimony thereon. The pipeline will originate at a point in Bastian Bay Field in Plaquemines Parish, Louisiana, and extend westerly, inside the Louisiana coast line, across Jefferson and LaFourche Parishes to a point of tie in to the company's existing pipeline system at Bayou Terrebonne Junction in Terrebonne Parish. The facilities will consist of approximately 59.4 miles of 36-inch O.D. pipeline and appurtenant facilities, a purchase meter station and a check meter station.

The Bastian Bay Field is located approximately seventy miles southeast of New Orleans, Louisiana, in Plaquemines Parish, and covers a geologic structure approximately eight miles long and two to three miles wide. Originally, it was believed that this tremendous gas reservoir was two separate fields. Accordingly nine square miles on the east side were designated the Cyprien Bay or East Bastian Bay Field, while the remaining portion was called the West Bastian Bay Field. However, in light of subsequent drilling, the Louisiana Conservation Commissioner now considers the entire area to be a single gas-condensate field.

The discovery well in the Bastian Bay Field was drilled in April 1956 by Pan-American. The Bastian Bay Field is one of the largest fields discovered in South Louisiana in recent years. Total natural gas reserves are estimated to exceed two trillion cubic feet.

The terrain in the Bastian Bay Field area consists of swampy marshlands and shallow water bottoms. Exploratory and development operations in such tidal, marsh country are difficult and expensive.

United estimated that, out of the Bastian Bay Field reserves currently committed to it, it would withdraw 29 billion cubic feet annually (Tr. 539). The contracts with the producers provide they shall have available to United delivery capacity from the field equal to 150 percent of the average daily quantity required to be taken under the contracts.

United estimated the cost of this project to be $16,917,010 of which approximately 57 percent is cost of materials, approximately 28 percent is the contractor's installation cost and the balance consists of other costs necessary for construction. The cost per mile of this line is higher than would be experienced in ordinary cross-country construction. This is because of the terrain where this line is located and the resulting necessity of having to dredge a canal through the marsh and a ditch within the canal, before laying the concrete covered pipeline from barges.

Construction of this pipeline and acquisition of the Bastian Bay Field reserves was not done to meet specific new and increased market requirements.

C. C. Barnett, L. C. Poindexter and W. G. Meece who testified about United's need for the Bastian Bay gas and the engineering, financial and economic feasibility of the facilities which they proposed to construct to take the gas. Gulf presented witnesses K. H. McLaughlin, B. L. Choate, D. L. Henry, Walter A. Morton, and John S. Trail. With Tidewater they also sponsored the testimony of J. Rhoads Foster and John P. Furman.

After cross-examination of applicants' witnesses was completed, Long Island Lighting Company (Long Island), Brooklyn Union Gas Company (Brooklyn) and United Gas Improvement Company (UGI) presented witness Charles H. Frazier. Joined by Philadelphia Electric Company (PEC), they also sponsored the testimony of the witness Charles A. Larson and incorporated into the record the testimony of E. S. Pettyjohn (Item F) and Holbrook G. Botset (Item H). These companies are hereafter referred to as the "Eastern distributors." Memphis Light, Gas and Water Division (Memphis) and Mississippi Valley Gas Company (Valley), hereafter referred to as the "Southern distributors," presented witness Melwood W. Van Scoyoc (Tr. 2713). The Commission Staff (Staff) offered two witnesses, Victor M. Hodge and Walter H. Beidatsch. In rebuttal, Gulf presented the testimony of Trail, Paul R. Keene and, with Tidewater, also sponsored Foster, Furman, and Herman H. Kaveler. Hearings were concluded on October 19, 1961 (Tr. 3499).

Before that, however, two significant events occurred. First, Pan-American Petroleum Corporation (Pan-American), a large interest owner in the Bastian Bay Field, sold its previously uncommitted interests in leases therein, and a pipeline company other than United commenced taking large volumes of gas from the field. To minimize possible serious drainage losses, at the request of the applicants pursuant to Sections 157.28 and 157.17 of the Commission's Regulations under the Natural Gas Act, the Commission on May 3, 1961, issued to United temporary authority to construct the facilities covered by its application herein. It also issued to Tidewater and Gulf temporary authority to commence the sale of gas to United herein proposed on condition that such temporary sales be at an initial rate of 23.25 cents per Mcf at 15.025 psia (inclusive of tax reimbursement) and that the producers agree to refund to United any amounts in excess of the initial price finally determined to be required by the public convenience and necessity in these proceedings down to 20 cents per Mcf at 15.025 psia (inclusive of tax reimbursement.)

Gulf accepted these conditions under protest. Its contract with United is now on file with the Commission as Gulf's Rate Schedule No. 214. Tidewater also similarly accepted its temporary authorization. United commenced the construction of its pipeline facilities to take the gas and they were scheduled to be completed and ready for operation as of December 31, 1961 (Tr. 3485).

Opportunity to file briefs was afforded to all parties. Initial briefs were filed by United, Gulf, and Tidewater. Interveners in the proceedings who have filed briefs are Public Service Commission of New York, Brooklyn Union Gas Company, Philadelphia Electric Company, Long Island Lighting Company, the United Gas Improvement Company, Memphis Light, Gas and Water Division, and Mississippi Valley Gas Company; briefs in response thereto were filed by United, Gulf and Tidewater. In response to the Presiding Examiner's further order issued April 6, 1962, directing the Commission Staff counsel to file a brief in these proceedings, the Commission Staff on May 14, 1962, has filed its "Statement of Position." Applicants replied thereto on or about May 26, 1962, as of which date the case was considered submitted for decision.

III. United's Project

United Gas Pipe Line Company is a Delaware corporation with its principal place of business in Shreveport, Louisiana. It is a wholly owned subsidiary of United Gas Corporation.

United is engaged in the business of purchasing gas from producers, transporting it through pipelines and selling it to distributors and other pipeline companies for resale, and directly to industries for their use. Its facilities are located in the States of Texas, Louisiana, Mississippi, Alabama and Florida and it transports and sells gas in both intrastate and interstate commerce. As a consequence, it is a natural gas company within the definition contained in the Natural Gas Act.

United was granted a so-called grandfather certificate of public convenience and necessity at Docket No. G–232, and it has since then obtained numerous certificates from this Commission under which it has enlarged its facilities and increased its sales substantially.

United introduced evidence showing the location of the proposed facilities and presented testimony thereon. The pipeline will originate at a point in Bastian Bay Field in Plaquemines Parish, Louisiana, and extend westerly, inside the Louisiana coast line, across Jefferson and LaFourche Parishes to a point of tie in to the company's existing pipeline system at Bayou Terrebonne Junction in Terrebonne Parish. The facilities will consist of approximately 59.4 miles of 36-inch O.D. pipeline and appurtenant facilities, a purchase meter station and a check meter station.

The Bastian Bay Field is located approximately seventy miles southeast of New Orleans, Louisiana, in Plaquemines Parish, and covers a geologic structure approximately eight miles long and two to three miles wide. Originally, it was believed that this tremendous gas reservoir was two separate fields. Accordingly nine square miles on the east side were designated the Cyprien Bay or East Bastian Bay Field, while the remaining portion was called the West Bastian Bay Field. However, in light of subsequent drilling, the Louisiana Conservation Commissioner now considers the entire area to be a single gas-condensate field.

The discovery well in the Bastian Bay Field was drilled in April 1956 by Pan-American. The Bastian Bay Field is one of the largest fields discovered in South Louisiana in recent years. Total natural gas reserves are estimated to exceed two trillion cubic feet.

The terrain in the Bastian Bay Field area consists of swampy marshlands and shallow water bottoms. Exploratory and development operations in such tidal, marsh country are difficult and expensive.

United estimated that, out of the Bastian Bay Field reserves currently committed to it, it would withdraw 29 billion cubic feet annually (Tr. 539). The contracts with the producers provide they shall have available to United delivery capacity from the field equal to 150 percent of the average daily quantity required to be taken under the contracts.

United estimated the cost of this project to be $16,917,010 of which approximately 57 percent is cost of materials, approximately 28 percent is the contractor's installation cost and the balance consists of other costs necessary for construction. The cost per mile of this line is higher than would be experienced in ordinary cross-country construction. This is because of the terrain where this line is located and the resulting necessity of having to dredge a canal through the marsh and a ditch within the canal, before laying the concrete covered pipeline from barges.

Construction of this pipeline and acquisition of the Bastian Bay Field reserves was not done to meet specific new and increased market requirements.

As stated at the outset of this proceeding, these facilities and reserves will be used to serve United's existing customers and existing market requirements together with the anticipated growth in customers and market requirements.

The evidence shows the past growth in market requirements and their anticipated growth through 1964. These requirements have grown from 263 billion cubic feet in 1937 to an estimated 1.537 trillion cubic feet in 1964 (Tr. 55–66).

As indicated above the Bastian Bay line will interconnect with United's existing facilities at Bayou Terrebonne Junction. Interconnection at this junction will permit gas from the Bastian Bay line to be moved north and eastward toward Mobile, Alabama, through United's 30-inch southeast Louisiana to Mobile system and north and westward to the Napoleonville Compressor Station and thence into Mississippi through United's 30-inch South Louisiana to Kosciusko, Mississippi, system. These two systems comprise United's principal transmission facilities for moving gas out of South Louisiana for resale in interstate commerce (Exhibit No. 1).

United's evidence shows that it planned to finance this construction by the issuance during construction of $10,000,000 of 4½ percent notes, to be refinanced with 5⅛ percent First Mortgage Bonds in 1963 and by the use of cash from its existing working capital. United Gas Pipe Line Company is a wholly owned subsidiary of United Gas Corporation. United Gas Corporation's securities are held by the public and that company in turn owns all the securities of United Gas Pipe Line Company. United introduced in evidence a statement of anticipated cash flow, a balance sheet and statement of income. In addition, it introduced pro forma balance sheets and a statement of income, adjusted for this construction, all showing United's ability to adequately finance this construction (Exhibit No. 4).

Because specific and identifiable new revenues will not be produced as a result of this construction, United did not show revenues to be derived from the facilities as contemplated by Section 157.14(14) of the Commission's Regulations. It did show the estimated annual cost of operating the new facilities (Exhibit No. 5).

No interveners in this proceeding has seriously questioned the public convenience and necessity aspect of United's project to construct and operate facilities to enable it to take natural gas from Gulf and Tidewater. The Eastern distributors obliquely criticize the immediate need for the project. They point out that according to applicant's own presentation if United buys no gas reserves whatsoever between now and the end of 1964, its reserves would equal 20 times the 1964 deliveries. The Eastern distributors specifically contend that while they "* * * do not challenge United's right to purchase gas at reasonable prices * * * United's 'need' certainly cannot justify prices in excess of the proper cost-of-service-determined producer prices for the Bastian Bay gas" (Brief, p. 7).

United argues that the reserves cited by the interveners are "in place" as distinguished from "recoverable," and that ability to meet annual sales requirement in the future is a vastly different thing from simply dividing reserves by sales.

None of the briefs filed herein expressed any true opposition to the construction and operation of the pipeline facilities for which United here asks a permanent certificate. No issue of any description was raised in the briefs concerning the permanent certificate United seeks. No one argued or even suggested that United's evidence did not fully support the public need and necessity for the construction and operation of the pipeline facilities. All parties to this proceeding, including the Staff of the Federal Power Commission, are thus in agreement that a permanent certificate of public convenience and necessity should

issue, authorizing construction and operation of the pipeline facilities as requested by United.

The principal remaining issues raised in these proceedings relate to the price at which Gulf and Tidewater should be permitted to sell natural gas to United. In other words, the question presented is: "Does the public convenience and necessity require that any certificate issued to Gulf and Tidewater be conditioned as to initial price?" If so: "What initial price should be allowed by the Commission?"

IV. The Initial Price

A. *Position of Parties*

There is presented for resolution here the question of what initial price should be approved for the sale of gas from West Bastian Bay by Gulf Oil Corporation and Tidewater Oil Company to United Gas Pipe Line Company. The price proposed in the contract is 24.8 cents per Mcf, tax inclusive. The area ceiling price for South Louisiana is 21.25 cents per Mcf, tax inclusive, as set forth in the Fourth Amendment to the Statement of General Policy 61–1, issued October 31, 1961, 26 FPC 661. The Commission's order of May 3, 1961, issuing to United a temporary certificate, specifically places in issue a price in excess of 20 cents per Mcf, inclusive of tax reimbursement.

Gulf submits that the present and future public convenience and necessity requires the issuance of a certificate to it without condition as to price. Allegedly there is no judicial precedent which precludes such action. Gulf argues that the interveners herein have neither established any adverse effect upon them or their consumers which such certification as here proposed might have, nor have they rebutted by competent evidence Gulf's affirmative showing of entitlement. Gulf contends that should it be concluded that a price condition is necessary in these proceedings as to Gulf's sale, then such conditioned price should be no less than 21.5 cents per Mcf plus applicable tax reimbursement. Such a level is allegedly supported by Gulf's complete evidence, and there allegedly is no judicial precedent which precludes such action. Gulf further submits that a condition reducing its initial price below the 22.0 cents per Mcf total price (20.25 cents plus 1.75 cents tax reimbursement) at which unchallenged permanently certificated sales of smaller volumes of gas from the Bastian Bay Field are presently being made in interstate commerce, under authorizations issued more than four years ago, would be highly discriminatory. Gulf alleges that interveners failed to establish by the required compelling evidence that a condition below the present 21.25 cents per Mcf tax inclusive area price level of the Policy Statement, as amended, should be imposed.

Tidewater contends that the proposed initial contract price of 22.5 cents per Mcf, plus tax reimbursement of 2.3 cents per Mcf "is or will be required by the present or future public convenience and necessity." It encompasses the value considerations involved in the proposed sale to United, industry demand-supply-cost trends, area reserve-cost-revenue trends, comparative well cost data, current market prices, and cost of service evidence. These evidentiary standards, considered separately or conjunctively, allegedly demonstrate that permanent certification of Tidewater's proposed initial contract price is in keeping with the present or future public convenience and necessity. Tidewater argues that its evidence constitutes "compelling" and "conclusive" proof justifying an exception to the Commission's 21.25 cents per Mcf area price for initial sales in Southern Louisiana.

The Eastern distributors submit that the proposed sales should be permanently certificated by the Commission only on the condition that the parties modify their contracts to adopt an initial price *not greater* than 18.5 cents per Mcf

737-370—66——25

inclusive of tax. (The Philadelphia Electric Company urges that such sales be conditioned at the 17 cent per Mcf level.)

The Eastern distributors allege that the Commission determined on rehearing the *CATCO* case (Opinion 351, *Continental Oil Company, et al.*, issued January 22, 1962, 27 FPC 96) that the field prices in South Louisiana at the time of the *CATCO* contracts ranged between 16 and 18 cents per Mcf, and that the pre-*CATCO* "in line" price to be applied there was 18.5 cents per Mcf. The cost of service studies presented by the Eastern distributors' witness Larson (based upon similar studies introduced by Gulf and Tidewater) show company-wide costs of these two companies for the test year 1959 to be in the 11–13 cent range, and the unit cost for the Bastian Bay area, computed according to Opinion 351 methods, is approximately 12 cents per Mcf. Data underlying the exhibit of the applicants' witness, Foster, demonstrate that there was no appreciable increase in drilling costs per unit of reserves found during the 1956–1959 period. Circumstances peculiar to the Bastian Bay sale also do not support a price greater than the "in line" price as determined in Opinion No. 351. Accordingly, the Commission would not be justified in certificating the sales at a rate exceeding the 18.5 cent per Mcf "in line" price, which exceeds both company-wide and area costs by 5 to 6 cents per Mcf.

The Southern distributors submit that the certificates in this case should be issued only if conditioned upon the reduction of the initial price to 12.3 cents per Mcf, on a tax inclusive basis. This result is required because the evidence establishes that the West Bastian Bay gas to be sold by Gulf and Tidewater to United is, at the most, 12.3 cents per Mcf, for either producer. Moreover, the system-wide average unit cost for each producer is likewise less than 12.3 cents per Mcf. Both figures include an 11 percent rate of return, and over 3 cents per Mcf. for system-wide exploration and development costs computed in the manner adopted by the Commission in Opinions No. 338, *Phillips*, and No. 351, *CATCO*. No other result is required even though the South Louisiana area ceiling price is 21.25 cents per Mcf under the Commission's 1961 Statement of General Policy, as modified. Since the record allegedly establishes a cost of service of approximately 12 cents per Mcf, no justification has been established for going higher. To allow a higher initial price would give the producers a "windfall," until such time as a just and reasonable rate is established under Sections 4 or 5 of the Act.

The Public Service Commission of the State of New York submits that the field price evidence in this record establishes that the "in line" initial price level for these sales is no more than 18 cents per Mcf in total. There is no evidence in the record that could properly be viewed as support or justification for certification of the instant sales at an initial price in excess of that "in line" level. In fact, since the applicants' costs of service, properly computed, are substantially below the "in line" initial price level, there is no evidence in this record, other than the proof of "in lineness" itself, which would support or corroborate the propriety of certification at a figure that high. Accordingly, the Public Service Commission submits that the proposed sales may be certificated, if at all, only upon the condition that the initial prices are reduced to no more than 18 cents per Mcf in total. In the alternative, permanent certificates of public convenience and necessity should be denied and the temporary certificates heretofore issued to the producer-applicants should be cancelled or terminated.

It is the position of the Commission Staff that permanent certificates issued to Gulf and Tidewater should be conditioned so as to require the charging of an initial base price of not more than 18.5 cents per Mcf, at 15.025 psia, plus 1.5 cents per Mcf tax reimbursement.

The Staff contends that a cost-of-service presentation limited to a single field is of no value in fixing the public convenience and necessity initial price. See *Socony-Mobil Oil Co., Inc.*, Docket No. G–17930, order issued February 9, 1962, 27 FPC 347. Conversely, system-wide cost-of-service studies cannot properly be used to determine the public convenience and necessity initial price for gas produced from a single field. Such procedure would inevitably lead to the fixing of a price for gas produced from a single field sufficiently high so as to take care of deficiencies in revenues from gas produced from other fields—an illogical and absurd result. The testimony of Staff witnesses allegedly indicate that the contract "in line" price during the year 1958 and early 1959 was 18.5 cents per Mcf, at 15.025 psia. This determination of the contract "in line" price is fully supported by the number of sales permanently certificated under sales contracts negotiated during 1958 and 1959.

The Staff submits that under the Commission's Opinion No. 351, issued January 22, 1962, and the Commission's order issued February 9, 1962, in *Socony Mobil Oil Co., Inc.*, Docket No. G–17930, the approach taken by Staff witness was proper.

In Opinion No. 351, the *CATCO* case, the Commission held that the "in line" price should be determined as of the *date of the contract* and not as of a subsequent date. It is true that the Staff in arriving at its determination of the "in line" price did not consider all contracts negotiated during the 1958–1959 period, but the contracts ignored by the Staff were those which might be considered to be in the "suspect" category. The prices specified in the "suspect" class of contracts were as high, and even higher, than the prices held to be out of line by the courts in the numerous cases remanded to the Commission after judicial review of Commission orders.

To the Staff's proposed initial base price of 18.5 cents per Mcf there should be added 1.5 cents per Mcf as allowance for tax reimbursement. This would accord Gulf and Tidewater the same tax reimbursement as would be given the *CATCO* companies by Opinion No. 351.

B. *The Evidence*

The present record is unusual in that, unlike other initial price cases considered by the Commission, this proceeding contains detailed cost-of-service evidence on both an area and individual company-wide basis. Both producer applicants submit detailed cost-of-service studies, and the Eastern distributors submit their own exhibits containing Gulf and Tidewater costs-of-service for the test year 1959 allegedly determined according to the Commission's methods in Opinion No. 338, the *Phillips* opinion.

In the instant proceeding, cost of service testimony was presented by Gulf through its witness Mr. Trail, who made four studies for 1959 on the basis of system-wide costs; two of which used principles which he recommended, and two purported to follow the Commission's *Phillips* method. Tidewater presented one study of 1959 system-wide costs, through its witness Mr. Powell, purportedly following the *Phillips* method.

Mr. Larson, on behalf of the Eastern distributors, presented system-wide cost studies for each producer, following the *Phillips* method.

Mr. Van Scoyoc, on behalf of Southern distributors, presented a modified cost study of Gulf, separating out with reference to West Bastian Bay the gas and liquid production, and the rate base investment and direct expenses related thereto.

The basis and results of these eight studies can be summarized as follows:

Exhibit number	Witness	Companies studied	Stated method	Rate of return	Including West Bastian Bay	Average unit cost (14.65 psia)
				Percent		*Cents*
10	Trail	Gulf	Gulf	22	No	27.40
11	do	do	*Phillips*	11.24	No	15.37
12	do	do	Gulf	22	Yes	25.93
13	do	do	*Phillips*	11.24	Yes	14.88
17	Powell	Tidewater	do	11.0	No	20.17
20	Larson	Gulf	do	11.0	Yes	11.67
33	do	Tidewater	do	11.0	No	12.61
31	Van Scoyoc	Gulf	do	11.24	Yes	12.06

The Southern distributors sponsored Bastian Bay costs of service showing area costs for the Bastian Bay Field of approximately 10 cents per Mcf. While the Eastern distributors have taken the position that complete cost-of-service evidence is not a necessary evidentiary basis for a lawful initial price, they submit that the Commission would be fully justified in considering such evidence to ascertain whether or not the applicants in this particular case would be entitled to a lesser or greater price.

The Commission in its recent Opinion 350 (*Panhandle Eastern Pipe Line Co., et al.*, Docket No. CP60–103, *et al.*, 27 FPC 35, 39) has stated that, apart from field price data, evidence in initial price cases "should not merely consist of comparative evidence peculiar to any given area, but evidence specifically related to the operations of each applicant * * *." Eastern distributors allege that the applicants' 1959 costs both on a company-wide and area basis are approximately 12 cents for the test year 1959. The Commission in Opinion No. 351, the *CATCO* decision, has determined that the predominant price for the South Louisiana area, as of the time of the *CATCO* sale, was in the 16 to 18 cent range, with an upper limit of 18.5 cents per Mcf. Eastern distributors contend that if this figure is applied to the present sales, there is a "spread" of roughly 6½ cents between the financial requirements of the applicants and such an upper limit to the "in line" price. Although the present contracts were entered into in December 1959, there is no justification for adjusting the 18.5 cent *CATCO*-determined price upward to account for the later date of these contracts, or to provide additional tax reimbursement, since the spread between costs and price is more than sufficient to compensate the applicants for any such additional costs. Accordingly, the present sale should be conditioned at a price no greater than 18.5 cents per Mcf inclusive of all cost factors, including tax reimbursement.

The testimony of Staff witness (Exhibit No. 19) indicates that the contract "in line" price was 18.5 cents per Mcf at 15.025 psia.

The Staff submits that the Commission recognized that the *CATCO* companies might be liable for 2.3 cents per Mcf representing the full Louisiana state severance tax, yet permitted the *CATCO* companies to collect only 1.5 cents per Mcf as tax reimbursement. Accordingly, the Staff proposes that to the initial base price of 18.5 cents per Mcf there should be added 1.5 cents per Mcf as allowance for tax reimbursement.

The producers contend that pursuant to the Commission's Statement of General Policy No. 61–1, as amended, the minimum price level announced for initial South Louisiana gas sales is 21.25 cents per Mcf, and that the proper tax reimbursement is 1.875 cents per Mcf.

Gulf went to great lengths to justify the proposed initial prices, submitting evidence on: (a) industry demand-supply and cost trends, (b) market prices, (c) Bastian Bay Field and comparative data, and (d) company cost of service.

Tidewater's evidence pertains to: (a) value consideration inherent in the sale to United, (b) industry demand supply cost trends, (c) area reserve-cost-revenue trends, (d) comparative well-cost data, (e) current market prices, and (f) cost of service evidence.

The Public Service Commission of the State of New York submitted that cost trend or individual-company cost-of-service evidence is particularly inappropriate and unnecessary in the context of the present area rate concept of producer regulation, and at a time when (1) not only has the general area rate proceeding for this district already been instituted, but (2) individual-company Section 5 rate proceedings involving many producers, including each of the producer-applicants in this proceeding have actually been concluded.[1]

Gulf submitted that a rate of return of 22 percent is required to meet the standards established in *Bluefield Waterworks & Improvement Co.* v. *Public Service Commission*, 262 U.S. 679; *F.P.C.* v. *Hope Natural Gas Co.*, 320 U.S. 591. The recommended 22 percent rate was developed principally on the basis of average comparative earnings for the years 1947–1959 of electric, gas and telephone utilities, motor carriers, railroads, airlines, pipeline companies, oil and gas producers, and industrial corporations. Moreover, the 22 percent rate of return includes an inflation factor.

The record contains the testimony of Dr. Beidatsch of the Commission's staff. While Dr. Beidatsch did not make a specific rate of return recommendation for Gulf, it was his opinion that with respect to integrated companies, while there are elements of risk, investors do not regard the large integrated companies as being in the same category as the small straight producing companies.

The distributors argue that, in light of the financial data in the record showing the investors' appraisal of the risks of the oil and gas producing business and the resulting cost of capital, a rate of return in the vicinity of 11 percent is more appropriate.

C. *Price Compatible with Public Interest*

On several occasions the courts have held that the Commission has the power to find that the public convenience and necessity does not warrant the granting of a certificate at an initial price higher than what the Commission deems compatible with the public convenience and necessity.[2] The crucial question is how to ascertain the "fair and reasonable" price to be paid by United to the producers, Gulf and Tidewater. In a comprehensive rate proceeding it is difficult to arrive at the ideal price that is "reasonable" within the overriding intent of Congress to give full protective coverage to the consumer,[3] and at the same time is "fair" to the producers, and meets the standards established in the *Bluefield* and *Hope* cases, *supra*. The problem becomes even more acute in a certificate case.

The Examiner spent considerable time studying all the widely divergent theories, evidence, and contentions of the producers, distributors, and the other parties in this proceeding. The briefs and the sundry pleadings emphasize different sections of earlier opinions, some of which have since been clarified by the Commission. The presentations therein are quite effective when pointing out infirmities in the contentions of the opposing side. However, they

[1] *Cf.* Examiner's decisions in *Tidewater Oil Co.*, Docket No. G–13310, *et al.*, issued September 14, 1961, and *Gulf Oil Corporation*, Docket No. G–9520, *et al.*, issued September 24, 1962. Neither decision indicates a rate in excess of the level set in the Commission's Statement of General Policy No. 61–1, as amended. [*Gulf* decision unreported; *Tidewater* decision reported at 27 FPC 1276.]

[2] *Atlantic Refining Co.* v. *Public Service Commission of New York*, 360 U.S. 378; *Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149; *Public Service Commission of New York* v. *F.P.C.*, D.C. Cir., 1960, 287 F. 2d 146; *United Gas Improvement Co.* v. *F.P.C.*, 9 Cir., 1960, 283 F. 2d 817; and *United Gas Improvement Co.* v. *F.P.C.*, 10 Cir., 1961, 287 F. 2d 159.

[3] *Atlantic Refining Co.* v. *Public Service Commission of New York*, 360 U.S. 378 at 389.

are less persuasive when proposing "fair and reasonable" prices for gas. The selection of samples, the tabulation of statistics, or the allocation of various expenses and investment bring about precariously different results. The proposed rate of return herein ranges between 11 and 22 percent. The average unit cost of gas ranges between 11.7 cents and 27.4 cents per Mcf.

The testimony of Staff witness Hodge indicates that the contract "in line" price, excluding tax, is 18.5 cents per Mcf, at 15.025 psia. This determination of the contract "in line" price is supported by the number of sales permanently certificated under sales contracts negotiated during 1958 and 1959.

In finding as to what the "in line" price is,[4] it is necessary to exclude, as having little or no relevance, all instances where the determinations were reached on bases which the Courts of Appeals in decisions issued subsequent to the issuance of such orders have considered to be erroneous. Prices in outstanding certificate cases coming within the latter category are considered to be "suspect" and not to be employed as guidelines in coming to a conclusion as to the appropriate public convenience and necessity initial price. Nor can prices in Section 7 certificate orders which are the subject of Commission or judicial review be employed as guidelines in the determination of "in line" prices.

The *CATCO* decision on remand notes many of the limitations of cost-of-service evidence in Section 7 proceedings. However, it does suggest that where cost-of-service evidence has been presented, it may, if properly adjusted to conform to the *Phillips'* standards, be used, at least, as a basis of comparison with the "in line" price, which has been determined by reference to appropriate field prices. In *CATCO* the price found by the Commission to be "in line" for the sales exceeded the applicants' properly computed cost of service by approximately one cent per Mcf. However, the Commission stated that the "in line" figure would allow a "margin for error" in its computation of the applicants' cost of service and concluded that the "in line" price was not in excess of an initial rate that would satisfy the requirements of public convenience and necessity for the *CATCO* sales.

Various matters which were argued at length in the course of the hearings and during the exchange of the initial briefs have since been dealt with in other regulatory proceedings. It is quite likely that if the parties had the foresight to anticipate more recent Commission holdings on many of the crucial points, their presentation in the instant proceeding would have been different and certainly much more streamlined. It is difficult indeed to come up with a comprehensive "fair and reasonable" price of gas on the basis of the evidence thus far submitted in this proceeding. However, there is sufficient evidence in the record to establish a line of demarcation and, allowing for a "margin for error," we can approach an upper level of the price of gas which is consistent with the presently prevailing policy determinations of the Commission and is still compatible with cost levels ascertained in recent *Gulf* and *Tidewater* proceedings under Sections 4(e) and 5(a) of the Natural Gas Act.

Several of the specific arguments made by the producers in their reply briefs filed on or before March 9, 1962, have since been discussed by the Commission in an order dated March 22, 1962. The order was issued in the *CATCO* case, Docket No. G–11024, and is entitled Order Denying Rehearing and Clarifying Opinion. On page 594 of that order the Commission stated that:

---

[4] See *U.G.I.* v. *F.P.C.*, 283 F. 2d 817, 824–5, cert. den. 365 U.S. 879, 881, and *P.S.C.* v. *F.P.C.*, 287 F. 2d 146, 149 fn. 3, cert. den. 365 U.S. 880, 882 in particular. See also *P.S.C.* v. *F.P.C.* 287 F. 2d 143; *U.G.I. & P.S.C.* v. *F.P.C.*, 290 F. 2d 133, cert. den. 368 U.S. 823; *ibid.*, 290 F. 2d 147, cert. den. 366 U.S. 965, and *ibid.*, 287 F. 2d 159.

* * * We did not intend the 1.5 cent tax reimbursement as an in-line tax provision as of the time of the contract, but because Louisiana taxes, if applicable, were increased on December 1, 1958, we are of the opinion that the partial tax reimbursement of the tax increases provided in the contract were in the public interest and required by the public convenience and necessity.

Coming to the cost of service, CATCO objects to our finding that the cost of service presentation is limited and falls short of that usually found requisite in a rate case. The cost of service presentation here has been valuable to us and, we do not say that it was inappropriate for the purposes of this proceeding. Nevertheless it is not a complete cost of service and the results must be considered indicative only and not decisive either as showing confiscation or showing that CATCO will make an excessive return. * * *

On August 30, 1962, the Commission issued its Opinion No. 362 in *Skelly Oil Company, et al.*, Docket No. G–18638, *et al.*, 28 FPC 401. At pp. 410–411, the Commission specifically said that the principal criterion that shall be employed is whether the proposed prices are "in line" at the time of contract execution as required by the Supreme Court's *CATCO* opinion. However, the Commission does not deem it necessary or appropriate in a certificate proceeding to consider evidence of area costs or financial requirements, or of individual company costs or financial requirements. Any such approach is of limited utility and leads to complicated, long-drawn-out proceedings, detrimental to the public. Obviously, we cannot permit every individual certificate case to be converted into a full-blown rate case. The proof in this proceeding demonstrates the ineffectiveness of a limited cost of service presentation.

The data presented by Gulf and Tidewater in this case[5] failed to demonstrate by a preponderance of evidence that contract prices for gas in excess of 20 cents per Mcf are compatible with present or future public convenience and necessity.

On consideration of all the material and relevant facts and circumstances by which the "in line" prices for natural gas involved in these proceedings should be determined, including all the other evidence adduced, the arguments of all counsel, and all the briefs filed herein, the Examiner concludes that there is no valid reason why Gulf and Tidewater's proposed sales herein to United should be authorized at any higher price than 20 cents per Mcf, and accordingly the certificates to be issued to Gulf and Tidewater will be conditioned to a public convenience and necessity initial price of 20 cents per Mcf, at 15.025 psia.

V. Additional Findings and Conclusions

Upon consideration of the record in these proceedings, it is specifically found and concluded, in addition to the findings and conclusions heretofore stated that:

(1) United is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

---

[5] *Cf.* Hearing Examiner's decision of September 24, 1962, filed in *Gulf Oil Corporation*, Docket No. G–9520, *et al.* In that decision the Examiner found that the total system-wide jurisdictional cost of service determined for Gulf, based upon the test year 1957, is 12.598 cents per Mcf. Similarly, in *Tidewater Oil Company*, Docket No. G–13310, *et al.*, the Hearing Examiner found that the jurisdictional unit cost of service determined for Tidewater, based upon the test year 1957, is 11.45 cents per Mcf. This case was later settled. Neither the evidence nor the findings in these two Sections 4 and 5 cases are directly applicable herein. However, these cases do lend some *prima facie* credence to the holding herein that an initial price of 20 cents per Mcf is neither "unfair" nor "unjust" to either Gulf or Tidewater. [*Gulf* decision unreported; *Tidewater* decision reported at 27 FPC 1276.]

(2) United's proposed facilities hereinabove referred to, and more fully described in its application, will be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and such facilities, together with the construction and operation thereof, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Gulf and Tidewater are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission, and each is a "natural-gas company" within the meaning of the Natural Gas Act.

(4) The sales of natural gas proposed by each of the producer applicants, as more fully described in their applications, are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Subject to the requirements of our order herein and the conditions of the certificates herein issued, United, and each of the producer applicants, are able and willing to properly do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(6) The construction and operation of the facilities proposed by United, and the sales proposed by each of the producer applicants, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are required by the public convenience and necessity, and certificates should be issued to each of them as hereinafter ordered and conditioned.

(7) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

VI. Order

Wherefore, it is ordered, subject to review by the Commission, that:

(A) Certificates of public convenience and necessity are hereby issued upon the conditions hereinafter set forth: to United Gas Pipe Line Company for the construction and operation of the facilities proposed, as more fully described above and in its application; and to Gulf Oil Corporation and Tidewater Oil Company for the sale of natural gas in interstate commerce for resale as proposed, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described above in their applications, and upon the terms and conditions of this order.

(B) The certificates issued to Gulf Oil Corporation and Tidewater Oil Company granted upon the express condition that they shall file a rate schedule with the Commission within 30 days from the date of the issuance of this order providing for a base initial price, replacing the initial contract price as proposed, not in excess of 20 cents per Mcf, at 15.025 psia, including tax reimbursement.

(C) The certificates herein issued to the producer applicants shall be accepted in writing and under oath within 30 days from the date of the issuance of this order.

(D) The certificates issued herein are not transferable and shall be effective only so long as each of said applicants continues the acts and operations herein authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(E) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 of the

Commission's Regulations under said Act requiring the filing of rate schedules for the service herein authorized and is without prejudice to any findings or orders which may have been or hereafter may be made by the Commission in any proceeding now pending or hereinafter instituted by or against the applicants. Further, the action taken in these proceedings shall not foreclose nor prejudice any further proceeding or objection relating to the operation of any price or related provisions in the gas contracts here involved.

ROBERT E. FREER,
Presiding Examiner.

Before Commissioners: Joseph C. Swidler, Chairman, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

VALLEY GAS TRANSMISSION, INC., DOCKET NO. CP63-270

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 17, 1963)

On April 4, 1963, as supplemented on April 25, 1963, Valley Gas Transmission, Inc. (Applicant) filed in Docket No. CP63-270 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale, on a firm basis, of an average daily quantity of 25,000 Mcf of natural gas to Iroquois Gas Corporation (Iroquois) and the construction and operation of certain facilities necessary for such sale and necessary to attach additional new sources of gas supply from acreage located in the Luby, Petronilla and Yeary Fields, Nueces and Kleberg Counties, Texas, all as more fully set forth in the application, as supplemented.

Applicant proposes to construct and operate a total of 61.72 miles of 2- to 8-inch pipeline, and appurtenant facilities, connecting some 8 gas supply areas[1] to the existing facilities of Tennessee Gas Transmission Company (Tennessee). The application indicates that the gas to be sold to Iroquois will be transported by Tennessee to a point in Erie County, New York, where Tennessee's system interconnects with that of Iroquois.

The application shows the total estimated cost of the subject project is $1,518,520, which cost will be financed by a long term loan and temporary borrowings from Applicant's parent, Valley Gas Production, Inc.

The sale to Iroquois is to be made pursuant to a contract, dated March 27, 1963, between Applicant and Iroquois. Said contract provides for an initial price of 18.3 cents per Mcf at 14.65 psia.

Pursuant to due notice, a public hearing was held in Washington, D.C., on June 26, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Valley Gas Transmission, Inc., a Texas corporation having its principal place of business in Houston, Texas, is a "natural-gas company"

---

[1] Seven of the areas are dedicated to sales to Iroquois. These include the Hackberry area, Cameron Parish, Louisiana, and the Spanish Camp, Koopman-Mopp, Coleto Creek, South Lissie, Luby and Petronilla areas, Nueces, Kleberg, Jim Wells, Victoria and Wharton Counties, Texas. The eighth area is dedicated to existing service to Tennessee; said area being the Luby-Yeary area, Nueces County, Texas.

within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed sale of natural gas by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Valley Gas Transmission, Inc., to construct and operate the proposed facilities and to sell natural gas as hereinbefore described, all as more fully described in the application, as supplemented, herein upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

ANADARKO PRODUCTION COMPANY, DOCKET NOS. CI62-1307, CI63-86, CI63-94, CI63-288 AND CI63-264

MEMORANDUM ORDER GRANTING TEMPORARY CERTIFICATES

(Issued July 18, 1963)

In the above-entitled proceedings, Anadarko Production Company (Anadarko) is seeking temporary certificates of public convenience and necessity pursuant to Section 7(c) of the Natural Gas Act (Act) authorizing it to sell natural gas from

various fields in the Anadarko Basin [1] to its corporate parent, Panhandle Eastern Pipe Line Company (Panhandle)[2]. In support of its request for temporary certificates Andarko alleges in each of its applications that its leases are "subject to drainage" which may cause it and the royalty owners to "suffer permanent economic injury and hardship."

Based upon these circumstances we find that an emergency exists within the meaning of the Act, and that temporary certificates should issue authorizing the proposed sales. To avoid any misunderstanding of the extent to which our action can or should be construed as approving the filed rate as it affects Panhandle's purchased gas costs we are including in this order the following statement.

The certificates being issued here and those which have been previously issued to Anadarko (both permanent and temporary),[3] while authorizing the sale and delivery of natural gas to Panhandle in accordance with Anadarko's rate schedules, necessarily determine only the payments which may legally be made by the buyer (Panhandle) to the seller (Anadarko) and do not and cannot estop the Commission from considering the appropriate cost to be attributed to these sales should Panhandle's purchased gas costs be in issue in a future rate proceeding under either Sections 4(e) or 5(a) of the Act. The basic rationale for this has already been elucidated by the Commission in our recent order denying the motion to vacate in *Northern Natural Gas Company, et al.*, 29 FPC 689, Docket No. G–12153, *et al.*, issued April 2, 1963. See also the "Order Remanding Proceedings, etc." in the same docket issued July 2, 1962, 28 FPC 4. While we thus think it is not necessary to do so, we have placed an express reservation to this effect in the order here being issued.

The Commission orders:

(A) Temporary certificates of public convenience and necessity are hereby issued to Anadarko Production Company for the sales proposed in its application filed in Docket Nos. CI62–1307, CI63–86, CI63–94, CI63–288 and CI63–264, subject to the following conditions.

(i) The initial rates provided for in the gas purchase contracts set out in Appendix A hereto for the gas sold shall remain in effect until changed by the Commission in an order issued in these proceedings.

(ii) The allowance for the take-or-pay provisions and the upward Btu adjustment provisions in the related rate schedules is subject to the ultimate disposition, with respect to such provisions, of the rule-making proceedings in Docket Nos. R–199 and R–200; however, Anadarko Production Company will not be required to file take-or-pay provisions for less than 80 percent of the annual contract quantity.

(iii) The temporary certificates with the conditions attached shall be accepted as issued, within 30 days herefrom by written acceptance (original and five copies) made by a responsible official of the company. If reconsideration of such temporary certificate is sought, service hereunder shall not be started. If service is commenced under this temporary certificate, the conditions attached shall be effective and the service may not be discontinued without permission of the Commission issued pursuant to the provisions of the Natural Gas Act.

[1] Pertinent data from the applications are set out in Appendix A attached hereto.

[2] Panhandle owns 100% of the common stock of Anadarko. See Moody's Public Utility Manual, 1962, pp. 1699–1701.

[3] Permanent certificates have issued in Docket Nos. G–19282, CI60–820, CI60–821, CI60–822, CI61–249, CI61–507, CI61–742, CI61–1679, CI61–1803, CI62–89, and CI62–257. Temporary certificates have issued in Docket Nos. CI60–486, CI60–699, CI60–765, CI60–823, CI61–61, CI61–78, CI61–542, CI61–543, CI61–684, CI61–700, CI61–872, CI61–873, CI61–893, CI61–964, CI61–1565, CI61–1617, CI61–1618, CI61–1755, CI62–431, CI62–827, CI62–834, CI62–846, CI62–928, CI62–1535 and CI62–1546.

(B) The related proposed rate schedules will be considered accepted for filing upon acceptance with the temporary certificate, as conditioned above, to be effective on the date of initial delivery subject to the provisions of Sections 154.94(c) and 154.101 of the Commission's regulations under the Natural Gas Act.

(C) Anadarko Production Company shall advise the Commission of the date of commencement of deliveries under its rate schedules by making reference in its communication to the rate schedules as designated in the Appendix hereto.

(D) If service is not commenced within 90 days from the date of this temporary certificate, then such temporary certificate shall be void and of no effect.

(E) The issuance of this temporary certificate and the acceptance of the rate schedules are without prejudice to such final disposition of the applications for permanent certificates as the record in the hearing on such applications may require, or to any action which the Commission might take in any subsequent proceeding involving either Anadarko or Panhandle under Sections 4 or 5 of the Natural Gas Act.

APPENDIX A

DESCRIPTIVE LIST OF ANADARKO'S APPLICATIONS FOR TEMPORARY CERTIFICATES

(1) Docket No.	(2) Designation: Rate schedule No.	(2) Designation: Supplement No.	Description and date of instrument	(3) Producing Area	(4) Price, cents per Mcf	(5) Area ceiling price, cents per Mcf
CI62-1307	61	----------	Ratification agreement, Mar. 28, 1962; contract,[1] [5] [6] Feb. 7, 1962.	Mocane Field, Beaver County, Okla.—Panhandle.	17	17

MICHIGAN WISCONSIN PIPE LINE COMPANY, DOCKET NO. CP63-289

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 18, 1963)

On April 24, 1963, Michigan Wisconsin Pipe Line Company (Applicant) filed in Docket No. CP63-289 an application pursuant to Section 7(c) of the

Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period commencing July 13, 1963, and the operation of field facilities to enable Applicant to take into its certificated main pipeline system natural gas which may be purchased from producers in the general area of its existing transmission system, all as more fully set forth in the application.

The purpose of this proposal is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its existing pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the proposed facilities will not exceed a maximum of $3,000,000 and no single project will exceed a cost of $500,000, said costs to be financed from current working funds.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 2, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Michigan Wisconsin Pipe Line Company, a Delaware corporation having its principal place of business in Detroit, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order dated November 30, 1946, in Docket No. G–669 (5 FPC 953).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing on July 13, 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Wisconsin Pipe Line Company, to construct during the 12-month period commencing on July 13, 1963, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit pursuant to Section 2.58 (c) of the Commission's General Policy Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing on July 13, 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $3,000,000, with no single project to exceed a cost of $500,000.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO. CP63-255

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND APPROVING ABANDONMENT OF STORAGE SERVICE GAS

(Issued July 18, 1963)

On March 14, 1963, as supplemented on April 18, 1963, Natural Gas Pipeline Company of America, (Applicant) filed an application in Docket No. CP63-255 pursuant to Sections 7(c) and 7(b) of the Natural Gas Act for (1) a certificate of public convenience and necessity authorizing the sale and delivery of an addi-

tional daily contract quantity of 2,160 Mcf of gas to the Monarch Gas Company (Monarch), an existing customer of Applicant, and (2) for permission and approval to abandon storage service now being rendered by Applicant to Monarch, all as more fully set forth in said application which is on file with the Commission and open to public inspection.

The application states that Monarch which now receives gas from Applicant under Applicant's Rate Schedules CD–1 and S–1 has requested an increase of 2,160 Mcf in its daily contract quantity to a total of 4,600 Mcf and that storage service to Monarch be discontinued. Total deliveries of gas by Applicant to Monarch will be purchased from Applicant by Monarch under Applicant's G–1 Rate Schedule instead of the service presently being rendered under Rate Schedules CD–1 and S–1.

Monarch estimates that the change in schedules will reduce its costs by $7,300 in 1963.

Monarch's 2,160 Mcf increase in daily contract quantity is to replace 946 Mcf per day of withdrawal quantity available under the storage schedule proposed to be abandoned and to supply growth requirements.

No additional facilities are proposed by Natural. The additional daily contract quantity will be supplied from Natural's presently unallocated capacity.

Pursuant to due notice a public hearing was held in Washington, D.C., on July 2, 1963, respecting the matters involved in and the issues presented by the application. No petition to intervene in opposition or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Natural Gas Pipeline Company of America is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in Docket No. G–235, (3 FPC 830).

(2) The subject transportation and sale of natural gas by Applicant hereinbefore described, as more fully described in the application, is subject to the jurisdiction of the Commission and such transportation and sale as aforesaid are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(5) The service to be abandoned by Applicant in Docket No. CP63–255 as hereinbefore described and as more fully described in the application is involved in the sale of natural gas in interstate commerce, subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act. The proposed abandonment of the aforesaid service is permitted by the public convenience and necessity and permission and approval therefor should be granted as hereinafter ordered.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any part of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant to transport and sell an additional volume of 2,160 Mcf of natural gas per day to Monarch Gas Company thus bringing the amount of daily delivery up to 4,600 Mcf, all as more fully described in the application as supplemented, herein upon the terms and conditions of this order.

(B) The certificate issued herein and the rights granted hereunder are conditioned upon Applicant's compliance with all applicable rules and regulations of the Commission under the Natural Gas Act and particularly the terms and conditions set forth in Section 157.20 of such Regulations.

(C) Applicant be and is hereby permitted to abandon storage service to Monarch Gas Company as requested by the said Monarch Gas Company.

(D) Applicant shall advise the Commission in writing of the date when such storage service is ended.

(E) The abandonment of storage service and increase in daily contract demand to 4,600 Mcf per day shall take effect simultaneously on December 1, 1963.

Before Commissioners: Charles R. Ross, Acting Chairman; Howard Morgan, and L. J. O'Connor, Jr.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. CP63-344 (PHASE ONE); KANSAS-NEBRASKA NATURAL GAS COMPANY, INC., DOCKET NO. CP63-340; RATON NATURAL GAS COMPANY, DOCKET NO. CP62-131

FINDINGS AND ORDER ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY PERMITTING AND APPROVING ABANDONMENT OF FACILITIES DISMISSING APPLICATION IN PART AND REJECTING INTERVENTION

(Issued July 19, 1963)

On June 14, 1963, Colorado Interstate Gas Company (Colorado Interstate) filed in Docket No. CP63-344 an application pursuant to Sections 7(c) and 7(b) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities for the sale and transportation of natural gas in interstate commerce and the abandonment of certain existing transmission facilities as hereinafter described, and as more fully described in the application.

Colorado Interstate proposes to construct and operate certain facilities to increase the peak day delivery capacity of its existing pipeline system in the Rocky Mountain area by approximately 133,000 Mcf of natural gas per day in order (1) to meet additional requirements of its existing customers, estimated to be approximately 76,000 Mcf of gas per day through the 1965-1966 winter; (2) to sell to Colorado Fuel and Iron Corporation (CF&I) an additional firm volume of 35,000 Mcf per day; (3) to sell Raton Natural Gas Company (Raton) a firm volume of 2,100 Mcf of gas per day; and (4) to sell to Kansas-Nebraska Natural Gas Company, Inc. (Kansas-Nebraska), at a point near the intersection of the Colorado-Wyoming-Nebraska border, a firm volume of 20,000 Mcf of gas per day. It also proposes to construct and operate a 275-mile pipeline to sell to Cities Service Gas Company at a point near Blackwell, Oklahoma, a volume of 100,000 Mcf of gas per day during 1964 and 1965 and a volume of 200,000 Mcf of gas per day from and after January 1, 1966. The estimated cost of the proposed facilities is $48,020,370. Colorado Interstate also seeks authorization

to retire the major portion of its existing Bivins-Denver transmission line constructed in 1927 and 1928, together with certain other related facilities.

Colorado Interstate requests that the application be considered and disposed of in two phases.

In Phase One, in order to render adequate service to Kansas-Nebraska, Raton, and CF&I, and to meet additional 1963–1964 peak day requirements in the Rocky Mountain area, Colorado Interstate proposes to construct and operate 7.1 miles of 20-inch pipeline between its Bivins and Fourway Compressor Stations in the Panhandle Field of Texas; 130.4 miles of 24-inch pipeline through the Arkansas Valley from the Morton Junction to Pueblo, all in the State of Colorado; 49.5 miles of 20-inch pipeline from Pueblo to North Colorado Springs, Colorado; 40.1 miles of 12¾-inch pipeline from the Cheyenne Meter Station in Weld County, Colorado, to a point of connection with Kansas-Nebraska's proposed facilities near the Wyoming-Nebraska state line; various sales meter stations and other miscellaneous transmission facilities.

Upon commencement of operation of the Phase One facilities, Colorado Interstate plans to retire approximately 166.6 miles of its Bivins-Denver transmission line together with certain related lateral facilities and compressor stations. Service to all present customers will be continued through the new facilities.

Colorado Interstate proposes to serve Kansas-Nebraska under its Rate Schedules P–2 and IS–2, which would represent a change in Tariff, and would require a filing pursuant to Section 154.63 of the Commission's Regulations under the Natural Gas Act.

On June 10, 1963, Kansas-Nebraska filed in Docket No. CP63–340 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of approximately 59 miles of 12-inch pipeline in order to receive the volumes of gas from Colorado Interstate and to acquire, convert, develop, and operate as a gas storage field the Third Dakota Formation of the Huntsman Field, Cheyenne County, Nebraska, all as more fully set forth in the application.

Kansas-Nebraska is presently purchasing and selling in intrastate commerce gas produced from the Third Dakota Formation in the Huntsman Field. The application indicates that in order to convert said formation into a storage reservoir for storage of natural gas being transported in interstate commerce including gas to be purchased from Colorado Interstate, it will be necessary for Kansas-Nebraska to purchase in place the remaining gas (cushion gas) and any liquids contained therein together with the production, gathering, and plant facilities presently being operated in connection with the production of said gas. Under Kansas-Nebraska's proposed plan for storage, the remaining recoverable gas will stay in the formation as a part of the cushion gas, although Kansas-Nebraska plans to recycle said gas to recover any products contained therein. Kansas-Nebraska plans to rework existing producing and plugged wells as required to insure against migration from the Third Dakota Formation to other porous zones and to drill additional wells as required by the storage project.

It is proposed to modify the gathering system by the addition of 3,000 feet of 12¾-inch pipe, 3,500 feet of 10¾-inch pipe and 5,000 feet of 6⅝-inch pipe and to install a compressor station of approximately 2,000 horsepower which will be used for the purposes of delivering gas purchased from Colorado Interstate into Kansas-Nebraska's main transmission facilities and injecting gas from Colorado Interstate or Kansas-Nebraska's other sources of supply into storage. The estimated cost of the proposed project is $4,185,893.

On November 27, 1961, Raton Natural Gas Company filed in Docket No. CP62–131 an application pursuant to Section 7(a) of the Natural Gas Act for

an order of the Commission directing Colorado Interstate to establish physical connection of its transmission facilities at a point near Trinidad, Colorado, with facilities to be constructed by Raton and to sell and deliver to Raton natural gas for resale and distribution in the City of Raton, New Mexico. In the same application Raton seeks a certificate authorizing the construction and operation of approximately 20.5 miles of 6-inch transmission line which, together with the construction of a distribution system in the City of Raton, will involve an initial capital investment of approximately $826,750.

Raton has received a franchise for the proposed distribution system from the City of Raton and has received a certificate of public convenience and necessity from the New Mexico Public Service Commission authorizing the sale and distribution of natural gas in the City of Raton.

The estimated annual and peak day natural gas requirements for the City of Raton for the third year of operation of the proposed distribution system are 248,648 Mcf and 2,614 Mcf at 14.73 psia, respectively.

Colorado Interstate has proposed in its application in Docket No. CP63-344 (Phase One) to serve the City of Raton. Therefore, the application of Raton Natural Gas Company will be dismissed as moot insofar as it requests an order of the Commission pursuant to Section 7(a) of the Natural Gas Act.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 16, 1963, respecting the matters involved in and the issues presented by the applications in Docket Nos. CP63-344 (Phase One), CP63-340, and CP62-131. No protests to the granting of these applications have been received. However, on July 11, 1963, Transwestern Pipeline Company filed a petition to intervene and stated that while it does not oppose additional capacity for the Rocky Mountain area, there are issues of cost allocation, gas supply, markets, abandonment of existing facilities, and design of new facilities which will directly affect Transwestern as a competitor for the sales to Cities Service Gas Company with relation to Phase Two of the application filed in Docket No. CP63-344.

In short, Transwestern's intervention in Phase One is predicated on the assumption that the Phase One facilities are interdependent with CIG's proposed Phase Two facilities and CIG's ability to make its competitive proposal for a sale to Cities Service Gas Company at Blackwell, Oklahoma.

On July 12, 1963, Colorado Interstate filed an answer to Transwestern's petition to intervene in which it asserts that no aspects of pipeline design and no part of the sales and facilities involved in Phase One are affected in any manner by CIG's proposal in Phase Two. Colorado maintains that all of the rights and interest which Transwestern asserts would be adequately protected by its intervention in Phase Two. On July 15, 1963, Transwestern withdrew its opposition to an abridged hearing insofar as it pertains to the issues presented by Phase One but specifically reserved the right by stipulation with Colorado to explore the aforementioned issues in the Phase Two proceedings.

The following petitions to intervene in support of Phase One (CP63-344) were filed on the dates indicated below:

Pueblo Gas and Fuel Company	July 5, 1963
Public Service Company of Colorado	July 5, 1963
Colorado-Wyoming Gas Company	July 5, 1963
City and County of Denver (Supplement to petition)	July 8, 1963
	July 11, 1963
City of Colorado Springs	July 8, 1963
City of Trinidad (Supplement to petition)	July 10, 1963
	July 11, 1963
Public Utilities Commission of Colorado	July 11, 1963

The Gas Service Company	July 12, 1963
Greeley Gas Company	July 12, 1963
Natural Gas Pipeline Company of America	July 12, 1963
Cities Service Gas Company	July 12, 1963

The Citizens Utilities Company by its intervention dated July 12, 1963, seeks a supply of gas for the City of Walsenburg, Colorado. Citizens Utilities seeks an order directing Colorado Interstate to furnish a specified supply of natural gas to Citizens together with appropriate construction by Colorado Interstate of the lateral facilities necessary to deliver said supply of gas to the city gate. Citizens interest in Phase One is predicated on its request that any certificate issued in that proceeding be conditioned upon the supply by Colorado Interstate to Citizens of a volume of natural gas sufficient to meet the third year estimated requirements of the City of Walsenburg.

Section 1.8 of the Commission's Rules of Practice and Procedure provides that where the purpose of the proposed intervention is to obtain an allocation of natural gas for sale and distribution by a person or municipality engaged or legally authorized to engage in the local distribution of natural gas to the public, the petition shall comply with the requirements of Part 156 (i.e., Regulations under the Natural Gas Act). It appears that the petition to intervene of Citizens Utilities fails to comply with the above requirement of the Commission's Rules and Regulations, in that essential exhibits specified in Part 156 of the Regulations are lacking, and consequently the petition of Citizens Utilities to intervene should be rejected.

Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure. Therefore, no further action need be taken on the petitions to intervene or notices of intervention.

The Commission finds:

(1) Applicant, Colorado Interstate Gas Company, a Delaware corporation having its principal place of business in Colorado Springs, Colorado, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of June 5, 1945, in Docket No. G–294 (4 FPC 936).

(2) Applicant, Kansas-Nebraska Natural Gas Company, Inc., a Kansas corporation having its principal place of business in Phillipsburg, Kansas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of April 6, 1943, in Docket No. G–259 (3 FPC 966).

(3) Applicant, Raton Natural Gas Company, a New Mexico corporation having its principal place of business in Raton, New Mexico, will be engaged in the transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption and upon commencement of service will be a "natural-gas company" within the meaning of the Natural Gas Act.

(4) The facilities hereinbefore described, as more fully described in the applications in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction, operation, and acquisition thereof by Applicants and the sale of natural gas by Colorado Interstate are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(5) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(6) The construction, operation, and acquisition of facilities by Applicants and the sale of natural gas as proposed by Colorado are required by the public convenience and necessity, and certificates therefor should be issued as hereinafter ordered and conditioned.

(7) Public convenience and necessity require that the certificates issued hereinafter and the rights granted thereunder be conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d) (Docket No. CP63–340 only), and (e) of Section 157.20 of such Regulations.

(8) The facilities proposed to be abandoned as hereinbefore described, all as more fully described in the application in Docket No. CP63–344 (Phase One), are subject to the jurisdiction of the Commission, and the abandonment of said facilities by Colorado Interstate Gas Company is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(9) The abandonment by Applicant in Docket No. CP63–344 (Phase One) is permitted by the public convenience and necessity and should be approved as hereinafter ordered and conditioned.

(10) The application filed by Raton Natural Gas Company in Docket No. CP62–131 should be dismissed as moot insofar as it requests an order of the Commission pursuant to Section 7(a) of the Natural Gas Act.

(11) The petition to intervene of the Citizens Utilities Company fails to comply with the requirements of Section 1.8(c) of the Commission's Rules of Practice and Procedure which sets forth the requirements which must be complied by an intervener seeking to obtain an allocation of natural gas.

(12) A request during the public hearing by staff counsel for omission of the intermediate decision and procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Certificates of public convenience and necessity be and the same are hereby issued authorizing Applicants to construct, operate and acquire the facilities and to sell natural gas as hereinbefore described, all as more fully described in the applications herein, upon the terms and conditions of this order.

(B) The certificates issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), (d) (Docket No. CP63–340 only), and (e) of Section 157.20 of such Regulations.

(C) The construction and acquisition authorized by paragraph (A) above shall be completed and the facilities placed in actual operation, as required by Section 157.20(b) of the Commission's Regulations under the Natural Gas Act, within 6 months from the date on which this order is issued.

(D) Permission for and approval of the abandonment of facilities by Colorado Interstate Gas Company as hereinbefore described, all as more fully described in the application in Docket No. CP63–344 (Phase One), be and the same are hereby granted.

(E) Colorado Interstate Gas Company shall advise the Commission of the date of the abandonment authorized in paragraph (D) above with 10 days of the date thereof.

(F) In Docket No. CP63–340 the maximum top storage pressure of 568 psia at the wellhead (shut-in) shall not be exceeded without further authorization from the Commission.

(G) Kansas-Nebraska shall submit to the Commission semi-annual reports on the proposed storage project, coinciding with the termination of two injection and withdrawal cycles, containing the following information:

(1) The total volume of gas in the reservoir.

(2) The volumes of gas injected or withdrawn by months.

(3) The maximum daily injection and withdrawal volumes experienced during the reporting interval.

(4) The suit-in wellhead pressure for each well.

(5) The top storage pressure (wellhead and reservoir experienced during the reporting interval.

(6) Structure maps of the reservoir (when revised).

(7) Subsea elevation of the water table in each well.

(8) A brief discussion of current operations with specific mention given to water production or flooding.

(H) The grant of the certificate herein to Colorado Interstate with respect to its sale to Kansas-Nebraska shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or of Part 154 of the Commission's Regulations under the Natural Gas Act, requiring the filing of rate schedules for the service herein authorized, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted against Colorado Interstate.

(I) The petition to intervene of the Citizens Utilities Company be and the same is hereby rejected for the reasons sets forth above.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

THE FO CORPORATION, DOCKET NO. RI62-214[1]

ORDER ACCEPTING NOTICE OF RATE DECREASE FOR FILING AND TERMINATING PROCEEDING IN PART

(Issued July 19, 1963)

The above-designated rate suspension proceeding relates to the jurisdictional sale of natural gas by the FO Corporation (FO) under its FPC Gas Rate Schedule No. 1 to Texas Gas Transmission Corporation (Texas Gas) from the North Elton Field, Allen Parish, Louisiana (South Louisiana).

The increased rate involved here was suspended because FO's interpretation of the tax reimbursement provision contained in the related gas sales contract was questionable. The increased rate became effective subject to refund on January 2, 1962.

Singer-Fleischaker Oil Company (Singer) succeeded to the interests of FO effective as of March 1, 1963. By letter order of May 1, 1963, in Docket No. CI63-1217, Singer was granted temporary authorization to continue the sale formerly made by FO, and FO's FPC Gas Rate Schedule No. 1 was redesignated as Singer's FPC Gas Rate Schedule No. 1.

On June 10, 1963, Singer tendered for filing a notice of change in its aforementioned rate schedule proposing a decrease in rate from 12.6714¢ to 12.5464¢ per Mcf which would eliminate the questionable tax reimbursement portion of the proposed rate tendered by FO. Singer requests that the decreased rate be

[1] Consolidated with the *Area Rate Proceeding, et al.*, Docket No. AR61-2, *et al.*, by order issued May 15, 1962, 27 FPC 952.

made effective as of March 1, 1963, the date Singer succeeded to FO's interests.[2]

Under these circumstances, this proceeding should be terminated insofar as it relates to Singer. However, sinces FO had been collecting the questionable tax reimbursement amount subject to refund prior to March 1, 1963, the proceeding should remain in full force and effect as to FO.

The Commission finds:

(1) The notice of change in rate tendered for filing by Singer on June 10, 1963, designated as Supplement No. 11 to Singer's FPC Gas Rate Schedule No. 1, should be accepted for filing, effective as of March 1, 1963.

(2) The proceeding in Docket No. RI62–214, insofar as it relates to Singer should be terminated, but should remain in full force and effect insofar as it relates to FO.

The Commission orders:

(A) The notice of change in rate tendered for filing by Singer on June 10, 1963, designated as Supplement No. 11 to Singer's FPC Gas Rate Schedule No. 1, is hereby accepted for filing, effective as of March 1, 1963.

(B) The proceeding in Docket No. RI62–214, insofar as it relates to Singer, is hereby terminated, but in all other respects it shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

YADKIN, INC., PROJECT NO. 2197

ORDER WAIVING PENALTY FOR DELINQUENCY IN PAYMENT OF ANNUAL CHARGES

(Issued July 19, 1963)

On January 28, 1963, a statement of the annual charges for the calendar year 1962 under the license for Project No. 2197 was mailed to Yadkin, Inc., licensee for the project. It was noted on the statement that the charges should be paid "within 30 days of rendition of a bill therefor."

The Licensee's check for such charges, in the amount billed was mailed on March 1, 1963. Thus, under the Commission Regulations a penalty attached by virtue of the one-day delay in payment.

By letter dated March 19, 1963, the licensee requested a waiver of the penalty, stating that although the person responsible for approving payment had noted the statement for special treatment and early payment, through an oversight, the license payment was not recognized by the personnel who prepare the checks as requiring special treatment and was treated in the routine manner.

Our records show that the licensee had made timely payment in prior years.

The Commission finds:

In the circumstances, it will not be inconsistent with the public interest to waive the penalty which attached by reason of the licensee's delay in payment of the annual charges.

The Commission orders:

The above-mentioned penalty by reason of the delay of the licensee in the payment of the annual charges under the license for Project No. 2197 for the calendar year 1962 is hereby waived.

---

[2] No refunds are required, since Singer has not collected any monies relating to the questionable reimbursement.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ORDER DENYING MOTION TO REOPEN PROCEEDINGS

(Issued July 22, 1963)

On June 12, 1963, Central Illinois Public Service Company (CIPSCO) filed a motion that the Commission reopen the above-captioned proceedings. Objection to the motion was filed by the Village of Milford, Illinois (Milford) on June 20, 1963.

This motion concerns proceedings which are now pending before us for final decision. CIPSCO points out that since the close of the hearings in this proceeding it has obtained an Order and Certificate of Public Convenience and Necessity from the Illinois Commerce Commission authorizing the construction, operation and maintenance of a gas transmission and distribution system in the Village of Milford.[1] It therefore requests that the Commission reopen these proceedings for the purpose of receiving evidence with respect to the filing of its application with the Illinois Commerce Commission, the issuance of the Order and Certificate and an increase in the supply of natural gas to CIPSCO.[2]

Milford opposes the reopening of the proceedings on the grounds that: (1) the allowance of the motion would cause additional delay in the determination of this matter; (2) the evidence sought to be adduced is immaterial to the decision; (3) the motion is premature.[3]

The issues about which the parties hereto are concerned were heard upon a very extensive record. The presiding examiner's initial decision was issued on January 22, 1963, and the matter is presently before us for decision. The proffered material is not a part of the record now before us. At such time as the Commission does determine the issues involved in the proceedings it will rely upon the evidence of record. We cannot assume, until such time as a decision on the merits is made, that the proposed documents, attached to the filings by both CIPSCO and Milford, are material to the decision. Evidence has been entered into the record upon which the examiner based his decision; exceptions thereto were taken. Our decision will be based upon that record; at such time as our decision is issued, the parties may renew their request to adduce new evidence, if necessary and material. Until it is shown that the proffered new additions of

[1] The Order and Certificate of Public Convenience and Necessity was attached as an Appendix to CIPSCO's motion.

[2] CIPSCO noted that pursuant to order of this Commission in *Panhandle Eastern Pipe Line Company and Trunkline Gas Company*, Docket No. CP63-123, issued April 23, 1963, 29 FPC 824, additional gas had been made available to CIPSCO for service for Hoopeston, Illinois, from which a supply would be available to Milford.

[3] In addition, Milford noted that it was seeking to appeal the order of the Illinois Commerce Commission. A copy of its "Complaint for Injunction and Other Relief" was attached to its objections.

evidence are material to the ultimate decision of the Commission, it would appear that the motion is premature.

The Commission orders:

The motion by Central Illinois Public Service Company that the Commission reopen these proceedings is hereby denied.

Before Commissioners: Charles R. Ross, Acting Chairman; Howard Morgan and L. J. O'Connor, Jr.

ARKANSAS LOUISIANA GAS COMPANY, DOCKET NO. CP61-311

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING RATE FILING

(Issued July 22, 1963)

On May 6, 1963, Arkansas Louisiana Gas Company (Applicant) filed in Docket No. CP61-311 an application to amend further the Commission's order, issued November 21, 1961, 26 FPC 749, as amended, in said docket to extend until July 22, 1964, the term of sale of natural gas to Texas Eastern Transmission Corporation (Texas Eastern) authorized by said order, as amended, all as more fully set forth in the application to amend.

The subject order, among other things, authorized Applicant to sell a maximum annual volume of 8,125,000 Mcf (14.65 psia) of natural gas to Texas Eastern for a period of one year from the date of initial delivery, which date was July 22, 1961. By subsequent order, the authorization was extended for one year to July 22, 1963. The purpose of the sale was to enable Applicant to dispose of a temporary over-supply of gas due to take-or-pay purchase obligations which exceed Applicant's system requirements for the immediate future.

The subject application indicates that the short-term over-supply still maintains and that an extension of the subject sale would be mutually beneficial to both Applicant and Texas Eastern.

On May 6, 1963, Applicant tendered for filing its proposed Second Revised Sheet No. 263 to its FPC Gas Rate Schedule XFS-19, providing for the herein proposed extension.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 19, 1963, (28 F.R. 6307). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued November 21, 1961, as amended, in Docket No. CP61-311 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued November 21, 1961, in Docket No. CP61-311 be and the same is hereby amended to extend to July 22, 1964, the term of the sale of natural gas by Applicant to Texas Eastern authorized by said order. The maximum annual volume of natural gas sold during the extended term of July 22, 1963, to July 22, 1964, shall be 8,125,000 Mcf at 14.65 psia.

(B) In all other respects, said order, as amended, shall remain in full force and effect.

(C) Applicant's proposed Second Revised Sheet No. 263 to its FPC Gas Rate Schedule XFS–19 is hereby accepted for filing to become effective July 22, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

DAIRYLAND POWER COOPERATIVE, MINNKOTA POWER COOPERATIVE, INC., SOUTH CENTRAL RURAL ELECTRIC COOPERATIVE, INC., DOCKET NO. E–7113

ORDER TO SHOW CAUSE WHY RESPONDENTS SHOULD NOT BE REQUIRED TO COMPLY WITH REQUIREMENTS OF THE FEDERAL POWER ACT

(Issued July 22, 1963)*

This is an order directing Dairyland Power Cooperative, La Crosse, Wisconsin, Minnkota Power Cooperative, Inc., Grand Forks, North Dakota, and South Central Rural Electric Cooperative, Inc., Lancaster, Ohio, to show cause why they should not be required to comply with this Commission's reporting, accounting and rate schedule filing requirements by filing, variously, annual financial and statistical report forms, original cost statements, accounting entries and rate schedules for wholesale electric services. Each of the aforementioned cooperatives owns or operates facilities for the transmission or sale of electric energy at wholesale for resale which is generated in one state and consumed in another, and therefore may be a public utility within the meaning of the Federal Power Act, Section 201(e), and, for reasons set forth below, the proper administration of the Act and exercise of our jurisdiction, if any, over those cooperatives requires that:

(1) Dairyland file its original cost statement pursuant to the Commission's Uniform System of Accounts, Electric Plant Instruction No. 1, and Section 120.3 of the Commission's Regulations under the Federal Power Act, and its rate schedules for wholesale electric services to the customers as set forth in Appendix A [1] pursuant to Part 35 of the Commission's Regulations;

(2) Minnkota file its original cost statement and its rate schedules for wholesale electric services to the customers as set forth in Appendix B;[1] and

(3) South Central file its FPC Form No. 1, Annual Report, for 1962, pursuant to Section 141.1 of the Commission's Regulations under the Federal Power Act, its original cost statement, and its accounting entries recording the transfer of facilities among South Central, Ohio-Midland Light & Power Company and Columbus and Southern Ohio Electric Company, pursuant to the Commission's Uniform System of Accounts, Electric Plant Instruction No. 5, and Account 102.

Dairyland, Minnkota and South Central are organized under the laws of the States of Wisconsin, Minnesota and Ohio, respectively, as cooperative corporations. They are financed in part by loans from the Rural Electrification Administration. The contention that any such cooperative corporation is not properly classifiable as a public utility within the meaning of Section 201(e) of the Federal Power Act because it is incorporated as a cooperative has been raised in informal communications to the Commission in response to a finding in *Southwestern Power Administration*, Docket No. E–6975, 27 FPC 895, (1962) that Associated Electric Cooperative, Inc. and several other cooperatives are "public utilities." In our subsequent consideration of this matter we have had

*See order deferring further proceeding issued August 6, 1964, 32 FPC 529. Motion for preliminary injunction denied; motion for dismissal granted, *South Central Rural Electric Cooperative, Inc.* v. *Joseph C. Swidler*, 228 F. Supp. 875 (1963). See also, 228 F. Supp. 968.

[1] Currently Dairyland and Minnkota each have on file with this Commission pursuant to Section 205 of the Act a number of rate schedules for interstate wholesale electric services which each cooperative renders.

the assistance of an opinion of our General Counsel prepared at our request, as well as briefs submitted informally by the Office of General Counsel of the Department of Agriculture and by a Committee of Rural Electric Cooperatives. The Commission, to date, has not yet reached any consensus on these difficult matters.

We believe that the "public utility" status of REA cooperatives should be determined upon a record made in a proceeding in which all interested parties may participate. Accordingly, we are issuing this show cause order, in part, to determine the public utility status of the aforementioned cooperatives and others similarly situated. If those cooperatives are public utilities, the original cost statements, accounting entries and rate schedules (and the original cost statements, accounting entries and rate schedules of other cooperatives owning or operating jurisdictional facilities), are essential to the proper discharge of the Commission's rate-making and accounting responsibilities and will be required to be filed just as we normally secure such statements, entries and rate schedules from all persons who have been classified as public utilities.

Accordingly, the Commission under its authority contained in Sections 203, 205, 206, 208, 301, 304, 307, 308, 309 and 311 of the Federal Power Act and under the Commission's Rules of Practice and Procedure finds it necessary and appropriate for the purposes of that Act that a public hearing be held on this matter in the manner hereafter provided and the Commission directs the aforementioned cooperatives to show cause at that public hearing to be held on October 22, 1963, commencing at 10 a.m. (EDST) in a hearing room of the Federal Power Commission, 441 G Street, NW. Washington 25, D.C., why they should not be required to file, as "public utilities," the aforementioned report form, original cost statements, accounting entries and rate schedules.

The following schedule for the service of testimony, motions to strike prepared testimony, and answers to motions to strike prepared testimony, is ordered:

September 20, 1963	Service of direct testimony by all parties, including the Commission staff.
October 10, 1963	Service of rebuttal testimony by all parties, including the Commission staff.
October 16, 1963	Service of motions to strike testimony by all parties, including the Commission staff.
October 21, 1963	Service of answers to motions to strike by all parties, including the Commission staff.

Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Commission's Rules of Practice and Procedure (18 C.F.R. 1.8 and 1.37) on or before August 16, 1963.

For the convenience of all parties, copies of the General Counsel's opinion and of the briefs filed by the Department of Agriculture and the Committee of Rural Electric Cooperatives will be made a part of the record in this proceeding and copies thereof are available for distribution at the offices of the Commission.

Commissioner Morgan *dissenting.*

MORGAN, Commissioner, *dissenting:*

I dissent from the subject order for several reasons.

First, I dissent because I do not believe Congress intended that this Commission should attempt to use the power Congress provided in 1935 for the regulation of privately-financed electric companies to regulate the rural electric cooperative movement Congress established in 1936;

Second, I dissent because I do not believe this Commission should dissipate its limited staff and resources in an attempt to expand its jurisdiction when, by this Commission's own admission, limitations of staff and other resources already prevent it from solving problems in areas where it does have jurisdiction, require it to deny the substantive and procedural rights of parties appearing before it, and prevent it from setting just and reasonable rates:

Third, I dissent because I do not believe this Commission should attempt to regulate rural electric cooperatives absent a showing that abuses exist which require such regulation for the protection of the consuming public;

Fourth, I dissent because I do not wish to be associated with an attempt to expand the jurisdiction of a Federal agency merely for the sake of or the gratification to be obtained by expanding its jurisdiction;

Fifth, I dissent because I do not believe the non-profit endeavors of rural electric cooperatives to provide low-cost power in the sparsely settled regions of this country should be harassed and hampered by the cost of fending off the desire of this agency to expand its jurisdiction at their expense;

Sixth, I dissent because no law—other than Parkinson's—has ever contemplated this expansion of jurisdiction.

* * * * * * *

For more than the past year, a certain segment of this Commission has exhibited a peculiar preoccupation with the question of whether or not rural electric cooperatives could somehow be made subject to FPC jurisdiction. The provisions of Part II of the Federal Power Act, it is said, "* * * apply to the transmission of electric energy in interstate commerce and to the sale of electric energy at wholesale in interstate commerce";[1] some rural electric cooperatives may transmit or sell electric energy wholesale in interstate commerce; ergo, FPC should extend its jurisdiction over rural electric cooperatives. This was, and remains, the argument. That is all there is to it. It is very tidy. Its simple beauty is unadorned with reasons which might justify it. Why gild this legal lily?

Perhaps for that reason my repeated queries as to *why* this should be attempted have gone, and remain, unanswered. My repeated requests to be informed of the way or ways in which the rural electric cooperative movement of 1936 are frustrating the attainment of the low-cost power supply objective of the Federal Power Act of 1935 have been dismissed as beside the legal point. I do not think they are. But, neither do I think that the decision to embark upon a matter of this consequence should turn upon the interpretation of an unclear and purely legal point.

In any event, the failure of the Commission and its staff to demonstrate that the endeavors of rural electric cooperatives conflict with or otherwise prevent the attainment of the objective of the Federal Power Act has confirmed my previous belief that they do not. For this and for other reasons mentioned below, I therefore believe it is unnecessary for the Commission to engage in this costly legal expedition, and I totally disassociate myself from the majority's obdurate determination to do so.

* * * * * * *

[1] Section 201(b) of the Federal Power Act.

The question presented here is whether, even though rural electric cooperatives organized pursuant to the Rural Electrification Act of 1936 did not exist when Part II of the Federal Power Act was enacted in 1935, we should now interpret that Part of the Federal Power Act to apply to those cooperatives? The nature of the inquiry on which we embark is set forth well in a passage in Justice Cardozo's book, *The Nature of the Judicial Process:*

> [T]he difficulties of so-called interpretation arise when the legislature has had no meaning at all; when the question which is raised on the statute never occurred to it; when what the judges have to do is, not to determine what the legislature did mean on a point which was present to its mind, but to guess what it would have intended on a point not present to its mind, if the point had been present. [p. 15.]

Following this approach, as we must if we are to avoid arrogating to ourselves the functions of Congress to legislate in the first instance on matters of substance, we must determine—

(a) the intended scope and purpose of Part II of the Federal Power Act of 1935;

(b) the nature and character of the rural electric cooperatives Congress provided for in 1936; and

(c) whether Congress would have made these cooperatives subject to Part II of the Federal Power Act, if the question had been presented to it in 1935—or in 1936, for that matter.

* * * * * * *

As introduced, the companion bills[2] that became the "Public Utility Act of 1935" provided, among other things, as follows: "Section 201(b) The provisions of this title [II] shall apply to the transmission and sale of electric energy in interstate commerce * * *"

Naturally, Congress wanted to know just what and whom would be covered by that language; it wanted "a picture of this operating industry." This was provided by one of the spokesmen for the Federal Power Commission. He said:

> There are at present approximately 3,500 electric utilities in the United States, of which 1,900 are municipal and 1,600 are private. The 1,900 municipal utilities produce between 4 and 5 percent, and the 1,600 private utilities produce between 95 and 96 percent of the total power produced.[3]

The municipal systems (or, more accurately, the power systems of any and all Governmental agencies or subdivisions) were not covered or were not meant to be covered by the bill, he continued, for the reasons that they were owned by Government and were not run for profit.

This was the total picture of the operating industry at that time. It was comprised of Government systems and private profit companies. The industry had no other segments. When the Government systems were eliminated, only the private companies remained. The privately-owned and financed segment of the industry was all the bill was aimed at. This was made clear time and time again in both the House and Senate hearings.

This picture and definition of the operating segment of the industry at which the bill was aimed squared with Congress' understanding. The reason why Congress had undertaken to legislate here was to remedy the abuses that had been perpetrated in the electric power field. These abuses had not been per-

[2] S. 1725 and H.R. 5423, amended and reported as (a "clean bill"), S. 2796, 74th Congress.

[3] Senate Commerce Committee hearings on S. 1725, at page 240. Identical expositions of the applicability and purpose of Title II of the bill were made by FPC witnesses in the House Commerce Committee hearing on H.R. 5423.

petrated by Governmental or non-profit systems: they had been perpetrated through and by means of privately-owned and financed electric power companies that controlled them. Congress itself had directed that those abuses be investigated; the abuses had been thoroughly studied for the preceding eight years; the studies had been reported to Congress; and Congress had undertaken to legislate on them.

The bases upon which and the reasons why Congress undertook its consideration of this legislation were set forth in the 83-volume, Federal Trade Commission study of the privately-owned and privately-financed electric utility industry, begun in 1928 at the request of Congress; the separate 4- and 6-volume summarizations and extensions thereof prepared for the House and Senate Commerce Committees; the Federal Power Commission's (interim) National Power Survey report called for by the President in 1933; the 1935 report of the National Power Policy Committee appointed by the President; and the President's March 1935 message to Congress on public utility holding companies. Legal minions of Government agencies and of privately-owned utilities have, for many years, searched through this massive literature and the later Congressional hearings and debates for an indication—any indication—that Congress was aiming at co-operatives. They have come up just as empty-handed as my colleagues of the majority.

The essence of the purpose, scope and intent of Title II of the Public Utility Holding Company Act, which is Part II of the Power Act, was explained at the outset of his testimony by the FPC spokesman before the Senate and House Commerce Committees:

> What I have to say of title I of the bill is simply this: I think you can illustrate a holding company, more or less, as a pasture fence that is built around groups of these utilities, here and yonder, scattered all over the country. Now, title I of the bill proposes to tear down that pasture fence and to turn the stock loose, that stock being the operating companies. * * * Title II provides that as you tear down this fence you shall place in the Federal Power Commission supervision over the integration of these operating companies into strong regional systems.[4]

In sum, the entire legislative foundation of Part II of the Federal Power Act, including the hearings thereon, make it unmistakeably clear that the abuses in the electric power field which that legislation sought to correct were perpetrated solely and exclusively by the privately-owned and financed segment of the industry; that these abuses were the sole reason why Congress undertook to enact the legislation in question; that in enacting that legislaion Congress expressly excluded all other known segments of the industry from its aim; and that by the language it used in Section 201 of the Federal Power Act, Congress intended to regulate only the privately-owned and financed or the profit segment of the electric power industy when it enacted Part II of the Federal Power Act in 1935.

* * * * * * *

Throughout the 1935 House and Senate hearings (totalling 3500 pages) on the bill that became the Public Utility Holding Act, only one reference was made to the Federal Government's rural electrification program. This reference was made on April 11, 1935 during the (earlier) House hearings by a Congressman in an attempt "to find out if both [municipal and privately-financed systems] are going to be treated inpartially and alike and the Government will not be engaging in competition with private industry in carrying out its rural electrification program."[5] The discussion that followed shows that Com-

[4] Senate Commerce Committee hearings on S. 1725, at p. 238.
[5] House Commerce Committee hearings on H.R. 5423, at p. 2163.

mittee members and the witness had only confused ideas about that program, which then was in a very inchoate form; and the discussion sheds no light on the question considered here.

The Rural Electrification Administration and Program was established by Executive Order No. 7037 of May 11, 1935 (promulgated under the Emergency Relief Appropriation Act of April 8, 1935). Subsequently, and until March 13, 1936, the REA entered into contracts for 27 rural electrification projects, including contracts with a few privately-owned profit-making companies.[6]

On January 6, 1936, the Chairmen of the Senate and the House Commerce Committees introduced companion bills to give the REA a separate, statutory foundation. The Senate passed the measure (S. 3483) on March 9, 1936, without hearings, in a form that provided for loans to Governmental units and to non-profit cooperatives only, and not to private, profit-making companies. During the accompanying discussion, it was explained that the Administration and the sponsors of the bill had excluded private profit companies because experience had shown that *non-profit* agencies were the preferred instrumentalities for achieving the purposes sought by the rural electrification program, and that private, profit-making companies were not.[7] This point was expanded upon during the brief hearings that were held in the House[8] and during House consideration of the measure. As passed by the House, however, and as enacted, S. 3483 provided that REA could make loans to private, profit-making companies, but that it had to give loan preference to *non-profit* Governmental agencies and to cooperatives.[9]

In sum, and in marked contrast to the legislative history of Part II of the Federal Power Act, the entire legislative history of the Rural Electrification Act shows that Congress there undertook to assist or bring into being a series of non-profit Governmental and cooperative agencies for the purpose of electrifying rural areas, and that these agencies were essentially different from the private, profit-making companies for which Congress in the preceding year had created a separate and exclusive regulatory pattern.

In general, by the Rural Electrification Act of 1936, Congress established a program whereby specially created cooperatives, exempt from Federal taxes, could borrow money at low interest rates from the Federal Treasury with no collateral, for the construction of facilities for the distribution and sale on a non-profit basis, of power purchased when available at reasonable rates from electric generating plants, in the remote or rural areas of the country which private profit companies had failed or declined to serve.

Naturally, Congress assumed that to carry out this objective, cooperatives located almost exactly on the border between two states (such as the Dairyland and Minnkota cooperatives named in the subject order) would engage in interstate commerce in the course of electrifying or supplying the immediately contiguous rural area in the adjoining state. And naturally, Congress assumed that in purchasing its power supply from a private company, a cooperative (such as the South Central cooperative named in the subject order) might buy from a private profit company subject to regulation under Part II of the Federal Power Act. But there is no evidence that Congress intended that non-profit rural electric cooperatives which found themselves in such positions were to be subject to regulation under Part II of the Federal Power Act.

That Act (enacted in the previous year) is silent on the subject. We must assume that Congress knew this. If Congress, in setting up a new program for

[6] House Commerce Committee hearings of March 12–14, 1936, on S. 3483 in the 74th Congress (the bill that became the Rural Electrification Act of 1936), at pp. 67–68.

[7] 80 Cong. Rec. at 2754–55, 2826–27.

[8] At footnote 6.

[9] 80 Cong. Rec. at 7247–48, 7362.

a new method of rural electrification, intended their new program to be covered by their legislation of 1935, they could have said so in 1936 either by amending the previous Act (The Federal Power Act) or by specific provision in the REA Act. They did neither. They did not even discuss doing either.

In general, by enacting Part II of the Federal Power Act in 1935 Congress established a comprehensive regulatory pattern, tailored, refined, and amended to prevent a recurrence of the abuses perpetrated in the electric power field by and through privately-owned profit-making companies; and to meet problems indigenous to private electric profit companies alone. This is shown unequivocally by the legislative history of that Act; as well as by a mere reading of the sectional headings and the provisions of Part II of that Act.

In conclusion, therefore, it is plain to me that, in addition to the reasons mentioned in the attached briefs of the Department of Agriculture and the Committee of Rural Electric Cooperatives, the language of Section 201(b) of the Federal Power Act (which provides that "the provisions of this Part shall apply to the transmission of electric energy in interstate commerce and to the sale of electric energy at wholesale in interstate commerce") is not to be literally interpreted to include rural electric cooperatives organized and financed pursuant to the Rural Electrification Act of 1936, because—

(a) the legislative history of Part II of the Federal Power Act shows that Congress intended that Act to apply only to privately owned profit-making electric power companies; and

(b) because the legislative history of Part II of the Federal Power Act of 1935 and of the Rural Electrification Act of 1936; the intent of Congress in enacting Part II of the Federal Power Act; and the past operations and practices of nonprofit rural electric cooperatives show, together and separately, that if the question of making nonprofit rural electric cooperatives subject to Part II of the Federal Power Act had been presented to Congress when it had that measure under consideration in 1935, Congress would have made these nonprofit cooperatives exempt from the regulatory scheme it enacted for privately owned, profit-making companies, exactly as it made all the then-existing nonprofit electric agencies exempt; and

(c) because Congress specifically refrained, when it enacted the REA statute in the following year, from conferring jurisdiction over REA cooperatives on any Federal agency other than the Rural Electrification Administration.

I am not alone in this opinion. It is stoutly held by many others more learned in these technical matters than I. The majority order states that the Commission itself "* * * has not reached any consensus of these difficult matters." Accordingly, I do not feel that this Commission should attempt, by a show cause proceeding, to force the owner-customers of the rural electric systems of this land to shoulder the full burden of proving or disproving the alternative propositions that they are or are not subject to the jurisdiction of this Agency. This Commission may initiate show cause proceedings against parties clearly subject to its full jurisdictional powers, but I do not believe this Commission should employ this harsh technique on the parties here, over whom the Commission itself cannot even agree whether it has jurisdiction.

If the majority of this Commission which is so peculiarly preoccupied with this question really feels that the role played by the rural electric cooperatives of this country requires additional attention, then, rather than lurching into this important policy matter in the anomalous manner described, that majority should follow the procedure which the Act has prescribed for treating questions of this nature, as follows—

> Sec. 307(a). The Commission may investigate any facts, conditions, practices, or matters which it may find necessary or proper in order to determine

whether any person has violated or is about to violate any provision of this Act or any rule, regulation, or order thereunder, or to aid in the enforcement of the provisions of this Act or in prescribing rules or regulations thereunder, or in obtaining information to serve as a basis for recommending further legislation concerning the matters to which this Act relates * * * [and]

Sec. 311. In order to secure information necessary or appropriate as a basis for recommending legislation, the Commission is authorized and directed to conduct investigations regarding the generation, transmission, distribution, and sale of electric energy, however produced, throughout the United States and its possessions, whether or not otherwise subject to the jurisdiction of the Commission, * * * The Commission shall report to Congress the results of investigations made under authority of this section.

If the majority will follow that procedure, it will get a clear and unmistakable set of directions from the Congress regarding this matter, and in very short order!

I am perfectly willing for this Commission, with my active participation and support, to proceed with the regulation of any electric agency, whether publicly or privately owned and financed, provided only that theretofore:

(a) the regulation of such agency has been found genuinely necessary for the protection of the public interest; and

(b) the necessity for that regulation has been spelled out clearly and convincingly and has been transmitted to the Congress for its consideration; and

(c) the Congress has issued a clear and unmistakable directive to the Commission to proceed with such regulation.

I am convinced that those conditions do not exist here. And I am equally convinced that an attempt to proceed, as the majority does, in the absence of those conditions is a wrongful attempt to arrogate to this Commission jurisdiction and powers not conferred upon it by the Congress.

The plain fact is that this Commission never asked Congress to confer this particular jurisdiction on it; Congress never even discussed this particular grant of jurisdiction at the time our enabling legislation was enacted, and nowhere in any law—again excepting Parkinson's—is this particular expansion of jurisdiction even so much as hinted at.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

LAKE SHORE PIPE LINE COMPANY, DOCKET NO. CP63-243

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 22, 1963)

On February 27, 1963, as modified by letter of April 4, 1963, Lake Shore Pipe Line Company (Applicant) filed in Docket No. CP63-243 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction during the 12-month period following the date of certification and the operation of lateral and field facilities to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application, as modified.

The purpose of this "budget-type" application is to augment Applicant's ability to act with reasonable dispatch in contracting for and connecting to its

pipeline system new supplies of natural gas in various producing areas generally coextensive with said system.

The total cost of the facilities proposed hereunder will not exceed a maximum of $100,000, with no single project to exceed a cost of $25,000.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 11, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Lake Shore Pipe Line Company, an Ohio corporation having its principal place of business in Cleveland, Ohio, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order accompanying Opinion No. 205 issued February 15, 1951, in Docket No. G–1210, *et al.* (10 FPC 22, 32.)

(2) The facilities hereinbefore described, as more fully described in the application, as amended, in this proceeding, are proposed to be used in the transportation of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, pursuant to Section 2.58 (c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects constructed pursuant to the authorization hereinafter granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering, and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Sections 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to construction during the 12-month period commencing on the date of issuance of this order and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $100,000, with no single project to exceed a cost of $25,000.

(8) A request during the public hearing by staff counsel or omission of the intermediate decision procedure herein was unopposed by any party of record

and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Lake Shore Pipe Line Company, to construct during the 12-month period commencing on the date of issuance of this order, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only to take natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) names of fields connected, (b) estimates of gas supplies attached in Mcf at 14.73 psia, (c) a description of the project or projects that have been constructed pursuant to the authorization herein granted, (d) the location of said project or projects, (e) the actual installed cost of said facilities subdivided by size of pipe, compressing, metering and appurtenant facilities, and (f) the names of the independent producers involved, together with the respective dates of the gas sales contracts and the docket numbers of the related producer certificate authorizations.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to construction during the 12-month period commencing on the date of issuance of this order, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $100,000, with no single project to exceed a cost of $25,000.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

MICHIGAN GAS STORAGE COMPANY, DOCKET NOS. CP63-217, CP63-237; PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP63-259

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 22, 1963)

On January 31, 1963, and on February 25, 1963, Michigan Gas Storage Company (Michigan) filed respectively in Docket Nos. CP63-217 and CP63-237 applications pursuant to Section 7(c) of the Natural Gas Act for certificates of public convenience and necessity seeking, collectively, authorization to establish three new delivery points; sell and deliver natural gas to a local distributor; transport natural gas for the account of a distributor; establish a new interchange or a delivery point; and construct and operate certain metering and regulating facilities, additional horsepower compressor capacity, and a length of new pipeline. On March 18, 1963, Panhandle Eastern Pipe Line Company (Panhandle) filed in Docket No. CP63-259 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity seeking

authorization for the construction and operation of two delivery taps and a certain interchange. The authorizations sought by both Applicants are more fully set forth in the applications on file with the Commission, and open to public inspection.

Michigan proposes specifically in Docket No. CP63–217 to (1) establish three new delivery points for the delivery of natural gas to the Consumers Power Company (Consumers), (2) construct and operate the necessary metering and regulating facilities at the proposed new delivery points, (3) deliver gas to Consumers at two existing delivery points for three new communities to be served by Consumers, and (4) deliver gas to Consumers at any existing delivery point for service to new communities, provided such service does not require the construction of facilities by anyone other than Consumers and does not result in any increase in total annual or peak day deliveries of natural gas by Michigan to Consumers. The purpose of the proposed new delivery points is to permit Consumers to serve the Village of Climax and adjoining areas in the Township of Climax, Kalamazoo County, Michigan; to serve the community of New Hudson and adjoining areas, in the Township of Lyon, Oakland County, Michigan; and the areas surrounding Pleasant Lake in the Township of Freedom, Washtenaw County, Michigan. The delivery taps proposed for service to the Village of Climax and the community of New Hudson are to be constructed by Panhandle for which authorization is sought in Docket No. CP63–259. The proposed deliveries at the two existing delivery points will permit Consumers to serve the cities of Beaverton and Gladwin and adjoining areas, both located in Gladwin County, Michigan, and the community of Gregory and adjoining areas in Livingston County, Michigan. The total cost of the proposed facilities to be constructed in this docket is estimated to be $56,400 to be financed from funds on hand.

For the six communities to be served, the total estimated annual and peak day requirements are 297,724 Mcf and 1,892 Mcf of natural gas respectively, for the first year, and 340,029 Mcf and 2,174 Mcf of natural gas respectively, for the third year. The proposed natural gas deliveries to Consumers would not result in any increase on Michigan's present annual or peak day deliveries nor would it have any effect on Consumer's present customers since Michigan would adjust its pattern of deliveries at other delivery points on its system, and Consumers has adequate gas supplies available to it and sufficient operating flexibility on its system to offset the effect of the changes in Michigan's adjusted pattern of deliveries.

In Docket No. CP63–237, Michigan seeks authorization to construct and operate (1) an additional 1600 horsepower of compressor capacity by turbocharging four compressors in its Muskegon River Compressor Station in Clare County, Michigan, (2) a 26-inch pipeline approximately 40 miles in length extending easterly from Ovid Junction in Ovid Township, Clinton County, Michigan, to a proposed point of interchange (to be known as "Flint Junction") with the so-called "North Line" of Panhandle in Section 8 of Grand Blanc Township, Genesee County, Michigan, (3) establish a new interchange or delivery point with Panhandle at the eastern end of the proposed 26-inch pipeline at Flint Junction, and (4) use its facilities to transport natural gas for the account of Consumers. The increased compressor capacity and the 26-inch pipeline would enable Michigan to increase its 1963–64 peak day deliverability to Consumers from 558,500 Mcf to 598,500 Mcf of natural gas, increasing its system capacity by 40,000 Mcf and allowing it to meet its peak day requirement in serving Consumers. In addition, the new pipeline would provide greater flexibility in Michigan's existing transmission system.

Michigan would transport natural gas for the account of Consumers in order to reduce certain plant expenditures otherwise needed by Consumers to trans-

port and market natural gas it now produces in the Falmouth and Forward Fields located in Missaukee County, Michigan. Michigan would not be required to construct any new facilities for this transportation since the gas produced in the two above-mentioned fields, approximately 1,500 Mcf per day, would be transported to Michigan's gathering system in the Riverside Field by pipelines to be constructed by Consumers.

The total cost of turbocharging the four compressor units is estimated to be $275,000, while the estimated cost of the construction of the 26-inch pipeline is $4,406,000, both projects to be financed from bank loans and funds on hand.

Panhandle, in Docket No. CP63–259 requests authority to construct and operate (1) a delivery tap on its "West Line" for deliveries to Michigan in connection with service to the Village of Climax, (2) a delivery tap on its "North Line" for deliveries to Michigan in connection with service to the community of New Hudson, and (3) an interchange at Flint Junction, Michigan, between its "North Line" and the proposed 26-inch pipeline to be constructed by Michigan. This interchange will be used by both Panhandle and Michigan on an emergency basis and to provide flexibility on the two respective systems. No increase in present contract quantities for Michigan is involved in this application. Panhandle states that Michigan will purchase volumes of natural gas at the proposed points, within the existing quantities available to it pursuant to the gas sales contract presently on file with the Commission.

The estimated cost of the tap on Panhandle's "West Line" is $1,300, while the same cost is estimated in order to tap its "North Line". The interchange at Flint Junction is estimated to cost $3,900. The financing of these proposed facilities by Panhandle will be made through the use of funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 10, 1963, respecting the matters involved in and the issues presented by the applications consolidated herein. No petition to intervene or protest to the granting of the applications have been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicants, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, and Panhandle Eastern Pipe Line Company, a Delaware corporation having a principal place of business in Kansas City, Missouri, are both "natural-gas companies" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the applications in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof and the transportation and sale of natural gas by Applicants are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicants are able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant, Michigan Gas Storage Company, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The construction and operation of the proposed facilities by Applicant, Panhandle Eastern Pipe Line Company, are required by the public convenience

and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(6) The deliveries of natural gas, to consumers for resale to the communities, as described herein should be limited to the estimated third year annual and peak requirements of 340,029 Mcf and 2,174 Mcf respectively.

(7) Michigan should limit the transportation of natural gas authorized herein for the account of Consumers to 1,500 Mcf per day.

(8) Michigan should submit a statement of any adjustments made in its pattern of deliveries authorized herein, and in addition should submit a statement showing the total cost of its installed facilities within 90 days after completion thereof.

(9) Panhandle should submit a statement showing the total cost of its installed facilities within 90 days after their completion.

(10) Public convenience and necessity require that the certificate issued hereinafter regarding the authorization sought in Docket No. CP63–217 and the rights granted thereunder be conditioned upon Michigan's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations. In addition, public convenience and necessity require that the certificate issued hereinafter regarding the authorization sought in Docket No. CP63–237 and the rights granted thereunder be conditioned upon Michigan's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(11) Public convenience and necessity require that the certificate issued hereinafter regarding the authorization sought in Docket No. CP63–259 and the rights granted thereunder be conditioned upon Panhandle's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(12) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Gas Storage Company, to construct and operate the proposed facilities, and to sell and transport natural gas as hereinbefore described, and likewise authorizes Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the applications herein, upon the terms and conditions of this order.

(B) The authorization granted by this order for the delivery of natural gas to Consumers Power Company for resale to the Communities specified herein is limited to the estimated third year annual and peak day requirements of 340,029 Mcf and 2,174 Mcf respectively.

(C) Michigan Gas Storage Company shall limit the transportation of natural gas authorized herein for the account of Consumers Power Company to 1,500 Mcf per day.

(D) Michigan Gas Storage Company shall submit a statement of any adjustments made in its pattern of deliveries authorized herein, and in addition shall submit a statement showing the total cost of its installed facilities within 90 days after completion thereof.

(E) Panhandle Eastern Pipe Line Company shall submit a statement showing the total cost of its installed facilities within 90 days after their completion.

(F) The certificate issued by paragraph (A) above and the rights granted thereunder regarding the authorization sought in Docket No. CP63–217 are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(G) The certificate issued by paragraph (A) above and the rights granted thereunder regarding the authorizations sought in Docket Nos. CP63–237 and CP63–259 are conditioned upon Applicants' compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), and (e) of Section 157.20 of such Regulations.

(H) The facilities hereby authorized shall be constructed and placed in actual operation, and the sale and transportation of natural gas hereby authorized shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

PANHANDLE EASTERN PIPE LINE COMPANY, DOCKET NO. CP63–245

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 22, 1963)

On February 28, 1963, Panhandle Eastern Pipe Line Company (Applicant) filed in Docket No. CP63–245 an application which it supplemented on March 14, 1963, pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the sale of natural gas to Northern Indiana Fuel and Light Company, Inc. (Northern Indiana) for its resale for domestic and commercial uses in the Town of Monroeville, Indiana, and for authorization to construct line taps and metering facilities upon its line 100 and 200 to effectuate the sale of natural gas, all as more fully described in the application as supplemented.

The estimated third year peak day and annual requirements are 481 Mcf daily and 57,500 Mcf annually, which volumes Northern Indiana can supply under its presently authorized contract demand; it being a customer of Applicant under FPC Gas Rate Schedule G–1.

The estimated total cost of the proposed facilities is $16,000, to be financed from funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 9, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition to intervene in opposition has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-

gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G–254 (4 FPC 1081).

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Panhandle Eastern Pipe Line Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraph (e) of Section 157.20 of such Regulations.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

SOUTHERN NATURAL GAS COMPANY, DOCKET NO. CP63–246

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 22, 1963)

On March 1, 1963, Southern Natural Gas Company, filed in Docket No. CP63–246 an application pursuant to Section 7 (c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of several miles of pipeline and a measuring and receiving station, all as more fully set forth in the application.

Applicant seeks authority specifically to (1) construct and operate approximately 22.4 miles of 16-inch O.D. pipeline extending northwest from the western terminus of its Cranfield Field, Mississippi, supply line to a central point in the Lake St. John Field located in Concordia and Tensas Parishes, Louisiana, but

not including the river crossing; (2) construct and operate two 12¾-inch O.D. and one 10¾-inch O.D. pipeline, each approximately 8,000 feet in length, crossing the Mississippi River approximately 9 miles north of Natchez in Adams County, Mississippi, into Concordia Parish, Louisiana; and (3) construct and operate a measuring and receiving station located in the Lake St. John Field.

Applicant will purchase gas in the Lake St. John Field from the California Company, a Division of California Oil Company (Calco), pursuant to a contract dated October 10, 1958, which covers gas produced in the Lake St. Johns Fields as well as in the Cranfield Field. The latter field was connected in Applicant's pipeline system by a supply line constructed in 1959 pursuant to a certificate of public convenience and necessity issued in Docket No. G–14587 by the Commission in Opinion No. 325 (22 FPC 211).

Applicant desires to extend the Cranfield supply line to the Lake St. John Field during 1963 due to the fact that daily deliverability from the Cranfield Field has recently declined sharply, and Applicant will be able to replace the diminished deliverability with Calco's gas produced from the Lake St. John Field without increasing its minimum take obligations. Applicant is obligated by its contract of October 10, 1958, with Calco to proceed with such extension, having received notice from Calco that the specified contract volume of gas in the amount of 151,000 Mcf per day minimum deliverability from Lake St. John will be available on or about October 15, 1963.

The estimated cost of the project is $1,940,371 to be defrayed from cash on hand or to be available from current operations.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 10, 1963, respecting the matters involved in and the issues presented by the application herein. On April 22, 1963, Long Island Lighting Company filed a Petition For Leave To Intervene in opposition to the application, however, on May 2, 1963, it withdrew said petition, the withdrawal becoming effective pursuant to Section 1.11(d) of the Commission's Rules of Practice and Procedure. Likewise, on April 24, 1963, Philadelphia Electric Company filed a Petition For Leave To Intervene in opposition to the application, but withdrew such pleading on May 14, 1963, which has also become affective. The Pennsylvania Public Utility Commission filed a Notice of Intervention on April 25, 1963, as supplemented on May 28, 1963, stating that it has no objection to the implementation of the shortened procedure in this proceeding. It made no appearance at the hearing. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Southern Natural Gas Company, a Delaware corporation with its principal place of business in Birmingham, Alabama, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Southern Natural Gas Company, to construct and operate the natural gas facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c) (3), (c) (4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within one year from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

TAPOCO, INC., PROJECT NO. 2169

ORDER WAIVING PENALTY FOR DELINQUENCY IN PAYMENT OF ANNUAL CHARGES

(Issued July 22, 1963)

On January 28, 1963, a statement of the annual charges for the calendar year 1962 under the license for Project No. 2169 was mailed to Tapoco, Inc., licensee for the project. It was noted on the statement that the charges should be paid "within 30 days of rendition of a bill therefor."

The licensee's check for such charges, in the amount billed was mailed on March 1, 1963. Thus, under the Commission's Regulations, a penalty attached by virtue of the one day delay in payment.

By letter dated March 19, 1963, the licensee requested a waiver of the penalty, stating that although the person responsible for approving payment had noted the statement for special treatment and early payment, through an oversight, the license payment was not recognized by the personnel who prepare the checks as requiring special treatment and was treated in the routine manner.

Our records show that the licensee has made timely payment in prior years.

The Commission finds:

In the circumstances, it will not be inconsistent with the public interest to waive the penalty which attached by reason of the licensee's delay in payment of the annual charges.

The Commission orders:

The above-mentioned penalty by reason of the delay of the licensee in the payment of the annual charges under the license for Project No. 2169 for the calendar year 1962 is hereby waived.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

CITIES SERVICE GAS COMPANY, DOCKET NO. CP63-304

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1963)

On May 13, 1963, Cities Service Gas Company (Applicant) filed in Docket No. CP63-304 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the installation and construction during the calendar year 1963 and the operation of small field compressor units ranging in size from 200 to 300 horsepower on gathering laterals in various gas producing fields to enable Applicant to take into its certificated main pipeline system natural gas which will be purchased from producers thereof, all as more fully set forth in the application.

It appears that such compressor facilities are required due to the normal decline in wellhead working pressures of the wells in various fields connected to Applicant's gathering systems, requiring Applicant to augment such working pressures to enable it to receive volumes of gas required to be taken from each producing area in order to meet the requirements of Applicant's customers.

Applicant states that the total cost of the proposed compressor facilities will not exceed a maximum of $500,000. In accordance with the 25% limitation in Paragraph 2.58(b) of the Commission's Rules of Practice and Procedure, the cost of compressor units for any single producing area should be limited to a maximum of $125,000. The proposed facilities will be financed from treasury cash.

The term of the authorization granted hereinafter coincides with the term of the authorization granted to Applicant by order issued March 6, 1963, in Docket No. CP63-65 (29 FPC 429) to construct and operate the field facilities to carry the gas which will require the compression facilities contemplated by the present application.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 11, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation of

natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the installation, construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The installation, construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit, pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization granted hereinafter, a statement showing by projects: (a) a description of the facilities installed under this authorization, (b) the location of said facilities, and (c) the actual installed cost of said facilities.

(6) Public convenience and necessity require that the certificate hereinafter issued and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(7) The authorization hereinafter granted should be limited to installation and construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder should be limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Cities Service Gas Company, to install and construct during the calendar year 1963, the proposed facilities hereinbefore described, as more fully described in the application in this proceeding, and to operate such facilities only in connection with the taking of natural gas supplies from producers who have received authorization from the Commission to sell natural gas to said Applicant.

(B) Applicant shall submit pursuant to Section 2.58(c) of the Commission's General Policy and Interpretations, within 60 days after the expiration of the authorization herein granted, a statement showing by projects: (a) a description of the facilities installed under this authorization, (b) the location of said facilities, and (c) the actual installed cost of said facilities.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(D) The authorization granted in paragraph (A) above is hereby limited to installation and construction during the calendar year 1963, and the total expenditures for facilities to be constructed thereunder are hereby limited to a maximum of $500,000, with no single project to exceed a cost of $125,000.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

COMMUNITY PUBLIC SERVICE COMPANY, DOCKET NO. E-7102

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS

(Issued July 23, 1963)

By order issued July 11, 1963, *supra*, p. 71 in the above-entitled matter, the Commission authorized Community Public Service Company (Applicant) to issue and sell at competitive bidding $13,000,000, maximum principal amount of First Mortgage Bonds, Series G, due 1993, subject to the provisions, among others set forth in paragraph (B) of that order, as follows:

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegram as contemplated by Section 34.9 of the Regulations;

(ii) The Commission shall have approved the price to be received by Applicant for the Bonds and the coupon rate thereof, by a further order.

Applicant, on July 23, 1963, filed an amendment, pursuant to the requirements of the afore-mentioned Commission order, in which it states, among other things, that it proposes to accept, as representing the lowest annual cost of money to it, the bid of Salomon Brothers & Hutzler to purchase all of the proposed issuance of $13,000,000, principal amount of Bonds, at a price of 100.916% of principal amount, with an interest rate of 4½% per annum.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements contained in paragraph (B) of the Commission's order issued July 11, 1963, in the above-entitled docket; and under the bid it proposes to accept for the issuance of Bonds, the price to be received by Applicant for the Bonds and the interest rate thereof are reasonable.

(2) The proposed issuance of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof under the bid referred to above, are approved as reasonable.

(B) The proposed issuance and sale of Bonds referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of paragraphs (C), (D) and (E) of the Commission's order issued July 11, 1963, in the above docket.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. G–20519

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1963)

On December 24, 1959, as supplemented on December 3, 1962, El Paso Natural Gas Company (Applicant) filed in Docket No. G–20519 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain compressor and metering facilities; necessary general structures and equipment; and a certain gathering system, all as more fully set forth in the application.

Applicant's original application sought authorization to construct and operate certain natural gas pipeline facilities necessary to the acquisition of up to approximately 17,000,000 cubic feet of casinghead gas per day from the Bisti Field area of the San Juan Basin, in New Mexico. This quantity of gas is in addition to the quantity of 25,000,000 cubic feet of casinghead gas per day proposed to be acquired from the Bisti Field area by means of certain of the facilities proposed in the proceeding in Docket No. G–15696.

The proceeding in Docket No. G–15696 was initiated by the filing of an application on July 29, 1958, as supplemented on six occasions, seeking authorization to construct and operate certain natural gas pipeline facilities to be utilized in conjunction with other of Applicant's facilities so as to permit the sale and delivery of up to an additional 100,000,000 cubic feet of natural gas per day to Pacific Gas and Electric Company at a delivery point near Topock, Arizona.

The purpose of filing the first supplement to the original application in Docket No. G–20519 was to consolidate those Bisti Field facilities described in its application in Docket No. G–15696, as supplemented, with those Bisti Field facilities which are the subject of this proceeding in order that all such facilities may be expeditiously certificated. In furtherance of this purpose, Applicant filed concurrently its sixth supplement to the original application in Docket No. G–15696 to withdraw and exclude from the project presented in that proceeding the applicable portion thereof relating to the Bisti Field facilities.

Applicant requested and received temporary authorization to construct and operate the Bisti Field facilities proposed in Docket No. G–20519. Likewise, a request was made for temporary authorization to construct and operate Bisti Field facilities proposed in Docket No. G–15696, but only those facilities necessary to take up to 25,000 Mcf of natural gas per day from the Bisti Field area were authorized. However, Applicant has not undertaken the construction of certain of those facilities temporarily authorized and does not plan to do so. Availability of gas from a certain compressor station in the Bisti Field proved somewhat less than originally anticipated, thus permitting a reduction of some planned horsepower in that area. In addition, Applicant has been able to alter the operating conditions of a gasoline plant from those originally anticipated, thus enabling the acceptance into its transmission system all of the available Bisti Field gas without construction of a portion of the temporarily authorized facilities. As a result, Applicant presently seeks in this proceeding a certificate of public convenience and necessity for the construction and operation of only those facilities which it has undertaken to construct pursuant to the temporary certificates issued. They are as follows: (1) an addition of 1800 horsepower to Applicant's existing Chaco Compressor Station, together with the necessary standard appurtenances for the operation of same; (2) those necessary metering facilities; (3) those necessary general structures and equipment; and (4)

a gathering system consisting of approximately 120.9 miles of natural gas pipelines ranging in size from 4-½" through 16" in diameter and approximately 7,580 horsepower in field compressor units, all located in the Bisti Field area in San Juan County, New Mexico. Applicant has completed the construction of and is presently operating all of the above facilities.

The estimated total cost of the above-described facilities is $6,620,658 to be financed from current working funds or by making short term bank loans.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 9, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation with its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (c)(4) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-283

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1963)

On April 11, 1963, El Paso Natural Gas Company (Applicant), filed in Docket No. CP63-283 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing construction and operation of certain facilities and the sale and delivery of natural gas through those facilities to the Village of Corona and its environs in New Mexico. The facilities to be constructed and operated for the purpose just stated are a measuring and regulating station with appurtenances to be located at a point adjacent to Applicant's 30-inch pipeline at the suction side of its Lincoln Compressor Station in Lincoln County, New Mexico, on the Permian-San Juan Crossover Pipeline.

The Village of Corona proposes to construct a distribution system and a pipeline approximately 10 miles long of 2⅜ inch O.D. to connect with Applicant's facilities.

The estimated cost of Applicant's proposed facilities above referred to is $4,200, to be paid out of current working funds.

The estimated third year annual requirement is 19,520 Mcf of natural gas with a peak day volume of 134 Mcf, and the rates to be applied are those contained in Applicant's Rate Schedule A-2 and B-3, FPC Gas Tariff, Original Volume No. 1.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 9, 1963, respecting the matters involved in and the issues presented by the application herein. No protest to the granting of the application or petition in opposition to intervene have been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company is a natural gas company within the meaning of the Natural Gas Act as found by the Commission in its order of January 11, 1944 in Docket No. G-288 (4 FPC 486).

(2) The facilities hereinbefore described are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant and the proposed transportation, sale for resale of natural gas by Applicant to the Village of Corona are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities and the proposed transportation and sale of natural gas by Applicant to Village of Corona, New Mexico, for distribution and sale to the inhabitants thereof, are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned up Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act

and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities and to transport, and sell natural gas to Village of Corona, New Mexico, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(1), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the transportation and delivery of natural gas authorized in paragraph (A) above shall commence, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within 12 months from the date on which this order issues.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

EL PASO NATURAL GAS COMPANY, DOCKET NO. CP63-288

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1963)

On April 24, 1963, El Paso Natural Gas Company (Applicant) filed in Docket No. CP63-288 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a measuring and regulating station and the delivery of natural gas to Moon Lake Electric Association, Inc. (Moon Lake), at a point adjacent to Applicant's 26-inch O.D. Northwest Division mainline in Rio Blanco County, Colorado, all as more fully set forth in the application.

Applicant proposes to make a direct sale of natural gas on an interruptible basis to Moon Lake pursuant to a gas sales contract dated March 21, 1963. Moon Lake will use the gas in place of diesel fuel in its existing electric generating plant located near Rangely, Colorado. Moon Lake estimates that, by use of natural gas in lieu of diesel fuel, an initial yearly saving of approximately $30,720 (after giving effect to recovery of the investment in natural gas facilities over 5 years) will result and that savings in subsequent years will exceed $80,000 per year.

Applicant will sell gas to Moon Lake at a rate of 3.6 cents per therm. Moon Lake's estimated annual and peak day requirements for the third year are 1,816,276 Mcf and 5,238 Mcf (19,070,898 and 55,000 therms), respectively, at 14.73 psia.

The estimated cost of the proposed facilities is $9,350, which will be financed from current working funds.

737-370—66——28

Applicant received a temporary certificate on June 20, 1963, authorizing the construction and operation of the subject facilities and the delivery of natural gas to Moon Lake.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 11, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, El Paso Natural Gas Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 29, 1942, in Docket Nos. G–242 and G–257 (3 FPC 851).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, El Paso Natural Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The construction authorized by paragraph (A) above shall be completed and the facilities placed in actual operation within six months from the date on which this order issues.

Before Commissioners: Charles R. Ross, Acting Chairman, L. J. O'Connor, Jr. and Harold C. Woodward.

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E-7089

ORDER DENYING APPLICATIONS TO TAKE TESTIMONY BY DEPOSITION AND FOR THE ISSUANCE OF SUBPOENAS

(Issued July 23, 1963)

On July 16, 1963, Indiana & Michigan Electric Company (Indiana-Michigan) filed two applications. The first application requests an order for subpoenas ad testificandum to issue for taking the testimony, by deposition, of Joseph C. Swidler, Chairman of this Commission, Joseph H. Gutride, Commission Secretary, and Harold E. Miller, a Commission staff member. The application requests that the depositions be taken on July 24, 1963 or some other time prior to July 29, 1963. The reasons for the depositions and the subject matter of the requested examinations are set forth in the second application, titled Application for Subpoena Duces Tecum.

The Application for Subpoena Duces Tecum is in the nature of a blanket request for data relating to "the bases, criteria, expert opinion, studies and analyses" underlying the issuance of the Order to Show Cause initiating this proceeding. Particular documents are not requested, identified or specified. It is claimed that the requested data are necessary to prepare for hearing. But the relevancy or materiality of such material to the facts upon which the issue of Commission jurisdiction must be determined is not demonstrated.

To the extent Indiana-Michigan wants to examine staff witnesses who may appear in this case to testify as to material matters, it will have opportunity to do so at the trial. Commission members, however, may not be examined either by deposition or at the hearing. *U.S.* v. *Morgan*, 313 U.S. 409, 421 (1941). Data in the public files and records of the Commission are now and have been available to Indiana-Michigan. See Section 1.36, Commission's Rules of Practice and Procedure.

The particulars and matters inquired into by the Show Cause Order are tentative and for the purpose of framing the issues. What the staff will present at the hearing is for the examiner's initial consideration and thereafter for consideration by the Commission. Currently the staff has presented nothing.

It may be that in the course of the hearing the parties may request certain specified material. Whether such request will or will not be granted is of course a matter to be considered by the hearing examiner in the first instance. Section 1.27, Commission's Rules of Practice and Procedure.

In the present circumstances, the Applications for Subpoena and the requests for depositions should be denied.

The Commission orders:

(A) The application of Indiana-Michigan for issuance of a Subpoena Duces Tecum is denied.

(B) The application for subpoenas ad testificandum to take the testimony by deposition of Joseph C. Swidler, Joseph H. Gutride, and Harold E. Miller is denied.

Before Commissioners: Charles R. Ross, Acting Chairman, L. J. O'Connor, Jr., and Harold C. Woodward.

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E-7089

ORDER FOR PRODUCTION OF DATA PURSUANT TO SUBPOENA DUCES TECUM AND TO REQUIRE THE MAKING OF MINUTES AVAILABLE FOR EXAMINATION

(Issued July 23, 1963)*

By this order, the Commission upon its own motion directs its Secretary to issue forthwith a subpoena duces tecum directed to American Electric Power Company, Inc., American Electric Power Service Corporation, Indiana & Michigan Electric Company, Appalachian Power Company, Kingsport Utilities, Inc., Ohio Power Company, Kentucky Power Company, Wheeling Electric Company and the President of each of those Corporations, Mr. Donald C. Cook.

On April 16, 1963, 29 FPC 746, an order was entered in the above-entitled matter directing Indiana & Michigan Electric Company (Indiana-Michigan) to show cause, through written answer and orally at a public hearing, why the Commission should not find and determine that Indiana-Michigan is a public utility as that term is used in the Federal Power Act; that all of Indiana-Michigan's sales of electric energy at wholesale for resale are sales at wholesale in interstate commerce within the meaning of the Federal Power Act and the Commission's Regulations thereunder; that Indiana-Michigan, at least since January, 1961, has violated, and threatens to continue violating, the provisions of the Federal Power Act and the Commission's Regulations; and that Indiana-Michigan is required to file all rate schedules for its interstate wholesale electric services. That hearing is presently scheduled to commence July 29, 1963, at Washington, D.C., in a hearing room of the Commission.

Commission review of communications between its staff and counsel for Indiana-Michigan indicates that certain data requested by the staff in preparation for the forthcoming hearing in this matter will not be made available without an order of this Commission. The position of Indiana-Michigan is set forth in its Answer to the Commission's Order to Show Cause as filed May 6, 1963, its telegram dated July 2, 1963, and its letters dated July 8, 10 and 15, 1963. The data requested by the Commission's staff for dates in 1962 are identified in a letter of the Commission's Secretary dated June 28, 1963, addressed to counsel for Indiana-Michigan.

The Commission finds:

(1) American Electric Power Company, Inc., controls, directly and indirectly, the other corporations as set forth in the recital above, all within the meaning of Section 301 of the Federal Power Act.

(2) The data as specified hereinafter relating to transactions with and the business of Indiana-Michigan is within the custody of Indiana-Michigan or the other corporations as set forth in the recital above and are subject to examination upon order of the Commission.

(3) For purposes of the public hearing ordered in the above-entitled matter, the data as hereinafter specified is relevant and material to the issues herein raised.

(4) It is necessary and appropriate to carry out the provisions of the Federal Power Act, particularly Sections 201, 205, 206, 301, 307 and 309 thereof, that each of the aforementioned corporations and their President be required, pursuant to subpoena duces tecum, to produce the data as hereinafter specified.

*Motion to dismiss complaint granted, *Indiana & Michigan Electric Co.* v. *F.P.C.*, 224 F. Supp. 166 (1963)

The Commission orders:

(A) The Secretary of the Commission shall issue forthwith a subpoena duces tecum directed to the American Electric Power Company, Inc., the American Electric Power Service Corporation, Indiana & Michigan Electric Company, Appalachian Power Company, Kingsport Utilities, Inc., Ohio Power Company, Kentucky Power Company and Wheeling Electric Company, and to Donald C. Cook, President of aforesaid companies, to produce for inspection and copying before the Presiding Examiner of the Federal Power Commission, 441 G Street, Washington, D.C., on the 29th day of July, 1963, at 10 a.m. EDST or at such reasonable time thereafter as the presiding examiner shall then determine the following documents and records:

(a) The original source documents which include data for the following dates in 1962 on the following forms for American Electric Power Company, Inc.:

(i) Data:

Form	*Description*
C-60	AEP System Hourly Load and Generation Forecast
C-49	AEP System Plant Generation
C-57	AEP System Prescheduled Interconnection Transactions
C-58	AEP System Interconnection Schedules
C-39	AEP System Log of Generation Changes
C-29	AEP Economy Energy Transactions
C-59	AEP System Preliminary Load Data—MWH
C-66	Meter Error
C-35	AEP System Capacity Outages
C-12	AEP System Load and Capacity Forecast

If such data are not kept on the above-designated forms, but are otherwise recorded and retained, such data shall be furnished as otherwise recorded and retained.

(ii) Dates:

January 6, 8, 24	July 8, 10, 12, 14, 17, 30
February 6, 18	August 6, 13, 16, 19, 20, 30
March 19, 25, 26, 29	September 1, 10, 13, 22
April 8, 9, 16, 26, 30	October 13, 14, 20, 21, 25
May 1, 2, 5, 10, 14, 30	November 6, 16, 17, 19
June 2, 7, 11, 18, 20, 24, 27	December 5, 13, 29, 31

(b) The original source documents which include the data set forth in ordering paragraph (A)(a)(i) for the American Electric Power Company, Inc., for each and every day in the year 1963.

(c) The original source documents which include data on the following forms and sheets of Indiana-Michigan for each and every day in the year 1963:

Form	Sheet	Description
2357	37 A, 37 B	Generation—frequency—schedules.
2358	37 C, 37 D	Metered, delivered and received with interconnected companies.
2360	37 E	Interconnections with Ohio Valley Electric Company and Ohio Power Co.—Metered Transactions.
2361	37 F	Interconnecting with Northern Indiana Public Service Company.
2363	37 G	Interconnections with Commonwealth Edison Company.
2364	37 H	Interconnections with Cincinnati Gas & Electric Company.
2365	37 I	Interconnections with Public Service Company of Indiana.
	37 CC	Non-Scheduled Deliveries and Receipts.
S-53-D-558		Interconnection with Commonwealth Edison Company.
SCJ		AEP System Pool.

If such data are not kept on the above-designated forms, but are otherwise recorded and retained, such data shall be furnished as otherwise recorded and retained.

(d) The Indiana-Michigan System Hourly Summary Book and the System Account Book for each month in the year 1963.

(e) All interconnection agreements and agreements for the sale and/or exchange of electric energy between Indiana-Michigan and any other party or parties; and specifically but not in limitation of the foregoing, all contracts for the sale or exchange of electric energy and all rate schedules between Indiana-Michigan and the following purchasers of electric energy: the cities of Albion, Anderson, Auburn, Avilla, Bluffton, Columbia City, Fort Wayne, Frankton, Garrett, Gas City, Mishawaka, New Carlisle, Portland, Richmond and Warren, Indiana; and cities of Niles and Sturgis, Michigan; Allen-Wells County Rural Electric Membership Corporation, Fruit Belt Electric Cooperative, Huntington County REMC, Jay County REMC, Nobel County REMC, Paulding-Putnam Electric Cooperative, Inc., Wayne County REMC, and Whitley County REMC.

(B) American Electric Power Company, Inc., American Electric Power Service Corporation, Indiana & Michigan Electric Company, Appalachian Power Company, Kingsport Utilities, Inc., Ohio Power Company, Kentucky Power Company and Wheeling Electric Company, shall make available at the offices where they are kept in the ordinary course of business the minute books for the meetings of the Boards of Directors and Executive Committees held during the years 1953 to and including 1963 for examination by the Commission's staff on a date to be fixed by the presiding examiner.

(C) Upon production of the foregoing documents the hearing in the above-entitled matter shall be continued for a reasonable time to be determined by the presiding examiner to afford the staff time within which to study said documents, books and records and make necessary copies.

(D) This order is without prejudice to the issuance of any further orders for the production of other data relevant or material to the inquiry in the above-entitled matter.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

MICHIGAN GAS STORAGE COMPANY, DOCKET NO. CP63-287

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 23, 1963)

On April 22, 1963, Michigan Gas Storage Company (Applicant) filed in Docket No. CP63-287 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 10,500 horsepower of compressor capacity by the installation of one gas turbine-driven centrifugal compressor at Applicant's Muskegon River Compressor Station in Clare County, Michigan, all as more fully set forth in the application.

The application states that Consumers Power Company (Consumers), which is Applicant's sole customer, has requested greater amounts of gas earlier in the heating season and peak deliverability until March 15th. This combination results in relatively low storage field pressures while still requiring peak deliverability. In order to maintain the peak day deliverability through March 15th, Applicant proposes to install the additional compressor.

The estimated cost of the proposed facilities is $2,000,000, which will be financed from bank loans and funds on hand.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 10, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff Counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Michigan Gas Storage Company, a Michigan corporation having its principal place of business in Jackson, Michigan, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of December 3, 1946, in Docket No. G–731 (5 FPC 965).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by Staff Counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Michigan Gas Storage Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The construction authorized in paragraph (A) above shall be completed and the facilities placed in actual operation within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NOS. G–18148, G–18149, AND RP60–5

ORDER GRANTING MOTION TO TERMINATE REFUND OBLIGATION

(Issued July 23, 1963)

On May 21, 1963, Natural Gas Pipeline Company of America (Natural) filed a "Motion for Order That Contingent Refund Condition Has Been Satisfied," seeking to terminate the contingent refund condition in Paragraph (E), (III) of the Commission order issued November 24, 1961, in the above-entitled proceedings.

The Commission order issued November 24, 1961 conditionally approved a settlement in the above-captioned proceedings. One of the conditions in that order, as set forth in paragraph (E), (III), provides that final determination of the overall rate of return in these dockets would be made on the basis of the rate of return on Natural's equity and the "overall rate of return" which would be determined in the pending proceeding, Docket No. RP61–8, relating to a further increase in rates proposed by Natural.

By Commission order issued October 25, 1962, 28 FPC 731, approving a settlement agreement, Docket No. RP61–8 was terminated except as to certain issues which are not here pertinent. However, neither the "overall rate of return" nor the "rate of return on Natural's equity" was specifically determined in that proceeding.

Natural states that since the refunds under return Paragraph (E), (III) relate the above-captioned dockets to Docket No. RP61–8 and since, neither the settlement agreement nor the order in that docket sets forth an "overall rate of return" or a "rate of return upon Natural's equity," the condition precedent to effectuating ordering Paragraph (E), (III) of the order of November 24, 1961 aforementioned has not been and cannot be met. Consequently Natural filed the motion aforesaid to terminate its obligation to make the refunds required under Paragraph (E), (III) of said order.

Natural in support of its motion filed studies purporting to show that the actual rate of return for calendar year 1960 was not inconsistent with reasonable Commission standards and precedent in similar cases. The Commission staff has reviewed the studies and other data relating to Natural. Based on that review no further refunds under the provisions of Paragraph (E), (III) of the order of November 24, 1961 are indicated.

Each of Natural's customers and the interveners has agreed in writing (Exhibit I of Natural's motion) that no further refunds under the aforementioned paragraphs of the order aforesaid are indicated and they concur in Natural's motion.

The Commission finds:

Good cause exists for terminating Natural's obligations under ordering Paragraph (E), (III) of the Commission's order of November 24, 1961.

The Commission orders:

Natural's obligations under Paragraph (E), (III) of the Commission's order of November 24, 1961 are hereby terminated.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

THE NORTHEAST OKLAHOMA GAS AUTHORITY AND THE GROVE MUNICIPAL SERVICES AUTHORITY, DOCKET NO. CP63-249

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 23, 1963)

On March 8, 1963, The Northeast Oklahoma Gas Authority and The Grove Municipal Services Authority (sometimes hereinafter referred to jointly as Applicants) filed in Docket No. CP63-249 a joint application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Cities Service) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicants for resale and distribution in the communities of Afton, Fairland and Grove, Oklahoma, all as more fully set forth in the joint application.

Applicants propose to take deliveries of gas from Cities Service for all three communities at one point of interconnection and to transport the gas to the city gates by means of 29.5 miles of 6-inch, 3.5 miles of 4-inch and 3.5 miles of 3-inch proposed lateral pipelines. Applicants will also construct and operate necessary distribution facilities.

Applicants' estimated third year peak day and annual requirements for the three communities are 2,967 Mcf and 180,885 Mcf, respectively.

The application shows the total estimated cost of the proposed project to be $1,161,000, which cost will be financed by a grant in aid from the Housing and Home Finance Agency, under the Public Works Acceleration Act, and by the issuance of First Mortgage Revenue Bonds.

On March 28, 1963, Cities Services filed an answer to the subject application stating therein that it does not object to the granting of the requested order.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 15, 1963 (28 F.R. 6201). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of December 28, 1943, in Docket No. G-298 (4 FPC 471).

(2) Applicants, The Northeast Oklahoma Gas Authority and The Grove Municipal Services Authority, are public trusts duly organized and existing under the laws of the State of Oklahoma and authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Cities Service be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicants, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicants should be prepared to receive natural gas from Cities Service within one year from the date of issuance of this order, and, further, Applicants should execute a service agreement with Cities Service in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Cities Service serve Applicants, as proposed, will not place any undue burden upon Cities Service nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Cities Service Gas Company be and is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicants and to sell and deliver up to 2,967 Mcf of natural gas per day to Applicants, all as hereinbefore described and as more fully set forth in the application.

(B) Applicants shall be prepared to receive natural gas from Cities Service within one year from the date of issuance of this order, and, further, Applicants shall execute a service agreement with Cities Service in accordance with the Commission's Regulations under the Natural Gas Act.

(C) Cities Service shall report to the Commission in writing the date of commencement of service to Applicants within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

UNITED STATES DEPARTMENT OF THE INTERIOR, SOUTHEASTERN POWER ADMINISTRATION, OLD HICKORY AND CHEATHAM PROJECTS, DOCKET NO. E-6999

ORDER CONFIRMING AND APPROVING RATES AND CHARGES

(Issued July 23, 1963)

The Secretary of the Interior (Interior) acting on behalf of the Southeastern Power Administration (SEPA), on April 23, 1963, pursuant to the provisions of the Flood Control Act of 1944 (58 Stat. 887) filed a request for an extension of the Commission's confirmation and approval of Wholesale Power Rate Schedule OHC–1 for a five year period beginning July 1, 1963 and ending June 30, 1968. Wholesale Power Rate Schedule OHC–1 applies to the wholesale sale by SEPA to the Tennessee Valley Authority (TVA) of electric power and energy generated at the Old Hickory and Cheatham Projects.

By order issued December 19, 1961, 26 FPC 889, the Commission confirmed and approved Wholesale Power Rate Schedule OHC–1 for a period ending June 30, 1963 which is the date for the first five-year periodic review of the rates set forth in the agreement between SEPA and TVA.

The Old Hickory and Cheatham Projects are navigation-power projects constructed on the Cumberland River in Tennessee by the Corps of Engineers, Department of the Army. There are four 25,000-kilowatt generating units at the Old Hickory Project and three 12,000-kilowatt generating units at the Cheatham Project. The hydraulic and power operations of these two projects are coordinated and such projects were treated as a unit by the Corps of Engineers for the purpose of making the allocation of costs to navigation and power. Furthermore, the Old Hickory and Cheatham Projects are treated as a unit by SEPA in the marketing of the power output of these projects.

Wholesale Power Rate Schedule of OHC–1, for which the Commission's approval has been requested for a five-year period beginning July 1, 1963, is identical to Schedule OHC–1 approved by the Commission for the period ending June 30, 1963. The schedule applies to the total power and energy generated at the Old Hickory and Cheatham projects less the power and energy required by the Department of the Army for operation of the projects. The rates and charges in Rate Schedule OHC–1 are those contained in a long-term agreement between SEPA and TVA executed May 12, 1958. Annual charges to TVA would range

from $2,100,000 to $2,700,000, depending upon the available streamflow, and would average about $2,400,000.

The initial investment of the projects to be repaid by power revenues was developed by SEPA using cost data furnished by the Corps of Engineers. In making this cost allocation SEPA used the separable costs-remaining benefits method and a 2.5% rate of interest. Only the specific costs of Cheatham were allocated to power, whereas 44.65 percent of Old Hickory construction costs of joint-use facilities, in addition to all specific power costs, were allocated to power. A cost allocation, dated May 1961, made by the Corps of Engineers is in close agreement with that made by SEPA. The Corps' report shows 44.52 percent rather than 44.65 percent of Old Hickory joint-use construction costs allocated to power. The general procedures agreed to by the Interagency Staff Working Group on Financial Practices and Cost Allocation at the Washington level were followed by SEPA in preparing its allocation of costs.

A revised repayment study has been submitted by Interior with the current request for approval of Rate Schedule OHC–1. This study shows annual estimated operation and maintenance expenses of the Corps of Engineers, allocated to power, to be $470,000 and SEPA marketing expenses to be $30,000, whereas the study submitted by SEPA in 1961 gave the sum of these two items as $400,000. Interest on the capital investment, computed at a rate of 2.5%, is reduced by an annual credit of $22,000, which is the saving in interest resulting from revenues received monthly rather than annually. According to the repayment study the capital investment would be amortized in the forty-fourth year of full commercial operation.

The total initial capital investment allocated to power, as shown in SEPA's current repayment study, is $51,213,198. Of this amount, it was estimated that facilities costing $41,560,198 had service lives of 50 years or more, and that capital replacements would be required as follows: $27,800 each 15 years, $2,263,600 in 25 years, $973,700 in 30 years, and $6,387,900 in 40 years. These estimates are based upon a replacement cost study made jointly by SEPA and the South Atlantic Division Office of the Corps of Engineers. The shorter-lived replacement items are principally for accessory electric equipment, miscellaneous power plant equipment, and transmission plant. The assumed replacements in the 40th year cover turbine and generator equipment items. The amounts estimated for replacement costs appear reasonable.

Studies made by the Commission staff indicate that annual revenues of $2,400,000 from the rates and charges in Wholesale Power Rate Schedule OHC–1 will be sufficient to pay all production and marketing expenses, including interest charges on investment allocated to power, amortization of the initial power investment in about 44 years from the beginning of full commercial operation of the projects, and amortization of capital replacement costs over the service lives of the facilities replaced.

Written notice of the request for approval of Wholesale Power Rate Schedule OHC–1 was given to the Public Service Commission of Tennessee and to the Governor of that State and to other interested parties. Notice of the aforementioned request was also published in the Federal Register on May 18, 1963 (28 F.R. 5037), stating that any person desiring to make comments or suggestions for Commission consideration with respect to the proposed rate schedule should submit the same in writing on or before June 1, 1963 to the Federal Power Commission, Washington 25, D.C. No comments or suggestions have been received.

The Commission finds:

The proposed rates and charges for the wholesale sale by SEPA to TVA of electric power and energy from the Old Hickory and Cheatham Projects, as set

forth in Wholesale Power Rate Schedule OHC–1, all as described above, for a period beginning July 1, 1963, and ending June 30, 1968, will not be inconsistent with the provisions of the Food Control Act of 1944.

The Commission orders:

The proposed rates and charges for the wholesale sale by SEPA to TVA of electric power and energy from the Old Hickory and Cheatham Projects, as set forth in Wholesale Power Rate Schedule OHC–1, all as described above, are hereby confirmed and approved for a period beginning July 1, 1963 and ending June 30, 1968.

Chairman Swidler did *not participate* in either the consideration or decision in this matter.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

AREA RATE PROCEEDING, ET AL., DOCKET NO. AR61–2, ET AL.

ORDER DENYING MOTIONS FOR RECONSIDERATION

(Issued July 24, 1963)

Sohio Petroleum Company (Sohio), Sun Oil Company (Sun), Pan American Petroleum Company (Pan Am), Hassie Hunt Trust, *et al.* (Hunt), and Gulf Oil Corporation (Gulf) [1] and Cities Service Oil Company, *et al.* (Cities Serice) [2] have tendered for filing on June 14, June 14, June 25, June 13, July 8, and July 22, 1963, respectively, motions for reconsideration [3] of the Commission's order of May 16, 1963, 29 FPC 981, which, among other things, established a schedule of hearing and prehearing procedures.

The motions seek clarification with respect to a statement in the aforementioned order that individual company cost presentations would not be permitted in these proceedings, contending that the order is contrary to the Natural Gas Act, the Commission's Rules and Regulations, the Administrative Procedure Act, and the Fifth Amendment to the Constitution. They request certain other changes as hereinafter set forth.

Certain of the movants refer to the language in the order of May 16, 1963, concerning individual company cost presentations, and inquire whether they will thereby be denied the opportunity after the issuance of any final order but prior to the effectiveness of such order, to demonstrate by a separate showing the justness and reasonableness of their rates. These movants suggest that by the order complained of the Commission has overruled its action taken in the proceedings in Docket No. AR61–1, *et al.*, in deferring a ruling on motions urging the adoption of a "savings clause."

Sun seeks rehearing of the order insofar as it deals with group presentations and limitations on cross-examination and further contends that the order does not provide adequate time for the preparation and submission of rebuttal evidence.[4]

---

[1] Gulf adopts Pan Am's reasons, arguments and contentions insofar as they relate to that part of the order concerning individual company cost presentations.

[2] Cities Services joins in and adopts Pan Am's motions.

[3] The motions are styled variously as motions for "reconsideration", for "rehearing", and for "clarification." In view of the fact that the May 16, 1963, order was not a final order no application for rehearing will lie under Section 1.34 of the Rules of Practice and Procedure. However, the motions will be accepted as motions for reconsideration.

[4] Sun also raises an issue concerning the exclusion of individual company cost presentations in certificate proceedings. However, Sun's certificate proceedings previously consolidated herewith have been severed and consolidated with the proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*

Hunt questions the legality of the area pricing method and claims that the procedure denies it the right to sustain the burden of proof imposed by Section 4 of the Natural Gas Act through individual cost showings.

In the *Phillips* case[5], the Commission determined that individual company costs do not form an appropriate basis for fixing producer rates and that the area basis should be used. The Commission has reiterated on numerous occasions that individual company cost evidence would not be acceptable in these proceedings for the purpose of fixing the proper area price or prices. The movants have failed to demonstrate the invalidity of the area approach or to show why the Commission should now deviate from this course.

In the *Permian* case, Docket No. AR61–1, *et al.*, the Commission has deferred ruling on the inclusion of so-called "savings clauses", since any action taken prior to a final decision in the proceedings necessarily would be premature. Similarly, in the instant proceedings, it is obvious that, prior to the time the Commission has before it the entire record, it would not be in a position to determine the appropriateness of a savings clause. Consequently, we will deny the motions in this regard without prejudice to future consideration by the Commission.

The movants also urge that the alleged limitation on full participation, particularly with regard to the suggested grouping of parties, denies the movants a full hearing as contemplated by the Natural Gas Act and the Administrative Procedure Act. The order embodies no mandatory limitation but is a direction to the presiding examiner and the parties that common interests should be grouped to the extent feasible and the number of attorneys permitted to cross-examine on any issue would be limited "where appropriate to do so and without derogation of the rights of any parties." The limitation is permissive rather than mandatory and the handling of such matters is left to the discretion of the presiding examiner consistent with the general directions contained in the order.

Sun and Hunt claim that the time allowed for the preparation of rebuttal is insufficient. After examining the direct presentations which will be placed in the record on December 3, 1963, the parties, interveners, and staff should be in a position to determine the nature and extent of any rebuttal which is required by such presentations and the two and one-half month period allowed should be ample time for the preparation of such rebuttal. However, if cross-examination develops the need for further rebuttal, the presiding examiner may entertain requests for permission to introduce further evidence in accordance with the subject order where there is a showing that "such evidence was not available at the times set for the introduction of direct and rebuttal evidence and there is a clear and convincing demonstration that the additional evidence would make a material contribution to the record upon which the case is to be decided." (Page 982 of the order.)

With regard to Hunt's contention that it has the right to open and close, it should be pointed out that, as was indicated in the order instituting the proceedings, issued May 10, 1961, 25 FPC 942, the proceedings are brought under other sections of the Act, including Sections 5 and 14, as well as under Section 4. Thus, in addition to encompassing rate increase proceedings, these proceedings include proceedings to fix rates under Section 5 as well as an investigation by the Commission under Section 14. Under these circumstances, the provisions of Section 1.20 of the Commission's Rules of Practice and Procedure relative to opening and closing "in hearings upon suspended rates" are inapplicable and

[5] Opinion No. 338, *Phillips Petroleum Company*, Docket No. G–1148, *et al.*, issued September 28, 1960, 24 FPC 537.

it is appropriate to permit the presiding examiner to determine the order of procedure within the guidelines set by the order of May 16, 1963.

The subject motions set forth no new facts or questions of law which were not considered by the Commission in issuing the order of May 16, 1963, or which, having been considered, require any modification of the order of May 16, 1963, except as hereinafter ordered.

The Commission finds:

(1) The motions filed by Sun, Pan Am, Gulf, and Cities Service for reconsideration of the Commission's order of May 16, 1963, should be denied.

(2) The motions filed by Sohio and Hunt for reconsideration of the Commission's order of May 16, 1963, should be denied except insofar as they request the amendment of the order to include a savings clause, as to which the motions are denied without prejudice to future consideration by the Commission.

The Commission orders:

(A) The motions filed by Sun, Pan Am, Gulf, and Cities Service for reconsideration of the Commission's order of May 16, 1963, are hereby denied.

(B) The motions filed by Sohio and Hunt for reconsideration of the Commission's order of May 16, 1963, are hereby denied except insofar as they request the amendment of the order to include a savings clause as to which the motions are denied without prejudice to future consideration by the Commission.

ORDER DENYING MOTIONS TO REJECT, CANCEL, AND DISMISS RATE FILINGS

(Issued July 24, 1963)*

The United Gas Improvement Company (UGI) on May 20, 21, 23, and 31, 1963, filed motions to reject, cancel and dismiss the rate filings in each of the above-designated rate suspension proceedings.[1] Philadelphia Electric Company and

*Rehearing granted for purposes of reconsideration, 30 FPC 647. See 30 FPC 1316 and 31 FPC 15. Order issued February 10, 1960, in G-17613, *et al.*, reopening proceedings for further consideration, 31 FPC 402.

[1] All of the proceedings involved herein are consolidated with the South Louisiana Area Rate Proceeding in Docket No. AR61-2.

Long Island Lighting Company have filed separate motions in support of UGI's motions in all of these proceedings. Answers to UGI motions have been filed by many of the respondents herein. All of these suspension proceedings involve increased rates for sales by producers to Transcontinental Gas Pipe Line Corporation (Transco), which are, or at the time of filing were, based on favored-nation provisions in their respective gas sales contracts.

In support of its motions, UGI cites Opinion No. 382, in *Shell Oil Company, et al.*, Docket No. RI61–515, issued March 15, 1963, 29 FPC 498, where it is stated:

> Any producer filing for an increase under a favored-nation clause of necessity has two hurdles to overcome in ultimately justifying the rate increase. First, his increase is dependent upon the validity of the rate which triggered his favored-nation clause. If the triggering rate is later found to be invalid or unreasonable in whole or in part, then any rate filing based on such triggering rate is without contractual justification to the extent the triggering rate is reduced. * * * [p. 504.]

UGI states that the favored-nation increases involved here were allegedly triggered by sales from Oil Participations Inc. (Oil Participations)[2] and Pan American Petroleum Corporation (Pan American) to Transco. UGI also states that the sale by Oil Participations has been found to be invalid,[3] and that the sale by Pan American has never been permanently certificated.[4] UGI claims that the alleged triggering rates represent a price line which is not in the public interest. UGI thus argues that the triggering rates are not valid rates, and therefore could not trigger the instant increases.

The underlying legal question raised by UGI as to the status of a triggered rate when the triggering rate has been found to be out-of-line in a Section 7 certificate case or unreasonably high in a proceeding under Section 4 or 5, is an interesting one, not previously resolved.[5] But we do not think the problem is factually presented here. For even if we assume that the Oil Participations' initial rate filing, having been the subject of a court remand, was always suspect and that the lower settlement figure was the only firm rate which would properly form the basis for triggering the sales here in issue, the same cannot be said for the Pan-American sale. Here an unconditioned temporary was granted at 23.55 cents, and while any triggering based thereon was, under the contracts in issue, subject to termination if the rate was cut back after the

[2] Now Austral Oil Company, Inc.

[3] The sale by Oil Participations was permanently certificated in Docket No. G–14164, by order issued July 30, 1962, 28 FPC 247, in Texaco Inc., *et al.*, Docket No. G–13169, *et al.*, which disposed of a number of certificate proceedings, including Docket No. G–14164. In accordance with the settlement proposal submitted there, a reduced rate of 20.625¢ per Mcf was made effective as of July 1, 1962, for the sale by Oil Participations. In addition, Oil Participations was required to refund two-thirds of the difference between the charges it had collected and those it would have collected at the settlement price. The Commission's original certification of this sale (20 FPC 264) was remanded by The United States Court of Appeals for the Third Circuit, upon direction of the United States Supreme Court (361 U.S. 195), "for reconsideration and redetermination in the light of *Atlantic Refining Company, et al.* v. *Public Service Commission of New York, et al.*, 360 U.S. 378.)"

[4] The sale by Pan American has been temporarily authorized in Docket No. G–16946 and has been consolidated for hearing with the proceedings in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, by order issued December 31, 1962.

[5] As UGI points out, in the original Opinion No. 382 in *Shell* we indicated that if the triggering rate was later found to be "unreasonable in whole or part, then any rate filing based on such triggering rate is without contractual justification." But as we subsequently pointed out on rehearing in Opinon 382A, this language was merely dictum since the holding in *Shell* was grounded on the fact that there was no contractual basis for the triggering rate, not that it was unreasonable.

Section 7 proceeding (or after a Section 4 or 5 proceeding),[6] there is no basis in the producers' contracts for precluding them from filing for the rate received by Pan-American at least during the time the temporary is in effect.[7] Moreover, as a number of the producers have pointed out their triggering rights under their contracts are not dependent upon the two sales mentioned in Transco's letter, and there in fact are other sales being made at 23.55¢ to Transco under Herbert Hunt Trust Estate FPC Gas Rate Schedule No. 3 and Wm. Herbert Hunt Trust Estate FPC Gas Rate Schedule No. 5, effective as of December 28, 1958, without obligation to refund.[8]

The Commission finds:

For the foregoing reasons, the motions filed by UGI in the above-designated proceedings should be denied.

The Commission orders:

The motions filed by UGI in the above-designated proceedings are hereby denied.

Commissioner Ross *dissenting* on the grounds consistent with the separate concurring statement by Commissioner Morgan, in which he joined, accompanying Opinion No. 382, issued March 15, 1963, in Shell Oil Company, *et al.*, Docket No. RI61–515, 29 FPC 498, 506.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

CITY OF OTTUMWA, IOWA, PROJECT NO. 925

ORDER FURTHER AMENDING LICENSE

(Issued July 24, 1963)

Application was filed on May 31, 1963 by City of Ottumwa, Iowa, licensee for Project No. 925, for amendment of Article 20 of its license for the project so as to include the administrative annual charge formula set forth in the Commission's Order No. 205 issued June 6, 1958 in Docket No. R–129 (19 FPC 907) pertaining to State and municipal licensees, apply to Project No. 925.

The administrative annual charge as presently fixed under Article 20 of the license is based upon the authorized power capacity of the project, in accordance with Regulation 14 of the Commission's rules and regulations in effect when the license was issued. Under the new administrative annual charge formula, the assessment of annual charges is based upon the actual costs of administering Part I of the Federal Power Act.

---

[6] Of course, where, as here, the triggering clauses expressly provide that the higher rate will remain in effect only as long as the purchaser pays the higher rate to another producer in the area, a rate reduction would be called for where the triggering rate or rates are cut back for any reason, even assuming that the higher rate could be collected in the interim.

[7] The Pan-American temporary was issued in 1958 prior to the establishment of our guideline prices which now preclude granting temporaries at rates high enough to involve triggerng. Moreover, where increased rate filings are made at a rate level which would result in triggering, we have set the case for immediate hearing in an effort, so far successful, to preclude any such triggering effect.

[8] In addition, renegotiated increased rates of 23.55¢ are being collected, subject to refund, by producers for sales to Transco from the area involved here in Docket Nos. G–17726, G–17727, G–17740 and G–17936, among others.

The Commission finds:

(1) The license further amended as hereinafter provided is in the public interest.

(2) The installed horsepower capacity of the project for the purpose of computing the capacity component of the annual charge is 4,200 horsepower, and the annual charge for reimbursing the United States for the costs of administration of Part I of the Federal Power Act, based on such capacity, is reasonable.

The Commission orders:

(A) The license for Project No. 925, as amended, is hereby further amended, effective as of January 1, 1963, by changing Article 20 thereof to read as follows: For the purpose of reimbursing the United States for the costs of administration of Part I of the Act, a reasonable annual charge in accordance with the provisions of Part 11 of the Commission's regulations. The authorized installed capacity for such purposes is 4,200 horsepower.

(B) This amendment in the manner set out above shall not operate to alter or amend the license in any other respect, and shall not in any way constitute a waiver of any other part, provision or condition of the license.

(C) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license amendment. In acknowledgement of the acceptance of this license amendment, it shall be signed for the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

TEXAS GAS PIPE LINE CORPORATION, DOCKET NOS. G–20073 AND G–20315

ORDER APPROVING SETTLEMENT AGREEMENT AND TERMINATING PROCEEDINGS

(Issued July 24, 1963)

On June 14, 1963, Texas Gas Pipe Line Corporation (Pipe Line) filed a proposed "Settlement Agreement" in the above dockets together with a motion requesting approval of that settlement and termination of the proceedings in conformity therewith. These dockets originated from proposed increases in rates and charges tendered for filing by Pipe Line on October 12, 1959 and November 13, 1959 respectively. Under those filings, Pipe Line proposed increases in rates and charges to Transcontinental Gas Pipe Line Corporation (Transco) of approximately $940,000 annually based on sales of 18,420,773 Mcf. The increased rates became effective subject to refund, on November 12, 1959 and on March 22, 1960, respectively.

Union Texas Petroleum, a Division of Allied Chemical Corporation (Union Texas), in December of 1962, acquired the assets of Texas Gas Corporation (Corporation), parent of Pipe Line.[1] Pipe Line operates approximately 15.7 miles of 12" pipeline extending from a connection with its parent, Union Texas, to its delivery point in Cameron Parish, Louisiana, to Transco, its sole purchaser. Pipe Line has contracted with a number of producers for purchase of gas which is dedicated to the sale to Transco. Union Texas will continue to perform the services of gathering, transporting, and processing natural gas which were per-

[1] See order issued June 14, 1963, in *Union Texas*, Docket No. G–2935, *et al.*

formed originally by Corporation for Pipe Line. These transactions are covered by a Gathering Agreement which is on file as Union Texas' FPC Gas Rate Schedule No. 70.

The aforementioned "Settlement Agreement" was concluded after field investigation by the Commission Staff and several conferences attended by the parties and the Commission Staff. The settlement agreement reduces Pipe Line's rates by 1.58¢ per Mcf, amounting to $227,505 [2] annually, effective as of June 1, 1963. Based upon sales volumes used in the settlement cost of service, Transco will pay 20.54¢ per Mcf for future purchases of gas. As refunds are made by the producers of gas, this rate will be further reduced.

The Settlement Agreement provides, *inter alia*, for a two-part rate, effective as of June 1, 1963, (at 15.025 psia) of a Demand Charge of 80¢ per month per Mcf and a commodity charge of 17.2¢ per Mcf of gas delivered.[3] Pipe Line and Transco will execute a new service agreement providing for a daily contract quantity of 50,000 Mcf and a minimum monthly bill based upon 75% use of the daily contract quantity with a 12-month make-up period. Pipe Line will pass on to Transco any refunds it receives from its current suppliers and file reductions in the commodity charge of its rate under conditions provided in the agreement. Pipe Line agrees not to file for any increase in rate to become effective prior to December 1, 1964, except if increased rates by suppliers are equivalent to 0.1¢ per Mcf.

Pipe Line and Union Texas will amend their Gathering Agreement—

(a) To reduce the currently effective gathering charge from 3.3¢ per Mcf to 2.5¢ per Mcf on the first 14,800,000 Mcf delivered at 14.65 psia, and 1.25¢ per Mcf for any additional deliveries;

(b) To change the reimbursement to Pipe Line for shrinkage and fuel loss due to processing operations from a volumetric basis to a BTU reduction basis;

(c) To provide for a yearly minimum annual bill based up on 75% use of the daily delivery obligation.

On June 24, 1963, Philadelphia Electric Company, by telegram, submitted certain comments in regard to the settlement: [4] Philadelphia Electric notes that (1) although the gas involved is produced in Texas, the proposed settlement rate is higher than the South Louisiana "in line" price for new gas; (2) the transportation charge by Texas Gas Corporation (now Union Texas) is unwarrantedly high; (3) the issue of whether the gas is of pipeline quality is unresolved; and (4) no valid reason is indicated why the settlement fails to provide for refunds.

With reference to those comments, the documents before us indicate: (1) the proposed settlement rates are based on a cost of service which has been investigated by Commission Staff, adjusted and finally agreed upon by Pipe Line, Staff and the parties hereto; (2) the transportation charge includes transporting, gathering and processing services by the parent and is consistent with Commission precedent in comparable cases; (3) it has been pointed out that the gas is of "pipeline quality" after processing and that Pipe Line receives compensation for BTU reductions in the purchased gas which Pipe Line passes on to Transco for the benefit of its customers; (4) although Pipe Line did collect a small amount of excess revenues during the locked-in periods, Pipe Line,

[2] This is based on annual sales by Pipe Line of 14,400,000 Mcf. If sales are increased to 18,420,773 Mcf as indicated by Pipe Line in Docket No. G–20315, the savings to Transco will amount to approximately $425,000 annually.

[3] That two-part rate equates to a rate of 20.54¢ per Mcf at 79% load factor. However, if Transco should purchase gas at 100% load factor from Pipe Line, this rate would be 19.8¢ per Mcf.

[4] That telegram does not comply with the requirements for an answer to the motion pursuant to the Commission's Rules nor was it served upon any party to the proceedings.

Staff and the parties deemed a further reduction in the prospective rate in lieu of the small refunds as more desirable. This was reflected in the ultimately agreed upon rate. Transco will pass the reduction in rates to its customers pursuant to the settlement agreement approved by Commission order issued February 2, 1962, in Docket No. RP61–13, 27 FPC 187.

The proposed "Settlement Agreement" is attached hereto [omitted in printing] as Exhibit I, and is made a part hereof. Upon review of that agreement and the data submitted in support thereto, we are of the view that the settlement of these proceedings is in the public interest.

The Commission finds:

(1) The proposed settlement of these proceedings upon the basis set forth in the aforementioned agreement is reasonable, proper, and in the public interest in carrying out the provisions of the Natural Gas Act and should be approved and made effective, subject to the terms and conditions hereinafter provided and ordered.

(2) The Commission's Regulations, particularly Part 154 thereof (18 CFR, Part 154), should be waived to the extent necessary to permit the tariff sheets and service agreement to be filed as hereinafter required to become effective on June 1, 1963.

(3) Good cause exists for terminating these proceedings subject to the conditions hereinafter specified.

The Commission orders:

(A) The settlement of these proceedings upon the basis of the Settlement Agreement (Exhibit I hereto), filed by Pipe Line on June 14, 1963, is approved and made effective, subject to the terms and conditions hereinafter ordered.

(B) Within thirty (30) days from date of issuance of this order, Pipe Line shall file, subject to the approval of the Commission, (1) revised tariff sheets embodying the rates and provisions contained in the Settlement Agreement; and (2) a new service agreement executed between it and Transco in compliance with the implementation of Article 2 of the Settlement Agreement.

(C) Within thirty (30) days from date of issuance of this order, Pipe Line and Union Texas shall amend their Gathering Agreement on file as Union Texas' FPC Gas Rate Schedule No. 70, in accordance with Article 5 of the Settlement Agreement and Pipe Line shall cause such amendment to be filed, subject to approval by the Commission.

(D) Upon acceptance by the Commission and notice to that effect from the Secretary, the tariff sheets, the Service Agreement and the Gathering Agreement referred to above, shall become effective as of June 1, 1963, and the requirements of the Commission's Regulations under the Natural Gas Act, particularly Part 154 thereof (18 CFR, Part 154), are hereby waived for that purpose.

(E) Within fifteen (15) days of receiving refunds from its producer suppliers listed in the Settlement Agreement, Pipe Line shall, in compliance with Article 3 of that Settlement Agreement, make such refunds, including interest received, and report to the Commission, in writing, and under oath, the amount of the refund made to Transco.

(F) Pipe Line shall reduce the commodity component of its DGS–1 rate as contained in the settlement to reflect rate filings by its producer-suppliers resulting in reduction of cost of gas to Pipe Line equivalent to at least one-tenth (1/10th) of one (1) cent per Mcf of sales to Transco.

(G) Subject to the provisions of paragraphs (E) and (F) above, and upon full compliance with paragraphs (B) and (C) above and all of the terms and conditions of this order, and acceptance by the Commission of the filings made pursuant hereto, these proceedings shall be deemed to be terminated.

(H) This order is without prejudice to any findings or orders which have been or may hereafter be made by the Commission Staff, and is without prejudice to any claims or contentions which may be made by the Commission, Pipe Line, or any affected party herein in any proceeding now pending or hereafter instituted by or against Pipe Line or any other company or person.

WILLIAM F. JOHNSON AND MADGE G. JOHNSON, AND CHARLES C., CAROLE L. AND CLYDE G. BALDOSSER, PROJECT NO. 433

ORDER APPROVING TRANSFER OF LICENSE (MINOR)

(Issued July 25, 1963)

Joint application was filed on May 3, 1963 by William F. Johnson and Madge G. Johnson, licensees for minor Project No. 433, and Charles C., Carole L. and Clyde G. Baldosser, of Covina, California, for Commission approval of transfer of the license for the project from the former to the latter.

Project No. 433 is located on North Fork of Rush Creek, a tributary to Silver Lake, in Mono County, California, and affects lands of the United States within the Inyo National Forest. The project consists of a concrete diversion dam, an 8-inch diameter steel pipeline 1,578 feet long, and a frame powerhouse having an installed capacity of 67 horsepower.

The outstanding license for the project was issued to the licensees on April 2, 1957, 17 FPC 484, for a period of 10 years effective as of June 14, 1954. Annual charges specified in the license, in the amount of $10.64, have been paid through the calendar year 1962.

According to the certified copy of the Bill of Sale which was filed as part of the joint application, the project properties were sold to the proposed transferees of the license on April 1, 1963.

The Commission finds:

(1) The proposed transferees are citizens of the United States, and have submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary for the operation of the project.

(2) Commission approval of transfer of the license to the proposed transferees will not be inconsistent with the public interest.

The Commission orders:

(A) The transfer of the license for Project No. 433 to Charles C., Carole L. and Clyde G. Baldosser is hereby approved, effective as of April 1, 1963, subject to the provisions of Section 9.3 of the Commission's Regulations and the Federal Power Act; provided that the transferees shall be subject to the conditions and obligations of the license and to all the provisions of the Act to the same extent as though they were the original licensee for the project.

(B) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Federal Power Act, and failure to file such an application shall constitute acceptance of the license for Project No. 433. In acknowledgment of the acceptance of such license, this instrument shall be signed by the new licensees and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7108

SUPPLEMENTAL ORDER AUTHORIZING ISSUANCE OF FIRST MORTGAGE BONDS AND PREFERRED STOCK

(Issued July 30, 1963)

By order issued July 17, 1963, 30 FPC 280, in the above-entitled matter, the Commission authorized Pacific Power & Light Company, (Applicant) to issue and sell at competitive bidding $30,000,000, principal amount of First Mortgage Bonds and 100,000 shares of Serial Preferred Stock, par value $100 per share, subject to the provisions, among others set forth in Paragraph (B) of that order as follows:

(B) The proposed issuance and sale of Bonds and Preferred Stock at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliation, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and Preferred Stock and the interest rate and dividend rate respectively, thereof.

Applicant, on July 30, 1963, filed an amendment, pursuant to the requirements of the aforementioned Commission order, in which it states, among other things, (1) that it proposes to accept, as representing the lowest annual cost of money to it, the bid of Lehman Brothers, Bear Stearns and Company, Merrill Lynch Pierce Fenner & Smith, Inc., and Salomon Brothers & Hutzler to purchase the proposed issuance of $30,000,000 principal amount of Bonds, at the price of 100.1099% of principal amount, with an interest rate of 4⅝% per annum; and (2) that it proposes to accept, as representing the lowest cost of money, the bid of Kidder, Peabody & Co., Eastman Dillon, Union Securities & Co. to purchase the Preferred Stock, par value $100 per share at a price of 100.21 per share and an annual dividend of 4.72%.

The Commission finds:

(1) Applicant has satisfactorily complied with the requirements contained in Paragraph (B) of the Commission's order issued July 17, 1963, in the above-entitled docket; and under the respective bids it proposes to accept for the issuance of Bonds and Preferred Stock, (a) the price to be received by Applicant for the Bonds and the interest rate thereof are reasonable; and (b) the price per share to be received by Applicant for the Preferred Stock and its dividend rate are reasonable.

(2) The proposed issuance and sale of Bonds and Preferred Stock, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The price to be received by Applicant for the proposed Bonds and the interest rate thereof, and the price per share to be received by Applicant for the proposed issuance of Preferred Stock and the dividend rate thereof, are approved as reasonable.

(B) The proposed issuance and sale of Bonds and Preferred Stock referred to above, upon the terms and conditions, and for the purposes specified in the application, as supplemented by the amendment referred to above, are hereby authorized, subject only to the provisions of Paragraphs (C), (D) and (E) of the Commission's order issued July 17, 1963, in the above docket.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

COLORADO INTERSTATE GAS COMPANY, DOCKET NO. G–15811; EL PASO NATURAL GAS COMPANY, DOCKET NO. G–16105

FINDINGS AND ORDER DISMISSING APPLICATIONS

(Issued July 31, 1963)

On August 4, 1958, as supplemented on August 20, 1958, November 30, 1959, January 5, 1961, June 13, 1961, and February 11, 1963, Colorado Interstate Gas Company (CIG) filed in Docket No. G–15811 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of facilities and the short-term sale of natural gas to El Paso Natural Gas Company (El Paso) in Moore County, Texas, to relieve a temporary oversupply of gas, at a point where CIG's 20-inch line running northwest from its Fourway Station intersects the 30-inch line of Northern Natural Gas Company (Northern) extending from Dumas, Texas, all as more fully set forth in the application as supplemented.

On August 22, 1958, El Paso Natural Gas Company filed in Docket No. G–16105 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the delivery of natural gas to be obtained from CIG under the authorization requested in Docket No. G–15811 to Northern at the aforementioned location, all as more fully set forth in the application.

El Paso originally proposed to take or pay for a minimum daily volume of 125,000 Mcf from the expected date of original certification to May 4, 1959, and

thereafter a minimum daily volume of 175,000 Mcf through December 31, 1959, plus an additional 50,000 Mcf per day on a best-efforts basis. El Paso proposed to use the gas so obtained in substitution for a portion of the quantities of gas which it is delivering to Northern on an exchange basis at El Paso's Dumas Compressor Station. The exchange with Northern has been authorized in Docket Nos. G–2134, G–12135, G–15139, and G–17854. Both CIG and El Paso requested and received temporary authorization for the proposed construction and operation of facilities and the sale and delivery of natural gas on October 1, 1958. Since the granting of the first temporary authorization, the application has been amended and further requests for temporary authorization have been filed. Letter orders granting temporary authorization were issued on February 4, 1960, February 16, 1961, July 6, 1961, and March 6, 1963. The final temporary authorization terminated April 30, 1963, and no request for an extension has been filed. The Applicants have agreed that volumes to be sold and delivered under the final temporary authorization should average 75,000 Mcf per day, and that any gas remaining to be made on May 1, 1963, could be used by El Paso at any time prior to January 1, 1965.

On April 10, 1963, the Commission issued a temporary certificate to El Paso in Docket No. CP63–63 authorizing the transportation and delivery to Northern of 50,000 Mcf of gas in addition to the delivery on an exchange basis previously authorized. The temporary certificate also authorized the construction and operation of facilities looping part of the Plains-Dumas line. Hence, it appears that El Paso will be able to offset the CIG gas stoppage by increasing the capacity of its Plains-Dumas line and that there is no need to take any further action on the pending applications in Docket Nos. G–15811 and G–16105.

In response to letters from the Secretary the Applicants have stated that they have no objection to the dismissal of the subject applications as moot so long as such action will not foreclose or prejudice CIG's ability to meet its obligation to deliver the prepaid volumes through December 31, 1964, and will not foreclose or prejudice El Paso's right to receive such gas through December 31, 1964.

Notice of the filing of the subject applications was issued May 13, 1963, and published in the Federal Register on May 18, 1963 (28 F.R. 5035). No protest, request for hearing, or petition to intervene has been received since the publication of the notice. Several notices of intervention and petitions to intervene were filed prior to the publication of the notice.

The Commission finds:

(1) The pending applications in Docket Nos. G–15811 and G–16105 should be dismissed as moot.

(2) The dismissal of the subject applications should not foreclose or prejudice CIG's ability to meet its obligation to deliver the prepaid volumes through December 31, 1964, and should not foreclose or prejudice El Paso's right to receive such gas through December 31, 1964.

The Commission orders:

(A) The pending applications in Docket Nos. G–15811 and G–16105 be and the same are hereby dismissed as moot.

(B) The dismissal of the subject applications shall not be construed to foreclose or prejudice CIG's ability to meet its obligation to deliver the prepaid volumes through December 31, 1964, or to foreclose or prejudice El Paso's right to receive such gas through December 31, 1964.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

TOWN OF GATE, OKLAHOMA, DOCKET NO. CP63-280

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued July 31, 1963)

On April 10, 1963, the Town of Gate, Oklahoma, (Applicant) filed in Docket No. CP63-280 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Cities Service Gas Company (Cities) to establish physical connection of its transmission facilities with the proposed facilities of, and to sell natural gas to Applicant for resale and distribution in the Town of Gate, and environs, all as more fully set forth in the application.

Applicant requests that Cities be directed to tap its transmission pipeline at a point approximately 3200 feet north of the town limits and to provide a regulation station at such point where Applicant can connect its proposed transmission line. Applicant proposes to install a 2½" natural gas transmission pipeline extending 3200 feet from the tap on Cities' line to the north town limits. Concurrently, it plans to construct a natural gas distribution system and appurtenances in the town and serve businesses and homes located therein. The transmission and distribution facilities will be owned and operated by Applicant.

It is estimated that the total cost of all construction by Applicant will amount to $24,760.44 to be financed by the issuance of $25,000 in bonds.

The application indicates that the estimated third year annual requirements would be 13,930 Mcf, while the estimated third year peak day requirements would be 124.3 Mcf of natural gas.

On April 29, 1963, Cities filed an answer to the subject application stating that it did not object to rendering the requested service.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on June 18, 1963 (28 F.R. 6250). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Cities Service Gas Company, a Delaware corporation having its principal place of business in Oklahoma City, Oklahoma, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) Applicant, Town of Gate, Oklahoma, is a municipal corporation incorporated under the laws of the State of Oklahoma and is legally empowered to construct and operate natural gas facilities and to sell and distribute natural gas in the Town of Gate.

(3) It is necessary and desirable in the public interest that Cities be directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 124.3 Mcf of natural gas per day to Applicant, its estimated third year peak day requirement, as set forth in the application, and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Cities within one year from the date of issuance of this order, and in addition execute a service agreement with Cities in accordance with the Commission's Regulations under the Natural Gas Act.

(5) The requirement that Cities serve Applicant, as proposed, will not place any undue burden upon Cities nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Cities Service Gas Company be and it is hereby directed to establish physical connection of its natural gas transportation system with the proposed facilities of Applicant and to sell and deliver up to 124.3 Mcf of natural gas per day to Applicant, its estimated third year peak day requirement, all as hereinbefore described and as set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Cities within one year from the date of issuance of this order, and in addition execute a service agreement with Cities in accordance with the Commission's Regulations under the Natural Gas Act.

(C) Cities shall report to the Commission in writing the date of commencement of service to Applicant.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

HASSIE HUNT TRUST, DOCKET NO. RI64-53; WILLIAM HERBERT HUNT TRUST ESTATE, DOCKET NO. RI64-54

ORDER PROVIDING FOR HEARINGS ON AND SUSPENSION OF PROPOSED CHANGES IN RATES [1]

(Issued July 31, 1963)

The above-named Respondents have tendered for filing proposed changes in presently effective rate schedules for sales of natural gas subject to the jurisdiction of the Commission. Both of the sales are made at a pressure base of 14.65 psia. The proposed changes, which constitute increased rates and charges, are designated as follows:

---

[1] This order does not provide for the consolidation for hearing or disposition of the matters covered herein, nor should it be so construed.

Docket No.	Respondent	Rate schedule No.	Supplement No.	Purchaser and producing area	Amount of annual increase	Date filing tendered	Effective date unless suspended	Date suspended until	Cents per Mcf		Rate in effect subject to refund in Docket Nos.
									Rate in effect	Proposed increased rate	
RI64-53...	Hassie Hunt Trust, 700 Mercantile Bank Building, Dallas 1, Texas.	2	14	Texas Eastern Transmission Corporation (Southwest Speaks Field, Lavaca County, Texas) (R.R. District No. 2).	$3,650	July 1, 1963	Aug. 1, 1963[2]	Jan. 1, 1964	[4] 13.8733	[3] [5] 14.3733	----------
RI64-54...	William Herbert Hunt, Trust Estate, 700 Mercantile Bank Building, Dallas 1, Texas.	2	13	Texas Eastern Transmission Corporation (Arneckeville Field, DeWitt County, Texas) (R.R. District No. 2).	1,825	July 1, 1963	Aug. 1, 1963[2]	Jan. 1, 1964	[6] 13.8733	[3] [5] 14.3733	----------

[2] The stated effective date is the first day after expiration of the required statutory notice.
[3] Periodic rate increase.
[4] Settlement rate accepted in order issued May 29, 1963, in Docket No. G-18093.
[5] Equivalent to 14.8733¢ when cost to buyer of 0.5¢ per Mcf for dehydration and central point delivery is taken into consideration.
[6] Settlement rate accepted in order issued May 29, 1963, in Docket No. G-18091.

Hassie Hunt Trust and William Herbert Hunt Trust Estate (both referred to herein as Hunt) request an effective date of February 5, 1963, for their proposed rate increases. Good cause has not been shown for waiving the 30-day notice requirement provided in Section 4(d) of the Natural Gas Act to permit an earlier effective date for Hunt's rate filings.

Hunt's presently effective 13.8733¢ per Mcf rates resulted from settlement offers approved by orders issued on June 24, 1963. The proposed increased rates, which were contractually due on February 5, 1963, are equivalent to rates of 14.8733¢ per Mcf when the cost to the buyer of 0.5¢ per Mcf for dehydration and central point delivery is taken into consideration and exceed the increase ceiling of 14.6¢ per Mcf as set forth in the Commission's Statement of General Policy No. 61–1, as amended [18 CFR, Chapter I, Part 2, Section 2.56].

The proposed changed rates and charges may be unjust, unreasonable, unduly discriminatory, or preferential, or otherwise unlawful.

The Commission finds:

It is necessary and proper in the public interest and to aid in the enforcement of the provisions of the Natural Gas Act that the Commission enter upon hearings concerning the lawfulness of the proposed changes, and that the above-designated supplements be suspended and the use thereof deferred as hereinafter ordered.

The Commission orders:

(A) Pursuant to the authority of the Natural Gas Act, particularly Sections 4 and 15 thereof, the Commission's Rules of Practice and Procedure, and the Regulations under the Natural Gas Act [18 CFR, Chapter I], public hearings shall be held upon dates to be fixed by notices from the Secretary concerning the lawfulness of the proposed increased rates and charges contained in the above-designated supplements.

(B) Pending hearings and decisions thereon, the above-designated rate supplements are hereby suspended and the use thereof deferred until the date indicated in the above "Date Suspended Until" column, and thereafter until such further time as they are made effective in the manner prescribed by the Natural Gas Act.

(C) Neither the supplements hereby suspended, nor the rate schedules sought to be altered thereby, shall be changed until these proceedings have been disposed of or until the periods of suspension have expired, unless otherwise ordered by the Commission.

(D) Notices of intervention or petitions to intervene may be filed with the Federal Power Commission, Washington 25, D.C., in accordance with the Rules of Practice and Procedure [18 CFR 1.8 and 1.37(f)] on or before September 16, 1963.

Commissioner O'Connor *dissenting* for the reasons set forth in his dissenting statement accompanying the order issued February 4, 1963 in *Mills Bennett Estate, et al.*, Docket No. RI63–308, *et al.*, 29 FPC 212, 217.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

NATURAL GAS PIPELINE COMPANY OF AMERICA, DOCKET NO CP62-144

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 31, 1963)

On March 22, 1963, Natural Gas Pipeline Company of America (Movant), filed in Docket No. CP62-144 a motion to amend the Commission's order issued on June 8, 1962, 27 FPC 1126, granting a certificate of public convenience and necessity, by authorizing the installation of additional facilities consisting of storage injection-withdrawal wells and appurtenant gathering lines, all as more fully set forth in the subject motion.

The Commission authorized Movant (formerly Natural Gas Storage Company of Illinois at the time of issuance of the order) to acquire certain underground storage rights and to construct and operate facilities for the evaluation of the characteristics and capabilities of an underground natural gas storage reservoir, described as the Cairo Storage Area, in Louisa County, Iowa. Such authorization included facilities necessary for the injection of gas into the St. Peter Formation of that storage area and limited the inventory of gas stored to 2,800,000 Mcf. Movant anticipated that the total quantity could be injected within a twelve month period. However, it now appears that the facilities originally authorized are not adequate to inject the volumes of gas in accordance with the reservoir testing program. The drilling of the additional storage wells proposed will allow Movant to inject the necessary volumes so as to complete its evaluation of this formation as a possible storage reservoir within the specified time as set out in the order of June 8, 1962.

The additional facilities sought herein consist of six new injection-withdrawal wells and approximately 3.0 miles of 6-inch gathering pipeline.

The total estmated cost of said facilities sought herein is $194,500 to be financed from funds on hand.

Due notice of the filing of the motion to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 22, 1963 (28 F.R. 6472). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued June 8, 1962, in Docket No. CP62-144 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued June 8, 1962, in Docket No. CP62-144 be and the same is hereby amended by authorizing Natural Gas Pipeline Company of America to install six new injection-withdrawal wells in the St. Peter Formation of the Cairo Area in Louisa County, Iowa, and to construct approximately 3.0 miles of 6-inch gathering pipeline.

(B) The requirements of paragraph (F) of that order shall apply to the facilities authorized in paragraph (A) above.

(C) In all other respects said order shall remain in full force and effect.

Before Commissioners: Charles R. Ross, Acting Chairman, L. J. O'Connor, Jr., and Harold C. Woodward.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NOS. G–15505, G–16426, G–16965, G–19660.* RI61–113,* RI62–112* AND RI62–113*

ORDER ACCEPTING OFFER OF SETTLEMENT, ACCEPTING NOTICES OF CHANGE FOR FILING, REQUIRING REFUNDS, TERMINATING PROCEEDINGS IN WHOLE OR IN PART

(Issued July 31, 1963)

On July 1, 1963, Socony Mobil Oil Company, Inc. (Socony) submitted an offer of settlement,[1] as amended by letters submitted on July 8, 1963, in the above-designated rate suspension proceedings, which relate to jurisdictional sales of natural gas under Socony's FPC Gas Rate Schedule Nos. 146, 149, and 151, to Shell Oil Company (Shell).

The gas is resold by Shell to Texas Eastern Transmission Corporation under Shell's FPC Gas Rate Schedule No. 10. Shell's resale rate of 14.6 per Mcf was established by settlement order in *Shell Oil Company, et al.*, Docket No. G–9446, *et al.*, issued August 1, 1962, 28 FPC 257.[2] The sales under Socony's FPC Gas Rate Schedule No. 146 and 149 are made in Colorado County, Texas (Railroad Commission District No. 3), and the sale under Socony's FPC Gas Rate Schedule No. 151 is made in Lavaca County, Texas (Railroad Commission District No. 2).

The presently effective rates under Socony's rate schedules are set forth in the following table:

Docket Number	Rate schedules No. 146[1]		Rate schedules No. 149[2]		Rate schedules No. 151	
	Supplement No.	Rate	Supplement No.	Rate	Supplement No.	Rate
		Cents		*Cents*		*Cents*
G–15505	4	14.2	5	14.2	3	14.2
G–16426	5	14.4	6	14.4	4	14.4
G–16965	6	14.6	7	14.6	5	14.6
G–19660	7	14.8	8	14.8	7	14.8
RI61–113	8	15.0	10	15.0	9	15.0
RI62–112	9	15.2	11	15.2		
RI62–113					10	15.2

[1] Rates under this rate schedule are subject to a deduction of 1.5¢ per Mcf for gathering.
[2] Rates under this rate schedule are subject to deduction of 1.25¢ per Mcf for gathering and, effective on April 18, 1960, 1.75¢ per Mcf for compression.

Socony tendered for filing, on June 10, 1963,[3] notices of change in its above-designated rate schedules proposing to decrease its rates to reflect the effect of the Shell settlement order.[4] Socony's decreased rates, 14.6¢ per Mcf at 14.65 psia, are the same as those under Shell's FPC Gas Rate Schedule No. 10, less certain contractual deductions as shown in the tabulation above. Socony states that it has made refunds to Shell of all amounts collected above 14.6¢ per Mcf

*The proceedings in Docket Nos. G–19660, RI61–113, RI62–112, and RI62–113, relating to certain additional rate schedules not involved in this order, will be terminated only in part.

[1] Although the document is styled as a motion to terminate, it has been construed as an offer of settlement.

[2] Under Socony's rate schedules involved here, Socony receives all of the revenues collected by Shell for the resale of gas to Texas Eastern, less certain deductions specified in the rate schedules.

[3] Socony proposed an effective date of August 1, 1963, for these changes.

[4] The notices of change are designated as Supplement Nos. 10, 12, and 11 to Socony's FPC Gas Rate Schedule Nos. 146, 149, and 151, respectively.

in accordance with the Shell settlement order under the aforementioned rate schedules, and that it will file a report of such refunds. Socony also waives its right to file for any increase in rate resulting from the operation of the favored-nation or price redetermination provisions in the subject contracts.[5]

Since the proposed settlement rates of 14.6¢ per Mcf, including present tax reimbursement, less applicable deductions, at 14.65 psia, are acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 590, for jurisdictional sales of natural gas in Texas Railroad Commission District Nos. 2 and 3, it is believed that the public interest will best be served by accepting Socony's proposed settlement as hereinafter set forth.

However, we desire to make it clear that acceptance of the offer of settlement shall not be construed as approval of any future increased rate proposed by Socony.

The Commission finds:

The proposed settlement of the above-designated proceedings, on the basis described herein, and as set forth in the offer of settlement filed by Socony with the Commission on July 1, 1963, as amended by letters filed on July 8, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The offer of settlement filed by Socony with the Commission on July 1, 1963, as amended by letters filed on July 8, 1963, and as hereinafter conditioned, is approved in accordance with the provisions of this order.

(B) Within 30 days from the date of issuance of this order, Socony shall refund to Shell all amounts collected under its FPC Gas Rate Schedule Nos. 146, 149, and 151, in excess of the settlement rate of 14.6¢ per Mcf, including present tax reimbursement, less applicable deductions, from and after January 1, 1961, in accordance with the aforementioned Shell settlement order, with appropriate interest to the date of refund. Socony shall bear all costs incidental to the making of such refunds.

(C) Within 45 days from the date of issuance of this order, Socony shall report to the Commisison in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (B) above, together with a copy of a release from Shell with respect to such refunds.

(D) Upon notification by the Secretary of the Commission that Socony has complied with the terms of this order, the notices of change tendered for filing by Socony on June 10, 1963, providing for a 14.6¢ per Mcf rate, including present tax reimbursement, less applicable deductions, under Socony's FPC Gas Rate Schedule Nos. 146, 149, and 151, and the other supplements thereto, as designated above, are hereby accepted for filing, to be effective as of the date of issuance of this order, the proceedings in Docket Nos. G–15505, G–16426 and G–16965 shall be deemed terminated, the proceedings in Docket Nos. G–19660, RI61–113, RI62–112, and RI62–113 shall be deemed terminated only insofar as they relate to Socony's FPC Gas Rate Schedule Nos. 146, 149, and 151, and in all other respects shall remain in full force and effect, and Socony's refund obligations with respect to its FPC Gas Rate Schedule Nos. 146, 149, and 151 shall be deemed discharged.

[5] The letters and amendatory agreements relating to waiver are designated as follows: Supplement Nos. 1 to 10, and 11, to Socony's FPC Gas Rate Schedule No. 146; Supplement Nos. 1 to 12, 13, and 14 to Socony's FPC Gas Rate Schedule No. 149; and Supplement Nos. 1 to 11, and 12, to Socony's FPC Gas Rate Schedule No. 151.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

SOUTHERN NATURAL GAS COMPANY AND TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. G–4715

ORDER FURTHER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND ACCEPTING TARIFF SHEETS FOR FILING

(Issued July 31, 1963)

On April 16, 1963, Southern Natural Gas Company (Southern) and Tennessee Gas Transmission Company (Tennessee) (sometimes hereinafter referred to jointly as Applicants) filed in Docket No. G–4715 an application to amend further the Commission's order, issued February 25, 1955, 14 FPC 577, in said docket, all as more fully set forth in the joint application to amend.

The subject order, as amended, authorized Applicants to exchange up to 15,000 Mcf of natural gas per day with Southern delivering said volume to Tennessee from the Franklin Field, St. Mary's Parish, Louisiana. Tennessee redelivers said volume to Southern to two points: the Bayou Sale redelivery point in St. Mary's Parish and the Eloi Bay redelivery point in Block 49, Chandeleur Sound, Offshore Louisiana.

The application indicates that Southern has now developed gas reserves in the High Island Field, Cameron Parish, Louisiana, and that Tennessee is presently purchasing gas in said High Island Field. Further, the application indicates that Tennessee owns and controls certain reserves from the Bastian Bay Field, Plaquemines Parish, Louisiana, and that Southern is presently purchasing gas from said field. Therefore, Applicants request that the subject order be further amended as follows:

(a) to authorize a new delivery point in the immediate vicinity of the existing High Island metering facilities and to authorize Southern to deliver to Tennessee at said point up to 5,000 Mcf of gas per day for the first 18 calendar months after commencement of deliveries at said point. During such 18 month period, the quantity of gas delivered by Southern at the Franklin delivery point would be reduced to 10,000 Mcf.

(b) to authorize, after the above-described 18 month period, Southern to deliver to Tennessee and Tennessee to redeliver to Southern up to 20,000 Mcf of gas per day; Southern to deliver said quantity at the High Island and Franklin delivery points.

(c) to authorize a new redelivery point in the immediate vicinity of Southern's receiving facilities in Bastian Bay, and to authorize Tennessee to redeliver to Southern at said point up to 2,000 Mcf of gas per day, with a corresponding reduction in the amount of gas redelivered by Tennessee at the Bayou Sale and Eloi Bay redelivery points.

The application shows that Southern's reserves in the High Island area are presently without an outlet and are being subjected to drainage. Southern states that only a short gathering line and delivery meter will be necessary to complete the High Island tie-in to Tennessee's system, and, thence, Southern will be able to commence deliveries of its gas at a minimum cost of construction of new facilities. The facilities necessary for Tennessee to redeliver at the proposed Bastian Bay point are already in existence and no additional construction will be required.

Applicants have entered into an amendatory exchange agreement, dated March 14, 1963, providing for the subject proposals. May 1 and May 13, 1963, Southern and Tennessee, respectively, filed the following applicable tariff sheets:

Southern: Original Sheet No. 68A; First Revised Sheets Nos. 63, 64, 65 and 68; Second Revised Sheets Nos. 60, 61, 62, 66 and 67, and the Third Revised Sheet No. 59, all to Southern's FPC Gas Tariff, Original Volume No. 2.

Tennessee: Original Sheet No. 57A; Second Revised Sheets Nos. 51, 52, 53, 54, 55 and 57; and Third Revised Sheets Nos. 49, 50 and 56, all to Tennessee's FPC Gas Tariff, Fourth Revised Volume No. 2.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on June 15, 1963 (28 F.R. 6201). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order, issued February 25, 1955, as amended, in Docket No. G–4715 be further amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued February 25, 1955, as amended, in Docket No. G–4715 be and the same is hereby further amended to authorize the proposed additional delivery point and redelivery point and to authorize the exchange and delivery of natural gas, all as hereinbefore described and as set forth in the subject application to amend and the amendatory exchange agreement, dated March 14, 1963.

(B) In all other respects said order, as amended, shall remain in full force and effect.

(C) Southern's applicable tariff sheets, filed on May 1, 1963, and hereinbefore described, are hereby accepted for filing to become effective on the date this order issues.

(D) Tennessee's applicable tariff sheets, filed on May 13, 1963, and hereinbefore described, are hereby accepted for filing to become effective on the date this order issues.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63–271

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 31, 1963)

On April 4, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63–271 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of some 5.2 miles of 6-inch loop pipeline, and the sale and delivery of additional volumes of natural gas to United Gas Corporation (United), all as more fully represented in the application in this proceeding.

The facilities proposed to be constructed would be used in conjunction with the sale and delivery of additional quantities of natural gas to United in Cherokee and Rusk Counties, Texas, in order to meet the additional requirements of United for resale to the communities of Henderson, Rusk, and Jacksonville, Texas. Applicant would construct and operate a new Rusk Lateral of approximately 3.0 miles of 6-inch pipeline loop beginning near the point of tie-in of the Rusk 4-inch lateral and the Longview-Palestine 8-inch pipeline located in the Thomas Quevedo Survey, Abstract 44, Cherokee County, Texas, and extending

in a southerly direction parallel to the existing Rusk lateral to a point in the Jose Pineda Survey, Abstract 41, Cherokee County, Texas. The estimated third year requirements to be delivered to the Jacksonville-Rusk communities would be 614,940 Mcf, while the annual peak day requirement is estimated at 4,025 Mcf. Applicant further estimates that the total cost of constructing the new Rusk Lateral will be $91,700.

Applicant would construct and operate a second pipeline called the Henderson Lateral of approximately 2.2 miles in length consisting of a 6-inch pipeline loop beginning at a point near Milepost 9.8 on Applicant's existing facilities in the John Runnels Survey, Abstract 679, Rusk County, Texas, and extending in a southerly direction parallel to the existing facilities to a point in the E. B. Warren Survey, Abstract 835, Rusk County, Texas. The estimated third year requirements to be delivered to the Henderson community would be 557,370 Mcf, while the annual peak day requirement is estimated at 5,665 Mcf. Applicant estimates that the total cost of constructing this new Henderson Lateral will be $57,000.

Applicant states that the increased sales would have no significant effect on its reserves nor impair service to other customers served by the facilities involved herein. It intends to finance the proposed construction out of current working funds.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 18, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation with its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof as well as the sale of natural gas by Applicant, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities as well as the sale of natural gas, as proposed by Applicant, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure here was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to construct and operate certain natural gas facilities, and to sell up to 4,025 Mcf of natural gas per day to United Gas Corporation for resale to the Jacksonville-Rusk communities, and further to sell up to 5,665 Mcf of natural gas per day to United Gas Corporation for resale to the Henderson community, as hereinbefore described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the right granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within six months from the date on which this order issues.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

WESTERN GAS SERVICE COMPANY, DOCKET NO. CP62-113

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued July 31, 1963)

On November 2, 1961, as supplemented on December 13, 1962, Western Gas Service Company (Applicant) filed in Docket No. CP62-113 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the operation of certain existing facilities comprising Applicant's Texhoma-Beaver pipeline, all as more fully described in the application, as supplemented.

The subject existing facilities consist of approximately 106.2 miles of various size pipe extending from a point near the Jones 1-A and Jones 1-B wells in Texas County, Oklahoma, to a point near the Town of Beaver, in Beaver County, Oklahoma.

Applicant states that it has been operating said facilities in the belief that it was not transporting natural gas in interstate commerce. However, Applicant states further that said facilities now do transport natural gas in interstate commerce and that it requests herein appropriate authorization to continue to operate said existing facilities.

The application indicates that the subject facilities connect with and form a continuous system with certain facilities heretofore certificated by the Commission's order, issued February 5, 1959, 21 FPC 164, in Docket No. G-16390.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 16, 1963, respecting the matters involved in and the issues presented by the application, as supplemented, herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Western Gas Service Company, a Delaware corporation having its principal place of business in El Paso, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application, as supplemented, in this proceeding, are to be used in the transportion and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the operation thereof by Applicant is subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The operation of the existing facilities by Applicant is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Western Gas Service Company, to operate the subject existing facilities as hereinbefore described, all as more fully described in the application, as supplemented, herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of such Regulations.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

GRARIDGE CORPORATION (OPERATOR), ET AL., DOCKET NOS. CI63-369 AND RI60-468

ORDER APPROVING PROPOSED OFFER OF SETTLEMENT, ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND REQUIRING REFUNDS

(Issued August 1, 1963)

On September 18, 1962, Graridge Corporation (Operator), *et al.* (Graridge), filed in Docket No. CI63-369 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing Graridge to continue the services authorized to be rendered by Midhurst Oil Corporation (Operator), *et al.* (Midhurst), in Docket No. CI60-727.[1] Midhurst's authorization covers sales of natural gas to Tennessee Gas Transmission Company (Tennessee) for transmission and sale in interstate commerce from the Areopagita G. de Garcia Lease, West Magnolia City Field, Jim Wells County, Texas (Texas Commission Railroad District No. 4).

Concurrent with its application for a certificate of public convenience and necessity, Graridge filed a notice of succession to Midhurst's FPC Gas Rate Schedule No. 7, and a motion to be substituted, concurrent with an agreement and undertaking, as respondent in Docket No. RI60-468. In its motion to be substituted, Graridge requests that it be made co-respondent with Midhurst in Docket No. RI60-468 because effective as of March 1, 1962, Graridge acquired all of Midhurst's interest in the properties related to the subject sale.

Docket No. RI60-468 relates to Midhurst's proposed rate increase from 12.12268¢ per Mcf to 17.24347¢ per Mcf at 14.65 psia, designated Supplement No. 6 to Midhurst's FPC Gas Rate Schedule No. 7, which was suspended by order issued July 8, 1960 until December 10, 1960. From December 10, 1960 to March 1, 1962, Midhurst collected the proposed increased rate subject to refund. Graridge states that it has been collecting the increased rate since March 1, 1962 under its FPC Gas Rate Schedule No. 15.

On April 8, 1963, Graridge submitted an Offer of Settlement covering the subject sale.[2] Under the terms of the Offer, Graridge agrees to amend its contract with Tennessee to eliminate the favored-nation and price-redetermination clauses from the contract. Graridge also agrees to refund to Tennessee all amounts collected from Tennessee in excess of the 14.6¢ per Mcf settlement rate applicable to volumes delivered on and after March 1, 1962, together with simple interest at the rate of 7 percent per annum until the date of refund. Graridge also agrees to accept a settlement rate of 14.6¢ per Mcf, including tax reimbursement, which would be contractually effective until January 1, 1964, with periodic escalations thereafter as follows:

From January 1, 1964 to January 1, 1969	15.6¢ per Mcf
From January 1, 1969 to January 1, 1974	16.6¢ per Mcf
From January 1, 1974 to balance of term	17.6¢ per Mcf

[1] A certificate of public convenience and necessity was issued to Midhurst by order issued March 10, 1961, as amended February 15, 1962, in *Elliott, Inc., et al.*, Docket No. G-3693, *et al.*

[2] With regard to Docket No. RI60-468, the Offer of Settlement covers only the interest of Graridge, and not the interest of Midhurst.

Tennessee has concurred in the Offer of Settlement.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 22, 1693, respecting the matters involved in and the issues presented by the application and the Offer of Settlement herein. No protest to the granting of the application or protest to the Offer of Settlement or petition to intervene has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c) (1) of its Rules of Practice and Procedure.

The proposed settlement is acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1 (18 CFR, Chapter I, Part 2, Section 2.56), issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589. It appears that the public interest will be served by accepting Graridge's Offer of Settlement, issuing Graridge a certificate of public convenience and necessity in Docket No. CI63–369, and requiring refunds.

By accepting Graridge's Offer of Settlement, the basis for making Graridge a respondent in Docket No. RI60–468 has been eliminated and Graridge's motion to be made a respondent is moot. However, the proceeding in Docket No. RI60–468 should remain in full force and effect with regard to Midhurst for the period prior to March 1, 1962.

We desire to make it clear that the acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Graridge under the periodic escalation provisions or otherwise.

The Commission finds:

(1) Graridge is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The proposed settlement on the basis described herein, as more fully set forth in the Offer of Settlement filed by Graridge with the Commission on April 8, 1963, is in the public interest and is appropriate to carry out the provisions of the Natural Gas Act, and should be approved by the Commission and made effective as hereinafter ordered.

(4) Graridge is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(5) The proposed sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and a certificate should be issued as ordered below.

(6) A request during the public hearing by Staff Counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c) (1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity is hereby issued to Graridge for the sale of natural gas in interstate commerce for resale as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Graridge's application and Offer of Settlement.

(B) The certificate issued by Paragraph (A) above is granted upon the express condition that Graridge comply fully with the terms of the Offer of Settlement referred to above and which was entered into evidence in this proceeding, which settlement is expressly approved as of the date of the issuance of this order.

(C) The certificate granted in Paragraph (A) above is not transferable and shall be effective only so long as Graridge continues the acts or operations thereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations, and orders of the Commission thereunder.

(D) The grant of the certificate issued in Paragraph (A) above shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act or of Part 154 or 157 of the Commission's Regulations thereunder, and is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Graridge. Further, our action in this proceeding shall not foreclose nor prejudice any future proceedings or objections relating to the operation of any price or related provisions in the gas-purchase contract herein involved. Nor shall the grant of the certificate aforesaid for service to Tennessee imply approval of all of the terms of the respective contracts, particularly as to the cessation of service upon termination of said contracts as provided by Section 7(b) of the Natural Gas Act. Nor shall the grant of the certificate aforesaid be construed to preclude the imposition of any sanctions pursuant to the provisions of the Natural Gas Act for the unauthorized commencement of any sales of natural gas subject to said certificate.

(E) Graridge shall file within 60 days of the date of issuance of this order a notice of change to its FPC Gas Rate Schedule 15, providing for the 14.6¢ rate, including tax reimbursement, specified in its Offer of Settlement, and a contractual amendment to its FPC Gas Rate Schedule No. 15, which Graridge shall execute with Tennessee in conformity with Graridge's Offer of Settlement in all respects. Both the notice of change and the contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(F) Within 60 days from the date of the issuance of this order, with regard to the subject sale Graridge shall refund to Tennessee all amounts collected from Tennessee in excess of the 14.6¢ per Mcf rate, together with simple interest, at the rate of 7 percent per annum from March 1, 1962 to the date of refund. Graridge shall bear all costs incidental to the making of such refunds.

(G) Within 60 days from the date of the issuance of this order, Graridge shall report to the Commission the details of its calculations resulting in the refunds ordered pursuant to Paragraph (F) above, together with a copy of a release from Tennessee with respect to such refunds.

(H) Graridge's motion to be made respondent in Docket No. RI60–468 is moot and is therefore denied; however, the proceeding in Docket No. RI60–468 shall remain in full force and effect with regard to Midhurst.

(I) Upon notification by the Secretary of the Commission that Graridge has complied with the terms and conditions of this order, the rate and charge of 14.6¢ per Mcf at 14.65 psia, including tax reimbursement, specified in the Offer of Settlement, shall be effective as of the date of the issuance of this order, and Graridge's refund obligation shall be deemed discharged.

Before Commissioners: Charles R. Ross, Acting Chairman; L. J. O'Connor, Jr., and Harold C. Woodward.

REVISION OF ANNUAL REPORT FORM PRESCRIBED FOR CLASS A AND CLASS B ELECTRIC UTILITIES, LICENSEES AND OTHERS SUBJECT TO THE FEDERAL POWER ACT, F.P.C. FORM NO. 1, DOCKET NO. R-238

ORDER NO. 269

ORDER PROMULGATING REVISIONS IN REGULATIONS AND ANNUAL REPORT FORM FOR ELECTRIC UTILITIES, LICENSEES AND OTHERS

(Issued August 1, 1963)*

This Commission has under consideration in this proceeding revisions in its F.P.C. Form No. 1, Annual Report Form Prescribed for Class A and Class B Electric Utilities, Licensees and Others [1] subject to the provisions of the Federal Power Act, and § 141.1, Subchapter D, Approved Forms, Federal Power Act, prescribing F.P.C. Form No. 1.

That Report Form, as revised, is prescribed hereinafter effective for use in reporting for the calendar year beginning January 1, 1963 or subsequently during the calendar year 1963 if an established fiscal year is other than the calendar year, and thereafter.

In addition, seven revised schedules and one new schedule in the form attached hereto,[2] are prescribed, and shall be properly completed and filed as a

part of 1962 Reports on Form No. 1 within 90 days from the date of this order.[2]

This proceeding was commenced by notice of proposed rulemaking describing the proposed changes. That notice was served upon interested parties, including State and Federal regulatory agencies, and by publication in the Federal Register on April 25, 1963 (28 F.R. 4097). Copies of the revised schedules and new schedule, as proposed, were served as a part of the notice of rulemaking as well as being filed with the Federal Register as a part of the notice (28 F.R. 4097). That notice afforded a period of 30 days for the submission to the Commission of written data, views, comments and suggestions concerning the proposed revisions of F.P.C. Form No. 1 and Part 141. Numerous responses were received and all are now before the Commission for consideration. As pointed out hereinafter the conclusions expressed in certain of the data, views, comments and suggestions are adopted and others are rejected.

Pages 432 through 441, F.P.C. Form No. 1, containing the seven revised and one new schedule as promulgated herein, are set forth in the attached Appendix A* showing the changes adopted in typed or handscript form rather than the printed form in which those changes will ultimately appear. Copies of these eight schedules will be made available in printed format by the Commission on or before September 1, 1963. Copies of the complete F.P.C. Report Form No. 1, including the revisions promulgated herein, also will be available from the Commission or the Superintendent of Documents, United States Government Printing Office. The 90 day period from the time of promulgation of this order and the due date for filing the revised schedules as a part of 1962 FPC Form No. 1 Reports will afford time for familiarization with the schedules herein adopted.

Generally, the changes adopted herein bring the subject eight schedules into agreement with the revised production expense account classifications under the Uniform System of Accounts which became effective January 1, 1961. In addition, those schedules have been revised to eliminate detailed reporting for certain smaller generating plants; i.e., of less than 10,000 kw for steam electric generating plants and of less than 5,000 kw for internal combustion and gas turbine plants. The one new schedule requests data on BTU's per net kilowatt hour of generation, net generation in million kilowatt hours, and kind of fuel for the reporting system's ten most efficient generating units and corresponding information for the company's total system.

Comments and suggestions were filed by 31 privately owned Class A & B electric utilities and the Tennessee Valley Authority.

Three of the 32 respondents suggested deletion of the new (heat rate) schedule, and one indicated it would have difficulty in completing the schedule. These objections were based upon the need for additional instrumentation, recording and estimating procedures required for individual units coming within the scope of the new schedule and not an objection to reporting system heat rate data. Although precise data may not be available in all cases, experience gained in supplying the requested data should resolve the relatively few objections which have been advanced to the schedule. The Commission is of the

---

[2] By letter of the Commission's Secretary of February 4, 1963, all Class A and B private utilities were advised:

The Commission has under consideration for reports for 1962 and subsequent years certain revisions in the schedules on pages 432 through 441. In preparing your report, omit the data required by these schedules. After rulemaking proceedings are ended, copies of such revised schedules as may be prescribed will be supplied for completion and filing as a supplement to your 1962 report.

* Omitted in printing.

opinion that the benefits to be derived from the new schedule warrant its adoption. Other suggested changes to the proposed revisions of Form No. 1 as attached to the notice of rulemaking have been adopted as indicated in the attached Appendix A.

A total of sixteen companies suggested a separate schedule for reporting pumped storage plants in lieu of Schedule 433a, together with revisions in expense accounts as applied to pumped storage projects. There are only a few pumped storage plants in existence at the present time, although additional large installations are expected to be in operation in the near future. Adequate provision for reporting data from this method of operation is necessary and this matter will be studied for future consideration. Operating experience in connection with the pumped storage plants will disclose more clearly the need for specific revisions which may be desirable.

One company suggested the existence of an ambiguity in Schedule 432 lines 38, 39, and 41–43 as noticed for rulemaking. Those lines have been changed to read "Quantities of fuel burned" and "Average cost per unit of fuel burned", respectively. Instruction 6 has been revised for purpose of clarification to read: "Quantities of fuel burned (line 38) and average cost per unit of fuel burned (line 41) should be consistent with the charges to expense accounts 501 and 547 (line 42) as shown on line 21."

The Commission's staff recommends our adoption of the revised schedules and new schedule as set forth in the annexed Appendix A as pages 432 through 441 inclusive, F.P.C. Form No. 1.

The Commission further finds:

(1) The notice and opportunity to participate in this proceeding with respect to the matters presently before this Commission through the submission, in writing, of data, views, comments and suggestions in the manner as described above are consistent and in accordance with all procedural requirements therefor as prescribed in section 4 of the Administrative Procedure Act.

(2) In view of the foregoing, and upon consideration of all relevant matters presented, it is necessary and appropriate for the purposes of the Federal Power Act that:

(a) Report Form F.P.C. No. 1 be revised to include pages 432 through 441 inclusive as set forth in annexed Appendix A and as so revised be adopted and promulgated as this Commission's F.P.C. Form No. 1 effective for use in reporting for the calendar year beginning January 1, 1963 or subsequently during the calendar year 1963 if an established fiscal year is other than the calendar year, and years thereafter; all as hereinafter provided.

(b) The eight schedules of Form No. 1 consisting of pages 432 through 441 inclusive as set forth in annexed Appendix A be adopted and promulgated as a part of the Report Form F.P.C. No. 1 prescribed for use in reporting for the year 1962; such schedules to be filed within 90 days from the issuance of this order.

(c) Section 141.1(d), Title 18 of the Code of Federal Regulations be amended to read as hereinafter provided.

(3) Good cause exists for adoption and promulgation of the matters referred to above immediately upon issuance of this order; all as hereinafter provided.

The Commission acting pursuant to the Federal Power Act, as amended, particulary sections 3(13), 4 (a), (b), (c), 301(a), 302, 304, 309 and 311 thereof (16 U.S.C. 796(13), 797 (a), (b), (c), 825 (a), 825c, 825h, and 825) *orders:*

(A) Report Form F.P.C. Form No. 1 as prescribed in § 141.1, is hereby revised to include pages 432 through 441 inclusive as set forth in annexed Appendix A and as so revised is hereby adopted and promulgated as this Commis-

sion's Annual Report, F.P.C. Form No. 1 effective for use in reporting for the calendar year beginning January 1, 1963, or subsequently during the calendar year 1963 if an established fiscal year is other than the calendar year, and years thereafter.

(B) The eight schedules of Form No. 1 consisting of pages 432 through 441 inclusive as set forth in annexed Appendix A are hereby adopted and promulgated as a part of the Report Form F.P.C. No. 1, prescribed for use in reporting for the year 1962 and such schedules shall be filed within 90 days from the issuance of this order.

(C) Paragraph (d) of § 141.1, Subchapter D—Approved Forms, Federal Power Act of Chapter I of Title 18 of the Code of Federal Regulations, is hereby amended to list the following schedules in lieu of the schedules presently listed between the schedules entitled "Monthly Peaks and Output" and "Transmission Line Statistics":

Steam-Electric Generating Plant Statistics (Large Plants)
Steam-Electric Generating Plant Statistics (Large Plants) (continued)
Steam-Electric Generating Plant Statistics (Large Plants) Average Annual Heat Rates and Corresponding Net kwh Output for Most Efficient Generating Units
Hydroelectric Generating Plant Statistics (Large Plants)
Hydroelectric Generating Plant Statistics (Large Plants) (continued)
Generating Plant Statistics (Small Plants)
Changes Made or Scheduled to be Made in Generating Plant Capacities
Steam-Electric Generating Plants
Steam-Electric Generating Plants (continued)
Hydroelectric Generating Plants
Hydroelectric Generating Plants (continued)
Internal-Combustion Engine and Gas-Turbine Generating Plants
Internal-Combustion Engine and Gas-Turbine Generating Plants (continued)

[Secs. 3(13), 4 (a), (b), (c), 41 Stat. 1065, as amended, secs. 301(a), 302, 304, 309, 311, 49 Stat. 838, 839, 854, 855, 858, 859; 16 U.S.C. 796(13), 797(a), (b), (c), 825(a), 825c, 825h, 825j.]

(D) This order shall be effective upon the date of issuance thereof.

(E) The Secretary of the Commission shall cause prompt publication of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

TENNECO CORPORATION, DOCKET NO. G–19983

ORDER CONDITIONALLY ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE AND CONTRACT AMENDMENTS, REQUIRING REFUNDS, AND TERMINATING PROCEEDINGS

(Issued August 2, 1963)

On March 6, 1963, Tenneco Corporation (Tenneco) submitted pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, an offer of settlement in the above-designated rate suspension proceeding which relates to seventeen jurisdictional sales of natural gas by Tenneco to eight pipeline companies.

These sales, previously made by Tennessee Gas Transmission Company (TGT), relate to properties which were assigned to Tenneco on February 28, 1961. By order issued August 28, 1962, 28 FPC 382, in Docket No. CI61–1273, the Commission authorized Tenneco to succeed to the interest of TGT in these sales effective as of the date of assignment. TGT's refund obligation in this proceeding for the period of time prior to Tenneco's succession was discharged as a result of a settlement order issued December 21, 1962, in Docket No. G–11980, *et al.*, 28 FPC 1100.

In its offer of settlement, Tenneco proposes settlement rates consistent with the Commission's announced area price levels. The settlement rate under Tenneco's FPC Gas Rate Schedule No. 8 is consistent with the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107.[1] The rates under Tenneco's FPC Gas Rate Schedule Nos. 21 and 39 will be reduced to the initial rates, which are below the applicable initial ceiling rates. The details pertinent to the sales are as follows:

Tenneco R.S. No.	Field, County, State, Area	Purchaser	Rate in effect subject to refund*	Settlement rate*
2	Aztec Fld. San Juan County, N. Mex. (San Juan Basin).	El Paso, Natural Gas Company.	11.0¢	11.0¢
5	Eunice Monument Fld. Lea County, N. Mex. (Permian Basin).	Northern Natural Gas Company.	10.7688	10.7688
7	Sibley Field, Webster Co., Louisiana (N. La.).	United Gas Pipe Line Company.	11.2432	11.2432
8	Mustang Island Area, Nueces County, Texas (Dist. No. 4).	United Gas Pipe Line Company.	14.8	[1] 14.6
9	Prentice Plant, Yoakum County, Texas (Dist. No. 8).	Northern Natural Gas Company.	13.0504	12.096
11	Doyle Fld., Stephens County, Okla. (Oklahoma Panhandle).	Lone Star Gas Company.	11.0	11.0
15	W. Kutz Canyon & Aztec Flds., (Pictured Cliffs), San Juan County, N. Mex. (San Juan Basin).	El Paso Natural Gas Company.	11.0	11.0
16	Blanco Fld (Mesa Verde), San Juan Co. N. Mex. (San Juan Basin).	El Paso Natural Gas Company.	12.0	12.0
17	San Juan Basin Area, Rio Arriba, N. Mex.	El Paso Natural Gas Company.	11.0	11.0
18	San Juan Basin Area, Rio Arriba County, N. Mex.	El Paso Natural Gas Company.	12.0	12.0
20	S. Fullerton Plant, Andrews County, Texas (Dist. No. 8).	El Paso Natural Gas Company.	10.8054	10.0
21	Fairbanks Fld., Harris County, Texas (Dist. No. 3).	Natural Gas Pipeline Company of America.	16.3555	[2] 15.2877
37	Seclusion Fld., Lavaca County, Texas (Dist. No. 2).	Texas Eastern Transmission Corp.	11.3254	11.3254
38	Blanco Fld., San Juan & Rio Arriba Counties, N. Mex. (San Juan Basin).	El Paso Natural Gas Company.	12.0	12.0
39	Keyes Fld., Cimarron Co., Okla. (Okla. Panhandle).	Colorado Interstate Gas Co.	16.0	[2, 3] 15.0
40	S. E. Braman Fld., Kay County, Okla. (Okla. Other).	Arkansas Louisiana Gas Co.	11.0	11.0
41	S. E. Braman Fld., Kay County, Okla. (Okla.-Other).	Arkansas Louisiana Gas Company.	11.0	11.0

*New Mexico and Louisiana sales are at 15.025 psia; Texas and Louisiana sales are at 14.65 psia.

[1] Settlement rate is consistent with the Second Amendment to the Policy Statement; Tenneco waives the right to file for any increase under the price redetermination clause.

[2] Settlement rate is the initially approved rate which is below the applicable initial rate ceiling.

[3] Subject to BTU adjustment; Tenneco agrees that any BTU adjustment will not cause the total rate to exceed the area initial price level of 17¢ per Mcf.

Tenneco requests that the settlement rates be made effective as of April 5, 1960, the date the increased rates suspended in Docket No. G–19983 became ef-

[1] Tenneco proposes to file a notice of change to its FPC Gas Rate Schedule No. 8 in conformity with its offer.

fective subject to refund. Consistent with our usual practice in situations of this type, however, we shall make the settlement rates effective as of the date of issuance of this order.

As a part of the offer, Tenneco proposes to make appropriate refunds with 6% interest from the date of its acquisition of the properties, March 1, 1961, of the amounts collected in Docket No. G–19983 in excess of the settlement rates. But, since the order of April 29, 1960 provides for interest at 7%, we will require, as a condition of this order, that the interest be at the rate of 7% per annum.

Since the proposed settlement rates are acceptable under the provisions of the Commission's Statement of General Policy No. 61–1,[3] as amended, for jurisdictional sales of natural gas in the respective areas, it is believed that the public interest will best be served by accepting Tenneco's proposed settlement as hereinafter set forth.

However, we desire to make it clear that acceptance of the offer of settlement shall not be construed as approval of any future increased rates proposed by Tenneco.

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Tenneco with the Commission on March 6, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Tenneco with the Commission on March 6, 1963, is hereby approved in accordance with the provisions of this order.

(B) Tenneco shall file, within 30 days from the date of issuance of this order, a notice of change in its FPC Gas Rate Schedule No. 8, providing for the 14.6¢ per Mcf rate, at 14.65 psia, specified in its offer of settlement, and a contractual amendment to its FPC Gas Rate Schedule No. 8, which Tenneco shall execute with United Gas Pipe Line Company in conformity with Tenneco's offer of settlement in all respects. Both the notice of change and the contract amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Tenneco shall refund to its purchasers all amounts collected in Docket No. G–19983 in excess of the respective settlement rates prescribed herein, together with simple interest at the rate of 7% per annum, from March 1, 1961, to the date of refund. Tenneco shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this letter, Tenneco shall report to the Commission in writing the details of its calculations resulting in refunds ordered pursuant to paragraph (C) above, together with copies of releases from the purchasers to whom refunds were made.

(E) Upon notification by the Secretary of the Commission that Tenneco has complied with the terms and conditions of this order, the settlement rates set forth above and specified in the Offer of Settlement, shall be effective as of the date of issuance of this order, the above-designated proceeding shall be deemed terminated, and Tenneco's refund obligations with respect to the above-designated proceeding shall be deemed discharged.

---

[3] Issued September 28, 1960, 24 FPC 818 (18 CFR, Chapter I, Part 2, Section 2.56).

MOUND COMPANY, ET AL., DOCKET NO. G–17362, ET AL.;[1] MOUND COMPANY (OPERATOR), ET AL., DOCKET NO. G–19729, ET AL.

ORDER CONDITIONALLY APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS AND PRESCRIBING REFUNDS

(Issued August 5, 1963)

We have before us for consideration a Motion for Approval of Settlement Offer filed on June 24, 1963, by Mound Company (Mound) encompassing the rates for eleven of Mound's presently effective gas rate schedules.

In summary, the settlement proposal as submitted by Mound provides:

(1) Settlement rates, including tax reimbursement, equal to or less than the Commission's applicable area ceilings;

(2) Mound waives the right to file for contractually authorized increased rates until January 1, 1966. Mound reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels determined through area hearings or by amendment of the Commission's Statement of General Policy No. 61–1, or any contractually authorized increase in tax reimbursement;

(3) Mound waives the right to file for any increase in rate resulting from the operation of any favored-nation, price redetermination or periodic escalation provision contained in its FPC Gas Rate Schedules Nos. 1, 2, 3, 4, 9, 10, 11, 12 and 16;

(4) Refunds with interest at the applicable rates under each rate schedule where collection was made subject to refund of the difference between the revenues actually collected and those which would have been collected at the settlement rate, in each instance, commencing with the effective date of the increased rate to April 1, 1962.

In support of its proposal, Mound states that the settlement rates, refunds, moratorium periods and other provisions thereof, are in the public interest in that the rates are reasonable and will provide price stability for a long period of time for natural gas moving in interstate commerce.

With respect to refunds, the April 1, 1962 termination date is based upon Mound's revenue-cost relationship for recent years as found by the parties to these proceedings utilizing cost-of-service studies. Such studies reveal that during the first quarter of 1962 Mound's costs per Mcf of natural gas produced had increased to such an extent that its jurisdictional cost began to exceed its jurisdictional revenue. In view of that, and all the terms of the settlement proposal, as hereinafer conditioned, it is appropriate that refunds should be computed for sales made under each of Mound's rate schedules where increased rates were being collected subject to refund from the effective date thereof to April 1, 1962, with interest to be paid on the refund to the date the refunds are made to the purchasers. The refunds will be approximately $335,000 plus applicable interest and Mound's annual revenues will be decreased approximately $113,000 as a result of the settlement.

In its settlement proposal Mound proposes to waive the right to file for any increase in rate resulting from the operation of any favored nations or price re-

[1] The additional dockets involved herein are set forth in the Appendix hereto.

determination clauses contained in its FPC gas rate schedules set forth in paragraph 3, *supra*. However, we hereby condition our approval of the settlement proposal to require Mound to file executed contract amendments eliminating such favored-nation and price redetermination clauses from the subject rate schedules.

Under the settlement proposal Mound will make refunds to Tennessee Gas Transmission Company, Texas Gas Pipe Line Corporation, Transcontinental Gas Pipe Line Corporation and United Gas Line Company (United). Each of said companies is under a requirement to flow-through to its jurisdictional customers the proportionate share of the amount it will receive by way of refunds from Mound. However, for the reasons set forth in our order issued July 16, 1963 in *Hunt Oil Company*, Docket No. G–9065, *et al.* 30 FPC 220, we shall order United to retain the refunds (without further interest obligation by it) and to submit a report setting forth the proposed disposition of such refunds. Thereafter we shall take such action as set forth in the *Hunt* order, *supra*.

Additionally we hereby condition our approval of the settlement proposal so as to provide that the settlement rates conditionally approved herein, shall be applicable to all sales of natural gas from all acreage dedicated as of the date of the issuance of this order under each of the rate schedules currently on file with the Commission for the moratorium period approved hereby whether such sales are made by Mound, its successors or assignees.

We believe this settlement proposal, as herein modified, and in other particulars not specifically noted or set forth herein, meets the criteria previously set forth in other of our recent settlement orders and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal filed on June 24, 1963, as herein modified, is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that it be conditionally approved and conditionally made effective subject to the modifications hereinafter ordered, and good cause exists for approving the settlement rates, for terminating certain proceedings and providing for refunds.

The Commission orders:

(A) The Settlement of these proceedings on the basis of the Settlement Proposal, filed June 24, 1963, as herein modified, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in the appendix hereto are approved and such rates shall be effective as of July 1, 1963, in accordance with the Settlement Proposal.

(C) Within 90 days from the date of this order, Mound shall make such filings under its rate schedules as are required to make effective the terms of the Settlement Proposal, as modified herein.

(D) Within 90 days from the date of this order, Mound shall (1) refund, with interest as specified in each docket computed to the date of actual refund, the differences between the rates collected subject to refund, prior to April 1, 1962 and the related settlement rates; and (2) report to the Commission, in writing, the amount of refunds made to each of its purchasers, showing separately the amount of principal and interest so paid, and the basis used for such determination, together with releases from its purchasers showing receipt of the refunds in conformity with the Settlement Proposal as modified and approved herein.

(E) Within 15 days from date of receipt by it of the refunds herein provided, United Gas Pipe Line Company shall submit a report to the Commission, and

serve a copy thereof upon each of its jurisdictional customers, setting forth a plan for distribution of such refunds to its customers. The report shall show separately the amount of principal and interest, together with a computation showing the manner in which such distribution was determined. United shall retain the refunds received pursuant to this order, subject to further order of the Commission, provided, however, that United shall not be required to pay interest on such funds.

(F) Mound shall, over the signature of a responsible officer, file with the Commission, within 30 days from the date of the issuance of this order, an original and one copy of its acceptance or rejection of the terms and conditions of this order applicable to it.

(G) Upon full compliance by Mound with all the terms and provisions of this order applicable to it, the Section 4(e) proceedings listed in the appendix hereto shall terminate.

(H) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Mound, the Commission Staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Mound or any other companies, person or parties affected by this order.

Commissioner O'Connor *not participating.*

[1] All prices in cents per Mcf, including tax reimbursement. Texas prices at 14.65 psia; Louisiana and Mississippi prices at 15.025 psia

[2] Subject to contract provisions for downward adjustment for dehydration, compression, transportation charges, etc.

[3] Settlement price approved by Commission order issued December 26, 1962, in *Cities Service Production Co.*, Docket No. G–9510, *et al.*, 28 FPC 1114, with respect to Cities Service Rate Schedule No. 1 for sales to Trunkline in the Columbus-Ramsey Field. Mound's gas now sold under Cities Service Rate Schedule No. 1.

[4] Initial contract price, including tax reimbursement.

Before Commissioners: Joseph C. Swidler, Chairman: Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

UNION TEXAS PETROLEUM, ET AL., DOCKET NO. G-13221, ET AL.; MOUND COMPANY (OPERATOR), ET AL., DOCKET NO. CI60-258

ORDER SEVERING PROCEEDING, CONDITIONALLY APPROVING OFFER OF SETTLEMENT AND CONDITIONALLY ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 5, 1963)

On June 24, 1963, Mound Company (Operator), *et al.* (Mound) filed a motion requesting the severance of Docket No. CI60-258 from the consolidated certificate proceeding, Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.* and approval of the offer of settlement attached to the motion.

The Pennsylvania Public Utility Commission (Pennsylvania) filed an answer in opposition to the Mound motion on July 10, 1963. However, on July 31, 1963, Pennsylvania filed a withdrawal of its objection. No other party has filed an answer to Mound's motion.

Mound offers to reduce the rate under its Rate Schedule No. 18 from 20.675¢ per Mcf[1] to 20.625¢ per Mcf effective July 1, 1963, and to have a moratorium on rate increase filings through June 30, 1968; except that such filings may be made (1) prior to July 1, 1968, to the extent that the maximum statutory suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months, and (2) at any time for reimbursement for one-half the amount of increased State or Federal taxes or payments in lieu of taxes, provided that such increase does not exceed the reimbursement to which Mound is entitled by its contract with Southern Natural Gas Company (Southern) the purchaser in Docket No. CI60-258.

Mound is presently collecting its initial contract rate of 20.675¢ per Mcf under a temporary authorization without refund condition issued April 14, 1960, and does not propose to refund any amounts above the settlement rate collected prior to July 1, 1963. There are no take-or-pay provisions in the Mound-Southern contract involved herein.

We find the settlement proposal of Mound to be, generally, in the public interest. Accordingly, we shall sever Docket No. CI60-258 from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*, omit the intermediate decision[2] in Docket No. CI60-258 and issue a certificate of public convenience and necessity to Mound in accordance with its application and offer of settlement.

The settlement provisions for adjustments in rates according to our order or orders in Area Rate Proceeding, Docket No. AR61-2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61-2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61-2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61-2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

---

[1] All volumes expressed at 15.025 psia and all rates expressed inclusive of tax reimbursement.

[2] The hearings in the Union Texas Petroleum, *et al.* consolidated proceeding concluded July 25, 1963.

The Commission finds:

(1) Mound Company (Operator), *et al.* is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sale of natural gas is subject to the jurisdiction of the Commission, and such sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, is subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Mound is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sale, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and a certificate should be issued as ordered below.

(5) The conditions attached to the certificate herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decision in this proceeding.

The Commission orders:

(A) The motion for waiver of the intermediate decision is granted.

(B) The matters in Mound Company (Operator), *et al.*, Docket No. CI60-258 are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*

(C) A certificate of public convenience and necessity is hereby issued upon the conditions set forth herein to Mound for the sale of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Mound's application and settlement proposal herein.

(D) The certificate issued by paragraph (C) above, is granted upon the express condition that Mound comply fully with the terms of the settlement proposal which settlement is expressly approved, as conditioned.

(E) Upon full compliance of Mound with all the terms of this order and of the settlement proposal, said proceeding shall terminate.

(F) The certificate herein issued is not transferable and shall be effective only so long as Mound continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificate herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reduction in rate as required by this order and the settlement proposal.

(H) The grant of certificate, herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Mound, particularly any proceeding under Section 5 of the Natural

Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

Commissioner O'Connor *not participating.*

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

ALGONQUIN GAS TRANSMISSION COMPANY, DOCKET NO. CP63-97

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 6, 1963)

On April 11, 1963, Algonquin Gas Transmission Company (Applicant) filed in Docket No. CP63-97 an application to amend the Commission's order issued March 18, 1963, 29 FPC 536, in the subject docket to authorize the sale of additional maximum daily quantities of natural gas to ten of Applicant's existing customers, all as more fully set forth in the application to amend.

The subject order, among other things, authorized Applicant to construct and operate certain facilities and to sell and deliver additional maximum daily quantities of natural gas to certain of Applicant's customers.

It appears that as a result of the extreme cold weather experienced during the past winter, ten of Applicant's existing customers have re-evaluated their requirements and in order to prevent a critical deficiency of supply, have requested additional quantities of firm gas under Applicant's F-1 Rate Schedule commencing November 1, 1963. The requests for additional gas, totaling 5,460 Mcf at 14.73 psia, are as follows:

Customer	Presently authorized F-1 MDQ	Additional F-1 MDQ requested	Proposed F-1 MDQ
Bristol & Warren Gas Company	1,400	100	1,500
Brockton Taunton Gas Company	18,700	978	19,678
The Connecticut Gas Company	29,000	1,000	30,000
Fall River Gas Company	12,500	500	13,000
The Hartford Gas Company	23,200	800	24,000
New Bedford Gas & Edison Light Company	15,870	630	16,500
The Newport Gas Light Company	2,800	400	3,200
City of Norwich, Connecticut	3,100	300	3,400
Norwood Gas Company	1,969	252	2,221
Worcester Gas Light Company	14,000	500	14,500

Due notice of the filing of the subject application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on July 2, 1963 (28 F.R. 6815). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's order issued March 18, 1963, in Docket No. CP63-97 be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order issued March 18, 1963, in Docket No. CP63-97 be and the same is hereby amended to authorize the sale by Applicant to ten of

its existing customers of additional maximum daily quantities of natural gas totalling 5,460 Mcf, all as hereinbefore described and as set forth in the application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

MISSISSIPPI RIVER FUEL CORPORATION, DOCKET NO. CP63-295

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 6, 1963)

On May 6, 1963, Mississippi River Fuel Corporation (Applicant) filed in Docket No. CP63-295 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities, and the sale and delivery of quantities of natural gas to Arkansas Louisiana Gas Company (ArkLa) for resale to the City of Griffithville, White County, Arkansas, all as more fully represented in the application in this proceeding.

Applicant proposes to establish a new delivery point on its main-line to enable ArkLa to provide natural gas service to the City of Griffithville. Applicant states that ArkLa did not request an increase in its existing stated demand of gas because of the small requirements Griffithville will need, accordingly no increase is proposed. The estimated total cost of establishing the new delivery point, consisting of a main-line tap connection and metering, regulating, and appurtenant facilities, would be $4,400 to be financed from cash on hand. The estimated third year peak day and annual requirements would be 105 Mcf and 10,500 Mcf of natural gas respectively.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 23, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Mississippi River Fuel Corporation, a Delaware corporation having its principal place of business in St. Louis, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof as well as the sale of natural gas by Applicant, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities as well as the sale of natural gas, up to 105 Mcf per day, as proposed by Applicant, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Mississippi River Fuel Corporation, to construct and operate certain natural gas facilities, and to sell up to 105 Mcf of natural gas per day for resale, as hereinbefore described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall commence as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP63-219

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 6, 1963)

On February 4, 1963, as amended on May 1, 1963, Northern Natural Gas Company (Applicant) filed in Docket No. CP63-219 an application pursuant to Section 7(c) of Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities enabling the sale and delivery of additional contract demands to existing customers for the 1963-64 heating season, and further authorizing a certain initial firm service to a large industrial consumer and changes in present firm service to two large volume industrial consumers served by three of Applicant's customer utility companies, all as more fully set forth in the application, as amended.

Based upon their experience during the past heating season, fourteen of Applicant's utility customers requested increases in their contract demand volumes of natural gas. Applicant's original application filed on February 4, 1963, requested an additional increase of some 13,461 Mcf, however, the amended appli-

cation increased this amount to 30,127 Mcf. In order to meet such increases, Applicant finds it necessary to construct and operate additional mainline facilities as follows: (1) 2000 horsepower addition at the Beatrice, Nebraska Compressor Station; (2) turbocharge units 19 and 20 at the Mullinville, Kansas Compressor Station adding 1400 horsepower; (3) 3400 horsepower addition at the Oakland, Iowa Compressor Station; (4) 11.9 miles of 30-inch pipeline loop north of Ogden, Iowa; (5) 16.8 miles of 30-inch pipeline loop north of Ventura, Iowa; (6) 10.8 miles of 30-inch pipeline loop north of Clifton, Kansas; (7) 11.7 miles of 30-inch pipeline loop north of Tescott, Kansas; (8) 15.7 miles of 30-inch pipeline loop north of Beaver, Oklahoma; (9) 10.4 miles of 26-inch pipeline loop east of Ogden, Iowa; and (10) 0.3 miles of 26-inch pipeline loop at Bushton, Kansas. In addition, Applicant proposes to change compressor cylinders in a unit at the Beatrice Station and to change or modify the compressor cylinders in certain units at the Clifton Station. The total estimated cost including interest and overheads of increasing the system salable capacity is $10,423,900, all to be financed from funds on hand, reserve accruals, and retained earnings.

Under the provisions of Applicant's existing tariff, firm service to a large volume industrial consumer is subject to certificate authorization. Therefore, it proposes to (1) initiate firm service of 210 Mcf per day to the W. S. Moore Company to be served by the City of Duluth, Minnesota; (2) increase the firm service from 738 Mcf to 850 Mcf per day to Wood Conversion Company being served by Iron Ranges Natural Gas Company; and (3) increase the firm service from 738 Mcf to 1000 Mcf per day to Minnesota Mining and Manufacturing Company being served by Applicant's Peoples Division. No additional contract demands are requested by these utilities since these volumes will be met under existing contract quantities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 24, 1963, respecting the matters involved in and the issues presented by the application herein. Petitions of Intervention in support of the application were filed by Northern States Power Company on July 10, 1963, and by Minneapolis Gas Company on July 11, 1963. The Webster Cooperative Dairy Association, Inc. filed a Petition to Intervene on July 11, 1963, but later filed a Motion of Leave to Withdraw Petition to Intervene on July 19, 1963. A Joint Petition by Fuels Research Council, Inc., National Coal Association, United Mine Workers of America, Mid-West Coal Producers Institute, Inc., and Upper Lake Docks Coal Bureau, Inc. to Intervene was filed on July 11, 1963, in opposition to the application. At the hearing of July 24, 1963, Fuels Research Council, Inc., *et al.*, made an appearance for the purpose of withdrawing its opposition to the application and made a statement on the record to that effect. No other notices or petitions of intervention or protest were filed. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Northern Natural Gas Company, a Delaware corporation with its principal place of business in Omaha, Nebraska, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Com-

mission, and the construction and operation thereof as well as the sale of natural gas by Applicant, are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities as well as the sale of natural gas, both proposed by Applicant, are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Applicant should be allowed to increase its system salable capacity by 30,127 Mcf per day in order to meet additional contract demand volumes. Furthermore, firm deliveries of natural gas by Applicant made through (1) the City of Duluth, Minnesota, to the W. S. Moore Company, should be allowed in amounts up to 210 Mcf per day; (2) Iron Ranges Natural Gas Company to Wood Conversion Company should be allowed in amounts up to 850 Mcf per day; (3) Applicant's Peoples Division to Minnesota Mining and Manufacturing Company should be allowed in amounts up to 1000 Mcf per day.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Northern Natural Gas Company, to construct and operate certain natural gas facilities, and to sell natural gas for resale, as hereinbefore described in the application in this proceeding, upon the terms and conditions of this order.

(B) Applicant shall be allowed to increase its system salable capacity by 30,127 Mcf per day in order to meet additional contract demand volumes. Firm deliveries of nautral gas by Applicant made through (1) the City of Duluth, Minnesota, to the W. S. Moore Company shall be allowed in amounts up to 210 Mcf per day; (2) Iron Ranges Natural Gas Company to the Wood Conversion Company shall be allowed in amounts up to 850 Mcf per day; and (3) Applicant's Peoples Division to Minnesota Mining and Manufacturing Company shall be allowed in amounts up to 1000 Mcf per day.

(C) Furthermore, the certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized shall be constructed and placed in actual operation and the sale of natural gas shall commence as provided by paragraph (b) or Section 157.20 of the Commission's Regulations under the Natural Gas Act within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

APPEALS FROM STAFF ACTION UNDER DELEGATED AUTHORITY, DOCKET NO. R-245

ORDER NO. 270

AMENDING §§ 1.7 (d), 1.9 OF RULES OF PRACTICE AND PROCEDURE

(Issued August 6, 1963) *

The amendments herein adopted are to cure an unintentional inconsistency resulting from an amendment to § 1.7 prescribed by Order No. 255 (28 FPC 500, 790; 27 F.R. 9499, 12212) which added a new paragraph (d) thereto. That paragraph, relating to appeals from staff actions taken pursuant to delegated authority, restricted such appeals to actions taken by the staff pursuant to the specific delegations of authority listed in § 3.5. No such narrow effect was intended. Appeals should be allowed from any delegated action whether the delegation is specific or is implicit in the provisions of a particular rule. One amendment made herein simply removes the present reference to § 3.5 from paragraph (d) of § 1.7. The paragraph is also amended to provide that answers to such appeals may be filed within 10 days.

The amendments to § 1.9, the general rule relating to answers, are to make it consistent with the provision for answers added to § 1.7(d).

The Commission finds:

(1) The amendments herein adopted pertain to matters of practice and procedure which do not require notice or hearing under section 4(a) of the Administrative Procedure Act.

(2) Adoption of these amendments is necessary and appropriate for the administration of both the Federal Power Act and the Natural Gas Act.

The Commission, acting pursuant to authority granted by the Federal Power Act, particularly sections 308 and 309 thereof (49 Stat. 858; 16 U.S.C. 825g, 825h), and the Natural Gas Act, as amended, particularly sections 15 and 16 thereof (52 Stat. 829, 830; 15 U.S.C. 717n, 717o), *orders:*

(A) Part 1, Rules of Practice and Procedure, of Subchapter A, General Rules, Chapter I of Title 18 of the Code of Federal Regulations, is amended as follows:

1. Paragraph (d) of § 1.7 is amended to read as follows:

(d) *Appeals from actions of the staff.* Actions taken pursuant to authority delegated by the Commission may be appealed to the Commission by filing a petition within ten days after such action. Answers to such petitions may be filed by any party or staff counsel within 10 days after the date of service thereof. Such petitions or answers shall conform to the requirements of §§ 1.15 through 1.17.

2. Paragraph (a) of § 1.9 is amended by inserting after "to intervene" the words "and petitions of appeal from delegated actions of the staff." As so amended paragraph (a) reads as follows:

§ 1.9 Answers.

(a) *Answers to formal complaints and petitions.* Answers to formal complaints and petitions, other than petitions to intervene and petitions of

* Published in the Federal Register on August 13, 1963 (28 F.R. 8287).

appeal from delegated actions of the staff, shall be filed with the Commission within 30 days after the date of service, unless for cause the Commission with or without motion shall prescribe a different time, but in no case shall answer be required in less than 10 days after the date of service. Any defendant failing to file answer within such period shall be deemed in default, and all relevant basic facts stated in such complaint or petition may be deemed admitted. All answers shall be in writing and under oath, and so drawn as fully and completely to advise the parties and the Commission as to the nature of the defense. They shall admit or deny specifically and in detail each material allegation of the pleading answered, and state clearly and concisely the facts and matters of law relied upon. They shall conform to the requirements of §§ 1.15 to 1.17, inclusive.

3. Section 1.9 is amended by adding a new paragrapgh (i) as follows:

(i) *Answers to appeals from actions of the staff.* (See § 1.7(d)) [Secs. 308, 309, 49 Stat. 858, secs. 15, 16, 59 Stat. 829, 830; 16 U.S.C. 825g, 825h: 15 U.S.C. 717n, 717o.]

(B) These amendments shall become effective upon issuance of this order.

(C) The Secretary shall cause publication of this order to be made in the Federal Register.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP61-292

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 6, 1963)

On March 29, 1963, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP61-292 an application to amend the Commission's order, issued January 18, 1963, in Docket No. CP61-292, CP61-294, *et al.*, 29 FPC 119, to authorize the installation and operation of three compressor units totaling 10,200 horsepower at Applicant's proposed Station No. 515 in lieu of the five presently authorized units totaling 10,000 horsepower, all as more fully set forth in the application to amend.

The subject order authorized Applicant to construct and operate, among other things, a new compressor station of 10,000 horsepower, designated as No. 515, to be located in Luzerne County, Pennsylvania, on Applicant's Leidy Line. Applicant states that substantial savings will be realized through the installation of the herein proposed substitute facilities.

The estimated total cost of the presently authorized units is $3,445,500, compared to $3,239,000 for the proposed substitute units; hence, a total estimated saving of $206,500 would be realized by installation of the substitute units.

Due notice of the filing of the application to amend and opportunity for hearing thereon has been given by publication in the Federal Register on May 30, 1963 (28 F.R. 5399). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act and the public convenience and necessity require that the Commission's

order, issued January 18, 1963, in Docket No. CP61–292, CP61–284, *et al.*, be amended as hereinafter ordered.

The Commission orders:

(A) The Commission's order, issued January 18, 1963, in Docket No. CP61–292, CP61–284, *et al.*, be and the same is hereby amended to authorize the installation and operation of three compressor units totaling 10,200 horsepower at Applicant's proposed Station No. 515 in lieu of the five units totaling 10,000 horsepower heretofore authorized in the subject docket, all as hereinbefore described and as set forth in the subject application to amend.

(B) In all other respects said order shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

TRANSCONTINENTAL GAS PIPE LINE CORPORATION, DOCKET NO. CP63–299

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 6, 1963)

On May 9, 1963, Transcontinental Gas Pipe Line Corporation (Applicant) filed in Docket No. CP63–299 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of a sales meter station and appurtenant equipment on Applicant's 36-inch transmission line, Louisa County, Virginia, and to utilize said station as an additional delivery point for natural gas service to Lynchburg Gas Company (Lynchburg Gas), an existing customer for resale, all as more fully set forth in the application on file with the Commission.

The application indicates that Lynchburg Gas has requested the proposed new delivery point in order that natural gas service may be rendered to the Town of Gordonsville, Virginia (Gordonsville) and an industrial plant of Gordonsville Industries, Inc. (Industries). Deliveries of natural gas are proposed to be made into the facilities of Lynchburg Pipe Line Company (Lynchburg Pipe), a wholly-owned subsidiary of Lynchburg Gas. Lynchburg Pipe will purchase said gas from Lynchburg Gas for resale to Gordonsville and Industries.

The natural gas requirements for the proposed service are:

	Maximum daily volumes (Mcf)	Annual volumes (Mcf)
Industries-interruptible	200	40,000
Industries-firm	10	
Gordonsville	160	24,000
Total	370	64,000

The volumes of gas to be delivered at the proposed new delivery point will be out of allocations previously authorized by the Commission.

The application indicates further that Lynchburg Pipe, itself or through its parent, Lynchburg Gas, will construct and operate all facilities between the proposed sales meter station and Gordonsville and Industries.

Applicant's proposed facilities are estimated to cost approximately $12,500, which cost will be initially financed from general funds. Lynchburg Gas will reimburse Applicant in full for the entire cost of facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 30, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Transcontinental Gas Pipe Line Corporation, a Delaware corporation having its principal place of business in Houston, Texas, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of November 18, 1948, in Docket No. G–1143 (7 FPC 139).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30 (c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Transcontinental Gas Pipe Line Corporation, to construct and operate the proposed facilities in order to provide an additional delivery point for natural gas service to Lynchburg Gas as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within six months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

UNITED GAS PIPE LINE COMPANY, DOCKET NO. CP63-337

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 6, 1963)

On June 7, 1963, United Gas Pipe Line Company (Applicant) filed in Docket No. CP63-337 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the installation during the 12-month period commencing October 1, 1963, and the operation of taps on its existing transmission system to enable Applicant to sell natural gas to new and existing customers for resale to rural consumers along and in the vicinity of said system, all as more fully set forth in the application.

Sales and deliveries by means of the proposed facilities will not exceed 300,000 Mcf per year and no expansion or enlargement of Applicant's presently existing system will be required. The effect of these proposed sales on the reserve life index of Applicant would be negligible.

The proposed facilities will not exceed a maximum cost of $14,000 and no single connection will exceed a cost of $700, said costs to be financed from current working funds.

Pursuant to due notice, a public hearing was held in Washington, D.C., on July 30, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of its Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, United Gas Pipe Line Company, a Delaware corporation having its principal place of business in Shreveport, Louisiana, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of January 20, 1942, in Docket No. G-216 (3 FPC 3).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are proposed to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, as integral parts of Applicant's existing pipeline system, and the installation and operation thereof by Applicant and the proposed sales of natural gas are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The installation and operation by Applicant of facilities to sell natural gas to new and existing customers for resale as proposed herein is required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that Applicant should submit prior to December 1, 1964, a statement showing by projects: (a) names of customers served, together with the dates of the sales service agreements and FPC gas rate schedules applicable to said sales, (b) estimates of annual delivery volumes, (c) actual final costs, (d) description of the project or projects, and (e) the location of said facilities.

(6) The authorization hereinafter granted should be limited to installations during the 12-month period commencing October 1, 1963, and the total expenditures for facilities installed thereunder should be limited to $14,000, with no single project to exceed a cost of $700.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) Upon the terms and conditions of this order, a certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, United Gas Pipe Line Company, to install during the 12-month period commencing October 1, 1963, the facilities hereinbefore described, all as more fully described in the application in this proceeding, and to operate such facilities only to sell and deliver natural gas to existing or new customers for resale to rural consumers along or in the vicinity of Applicant's existing pipeline system.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a) and (e) of Section 157.20 of said Regulations.

(C) Applicant shall submit, prior to December 1, 1964, a statement showing by projects: (a) names of customers served, together with the dates of the sales service agreements and FPC gas rate schedules applicable to said sales, (b) estimates of annual delivery volumes, (c) actual final costs, (d) description of the project or projects, and (e) the location of said facilities.

(D) The authorization granted in paragraph (A) above is hereby limited to maximum total expenditures of $14,000, with no single project to exceed a cost of $700.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

THE CALIFORNIA COMPANY, A DIVISION OF CALIFORNIA OIL COMPANY, DOCKET NOS. G-16167, G-19343, CI61-348, CI61-628, CI61-629, CI61-630, AND CI61-1285

ORDER CONDITIONALLY APPROVING PROPOSED SETTLEMENT AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND AMENDING CERTIFICATE

(Issued August 7, 1963)

The California Company, a Division of California Oil Company (California) filed on June 25, 1963, a settlement proposal and a motion for approval of said proposal, for severance of the captioned dockets from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G-13221, *et al.*, and for issuance

of permanent certificates of public convenience and necessity and an amendment to a certificate of public convenience and necessity therein. No party filed an answer to California's motion and settlement proposal. On July 19, 1963, we granted California's motion to sever and fixed July 30, 1963, as the date for a hearing on these applications.

Pursuant to such notice, a hearing was held concerning the above-captioned matters on July 30, 1963. Staff Counsel moved for the omission of the intermediate decision pursuant to section 1.30(c)(1) of the Rules of Practice and Procedure and the record including the settlement proposal was certified to us by the presiding examiner. No party opposed the omission of the intermediate decision in these proceedings.

In general, California agrees (1) to reduce its South Louisiana initial service rates under its FPC Gas Rate Schedule Nos. 13, 15, 19, 24, 25, and 26 (Docket Nos. G–16167, G–19343, CI61–348, CI61–628, CI61–629, CI61–630, respectively) to 20.625¢ per Mcf (inclusive of tax reimbursement); (2) to the amendment of its permanent certificate of public convenience and necessity in Docket No. CI61–1285 for the sale of gas at 19.9¢ per Mcf (inclusive of tax reimbursement) from acreage added under Supplement No. 2 to its FPC Gas Rate Schedule No. 23;[1] (3) to have a five-year moratorium on rate increase filings from April 1, 1963 through March 31, 1968, inclusive; (4) to extend make-up periods for take-or-pay gas to 48 months where applicable; and (5) to refund two-thirds of the difference between the rates actually collected in the subject dockets and the settlement rates from the date of initial deliveries through March 31, 1963, with interest at 6 percent per annum as to volumes delivered prior to March 1, 1960, and at 7 percent per annum as to volumes delivered after that date, and to refund all amounts above the settlement rate collected since March 31, 1963.

California reserves the right to file for changes in rate during the moratorium period according to any specifically applicable area rate determined in the South Louisiana Area Rate Proceeding, Docket No. AR61–2, or similar proceeding. If California becomes obligated to pay any tax levied for which reimbursement is contractually provided, a rate increase equal to one-half of such tax may be filed. If the existing maximum five-month suspension period under Section 4(e) of the Act is lengthened, or if the Commission may hereafter be authorized to lengthen such period beyond five months, the March 31, 1968 moratorium date will be moved up correspondingly.

Generally, the terms of the settlement are similar to those approved by the Commission in the Texaco-Seaboard settlements[2] and other recent settlements.[3] The starting date for the regressive two-thirds refund calculation is March 31, 1963. The refunds, estimated to be over $350,000, are to be paid to Southern Natural Gas Company (Southern) Texas Gas Transmission Corporation (Texas Gas) and United Gas Pipe Line Company (United).

In our order of July 16, 1963, conditionally approving a rate settlement in *Hunt Oil Company*, Docket No. G–9065, *et al.*, 30 FPC 220 we noted that we were disturbed about the possible existence of a gap in the refund line and that we intended to take steps, when ordering refunds, to insure the proper disposition

---

[1] Permanent certificate issued by order September 10, 1962, in *W. E. Walker and J. R. Mecker, et al.*, Docket No. G–13265, *et al.* Temporary authorization was granted on February 28, 1963, to sell from the additional acreage at 19.9¢ per Mcf.

[2] *Texaco Inc.*, 28 FPC 247 (July 30, 1962).

[3] See Orders issued June 24, 1963, in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, 29 FPC 1283 and 1279, respectively concerning Union Oil Company of California and Tenneco Corporation.

thereof. We believe that similar action is necessary in this matter. Accordingly, we shall require United, Texas Gas and Southern, each of whom is a party intervenor herein, to submit reports indicating their proposed disposition of such refunds and interest and require that they shall hold such refund and interest amounts in a special fund (without further interest obligation) pending Commission action on such proposed dispositions. On the basis of these reports, we shall then decide whether further Commission proceedings are required with respect to jurisdictional natural gas companies who do not agree to pass such refunds and interest to their customers.

We find that the proposal, generally, is in the public interest. However, no provision is made for the accrual of interest subsequent to March 31, 1963, on the amounts to be refunded. In keeping with present Commission policy of requiring refunds to accrue through the last day of the month in which the settlement proposal is filed, our order granting certificates in these dockets requires that interest accrue through June 30, 1963.

The settlement provisions for adjustments in rates according to our order or orders in *Area Rate Proceeding*, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the *Area Rate Proceeding*, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

The Commission finds:

(1) The California Company, a Division of California Oil Company is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsection (c) and (e) of Section 7 of the Natural Gas Act.

(3) California is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is in the public interest and it is appropriate in carrying out the provisions of the Natural Gas Act that United, Texas Gas and Southern be required to submit the reports and retain the refunds and interest as ordered below.

(7) No party has opposed the waiver of the intermediate decision in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decision procedure is granted.

(B) Certificates of public convenience and necessity and an amendment to the certificate in Docket No. CI61–1285 are hereby issued upon the conditions set forth herein to The California Company, a Division of California Oil Company for the sale of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in California's applications and settlement proposal herein.

(C) The certificates and amendment issued by paragraph (B) above, are granted upon the express condition that California comply fully with the terms of the settlement proposal referred to above and which was entered into evidence in this proceeding, which settlement is expressly approved, except that interest shall accrue through the last day of the month in which the settlement proposal was filed, June 30, 1963.

(D) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal, California shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity to the settlement as approved.

(E) Upon full compliance of California with all the terms of this order and of the settlement proposal, California shall be relieved of any further refund obligations in these proceedings and said proceedings shall terminate.

(F) The certificates and amendment herein issued are not transferable and shall be effective only so long as California continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificates and amendment herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(H) The grant of certificates and amendment herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against California, particularly any proceeding under Section 5 of the Natural Gas Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

(I) Within 15 days from the date of receipt of refunds and interest required by this order, United, Texas Gas and Southern shall each submit a report to the Commission and serve a copy on their respective jurisdictional customers, and the various State Utility Commissions wherein each pipeline does business, setting forth the amount of refund and interest received and their proposed disposition of such amounts. Pending Commission action and further orders respecting such proposed dispositions, the aforementioned companies shall hold such refund and interest amounts in a special fund (without further interest obligation).

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

INDIANA & MICHIGAN ELECTRIC COMPANY, DOCKET NO. E-7089

ORDER MODIFYING ORDER FOR PRODUCTION OF DATA PURSUANT TO SUBPOENA DUCES TECUM AND TO REQUIRE THE MAKING OF MINUTES AVAILABLE FOR EXAMINATION

(Issued August 7, 1963)

This order amends an order of the Commission issued July 23, 1963, 30 FPC 391, in the above entitled matter requiring *inter alia* the production before the Commission's trial examiner of certain documents, records and data of Indiana & Michigan Electric Company (Indiana-Michigan) and its corporate affiliates in the American Electric Power Company System. On July 30, 1963, the presiding examiner certified to the Commission, pursuant to Section 1.27 of the Rules of Practice and Procedure, a recommendation by staff counsel and counsel for Indiana-Michigan for modification of the Commission's July 23, 1963 order to permit production of the subject documents, records and data at the respective corporate business offices where they are maintained, and for such further continuances of the hearing in this matter as the examiner may deem reasonable.

The Commission finds:

It is necessary and appropriate for purposes of the aforementioned order issued July 23, 1963 that paragraph (A) thereof be modified so as to permit the companies therein named (and their President, Mr. Donald C. Cook) to make all original source data specified in subparagraphs (a), (b), (c), (d) and (e) of paragraph (A) available to the Commission's staff for purposes of inspection and supplying copies to the staff at the respective places of business of those companies where those records are maintained.

The Commission orders:

(A) Paragraph (A) of the Commission's order issued July 23, 1963 in the above entitled matter is hereby modified as provided above.

(B) The hearing in this proceeding shall be continued as directed by the presiding examiner.

(C) The order of July 23, 1963 is otherwise affirmed in all respects.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

SOCONY MOBIL OIL COMPANY, INC., DOCKET NO. G-17625; CONTINENTAL OIL COMPANY, DOCKET NO. G-17649; NEWMONT OIL COMPANY, DOCKET NO. G-17765; TENNESSEE GAS TRANSMISSION COMPANY, DOCKET NO. RP64-4

ORDER CONDITIONALLY APPROVING PROPOSED SETTLEMENT, CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY AND IMPOSING REPORTING REQUIREMENTS

(Issued August 7, 1963)

On October 29, 1962, Socony Mobil Oil Company, Inc., Continental Oil Company and Newmont Oil Company (hereafter collectively referred to as MCN) filed an offer of settlement in the above-captioned dockets which was rejected by our order of April 10, 1963[1] for the reasons therein set out. On June 19, 1963,

[1] *Union Texas Petroleum, et al.*, Docket No. G-13221, *et al.*, "Order Denying Motions to Sever and Rejecting Settlement Proposal," 29 FPC 734.

MCN filed an amended settlement proposal[2] and a motion for severance and issuance of certificates upon shortened procedures. No answers to this latter settlement proposal and motion have been received.

The major defects in the original proposal (i.e. ambiguities and failure to provide for permanent certificates as to some of the properties) have been cured.

A settlement rate of 19.0¢ per Mcf[3] is proposed for all three sales. Escrow provisions for an additional 1.5¢ per Mcf are to provide for the contingency of the producing acreage's being finally adjudicated as lying within the taxing jurisdiction of the State of Louisiana. Similar provisions were approved in the Commission's order of August 24, 1962 in *Socony Mobil Oil Company, Inc.*, 28 FPC 357, and other settlements. MCN represent that they are not now nor have they been paying Louisiana State taxes referable to the properties in question. The buyer in each case is Tennessee Gas Transmission Company (TGT).

MCN's offer applies to all properties (a 160-acre tract[4] and a 2340-acre tract[5] in the Block 62 Field, East Cameron Area, offshore Louisiana) covered under the rate schedules proposed to be settled.[6] It provides for: (1) a reduction in rate for the 160-acre tract sales from 22.9¢ per Mcf (includes 1.5¢ per Mcf tax reimbursement) now being collected to 19.0¢ per Mcf, and a reduction for the 2340-acre tract from 19.5¢ per Mcf to 19.0¢ per Mcf.[7] In addition, 1.5¢ per Mcf will be paid to an escrow agent pending final adjudication of the proper taxing jurisdiction for the subject properties; (2) a moratorium on further rate increases from October 1, 1962 to June 30, 1967, inclusive; (3) extension of make-up periods for take-or-pay gas to 48 months; (4) refunds of all amounts heretofore collected as reimbursement for Louisiana State taxes for deposit in the escrow account; (5) refund of two-thirds of the difference between 21.4¢ per Mcf (referable to to 160-acre tract) and 19.0¢ per Mcf collected from the date of initial delivery through September 30, 1962; and (6) refund of two-thirds of the difference between 19.5¢ per Mcf (referable to the 2340-acre tract) and 19.0¢ per Mcf collected from the date of initial delivery through September 30, 1962; (7) refunds of all amounts above the settlement rates collected subsequent to September 30, 1962.

Changes upward or downward in the settlement prices may be made during the moratorium period according to any specifically applicable area rate determined in the Area Rate Proceeding, Docket No. AR61–2, or other proceeding of similar nature. If MCN becomes obligated to pay any tax levied by the United States for which reimbursement is contractually provided, a rate increase equal to one-half of such tax may be filed. If the existing five-month suspension period of Section 4 of the Natural Gas Act is lengthened, the July 1, 1957 moratorium date for increased filings shall be moved up correspondingly.

Generally, the terms of the settlement are similar to those previously accepted by the Commission in recent settlements.[8] As noted above, interested interveners participated in negotiations for settlement and have signed the settlement proposal, and no comments have been received opposing the settlement. Refunds to

[2] Other parties to the proposal are Consolidated Edison Company of New York, Inc., Long Island Lighting Co. and Public Service Electric and Gas Company.

[3] All volumes at 15.025 psia.

[4] MCN contracts dated December 12, 31, and 30, 1958, respectively.

[5] MCN contracts dated September 6, September 6 and September 14, 1961, respectively.

[6] Socony's FPC Gas Rate Schedule No. 177, Continental's FPC Gas Rate Schedule No. 165 and Newmont's FPC Gas Rate Schedule No. 4.

[7] The original proposal of October 29, 1962, provided for the continuance of the temporary authorization at 19.5¢ per Mcf for the 2340-acre tract.

[8] See Orders issued June 24, 1963 in *Union Texas Petroleum, et al.*, Docket No. G–13221, *et al.*, concerning *Union Oil Company* of California and *Tenneco Corporation*, 29 FPC 1283 and 1279, respectively.

TGT are estimated to be $300,000 [9] (exclusive of interest) and under TGT's latest rate settlement in Docket No. G–11980, *et al.* such refunds will flow through to its customers.

Interest on refunds is proposed to be paid at a rate of 6% per annum, and no interest is proposed to accrue subsequent to April 30, 1963. However, in keeping with the present Commission policies of (1) requiring refunds to accrue until the last day of the month in which the proposal is received and (2) requiring interest to be paid at the rate of 6% per annum for refunds referable to sales made prior to March 1, 1960, with 7% interest for refunds made for sales after that date, our order below grants the certificates in these dockets upon the condition that interest on refunds accrue through June 30, 1963, the last day of the month in which the proposal was filed, and upon the further condition that interest attributable to volumes delivered prior to March 1, 1960 be computed at a rate of 6 percent per annum and for volumes delivered thereafter at a rate of 7 percent per annum.

In previous settlements involving another pipeline purchaser, where escrow arrangements have been necessary to account for monies pending final adjudication of the proper taxing jurisdiction for properties involved, we have required the pipeline company to make certain filings with us in order that we might be properly appraised of developments.[10] We believe that a similar requirement should be imposed upon TGT, an intervener party in these proceedings, at this time. Accordingly, in Docket No. RP64–4, TGT will file its escrow agreement with the agent selected and will file a special report of the amounts initially paid into escrow, special annual reports of the status of the escrow account, and special reports whenever the escrow agent makes disbursements therefrom.

We have approved of two other settlements involving TGT as purchaser in which similar escrow arrangements were provided.[11] In order to keep the Commission and interested parties informed as to the status of all of TGT's escrow accounts, we shall require TGT to file with the Commission in Docket No. RP64–4 the same reports for those other two escrow arrangements.

The settlement provisions for adjustments in rates according to our order or orders in *Area Rate Proceeding*, Docket No. AR61–2, seeks to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

Pursuant to due notice, a hearing was held concerning the above-captioned matters on July 23, 1963. Staff Counsel moved for the omission of the intermediate decision pursuant to section 1.30(c)(1) of the Rules of Practice and Procedure and the record including the settlement agreement was certified to us by the presiding examiner. No party opposed the omission of the intermediate decision in these proceedings.

---

[9] Includes full tax refund paid to escrow account.

[10] See *Socony Mobil Oil Company, Inc.*, 28 FPC 357; footnote 8, *supra*.

[11] See *Continental Oil Company, et al.*, Docket No. G–11024, *et al.*, "Order Conditionally Approving Rate Settlement Proposal, Severing and Terminating Proceedings," issued December 21, 1962, 28 FPC 1090, and *Tennessee Gas Transmission Company, et al.*, Docket No. G–14562, *et al.*, "Order Granting Motion to Omit the Intermediate Decision, Approving Proposed Settlement and Issuing Certificates of Public Convenience and Necessity," issued January 2, 1963, 29 FPC 4.

The Commission finds:

(1) Socony Mobil Oil Company, Inc., Continental Oil Co., and Newmont Oil Co. are natural-gas companies within the meaning of the Natural Gas Act, and are engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) MCN are able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) It is necessary and appropriate in carrying out the provisions of the Natural Gas Act that TGT be required to report to the Commission on its escrow arrangements, as ordered below.

(7) No party has opposed the waiver of the intermediate decision in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decision procedure is granted.

(B) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to Socony Mobil Oil Company, Inc., Continental Oil Co., and Newmont Oil Co. for the sale of natural gas in interstate commerce for resale as proposed, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in the MCN's applications and settlement proposal herein.

(C) The certificates issued by paragraph (B) above, are granted upon the express condition that MCN comply fully with the terms of the settlement proposal referred to above and which was entered into evidence in this proceeding, which settlement is expressly approved, as conditioned herein.

(D) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposals, the MCN shall report to the Commission, in triplicate, the amount of the refunds made to TGT, showing separately the amount of principal and interest so paid and the bases used for such determinations, together with releases from the purchaser showing receipt of the refunds in conformity to the settlement as approved.

(E) Upon full compliance of MCN with all the terms of this order and of the settlement proposals, MCN shall be relieved of any further refund obligations in these proceedings and said proceedings shall terminate.

(F) The certificates herein issued are not transferable and shall be effective only so long as MCN continue the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(G) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the

Regulations thereunder; *provided, however*, that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(H) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against MCN particularly any proceeding under Section 5 of the Natural Gas Act or Section 5(c) of the Outer Continental Shelf Lands Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

(I) Within 30 days after it has executed an agreement with an escrow agent, pursuant to this order, TGT shall file with the Commission a conformed copy of such agreement and a special report of the amounts paid into escrow. In addition, within 30 days of the date of this order TGT shall file with the Commission conformed copies of the escrow agreements entered into pursuant to our orders of December 21, 1962, and January 2, 1963, *supra*, and special reports of the amounts paid into escrow thereunder. Each year thereafter and until the escrow agreements terminate, TGT shall file contemporaneously with its Form 2 Annual Report a report of the amounts in the escrow accounts as of the last day of the reporting year. In addition, whenever the escrow agent pays out monies from the escrow accounts, TGT shall file a special report of the principal and interest so paid out, the reason for such payments, and the manner of distribution and basis therefor. Whenever the escrow agent pays out monies, TGT shall serve a copy of its special report on each interested State Commission. All filings and reports required by this paragraph shall be made by a responsible corporate official in Docket No. RP64-4 and shall include a statement of the amounts attributable to each rate schedule and field.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

ORDER SEVERING PROCEEDINGS, CONDITIONALLY APPROVING PROPOSED SETTLEMENT AND CONDITIONALLY ISSUING CERTIFICATES OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 7, 1963)

Humble Oil & Refining Company (Humble) and certain interested interveners,[1] submitted on April 11, 1963, a settlement agreement and a motion for severance

[1] The Brooklyn Union Gas Company, Consolidated Edison Company of New York, Inc., Long Island Lighting Company, Philadelphia Gas Works Division of the United Gas Improvement Company, Public Service Electric and Gas Company, South Jersey Gas Company, The United Gas Improvement Company, the New England Distributors group, the East Ohio Gas Company, Hope Natural Gas Company, Lake Shore Pipe Line Company, New York State Natural Gas Corporation, The Peoples Natural Gas Company, and The River Gas Company.

of twenty-two of the Humble dockets listed above from the consolidated certificate proceeding, Union Texas Petroleum, *et al.* Docket No. G–13221, *et al.* and one Humble docket (CI63–455) from the consolidated proceeding, Graridge Corporation (Operator), *et al.* Docket No. G–19246, *et al.* The motion also requested the expeditious issuance of permanent certificates of public convenience and necessity according to the applications as modified by the settlement agreement in each of the dockets except Docket No. CI63–635. The agreement proposed that the sale in Docket No. CI63–635 continue under temporary authorization.

Answers in opposition to this motion were filed on April 22, 1963, by the Pennsylvania Public Utility Commission (Pennsylvania), Alabama Gas Corporation (Alabama Gas) and the Memphis Gas, Light and Water Division of the City of Memphis, Tennessee (Memphis). Transcontinental Gas Pipe Line Corporation (Transco), a purchaser from Humble, on May 13, 1963, filed a statement objecting to the date on which the proposed moratorium would end and on the same date, the Philadelphia Electric Company filed a letter with the Secretary objecting to the treatment proposed for Docket No. CI63–635. The Public Service Commission of New York, on April 26, 1963, filed a response to the motion. Because of the opposition by parties and without passing on the merits of the settlement proposal, on May 21, 1963, we issued an order denying the motion.[2]

On May 31, 1963, Memphis filed a withdrawal of objection and on June 6, 1963, Pennsylvania filed an "Amended Answer" to the Humble, *et al.* motion withdrawing its objection. Alabama Gas, on June 10, 1963, filed a letter with the Secretary requesting that its Answer of April 22, 1963, be considered a statement of position and not be considered an objection to the settlement proposal of Humble, *et al.*

On June 7, 1963, Humble filed an application for rehearing and reconsideration of our order of May 21, 1963,[3] and on June 12, 1963, the Eastern Seaboard Interveners[4] filed a motion for reconsideration of the same order.

Since we could not approve of the entire package settlement proposal as submitted because of its failure to provide for the issuance of a permanent certificate of public convenience and necessity in Docket No. CI63–635 and its failure to provide for the accrual of interest on the amounts to be refunded through the last day of the month in which the settlement was filed, we granted the motions for reconsideration on July 8, 1963,[5] for the limited purpose of allowing the parties an opportunity to consider our proposal to approve of the settlement upon condition that a permanent certificate be issued at a settlement rate of 20.625¢ per Mcf[6] in Docket No. CI63–635 subject to the moratorium and the take-or-pay make-up provisions of the agreement. On July 22, 1963, Humble filed a letter with the Secretary advising "* * * that Humble will accept the settlement conditioned as proposed in the Commission's said order issued July 8, 1963." No objections to our proposed disposition of these matters have been filed.

[6] All volumes expressed at 15.025 psia.

The settlement agreement as now modified provides the following:

(1) In respect to the Humble Rate Schedules listed in paragraphs (2), (3), (4), and (5) below, a moratorium on rate increase filings from April 1, 1963, through March 31, 1968; except that such filings may be made (1) prior to April 1, 1968, to the extent that the maximum statutory suspension period under Section 4(e) of the Natural Gas Act may be extended beyond 5 months or the Commission may hereafter be authorized to lengthen such suspension period, and (2) at any time for reimbursement of one-half the amount of increased State or Federal taxes or payments in lieu of taxes, provided that such increase does not exceed the reimbursement to which Humble is entitled by contract.

(2) Permanent certification at settlement rates of 20.625¢ per Mcf inclusive of tax reimbursement, for gas delivered pursuant to Humble's Rate Schedules Nos. 136 (G–15227), 148 (G–17349), 152 (G–17772), 158 (G–18547), 163 (G–18714), 164 (G–18715), 165 (G–18716), 168 (G–19800), 169 (G–20019), 234 (CI60–177), 238 (CI60–623), 246 (CI61–397), 247 (CI61–425), 269 (CI61–1176), 274 (CI60–531), 280 (CI62–70) and 317 (CI63–635).

(3) Permanent certification at settlement rates of 19¢ per Mcf, inclusive of reimbursement for payments under Section 6(a)(9) of the Outer Continental Shelf Lands Act,[7] for gas delivered pursuant to Humble's Rate Schedule Nos. 241 (CI60–96) and 304 (CI62–69).

(4) Permanent certification at a rate of 19.5¢ per Mcf inclusive of tax reimbursement for gas delivered pursuant to Humble's FPC Gas Rate Schedule No. 323 (CI63–755).

(5) Permanent certification at contractual initial rates of 18.70¢, 20.25¢ and 14.25¢ per Mcf, inclusive of tax reimbursement, for gas delivered pursuant to Humble's Rate Schedules Nos. 135 (G–14967), 149 (G–17570) and 314 (CI63–455), respectively.

(6) Prospective upward or downward adjustment of settlement rates according to any applicable area rate or rates determined in Area Rate Proceeding, Docket No. AR61–2.

(7) Collection of the increased rates now in effect subject to refund in Docket Nos. RI62–82,[8] RI62–393,[9] RI63–94,[10] to be continued and the increased rate filed for but under suspension in Docket No. RI63–172[11] to be collected, subject to further orders of the Commission in those suspension dockets.

(8) Extension of the make-up period for gas paid for but not taken to 4 years in any case where the contract provides a lesser make-up period.

(9) Full refunds to be paid on all amounts collected by Humble in excess of the proposed settlement rate of 20.625¢ per Mcf for gas purchased under Humble's Rate Schedules Nos. 274 and 269. In both instances sales are being made to Tennessee Gas Transmission Company (Tennessee) under temporary authorizations subject to refund of amounts above the rate required by public convenience and necessity down to a floor of 20¢.

(10) Full refunds of all amounts above the settlement rates collected by Humble since April 1, 1963, the effective date of the rate reductions.

(11) Interest on the refundable amounts at 7% per annum to accrue through April 30, 1963.

The pipeline purchasers which will receive refunds and rate reductions under the settlement are Tennessee, United Gas Pipe Line Company (United), Trans-

[7] 67 Stat. 462.
[8] Related to Supplement No. 5 to Humble's FPC Gas Rate Schedule No. 135.
[9] Related to Supplement No. 4 to Humble's FPC Gas Rate Schedule No. 149.
[10] Related to Supplement No. 6 to Humble's FPC Gas Rate Schedule No. 135.
[11] Related to Supplement No. 6 to Humble's FPC Gas Rate Schedule No. 314.

continental Gas Pipe Line Corporation (Transco), Southern Natural Gas Company (Southern), and Trunkline Gas Company (Trunkline).

Tennessee, which will receive the greatest share of the refunds (approximately $400,000) will, in accordance with its rate settlement in Docket No. G–11980, *et al.*, pass the refunds on to its customers and also reflect Humble's reduced rates in its rates. Subject to the various conditions in their respective rate settlements, Tennessee's jurisdictional customers will in turn reflect Tennessee's refunds and rate adjustments.

United's rate case in Docket No. RP63–1 is presently before the Commission. Any adjustments necessary to reflect Humble's reduced rates will be considered in that proceeding.

The refunds to Transco (approximately $10,000) will be passed on and the Humble rate reductions will be reflected by Transco, subject to the accumulation provision of its rate settlement in Docket No. RP61–13.

Southern, whose refund will be approximately $2,000, is under a similar obligation. The dollar effect of this settlement on Trunkline is *de minimis*.

Transco, as we noted in our order of July 8, 1963, objects to the date of the end of the moratorium period because it fears that since the moratoria in other settlement agreements concerning its suppliers end less than six months prior to the date proposed by Humble, *et al.*, Transco may not be in a position to pass on Humble's prospective rate increases immediately. We stated in that order that we feel that an otherwise acceptable settlement agreement should not be rejected because of these circumstances. Should the circumstances which Transco fears actually occur it would be free to make application for special permission at that time to file rate changes during a suspension period.

The settlement provisions for adjustments in rates according to our order or orders in *Area Rate Proceeding*, Docket No. AR61–2, seek to anticipate in part the nature of our final determinations in that matter. It is clear that we shall make no determinations in this matter which will control our conclusions in Docket No. AR61–2. The settlement proposal also provides that adjustments in price growing out of the Area Rate Proceeding, Docket No. AR61–2, should go into effect upon conclusion of judicial review of our final order. However, we cannot now commit the Commission to conditionally staying the effectiveness of its final order in Docket No. AR61–2. These matters should be decided at the conclusion of that proceeding and our approval of the settlement will be so conditioned.

We find the settlement proposal as modified to be in the public interest. Accordingly, we shall sever the above-captioned Humble dockets from the consolidated proceedings in Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.*, and Graridge Corporation (Operator), *et al.*, Docket No. G–19246, *et al.*, omit the intermediate decisions in regard to these dockets[12] and conditionally issue certificates of public convenience and necessity.

The Commission finds:

(1) Humble Oil & Refining Company is a natural-gas company within the meaning of the Natural Gas Act, and is engaged in the sale of natural gas in interstate commerce for resale for ultimate public consumption, subject to the jurisdiction of the Commission.

(2) The proposed sales of natural gas are subject to the jurisdiction of the Commission, and such sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, are

[12] The hearings in the Union Texas Petroleum, *et al.* consolidated proceeding concluded July 25, 1963, and the hearing in the Graridge Corporation (Operator), *et al.*, consolidated proceeding concluded on May 14, 1963.

subject to the requirements of subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Humble is able and willing properly to do the acts and to perform the services proposed, and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The proposed sales, together with the construction and operation of any facilities subject to the jurisdiction of the Commission and necessary therefor, are required by the public convenience and necessity and are in the public interest upon the conditions set forth below, and certificates should be issued as ordered below.

(5) The conditions attached to the certificates herein issued are required by the public convenience and necessity.

(6) No party has opposed the waiver of the intermediate decision in these proceedings.

The Commission orders:

(A) The motion for waiver of the intermediate decision is granted.

(B) The matters in the Humble dockets listed in the caption to this order, except Docket No. CI63–455, are hereby severed from the consolidated proceeding, Union Texas Petroleum, *et al.*, Docket No. G–13221, *et al.* and Docket No. CI63–455 is hereby severed from the consolidated proceeding, Graridge Corporation (Operator), *et al.*, Docket No. G–19246, *et al.*

(C) Certificates of public convenience and necessity are hereby issued upon the conditions set forth herein to Humble Oil & Refining Company for the sales of natural gas in interstate commerce for resale as proposed and as modified by the settlement proposal and this order, and for the construction and operation of any facilities subject to the jurisdiction of the Commission necessary therefor, as more fully described in Humble's applications and settlement proposal herein.

(D) The certificates issued by paragraph (C) above, are granted upon the express condition that Humble comply fully with the terms of the settlement proposal as modified which settlement is expressly approved, as modified by this order.

(E) Within 30 days after making the refunds required by the terms and conditions of this order and the settlement proposal as modified, Humble shall report to the Commission, in triplicate, the amount of the refunds made to its pipeline purchasers, showing separately the amount of principal and interest so paid and the bases used for such determination, together with releases from the purchasers showing receipt of the refunds in conformity to the settlement as approved.

(F) Upon full compliance of Humble with all the terms of this order and of the settlement proposal as modified, Humble shall be relieved of any further refund obligations in these certificate proceedings and said proceedings shall terminate.

(G) The certificates herein issued are not transferable and shall be effective only so long as Humble continues the acts and operations hereby authorized in accordance with the provisions of the Natural Gas Act and the applicable rules, regulations and orders of the Commission.

(H) The grant of the certificates herein shall not be construed as a waiver of the requirements of Section 4 of the Natural Gas Act, or Part 154 of the Regulations thereunder; *Provided, however,* that the 30-day notice provision of Part 154.94(b) and the detailed submittal requirements of Part 154.94(f) are hereby waived insofar as they apply to the filing of reductions in rate as required by this order and the settlement proposal.

(I) The grant of certificates herein and approval of the settlement proposal is without prejudice to any findings or orders which have been or may hereafter be made by the Commission in any proceeding now pending or hereafter instituted by or against Humble, particularly any proceeding under Section 5 of the Natural Gas Act or Section 5(c) of the Outer Continental Shelf Lands Act and is without prejudice to claims or contentions which may be made by the Commission, Applicant, the Commission staff, or any affected party herein in any other proceeding.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr. and Charles R. Ross.

CALIFORNIA ELECTRIC POWER COMPANY, DOCKET NO. E-7107

ORDER AUTHORIZING ISSUANCE OF PROMISSORY NOTES

(Issued August 9, 1963)

California Electric Power Company (Applicant), a corporation organized under the laws of the State of Delaware and doing business in the States of California and Nevada, with its principal business office at San Bernardino, California, filed an application on June 11, 1963, for authority, pursuant to Section 204 of the Federal Power Act, to issue unsecured Promissory Notes in the aggregate principal amount of $17,000,000.[1] The Notes are proposed to be issued to the Bank of America National Trust and Savings Association in accordance with the terms of a Loan Agreement dated May 31, 1963 and will mature in less than 12 months from the date of issue. Interest on the note or notes will be at a fluctuating rate, which shall be equal at all times to Bank of America's prime rate for 90-day to 180-day prime commercial loans.

Applicant states that it will use the proceeds from the proposed issuance of Promissory Notes to redeem all of the outstanding shares of its $2.50 Cumulative Preferred Stock, 6% Cumulative Preferred Stock and 5.75% Cumulative Preferred Stock prior to the record date to be selected for determining the shareholders who will be entitled to vote upon the adoption of the proposed Merger Agreement. According to the application, the three issues to be called are quite costly in the light of the present Preferred Stock market.

Applicant states that if the issues remained outstanding at the time of merger the surviving corporation would, of necessity, be required to exchange and convert them into Preferred shares of the surviving corporation at ratios which would provide an equally high cost. It further states redemption through the proceeds of a bank loan bearing interest at prime rate will eliminate these three issues prior to the merger and permit the surviving corporation flexibility in selecting the method of replacing them with permanent financing on a basis which may be more advantageous than exchange or conversion in the course of merger.

If the contemplated merger does not take place the Applicant states amounts borrowed will be repaid through the issuance of additional securities. Applicant anticipates that it will be able, to market one or more new series of Cumulative Preferred to repay these redemption borrowings and to restore the Preferred element to Applicant's capital structure without financial detriment.

Present market conditions of the electric utility's Preferred Stock issues indicate that any new Preferred Stocks so issued by the Applicant could be placed at

[1] In a related application (Docket No. E-7106), filed on the same day pursuant to Section 203 of the Federal Power Act, California Electric seeks authority to merge with the Southern California Edison Company.

dividend rates which are less than the dividend rates for the three series proposed for redemption.

The total redemption cost of the three callable series of Preferred Stock will require $17,046,000.[2]

Written notice of the application has been given to the Public Utilities Commission of California, the Public Service Commission of Nevada, and to the Governors of each of those states. Notice has also been given by publication to the Federal Register on June 26, 1963 (28 F.R. 6604), stating that any person desiring to be heard, or to make any protest to the application should file a petition or protest on or before July 15, 1963 with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 204 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore determined and set forth in the Commission's order issued August 30, 1957, *California Electric Power Company*, Docket No. E-6770 (18 FPC 239).

(2) The proposed issuance of Promissory Notes in the aggregate principal amount of $17,000,000 all as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) The proposed issuance of Promissory Notes in the aggregate principal amount of $17,000,000, all as described above, will be in excess of 5% of the par value of the other securities of Applicant, and, therefore, will not be exempt by virtue of Section 204(e) from the requirements of Section 204(a) of the Act.

(4) Applicant is not organized and operating in a State, under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204(f) of the Act, and the proposed issuance is, therefore, not exempt by virtue of that Section from the requirement of Section 204 of the Act.

(5) The proposed issuance of Promissory Notes is exempt from the competitive bidding requirements of Section 34.1a of the Commission's Regulations under the Federal Power Act by reason of Paragraph 34.1a(a)(2) thereof.

(6) The proposed issuance of Promissory Notes, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance of service by Applicant as a public utility, and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance of Applicant of Promissory Notes in the aggregate principal amount of $17,000,000, outstanding at any one time, upon the terms and conditions and for the purposes set forth in the application, as amended, all as described above, is hereby authorized, subject to the provisions of this order.

[2] Redemption cost:

Preferred stock	Shares outstanding	Redemption price	Cost of redemption (does not include accrued dividends)
$2.50 Series	60,000	$52.50	$3,150,000
6% Series	140,000	54.00	7,560,000
5.75% Series	115,200	55.00	6,336,000
Total			17,046,000

(B) This authorization is expressly conditioned upon the final maturity of all Notes to be issued pursuant hereunder being not later than May 31, 1964.

(C) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates, or determinations of cost or any other matter whatsoever now pending or which may come before this Commission including the proposed merger.

(D) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

THE OHIO OIL COMPANY,[1] DOCKET NO. G–13532, ET AL.[2]

ORDER APPROVING RATE SETTLEMENT PROPOSAL, TERMINATING PROCEEDINGS, AND PROVIDING FOR REFUNDS

(Issued August 9, 1963)

On April 24, 1963, Marathon Oil Company (Marathon) filed a petition for approval of a settlement proposal concerning the rates under nine of its presently effective rate schedules. No objections or protests to such proposal have been received.

In summary the settlement proposal provides:

(1) Marathon's rates, inclusive of tax reimbursement, for sales of natural gas in interstate commerce under the nine rate schedules shall be at or below the applicable area ceilings;

(2) Marathon waives the right to file for contractually authorized increased rates for a 24-month period subsequent to the date of the Commission's order approving the settlement proposal. Marathon, however, reserves the right to file for any increased rates, if contractually authorized, up to the applicable area-rate levels determined through area hearings or by amendment to the Commission's *Statement of General Policy No. 61–1*, or any contractually authorized increase in tax reimbursement;

(3) In the event that the Natural Gas Act is amended so as to remove or release from Commission jurisdiction any sales covered by the rate schedules listed in the appendix hereto, or any of the prices contained in any or all of such rate schedules, Marathon reserves the right to claim such price or prices as it may presently be or may hereafter become entitled to under its contracts;

(4) Marathon will refund, with interest, 0.125 cents per Mcf of the 1.875 cents per Mcf Louisiana gas severance tax reimbursement collected under its FPC Gas Rate Schedules Nos. 69 and 72 (Docket Nos. G–17674 and G–17702).

In support of its proposal, Marathon states that the settlement rates, moratorium periods and other provisions thereof, some of which are not specifically noted herein, with the added benefit of termination of rate proceedings, are in the public interest in that the rates are reasonable, and will provide price stability for a long period of time for natural gas moving in interstate commerce.

---

[1] The corporate name of "The Ohio Oil Company" was changed to "Marathon Oil Company". There is pending before the Commission a motion to redesignate the subject rate proceedings from "The Ohio Oil Company" to "Marathon Oil Company."

[2] The additional dockets involved herein are set forth in the appendix hereto.

With respect to refunds, the various parties to the settlement conference compiled an agreed-upon cost-of-service. Such cost-of-service revealed that for the test year 1961, the jurisdictional costs exceeded the jurisdictional revenues. Marathon may therefore be relieved of any obligation to make refunds in the subject proceedings, other than the above-mentioned tax reimbursement refunds, as provided in the settlement proposal.

We believe that the settlement proposal meets the criteria previously set forth in other of our recent settlement orders and accordingly we find it to be in the public interest and should be approved as hereinafter provided.

Our approval of the settlement proposal should not be construed as constituting approval of any future rate increases that may be filed under the subject rate schedules, and is without prejudice to any findings or orders of the Commission in any future proceedings, including area rate proceedings, involving Marathon's rates and rate schedules.

The Commission finds:

The proposed settlement of the subject proceedings on the basis described herein, as more fully set forth in the settlement proposal filed on April 24, 1963, is in the public interest, and it is appropriate in carrying out the provisions of the Natural Gas Act that it be approved and made effective as hereinafter ordered, and good cause exists for approving the settlement rates, for terminating certain rate proceedings, and providing for refunds.

The Commission orders:

(A) The settlement of the subject proceedings on the basis of the settlement proposal filed April 24, 1963, is approved and made effective subject to the following terms and conditions.

(B) The applicable settlement rates set out in the appendix hereto are approved and such rates shall be effective as of the date of issuance of this order.

(C) Within 90 days from the date of this order, Marathon shall make such filings under its rate schedules as are required to make effective the terms of the settlement proposal.

(D) Within 90 days from the date of this order, Marathon shall (1) refund, with interest, to Texas Eastern Transmission Corporation 0.125 cents per Mcf of the 1.875 cents per Mcf Louisiana gas severance tax reimbursement collected under its FPC Gas Rate Schedule No. 69, (Docket No. G–17674), and (2) refund, with interest, to Texas Gas Transmission Corporation 0.125 cents per Mcf of the 1.875 cents per Mcf Louisiana gas severance tax reimbursement collected under its FPC Gas Rate Schedule No. 72 (Docket No. G–17702).

(E) Within 90 days from the date of this order Marathon shall report to the Commission in writing the amount of refunds made pursuant to paragraph (D) above, and the compilation of principal and interest, together with a copy of a release from Texas Eastern and Texas Gas with respect to such refunds.

(F) Upon full compliance by Marathon with all the terms and provisions of this order, the Section 4(e) proceedings listed in the appendix hereto shall terminate.

(G) This order is without prejudice to any findings or orders which have been or may be made hereafter by the Commission, and is without prejudice to claims or contentions which may be made by Marathon, the Commission Staff, or any affected party hereto, in any proceedings now pending, or hereafter instituted by or against Marathon or any other companies, person or parties affected by this order.

VIRGINIA ELECTRIC & POWER COMPANY, DOCKET NO. E-7098

ORDER AUTHORIZING, ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued August 9, 1963)

The Virginia Electric & Power Company (VEPCO), incorporated under the laws of the State of Virginia and doing business in the States of Virginia, West Virginia, and North Carolina, with its principal business office at Richmond, Virginia filed an application on May 21, 1963 as amended on June 13, 1963, requesting authorization, pursuant to Section 203 of the Federal Power Act, for VEPCO to acquire two 66,000 volt power lines from the Mecklenburg Electric Cooperative (Cooperative) an electric cooperative organized under the laws of the State of Virginia and doing business in that State with its principal office at Boydtown, Virginia.

VEPCO, is engaged in the business of generating and purchasing electric energy and transmitting and selling it at retail and at wholesale in an area comprising the greater part of Virginia, northeastern North Carolina and east central West Virginia. The Company renders electric service in 66 counties in Virginia, in 19 counties in North Carolina and in 5 counties in West Virginia. The Company had net plant of about $730,000,000 as of December 31, 1962.

Cooperative, is engaged in the business of puchasing and distributing electric energy and selling it in the towns of Chase City and Emporia, Virginia, and in portions of 9 counties in Virginia.

VEPCO and Cooperative entered into an agreement dated as of December 18, 1962, for the purchase by VEPCO and the sale by Cooperative of two 66 kv lines as follows:

(a) A 66 kv line approximately 4.6 miles in length, extending from a point on VEPCO's present 66 kv Altavista-Chatham line to Mecklenburg's Climax Substation, Pittsylvania County, Virginia; and

(b) A 66 kv line approximately 8.1 miles in length, extending from a point on VEPCO's present 66 kv Halifax-Carter Fabrics line to Mecklenburg's Lacks Store Substation (Riverdale delivery point), Halifax County, Virginia.

According to the agreement, the transfer of the properties will be in consideration of a cash payment of $100,000 plus reimbursement of any expense in excess of an aggregate of $3,000 incurred in clearing any defects in title in the right-of-way to be transferred.

According to the application the lines have been and are being used for the delivery by VEPCO of power and energy to Cooperative and will continue to be used for that purpose; and in addition will be connected with other facilities proposed for construction by VEPCO to provide more reliable service to the areas served by both parties. According to the application, VEPCO proposes to (1) extend the Lacks Store Line to Clarkville, Virginia, to provide loop feed to three Cooperative and two VEPCO substations, and (2) connect the Climax Line to the Appalachian Power Company (APCO) system and provide loop feed to three Cooperative and three VEPC0 substations. The additional lines will decrease the distance over which energy from the Southeastern Power Administration must be "wheeled" and in addition will increase reliability of service to all VEPCO and Cooperative customers in the areas in question.

VEPCO proposes to record the transmission facilities at total original cost of $99,187 and also to record the estimated applicable Accumulated Provision for

Depreciation of $12,200. The consideration of $100,000 will be $13,013 in excess of net plant of $86,987 and, therefore an Electric Plant Acquisition Adjustment of $13,013 will be created on the books of VEPCO. VEPCO proposes to eliminate the entire amount of the acquisition adjustment by a charge to Account 425, Miscellaneous Amortization.

Written notice of the application has been given to the State Corporation Commission of Virginia, the North Carolina Utilities Commission, the Public Service Commission of West Virginia and to the Governor of each of those States. Notice was also published in the Federal Register on June 6, 1963 (28 F.R. 5596), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before June 20, 1963, with the Federal Power Commission, Washington 25, D.C. No petition or protest or request to be heard in opposition to the granting of the petition has been received.

By order of May 16, 1963 the Virginia State Corporation Commission approved the request of the Cooperative to sell the said facilities and the request of VEPCO to acquire the facilities of the Cooperative.

The Commission finds:

(1) Applicant, a corporation, owns and operates facilities for the transmission and sale at wholesale of electric energy which is transmitted among the States of Virginia, West Virginia, and North Carolina, and consumed outside the State where generated, all of which facilities are in addition to, and do not include, facilities used for the generation of electric energy, facilities used in local distribution, or only for the transmission of electric energy in intrastate commerce, or facilities for the transmission of electric energy consumed wholly by the transmitter. Applicant is therefore, a public utility within the meaning of that term as used in Section 201 of the Act.

(2) By the proposed transaction, as described above, VEPCO will acquire and merge or consolidate with its facilities, subject to the jurisdiction of the Commission certain facilities of Cooperative, another person, within the meaning and subject to the requirements of Section 203 of the Federal Power Act.

(3) The proposed acquisition of Cooperative's facilities, by VEPCO as described above, upon the terms and conditions specified in the application and subject to the provisions of this order will be consistent with the public interest, as expressed in Section 203 of the Act, for the reasons set forth in the recital above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of the Mecklenburg Electric Cooperative as described above, by the Virginia Electric & Power Company is hereby authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) VEPCO shall record the transaction herein authorized and the facilities and properties referred to above, as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees. VEPCO shall dispose of the Electric Plant Acquisition Adjustment from the proposed transaction by a charge to Account 425, Miscellaneous Amortization.

(C) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of costs, or any matter whatsoever now pending or which may come before this Commission or any other regulatory body.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

HOPE NATURAL GAS COMPANY, DOCKET NO. CP63-311

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 12, 1963)

On May 17, 1963, as supplemented on June 12, 1963, Hope Natural Gas Company (Applicant) filed an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity to construct and operate certain transmission and storage facilities for the greater utilization of its existing underground Fink and Kennedy storage pools in Harrison and Lewis Counties, West Virginia.

The proposed facilities, estimated to cost $8,461,000, principally include a new 4,000 horsepower compressor station (Lightburn Station); 38.7 miles of 30-inch pipeline connecting Lightburn Station with Applicant's existing Hastings compressor station; 6.9 miles of 20-inch pipeline connecting applicant's existing Sweeney Station with the proposed 30-inch pipeline; 2.85 miles of 20-inch pipeline connecting the Kennedy station with the proposed Lightburn Station and 1.52 miles of 20-inch pipeline connecting the Kennedy storage pool to the proposed Lightburn Station. Applicant estimates that the proposed facilities will enable it to cycle an additional 15 Mcf of natural gas now required to be maintained as non-current or cushion gas in order to meet its delivery pressure requirements.

Applicant states that the proposed construction is urgently needed to supply the increased requirements of its existing customers, particularly in colder-than-normal weather. Such increased requirements are stated to represent normal growth in residential and commercial space heating in the present markets served with natural gas by Applicant.

The facilities are to be financed by funds on hand and funds to be obtained from the Applicant's parent corporation, Consolidated Natural Gas Company.

Pursuant to due notice, a public hearing was held in Washington, D.C. on August 5, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Hope Natural Gas Company, a West Virginia corporation with its principal place of business in Clarksburg, West Virginia, is a "natural-gas" company within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transmission and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Hope Natural Gas Company, to construct and operate the facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within 6 months from the date on which this order issues.

OPINION NO. 400

MIDWESTERN GAS TRANSMISSION COMPANY AND NORTHERN NATURAL GAS COMPANY, DOCKET NO. CP61-303

OPINION AND ORDER AFFIRMING EXAMINER'S DECISION

(Issued August 13, 1963)*

Syllabus

1. It may be correct that Northern's customers could cut down on interruptions and make additional sales but proof should show which customers are likely to receive such benefit and degree thereof. P. 471.
2. *Distinguishing Tennessee Gas*, Commission *notes* that evidence here does not show that benefits to all parties outweigh any alleged difficulties in system operations. P. 471.
3. Although aware of probable benefits to Midwestern and Northern's customers by proposed sale, Commission *states* such probabilities and assumptions are not a substitute for factual record which can be put to test of cross examination. P. 471.
4. Commission *denies* application for amendment of certificate of public convenience and necessity. P. 472.

---

*Initial decision appears on p. 472.

George C. Mastor and *P. L. Farnand* for Minneapolis Gas Company.

F. Vinson Roach, Daniel B. O'Brien, Justin R. Wolf, and *Charles A. Case, Jr.* for Northern Natural Gas Company.

A. R. Renquist for Northern States Power Company.

John A. McGrath, Jerome J. McGrath, and *Thomas C. Williams* for Fuels Research Council, Inc., et al.

L. R. Pankonien and *George R. Perrine* for Midwestern Gas Transmission Company.

Agnes Mae Wilson for the Staff of the Federal Power Commission.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

SWIDLER, *Chairman:*

This proceeding concerns an application by Midwestern Gas Transmission Company for an amendment to an existing certificate, which authorized an emergency interconnection between Midwestern and Northern Natural Gas Company to provide for the use of such interconnection not only for emergencies but also for interruptible sales of gas to Northern. No further facilities would be constructed and Midwestern would not be obligated to deliver any gas, nor would Northern be obligated to take any. The interconnection is located north of Minneapolis and Midwestern would make the gas available from its supplies from Trans-Canada only after the gas had been refused by all other customers. When the application was filed it was anticipated that it would be set for an abridged hearing, but the coal interests intervened in opposition, and Northern, Northern States Power Company, and Minneapolis Gas Company thereupon intervened in support of the application. The application was also supported by the staff of the Federal Power Commission.

At the hearing Midwestern presented only one witness, a senior sales representative of Tennessee Gas Transmission Company, and Northern presented one witness, its director of customer relations. Five exhibits were introduced: (1) a map of Midwestern's northern system, (2) Midwestern's estimated sales for the last half of 1963, (3) a map of Northern's system, (4) Midwestern's actual sales in 1962, and (5) a list of Northern's interruptible customers. No other evidence was presented.

The Examiner found that the evidence presented did not show that the project was required by the public convenience and necessity. He first noted that the application did not conform to the requirements of either a full-length or an abbreviated application under our rules and suggested that it should have been rejected.

The Examiner found that the evidence showed a benefit to Midwestern if the transaction were certificated. He noted that Midwestern's price to Northern of 25.2¢ per Mcf would result in a profit to Midwestern, with a consequent benefit to its other customers, if any gas at all were sold. Midwestern had also argued that because of the minimum-take provisions in its contract with Trans-Canada, the agreement with Northern would provide a possible outlet for gas which it might be forced to pay for and which it could not otherwise use. The Examiner noted that Midwestern made no showing that this would actually happen but only indicated that the minimum-take provisions existed and that under the contract demand provisions of its present customers it could happen.

On the question of the effect on Northern, another jurisdictional pipeline, the Examiner computed a probable loss on the transaction of $34,000 a year if Northern were to take the 11.3 billion cubic feet which Midwestern indicated might be available and which Northern testified that it might take. The witness for Northern stated that a large part of this gas (7.5 million Mcf) would

be used to fill the Redfield storage in Iowa by displacement and that the rest of the gas would be sold to existing customers in order that they could reduce interruptions. He pointed out that any gas which Northern's customers could resell would result in a profit to them which would more than offset Northern's loss. Northern's witness gave no clear indication which customers would avoid interruption.

Noting that Northern had cheaper gas available elsewhere, that it was having trouble in taking all of this cheaper gas, and that it had put in no evidence to show any benefit from paying this higher price, the Examiner concluded that the application had not been justified.

Midwestern and Northern were the only parties to file exceptions to the Examiner's decision. Both argue that the Examiner's interpretation of the requirements of an application are too strict and that where, as here, no facilities are required and there is no obligation to deliver or take gas, there is no need to include the usual market data.

Midwestern argues that the Examiner should have concluded from its showing of the minimum-take obligations from Trans-Canada and the comparable obligations of Midwestern's customers that it would have a problem in avoiding payments for gas not taken.

Both Northern and Midwestern argue that the minimal adverse effect on Northern is more than outweighed by the possible benefits to Midwestern and to Northern's customers and that the Examiner's speculation as to Northern's supply problems with cheaper gas is irrelevant.

On the basis of the evidence in the record, the parties' briefs, the Examiner's decision and the exceptions thereto we are of the opinion that the Examiner's decision is correct and should be affirmed.

The application, exhibits and the testimony in this case leave many unanswered questions as to the effect of this proposal on Northern and its customers. The testimony that Northern's customers could cut down on interruptions and make additional sales may be correct, but the proof should show which customers are likely to receive these benefits and the degree thereof. It was impossible for the coal interveners to make any meaningful showing in the absence of such evidence. Northern's claim that the authorization would allow filling its storage fields faster may also be correct, but it put in no supporting evidence.

Our decision in *Tennessee Gas Transmission Company*, Docket No. G–20388, 26 FPC 860, quoted in the exceptions, is not applicable here; a reading of that decision makes clear that the evidence of the benefits to all parties could be found to outweigh any alleged difficulties in the system operations.

The price Northern would pay for the gas of 25.2¢ per Mcf, is substantially more than it receives in Minnesota from its customers. In the recent "Black Dog" case, Docket No. G–2409, Opinion No. 388, issued May 20, 1963, 29 FPC 1025, Northern was to get 23.9¢ for the gas, and with the certification of the Bushton Plant in Docket No. CP61–132, Opinion No. 374, issued December 28, 1962, 28 FPC 1155, the reduction in the quality of Northern's gas will reduce the price for Northern's jurisdictional sales by .76¢, or to a price of 23.14¢. This would seem to increase Northern's losses on the proposed purchases involved in this application.

We are aware of the probable benefits to Midwestern, and of the likelihood of benefits to Northern's customers by the sale of additional interruptible gas. We agree that Northern is not in business to lose money and, having no obligation to take gas, we assume would do so only for its advantage. However, such probabilities and assumptions are not a substitute for a factual record which can be put to the test of cross-examination. This affirmance is limited,

as was the Examiner's decision itself, to the finding that the applicant has not sustained his burden rather than any finding that the proposal is contrary to the public interest. It may well be that with an adequate record it will be demonstrated that it is in the public interest.

The Commission orders:

(A) The findings and orders in the Presiding Examiner's decision issued May 9, 1963, in the above entitled proceedings are hereby adopted as the findings and orders of the Commission.

(B) The exceptions to the Examiner's decision are hereby denied.

INITIAL DECISION

OF THE PRESIDING EXAMINER UPON APPLICATION FOR CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY UNDER THE NATURAL GAS ACT

(Issued May 9, 1963)

FRIBOURG, *Presiding Examiner:* Midwestern Gas Transmission Company (Midwestern) here applies for an amendment of a certificate of public convenience and necessity issued in this docket on August 4, 1961. The original application was filed on May 29, 1961, by Midwestern and by Northern Natural Gas Company (Northern) for authority to construct and operate facilities for the emergency exchange of natural gas at two existing interconnections, one in Morrison County, Minnesota and one in Chisago County, Minnesota. The application was unopposed and was handled under the Commission's shortened procedure.[1] The August 4, 1961 certificate ran to both Midwestern and Northern. While Northern is not itself applying for the amendment, it appears as an intervenor in support of it.

On October 29, 1962, Midwestern filed, under Section 7 of the Natural Gas Act, the petition which is the subject of the present proceeding. It requests amendment of the certificate previously issued so as to permit it to make sales of interruptible gas to Northern at the Chisago County interconnection under Midwestern's Rate Schedule I–2, which was already on file with the Commission. The rate for all gas delivered under this rate schedule is 25.2 cents per Mcf. The schedule provides for interruptible sales of natural gas from time to time to any buyer whose pipeline system "connects or can be made to connect with" Midwestern's northern system, i.e. its transmission line system between the Canadian border and the vicinity of Marshfield, Wisconsin. The gas to be offered for sale under the proposed arrangement is gas which is rejected by those customers of Midwestern who have executed service agreements with Midwestern for firm service.

Midwestern's October 29 petition set forth the letter agreement of October 17, 1962, between Midwestern and Northern which states, *inter alia:*

> * * * It is understood that Midwestern is under no obligation to sell and deliver, and Northern is under no obligation to purchase and receive such natural gas. * * *

The petition alleged that

> * * * deliveries of this gas to Northern will enable Midwestern to operate at a higher annual load factor than would otherwise be possible.

The form of applications under Section 7 of the Natural Gas Act is governed by Part 157 of the Commission's Regulations under the Natural Gas Act. That part requires (§ 157.14) that the application shall be accompanied by exhibits setting forth certain information, including detailed market data, and data as to the gas supply available to applicant's customers. No such exhibits ac-

[1] FPC Rules of Practice and Procedure, § 1.32, 18 CFR, Sec. 1.32.

companied this petition. Part 157 also provides (§ 157.7) for the filing of an abbreviated application when the proposed sales or service do not require all the data and information specified by other sections. An abbreviated application may be filed

> * * * provided it contains all information and supporting data necessary to explain fully the proposed project, its economic justification, its effect upon applicant's present and future operations and upon the public proposed to be served, and is otherwise in conformity with the applicable requirements of §§ 157.5 through 157.16 regarding form, manner of presentation, and filing. Such an application shall (a) state that it is an abbreviated application; (b) specify which of the data and information required by §§ 157.5 through 157.16 are omitted; and (c) relate the facts relied upon to justify separately each such omission.

The present petition conformed neither with the requirements for a full-length nor an abbreviated application. It was plainly deficient on its face. It should have been rejected.

The coal intervenors[2] moved early in the hearing to dismiss the petition. However, the examiner is without authority to grant such a motion prior to his initial decision,[3] and the motion was denied.[4] The denial was without prejudice to renewal of the motion at the conclusion of the evidence, but it was not renewed.

On November 21, 1962, the Commission by its Secretary wrote to Midwestern for additional information. It inquired (1) how much gas would be available to Northern in 1963 by months, (2) how much gas Northern would buy in 1963 by months, and (3) as to the Midwestern customers; first, the names of the customers who take less than their contract demands; second, their present contract demands; and third, the maximum daily, monthly, and annual volumes expected to be made available for interruptible sales to Northern due to this situation. On December 10, 1962, Midwestern responded by filing a supplement to its petition to which there was annexed a table showing the estimated amounts of gas which Midwestern would have available for interruptible sales in each month of 1963. The table presented estimates of requirements month by month for 1963 for each of Midwestern's customers on its Northern system and each customer's contract demand.

The supplement to the application stated that Midwestern was unable to estimate the quantity of gas which Northern might be expected to purchase under this proposal during 1963, and that Northern, in response to Midwestern's inquiry, had declared itself unable to make such an estimate. Northern, it was stated, "can only inform Midwestern that Northern might be in a position to purchase some of the gas which Midwestern expects to have available."

The Effect of the Proposed Sale on Midwestern.—The proposed sale would be made at 25.2 cents per Mcf. Midwestern's sole source of gas for its north-

[3] Rule 1.12(d), Rules of Practice and Procedure.

[4] It may be desirable for the Staff to consider whether, when a petition so obviously defective has nevertheless not been rejected, sufficient information or explanation should be requested so that the published requirements will be complied with. The firm and unequivocal language of § 157.5 of the Regulations Under the Natural Gas Act would seem to indicate such a course, and it is not always practicable for the examiner to require that the defects be remedied before the hearing starts. Stricter enforcement of that section would tend to prevent situations in which everyone but the applicant is in the dark at the beginning of a hearing, and would thereby tend to promote better preparation and presentation of cases of the other participants. (This does not imply any reflection upon able counsel in the present case. They would doubtless agree that a fuller petition would have eased their task.)

ern system (which is the portion of Midwestern here involved) is from Trans-Canada Pipe Lines, Ltd. (Trans-Canada), from which it buys at a monthly demand charge of $2.30 per Mcf (at 15.025 psia) times the contract quantity (200,000 Mcf per day at 15.025 psia), and a commodity charge of 20.75 cents per Mcf purchased.[6]

Under its contract with Trans-Canada, Midwestern is now obligated to pay a minimum *monthly* bill consisting of the demand charge plus a commodity charge equal to 75 percent of the contract quantity. On December 15, 1963 and thereafter it will also be obligated to pay a minimum *annual bill* consisting of the demand charges plus an average daily commodity charge equal to 95 percent of the contract quantity. (The contract quantity, converted to 14.73 psia, at which applicant sells to its customers, is 204,000 Mcf, and 95 percent of this is 193,800 Mcf, per day.)

Midwestern points out in its brief that it has, on its northern system, contractual commitments from its customers of 118,500 Mcf per day, plus 30,000 Mcf which its northern system can dispose of under an exchange arrangement with Michigan Wisconsin, or a total of 148,500 Mcf per day, compared to its annual take-or-pay obligation of an average of 193,800 Mcf per day to Trans-Canada, beginning December 15 next. It urges approval of the sale as a means of permitting it to operate at a higher annual load factor, thus reducing the possibility that it may have to pay Trans-Canada for gas Midwestern is unable to receive.

In an earlier Midwestern case, *Midwestern Gas Transmission Co.*, Docket No. G–18313, *et al.*, 22 FPC 775, the company represented that it would have to provide in its tariff for a monthly minimum bill to Michigan Wisconsin equal to the demand charge plus a commodity charge equal to a 75 percent monthly load factor for the first three years of service and a commodity charge based on an 87½ percent monthly load factor thereafter, in order to be assured of selling all the gas it is required to buy. Because the 87½ percent provision was in violation of § 157.38(d)(3) of the Regulations Under the Natural Gas Act, it was excluded from Midwestern's tariff at that time. 22 FPC at p. 787. The exclusion, however, was without prejudice to a timely filing in the future to increase the minimum bill provision to 87½ percent. The record in the present case shows that Michigan Wisconsin has agreed not to oppose such a filing. Such a filing, if accepted, would substantially assure Midwestern of being able to dispose of the gas it is committed to buy, taking into consideration its other business. The absence of market data beyond 1963 precludes the making of any finding as to whether it might be in a take-or-pay-for situation if the filing is not approved.

Midwestern's position is that the sale should be authorized largely because its presently assured sales are less than its future obligation to Trans-Canada. The presentation gives no weight to its other business, i.e., sales which customers are not contractually obligated to take but nevertheless do take in sizeable amounts. The company makes no showing as to what that business is likely to be during even the first year after the 95 percent annual bill from Trans-Canada becomes effective.

The proposed sale, if authorized, would make no difference in the picture as Midwestern presents it, since it presents only a contrast between contractually assured sales and prospective contractual obligations. That is a contrast which the addition of an interruptible sale would in no wise disturb.

There is in the record no clear documentary showing that Midwestern is in any serious danger of finding itself in a take-or-pay-for situation vis-a-vis Trans-

[6] The payments are in Canadian funds, which are now at a substantial discount.

Canada, nor did its witness so indicate. If its Michigan Wisconsin tariff is altered to require 87½ percent takes, Midwestern would appear to be adequately protected by that provision, together with the transfer arrangement and the present demands for Midwestern's gas. If the present 75 percent tariff provision remains the development of Midwestern's other business will assume considerable importance in calculating the comparison between its sales and its obligations. In that event, however, its ability to meet the purchase obligation beginning December 15, 1963, cannot reasonably be judged on the basis of the sales estimate for the period ending December 31, 1963, which it relies on. There is no basis here for finding that Midwestern's claimed danger is real. It limited its own market showing, contrary to Commission rule and without explanation. It cannot complain of any refusal to indulge in the speculation that is necessary to bridge the gap between the showing it makes and the conclusion it requests. This record does not support the conclusion that Midwestern is likely to be unable to dispose of the gas it is required to take.

Nevertheless, the record shows that Midwestern may be able to sell as much as 11,300,000 Mcf of gas to Northern in 1963 which might otherwise remain unsold, that these proposed sales would require no additional investment and that Midwestern's resulting revenues would substantially exceed the cost of the related gas purchases. From the viewpoint of Midwestern and its customers, the proposal is a desirable one. The extent of the benefits is, however, entirely speculative for the reason that the amount of gas likely to be sold is an unknown quantity.[6]

The Effect on Northern.—Whether the proposed sale is or will be required by the present or future public convenience and necessity is not decided by finding that it would represent a desirable transaction for the seller and its customers. Where, as here, the buyer is an interstate pipeline under the jurisdiction of the Federal Power Commission, it is plainly the Commission's duty to consider the effect on the buyer as well as on the seller. Were the seller an independent producer of natural gas, the effect on the buyer would be a prime consideration in granting or denying the certificate. The mere fact that the seller is a pipeline is no reason to ignore the effect upon a jurisdictional pipeline buyer.

There is nothing new in this: the Commission has properly, in the past, considered the effect of a pipeline's proposed sale upon its proposed pipeline customer. For instance, in *Natural Gas Pipeline Company of America*, Docket No. CP62-243 *et al.*, its order of October 15, 1962, 28 FPC 593, reflects careful consideration of the effect of a proposed sale by the applicant to Mississippi Transmission upon the jurisdictional pipeline (Mississippi River Fuel) which was Mississippi Transmission's customer, as well as on Trunkline Gas Company, another jurisdictional pipeline supplying Transmission with natural gas. The concept of "public convenience and necessity" is an elastic one dependent on the circumstances of the case. The Natural Gas Act refrains from defining it,[7] and the Supreme Court has held that the very purpose of Congress in using so broad a phrase is to permit the administrative body "to draw its conclusion from the infinite variety of circumstances which may occur in specific instances. *Interstate Commerce Commission* v. *Parker*, 326 U.S. 60, 65. Clearly, a decision as to the public interest requires consideration of public loss as well as public benefit, *Democrat Printing* v. *Federal Communications Commission*, 202 F. 2d 298, 301 (CADC, 1952), cited in *Michigan Consolidated Gas Co.* v. *F.P.C.*, 283 F. 2d 204 (CADC, 1960), cert. den. 364 U.S. 913.

[6] Midwestern's brief (p. 3) emphasizes "There is no guarantee that *any* gas will be sold as a result of this requested authorization." [Emphasis in original.]

[7] So does the legislative history, *Sen. Rep. 1172, 75th Cong., 1st Sess.*, which sets forth in full the House report on the same bill.

Commissioner Ross, in his supplemental statement in *Southern Natural Gas Co.*, Docket No. G–20509 *et al.*, Opinion 379, February 18, 1963, 29 FPC 323 at 366 used words which, though spoken in another context, could well be applied to the present situation:

> That there may be benefits is clear. It is also clear that there may be offsetting factors or abuses, and I would expect the Commission's staff and other interested parties to insure that the record is complete with respect to these matters.

Most of Northern Natural's supply of gas comes from the Southwest, originating in Texas, Oklahoma and Kansas. Its markets extend from the Kansas-Nebraska border on the south to Silver Bay, Minnesota, near Duluth, on the north. The gas to be delivered under the proposed sale would enter the system at a point north of Minneapolis and St. Paul, and would move north from there.

While there is no assurance that Midwestern would have any interruptible gas to sell or that Northern would buy any, Northern's witness testified that between May 1 and December 31, 1963 Northern might buy as much as 11.3 billion cubic feet, assuming that Midwestern had the gas available at times when Northern could use it. Approximately 7.5 billion cubic feet would go into storage, and 3.8 billion "would be immediately available for sale to the gas utility customers and others." (Tr. 40.)

Although the new gas would physically flow north from the interconnection, it is not Northern's intention to give the customers in that area the full benefit of it. It would be treated as an additional source of gas on the system, with curtailment on other parts of the system being reduced as this gas flows into the northern part. That is to say, it would add to the general supply, and to storage, by displacement.

Thus, as much as 7.5 billion cubic feet would go into storage at a purchased gas cost to Northern of 25.2 cents per Mcf. Northern's cost of gas, according to its witness, is about 16.5 cents per Mcf, and any gas purchased at 25.2 cents would add to its average cost.[8] The fact that the volume here involved is so small as to cause only a slight over-all effect on Northern's average cost of gas is irrelevant. The small over-all effect of a proposal does not require its automatic approval. See, e.g., *Harper Oil Co.*, Docket No. G–14456, 22 FPC 756, 766; *Northern Natural Gas Co.*, Docket No. G–20570, *et al.*, 25 FPC 1234, 1242.

More important is the silence of the record with respect to the availability of gas to Northern from its present sources for the buildup of gas in storage contemplated as a result of this transaction. There is no showing of any inability of Northern to obtain its storage requirements from present sources at 16.5 cents or less rather than from Midwestern at 25.2 cents. Northern's witness stated (Tr. 167) that there is a sufficient supply of gas now available to meet the requirements with respect to applications Northern now has pending in other dockets.[9]

In these circumstances it is highly pertinent to give such consideration to the net effect on Northern as the meager record permits. The previously quoted portion of § 157.7 of the Regulations unequivocally contemplates consideration of

---

[8] In *Northern Natural Gas Co.*, Docket No. CP63–150, Northern states its system average cost of gas purchased in 1962 (based on 8 months actual and 4 months estimated) to be 14.3 cents per Mcf (Amendment to Application, Exh. N, Sched. 2). Since Northern's stated cost of purchased gas appears to be based in part on the filed rates of its 100 percent-owned producing subsidiary, and not on the subsidiary's costs, see *Northern Natural Gas Co.*, Docket No. G–12153, *et al.*, Opinion No. 385, April 2, 1963, 29 FPC 689, it may well be that Northern's overall gas cost is even lower.

[9] Northern's Redfield storage reservoir, in central Iowa, supplies some 230,000 Mcfd. Pending applications seek to increase peak day deliveries from storage to approximately 280,000 Mcfd.

the "effect * * * upon the public proposed to be served * * *." The cost to Northern of the 3.8 billion cubic feet it would purchase from May 1 to December 31, 1963, for immediate resale would approximate $950,000. Its revenues from that gas would approximate $916,000.

Northern's witness on direct testified that some 96,000 Mcf of the gas would be sold at 56 cents per Mcf under its ERS schedule as a replacement for gas which its customers would otherwise have to manufacture for peak use. The rest would be sold as overrun gas. It would appear, therefore, that the ERS gas alone would show revenues of about $54,000 compared with a cost of about $24,000. Thus, leaving out the ERS gas, Northern would be paying about $924,000 for the privilege of selling approximately 3.7 billion cubic feet of overrun gas for $862,000. The gross loss on the overrun gas would be $62,000 and on the entire transaction $34,000.

When the examiner inquired why Northern wanted such a deal, the witness stated that its utility customers would be able to make a profit of one million dollars on it. There is no support for this figure in the record and Northern's briefs make no mention of it. Although the Staff's brief urges it as an important reason for approving the sale, the figure, standing by itself as it does, should be viewed with much abatement.

In any event, the question whether sales to non-jurisdictional customers would prove profitable to them is beyond the scope of a Section 7 inquiry. As the Commission properly observed in *Northern Natural Gas Co.*, Docket No. CP61–132, Opinion No. 374, December 28, 1962, 28 FPC 1155 at 1161, matters pertaining to a non-jurisdictional operation are

> * * * not subject to the same scrutiny of Section 7 as to public need, etc., as are jurisdictional facilities. Rather, in the case of such a non-jurisdictional operation which is integrated with a jurisdictional proposal, we must merely determine if it entails any violation of public policy or abuse of a jurisdictional proposal which would compel rejection of the jurisdictional proposal.

Similarly, in *Transcontinental Gas Pipe Line Corp.*, Docket No. G–10000, Opinion No. 371, issued December 11, 1962, 28 FPC 979, the Commission refused to consider the effect of a proposed certificate modification on a non-jurisdictional distributor.

However, the effect of a sale on the costs of a *jurisdictional* utility is important in a certificate proceeding, and it is for this reason that a sale to a jurisdictional pipeline is closely scrutinized as to price. In the *Catco* case, the unexplained fact that the proposed price was 70 percent higher than the weighted average cost to the pipeline buyer was an important factor leading the Supreme Court to set aside the certificate. *Atlantic Refining Co.* v. *P.S.C. of New York*, 360 U.S. 378 at p. 393. The proposed price of the present sale is over 50 percent higher than Northern's present average purchased gas cost, and there is no showing that like quantities will not be available from Northern's present sources, though perhaps over a longer period. Northern urges "the more rapid buildup of inventory in the Redfield gas storage field" as the first reason for granting the requested authority. It does not say or imply, nor did its witness, that the storage inventory will not be built up absent Midwestern's gas.

The parties, including the Staff, have ignored the cost of the increased rapidity of the buildup. To pay 25.2 cents for 7.5 billion cubic feet of storage gas instead of drawing on present sources at 16.5 cents or less would require the clearest showing of public need. Such a showing is completely absent.

Commissioner Ross, in his supplemental opinion in *Southern Natural Gas Co.*, *supra*, after the words quoted on p. 476, *supra*, went on to say that "[e]vidence of alternative sources of gas at reasonable prices clearly would weight against the

advisability of encouraging a pipeline to undertake it own production." Such evidence would likewise weigh against the advisability of encouraging a pipeline to purchase gas at 50 percent above its average cost. This record does not show whether Northern has such sources or not, or why the payment of such a premium is or will be required by the present or future public convenience and necessity.

Furthermore, the dubious claim that the proposal may help Midwestern to avoid a possible take-or-pay-for situation vis-a-vis Trans-Canada is unmatched by any showing as to how Northern would be affected were it to buy from Midwestern instead of from its present sources. This record fails to inform us whether Northern has any take-or-pay-for situations of its own, either actual or potential, or whether its present sources of lower-priced gas are adequate for its needs.

The omission is of no mere academic interest. The Commission recently authorized the exchange and delivery, on a best efforts basis, of up to 50,000 Mcf per day, for the period ending December 31, 1963, between Northern and El Paso Natural Gas Company, instead of the 30,000 Mcf authorized for the period ended December 31, 1962. *El Paso Natural Gas Co.*, Docket No. CP62–63 *et al.*, order issued March 21, 1963, 29 FPC 559. The stated reason for the granting of the exchange authority was that Northern is in an under-produced position in Lea County, New Mexico, that it has had 15 million Mcf of allowable production cancelled in that field, and that it is currently carrying more than 6.5 million Mcf of underage there.

In another case, now before the Commission for consideration, the examiner found that Northern is discriminating against the producers in the Hugoton Field by taking an unduly small portion of its needs from that area. *Hugoton Plains Gas & Oil Co.*, Docket No. RI60–102, Examiner's Decision, March 12, 1962. The examiner there denied a rate increase from 9.2047 cents per Mcf on the ground that increased deliveries by Hugoton Plains (to which Northern is entitled but which it has long refused to take) would mitigate the unfavorable financial situation in which Hugoton Plains found itself as a result of Northern's low purchases. Higher rates were therefore found unjustified. To authorize sales of Canadian gas to Northern at 25 cents while American gas is available to it at 9 cents from Hugoton Plains, or at 16.5 cents, on the average, from all of its sources, is not in the public interest.[10]

According to the findings of the Presiding Examiner in *Northern Natural Gas Co.*, Docket No. CP62–85, *et al.*, Decision, April 26, 1963, 30 FPC 859, Northern's gas supply is sufficient to justify the addition of 76 new communities to its lines without jeopardy to the rest of the system.

The findings in that case, and in *El Paso* and in *Hugoton Plains* serve to emphasize the pertinence of questions which would be present here even without them and which are not touched on by the pleadings or by the briefs in support of the application.

Early in the hearing the examiner observed to counsel for the applicant that even if all the allegations of the petition were proved it was questionable

[10] The Minnesota delivery point for Midwestern's proposed sale is more advantageous to Nothern than the more southerly delivery points for the Hugoton Plains and other gas. Northern has zone rates to allow for the fact that the southern end of the system, where the supplies are located, is further from the principal markets than is the northern end. The differentials between the highest and lowest zone commodity rates are only about 3½ cents, *Northern Natural Gas Co.*, Docket No. G–19040, *et al.*, 27 FPC 915, 917. Northern's rates were designed so that the total average rate in each zone at a 70 percent load factor, would be 2 cents higher than that for the preceding zone, so as to reflect the progressively higher transmission costs as the gas moves north. *Northern Natural Gas Co.*, Docket No. G–2217, 14 FPC 11. Northern, while it now asks that weight be given to the favorable location of the delivery point (reply brief, p. 3) made no effort to show the extent of the benefit in relation to the cost. Neither did anyone else.

whether a certificate could properly be issued. The only allegation in either the original or supplemental petition that might tend to indicate that the sale is in the public interest is that it would improve Midwestern's load factor. No amendment to the petition was offered.

The findings and conclusions proposed in Midwestern's brief are purely formal except for the third: "Northern Natural has demonstrated a need for the gas." But Northern itself, with respect to the largest part of the gas—the 7.5 billion cubic feet which would go into storage—says merely that storage would be built up more rapidly. The value of this acceleration compared to the higher cost is left to conjecture. As to the 3.8 billion cubic feet which Northern would sell immediately, there is no satisfactory explanation for Northern's eagerness to sell it at a loss.

ADDITIONAL FINDINGS AND CONCLUSIONS

Upon consideration of the record and the briefs filed in this proceeding, it is found and concluded, in addition to the findings and conclusions heretofore stated, that:

(1) Midwestern Gas Transmission Company is a natural gas company within the meaning of the Natural Gas Act, and the sale of natural gas applied for herein is subject to the jurisdiction of the Commission.

(2) The applicant is able and willing properly to do the acts and perform the service proposed and to conform to the provisions of the Act and the requirements, rules and regulations of the Commission thereunder.

(3) Northern Natural Gas Company is a natural gas company within the meaning of the Natural Gas Act.

(4) The proposed sale has not been shown to be required by the present or future public convenience and necessity.

ORDER

WHEREFORE, IT IS ORDERED that the application for a certificate of public convenience and necessity be, and it hereby is, denied.

ARTHUR H. FRIBOURG,
Presiding Examiner.

MEMORANDUM OPINION AND ORDER CLARIFYING AND MODIFYING OPINION AND ORDER AND DENYING APPLICATIONS FOR REHEARING AND MOTIONS FOR STAY

(Issued August 14, 1963)

Syllabus

1. Upon rehearing, Commission *clarifies* and modifies prior opinion and order; *denies* applications for rehearing and motions for stay.

Commissioner O'Connor *dissenting.*

[1] Formerly United Producing Company, Inc.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

Applications for rehearing of the Commission's Opinion No. 390 and Order issued June 19, 1963, 29 FPC 1175, were filed on July 16, 1963, by Ashland Oil & Refining Company, on July 17, 1963, by the California Public Utilities Commission and on July 19, 1963, by Pan American Petroleum Corporation, Sinclair Oil & Gas Company, Pioneer Production Corporation and El Paso Natural Gas Company. Additional applications for rehearing have been rejected by the Secretary on the ground that their tender was not in conformity with the requirements of Section 19(a) of the Natural Gas Act and Sections 1.34 (a) and (b) of our Rules of Practice and Procedure. Motions for stay of our Order also were filed by certain of the parties. On examination of the rehearing applications which were accepted we find that a number of the points raised therein are restatements of arguments previously advanced which have been covered in our Opinion and Order and which do not warrant further discussion here. We direct our attention to the remaining matters.

Sinclair points out that our treatment of the sale in Docket No. G–18748 conflicts with a rate settlement proposal conditionally approved by the Commission on July 1, 1963,[1] insofar as such settlement concerns Sinclair's Rate Schedule No. 189. By errata notices issued July 23, 1963 and August 8, 1963, all reference to the certificate application in Docket No. G–18748 has been deleted from the settlement order and the conflict has now been eliminated.

A number of the applications for rehearing continue to protest our alleged "assumption" of jurisdiction over the division of proceeds on the processing and sale of the liquid hydrocarbons as not being within the authority granted to us by the Natural Gas Act. This argument was answered by the presiding examiner in his initial decision. Nothing in our Opinion is at variance with the conclusions reached by the examiner on the general question of jurisdiction over the proceeds from processing and his determination on that issue to the extent that such decision was consistent with our determination, it was adopted by our Order and is reaffirmed herein.

Apart from the arguments concerning our jurisdiction over the processing arrangement, the applications also raise some questions on which clarification and, to a slight degree, modification of the Opinion and Order is desirable or necessary. First, the applications question the meaning of "adjusted proportionately for processing shrinkage" as used in ordering paragraph (G) in determining the amount paid the producers for gas actually processed. Since the producers whose gas is processed receive only 25 percent of the liquids, or the revenues realized from the sale thereof, it would not seem reasonable to require that they bear the full cost of the processing shrinkage, but that such shrinkage should be divided between El Paso and the producers in the same proportion as the division of the proceeds on the liquids. El Paso's obligation to bear 75 percent of the shrinkage and its assumption of the construction and general operational expenses of the gasoline plant is offset by its retention of 75 percent of the gross revenues on the sale of the liquids and by its ability to control the plant operations to meet the needs of its west coast markets. Accordingly, it is our intent that the proportional adjustment for processing shrinkage to which reference has been made be limited to 25 percent as applied to the producers to correspond with the proportion of the liquid revenues received by them.

Second, some confusion is apparent regarding our limitation of the initial price to 17 cents "including reimbursement for additional taxes" and to our

[1] *Sinclair Oil & Gas Company*, Docket No. G–9291, *et al.*, 30 FPC 5.

allowance of an upward Btu adjustment "not to exceed .95 cents per Mcf at 14.74 psia for gas not processed because of El Paso's unilateral election to take quantities in excess of the capacity of its processing plant." As to the former, the contracts provide that both buyer and seller shall pay their own present taxes without reimbursement and contain a provision that El Paso will reimburse the producers for three-fourths of the amount of additional taxes. We believe it to be implicit that the additional taxes referred to in our initial price condition included only those new or increased taxes which may have become effective since the making of the contracts and until issuance of our decision in June 1963. The limitation in no way impairs the producers' contractural authority to file for rate increases on the occurrence of subsequent tax increases[3] nor, we may observe, does the initial price established under the decision prevent the producers (except for the statutory suspension period and applicability of a refund obligation) from charging their full contract price until such time as just and reasonable prices have been set for these sales.[4]

The calculation of the Btu adjustment on a pressure base of 14.74 psia was, as pointed out in the decision, grounded upon evidence presented in the hearing on the difference in the average Btu content in the gas received by El Paso and that which it delivers to Northern after processing. The values appearing in the hearing transcript are stated to be calculated at the pressure indicated by us, *i.e.*, 14.74 psia. Although the statement was not the subject of a transcript correction we may assume, in view of the unusualness of the pressure base, that what actually was intended was a pressure of 14.73 psia. This modification of one-hundredth of a pound would affect only a minuscule change in the Btu content of the gas. Since, however, the value of 1/100 cents per Mcf for each Btu passed on in excess of 1058 which we have specified was based on similar allowances which have themselves been computed at a pressure base of 14.65 psia, and since the contract pressure base is itself 14.65 psia, we shall amend our designation to provide for a pressure of this amount. The values of 1153 and 1058 Btu at 14.73 psia, upon conversion, thereby become respectively 1147 and 1052 Btu at 14.65 psia, for an identical maximum adjustment of .95 cents per Mcf.

Objection has been indicated to our failure to provide for an equivalent allowance for the Btu's down to 1000 Btu per cubic foot. This matter was among those considered and taken into account in our approval of an initial price of 17 cents per Mcf, where we indicated that such price "was the upper limit of the in-line price for initial service in the Panhandle area of Texas and Oklahoma," and in our recognition that gas produced in this area is, as a normal matter, high in Btu content. In our opinion, no basis exists for a Btu allowance greater than that specified in the Opinion.

California PUC questions the reference to certain producers on pages 1184–1185 whose gas, though purchased by El Paso, is picked up by Transwestern. In return, El Paso receives exchange gas from Transwestern at the input side of its plant. Our requirement that El Paso share the liquid revenues realized from the processing of the exchange gas was intended to hold harmless those producers selling their gas to El Paso but which is delivered to Transwestern under an agreement devised by the pipeline companies to save the

---

[3] This should not be construed to indicate a predetermination on our part that such rate increases necessarily would be allowed.

[4] *Texaco Inc.* v. *F.P.C.*, 290 F. 2d 149 (CA5, 1961); *Atlantic Refining Co.* v. *F.P.C.*, No. 17,166, 316 F. 2d 677 (CADC, March 21, 1963).

cost of laying duplicate gathering lines to the same wells or fields. It has no reference to any producers other than those whose permanent certificates of public convenience and necessity were the subject of the proceedings then before us and, specifically, was not intended to apply to those producers selling their gas to Transwestern. The fact that the gas delivered by Transwestern under the exchange comes in part from the same geographical area and, at least to this extent, may be expected to be of relatively similar Btu content affords justification for our belief that no substantial problems will arise on the apportionment of the liquid revenues.

As recognized at footnote 6, page 1179, of the Opinion, El Paso has already filed all necessary revisions of its Rate Schedule Z–1 for elimination of the 2-cents per Mcf charge on all deliveries of gas made to Northern at the Beaver County delivery point and temporary authorization therefor was granted. Paragraph (E) of our Order does not require any additional filings and, in its present form, simply confirms and makes permanent the elimination of the charge on the Beaver County deliveries. Ordering paragraph (C) will remain without change on the basis of the interrelation with the applications pending in Docket Nos. CP61–92 and CP61–265.

Except to the extent modified herein, El Paso's understanding of the terms of the producers settlements appears to reflect accurately the conditions applied in the decision. Any additional measuring facilities which it may require will, we believe, be relatively minor and should be able to be installed without difficulty or undue expense.

Finally, the producers contend that we erred in imposing certain conditions subjecting the allowance of the take-or-pay provisions and the Btu adjustment issue to ultimate disposition in the rule-making proceedings in Docket Nos. R–199 and R–200. Except for the modification in the Btu adjustment, the condition is identical with that provided in *Panhandle Eastern*, Opinion No. 350, 27 FPC 35, and *Michigan Wisconsin*, Opinion No. 353, 27 FPC 449, and in a number of other producer certificate proceedings. We are convinced that we have authority to so condition these certificates and that the imposition thereof was proper in the circumstances of this proceeding.

It has come to our attention that certain producers were erroneously designated in regard to the operating and nonoperating interests involved. The correct designations which are applicable to the producers and to other parties represented by them is contained in the caption hereto. Furthermore, numerous supplemental agreements have been submitted to the Commission which are applicable to the permanent certificates granted in Opinion No. 390. The certificates as therein issued included all supplements to the applications on file at the time of our decision in June 1963, except that the certificate issued to Sinclair in Docket No. G–18748 shall not be held to include the acreage assigned on November 30, 1961, to Crest Exploration Company, a partnership composed of Earl T. Smith and Gilbert N. Freeman. In addition, the contract of H. H. Davis dated December 31, 1958, as amended by a letter agreement dated December 23, 1959, is accepted to have been effective June 19, 1963, and is designated respectively as H. H. Davis Rate Schedule No. 1 and Supplement No. 1.

The remaining assignments of error raised in the application for rehearing do not convince us that we were incorrect in our determinations or, except as treated herein, that any further action is necessary. We accordingly find that no useful purpose would be served by granting rehearing or the stay requested.

The Commission finds:

(1) The assignments of error and grounds for rehearing set forth in the applications for rehearing filed herein present no facts or principles of law which were not considered by the Commission when it issued its Opinion No. 390 or which, having now been considered, warrant any change in, modification of, or rehearing of such Opinion and Order, except as noted above.

(2) There is no justification for, and the public interest would not be served by, granting a stay of Opinion No. 390 and accompanying Order.

The Commission orders:

(A) The applications for rehearing filed in the above-entitled proceeding are hereby denied.

(B) Except as clarified and modified above, said Opinion and Order is confirmed.

(C) The motions for stay of the Opinion and Order are denied.

Commissioner O'Connor *dissenting* stated he would grant rehearing for the reasons set forth in his dissenting statement accompanying Opinion No. 390.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

SLADE, INC. (OPERATOR), DOCKET NOS. G–19986 AND RI61–10

ORDER ACCEPTING OFFER OF SETTLEMENT, REQUIRING FILING OF NOTICE OF CHANGE, REQUIRING REFUNDS, AND TERMINATING PROCEEDINGS

(Issued August 14, 1963)

On July 2, 1963, as supplemented on July 22, 1963, Slade, Inc. (Operator) (Slade) and Charles F. Haas and Richard E. Haas, d/b/a Sinton Gathering System (Sinton), successor in interest to Slade, submitted an Offer of Settlement, pursuant to Section 1.18(e) of the Commission's Rules of Practice and Procedure, in the above-designated proceedings, which relates to the jurisdictional sale of natural gas by Slade prior to May 1, 1963 under its FPC Gas Rate Schedule No. 5 and subsequent thereto by Sinton under its FPC Gas Rate Schedule No. 1 to Tennessee Gas Transmission Company (Tennessee) from a gas compression plant in San Patricio County, Texas (Railroad Commission District No. 4). The increased rate of 15.0952¢ per Mcf, at 14.65 psia, became effective subject to refund in Docket No. G–19986 on August 3, 1960. A proposed increased rate of 17.24347¢ per Mcf was suspended in Docket No. RI61–10, but has not been placed in effect subject to refund.

Under the terms of the offer, Sinton proposes to delete the favored-nation, price redetermination and periodic escalation provisions from the rate schedule involved, and to establish a settlement rate of 15.0¢ per Mcf, inclusive of present tax reimbursement, for the remaining term of the contract. Slade agrees to withdraw its petition for review of Opinion No. 376 issued January 3, 1963 in the Fifth Circuit's Case No. 20497 insofar as it relates to Docket Nos. G–19986 and RI61–10.[1] Further, Slade and Sinton agree to waive any and all rights

[1] Docket Nos. RI60–147 and RI60–179, which relate to wellhead sales by Slade in the Permian Basin area, were also involved in Opinion No. 376, 29 FPC 11, and in Slade's petition for court review, but are not involved in this offer of settlement.

for any further or additional judicial review with respect to these dockets. Slade and Sinton also agree to make refunds, with interest, of all amounts collected in excess of 15.0¢ per Mcf in Docket No. G–19986 applicable to volumes delivered on and after August 3, 1960.[2]

In Opinion No. 376 the Commission found that the record did not permit a proper determination of Slade's rates and concluded that under the special circumstances presented it would be more appropriate to make a determination of the justness and reasonableness of Slade's rates in connection with area rate proceedings. Subsequent to the offer of settlement filed herein, the Fifth Circuit on July 11, 1963, granted the Commission's motion to dismiss Slade's petition for review. *Slade, Inc.* v. *F.P.C.* (CA5, No. 20497). The effect thereof is that Slade will not be required to withdraw its petition for review as it has agreed to do, but, of course, it may not seek further judicial review of this matter insofar as it relates to the dockets involved here.

In support of their offer, Slade and Sinton cite among other things, the deletion of the favored-nation, price redetermination and periodic escalation provisions from the gas purchase contract with Tennessee and state that such provisions were important elements of consideration required by Slade under the contract for the long-term commitment of its gas reserves to the performance of the contract. Tennessee has concurred in the offer, and has executed the contract amendment provided for therein, which is designated as Supplement No. 7 to Sinton's FPC Gas Rate Schedule No. 1. No answers or protests to the offer have been received.

Since the proposed settlement rate of 15.0¢ per Mcf, including present tax reimbursement, at 14.65 psia, is acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61–1, issued December 20, 1960, 24 FPC 1107, as amended by Order No. 264, issued March 27, 1963, 29 FPC 589, for jurisdictional sales of natural gas in Texas Railroad Commission District No. 4, it is believed that the public interest will best be served by accepting the proposed settlement as hereinafter set forth.

However, we desire to make it clear that acceptance of the offer of settlement shall not be construed as approval of any future increased rate proposed by Sinton.[3]

The Commission finds:

The proposed settlement of the above-designated proceeding, on the basis described herein, as more fully set forth in the Offer of Settlement filed by Slade and Sinton with the Commission on July 2, 1963, as supplemented, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved and made effective as hereinafter ordered.

The Commission orders:

(A) The Offer of Settlement filed by Slade and Sinton with the Commission on July 2, 1963, as supplemented, is hereby approved in accordance with the provisions of this order.

---

[2] By letter order issued July 11, 1963, the Commission granted Sinton temporary authorization to continue the sales previously made by Slade. The temporary certificate was conditioned at a rate of 15.0952¢ per Mcf, subject to Sinton refunding to Tennessee from the date of transfer of the property any amounts collected, plus interest, in excess of the rate determined to be proper in the suspension proceeding in Docket No. G–19986.

[3] Sinton retains the right to file for future increases in tax reimbursement to the extent permitted under its rate schedule.

(B) Sinton shall file, within 30 days from the date of issuance of this order, a notice of change providing for the 15.0¢ per Mcf rate, including present tax reimbursement, specified in its offer of settlement. The notice of change shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Within 30 days from the date of issuance of this order, Slade and Sinton shall refund to Tennessee all amounts collected under their respective rate schedules in Docket No. G–19986 in excess of the settlement rate of 15.0¢ per Mcf, together with simple interest at the rate of 7% per annum, from the date of receipt of such excess amounts by Slade or Sinton to the date of refund. Slade and Sinton shall bear all costs incidental to the making of such refunds.

(D) Within 45 days from the date of issuance of this order, Slade and Sinton shall report to the Commission in writing the details of their calculations resulting in refunds ordered pursuant to paragraph (C) above, together with a copy of a release from Tennessee with respect to such refunds.

(E) Upon notification by the Secretary of the Commission that Slade and Sinton have complied with the terms and conditions of this order, the rate and charge of 15.0¢ per Mcf at 14.65 psia, including present tax reimbursement, specified in the Offer of Settlement, and the executed contract amendment, designated as Supplement No. 7 to Sinton's FPC Gas Rate Schedule No. 1 shall be effective as of the date of issuance of this order, Docket Nos. G–19986 and RI61–10 shall be deemed terminated, and the refund obligation of Slade and Sinton with respect to Docket No. G–19986 shall be deemed discharged.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

CARNEGIE NATURAL GAS COMPANY, DOCKET NO. CP63–282

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY AND PERMITTING AND APPROVING ABANDONMENT OF FACILITIES

(Issued August 15, 1963)

On April 11, 1963, Carnegie Natural Gas Company (Applicant) filed in Docket No. CP63–282 an application pursuant to Section 7 of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of certain facilities to replace and relocate certain existing facilities, and for permission and approval to abandon approximately 3 miles of 16-inch and 20-inch pipeline, all located in the vicinity of Pittsburgh, Pennsylvania, all as more fully set forth in the application.

Applicant states that portions of its present transmission system now pass through various densely populated areas and because of the type of contruction and age of the line it is undesirable to operate such portions at other than restricted pressures. Hence, Applicant proposes to relocate and replace said portions by constructing and operating approximately ten miles of 16-inch and 20-inch pipeline extending in an easterly direction from Applicant's city gate, Allegheny County, Pennsylvania, thence in a north-northeasterly direction to a point in the City of Duquesne, Pennsylvania, and thence in a north-northwesterly direction to a terminus in the Borough of Munhall, Pennsylvania. Applicant states further that the proposed facilities will permit applicant to abandon ap-

737–370—66——34

proximately 3 miles of 16-inch and 20-inch line and to reduce pressure in other parts of its present transmission system.

The application shows that the cost of the proposed facilities is estimated to be $1,600,000, which cost will be financed by cash funds and other cash-type assets now available.

By letter, dated June 7, 1963, Applicant was granted a temporary certificate to construct and operate the proposed facilities.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 1, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Carnegie Natural Gas Company, a Pennsylvania corporation having its principal place of business in Munhall, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of August 3, 1943, in Docket No. G–263 (3 FPC 1052).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce, subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity and a certificate therefor should be issued as hereinafter ordered and conditioned.

(4) The facilities to be abandoned, as hereinbefore described, are subject to the jurisdiction of the Commission, and abandonment of such facilities is subject to the requirements of Subsection (b) of Section 7 of the Natural Gas Act.

(5) Such abandonment by Applicant, as hereinbefore described, is permitted by the public convenience and necessity and should be approved as hereinafter ordered.

(6) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(7) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(8) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Carnegie Natural Gas Company, to construct and operate the proposed facilities, as hereinbefore described, all as more fully described in the application herein, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within four months from the date on which this order issues.

(D) Permission for and approval of the abandonment by Applicant of the facilities hereinbefore described, all as more fully described in the application in this proceeding, be and the same is hereby granted.

(E) Applicant shall advise the Commission of the date of abandonment within 30 days of the date thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr. and Charles R. Ross.

CENTRAL ILLINOIS PUBLIC SERVICE COMPANY, DOCKET NO. CP63-294

FINDINGS AND ORDER DIRECTING PHYSICAL CONNECTION OF FACILITIES AND SALE OF NATURAL GAS

(Issued August 15, 1963)

On May 3, 1963, Central Illinois Public Service Company (Applicant) filed in Docket No. CP63-294 an application pursuant to Section 7(a) of the Natural Gas Act for an order of the Commission directing Panhandle Eastern Pipe Line Company (Panhandle) to establish physical connection of its transmission facilities with the proposed facilities of and to sell natural gas to Applicant for resale and distribution in the Village of Murrayville, Morgan County, Illinois, and environs, all as more fully set forth in the application.

Applicant proposes to construct and operate the necessary transmission and distribution facilities in order to render service to Murrayville. Said facilities are estimated to cost $55,475. Panhandle will construct and operate a metering and regulating station at an estimated cost of $17,000.

The application shows Applicant's estimated third year peak day and annual natural gas requirements to be 310 Mcf and 32,760 Mcf, respectively.

It appears that Applicant has received the appropriate authorization from Murrayville and the Illinois Commerce Commission.

On June 5, 1963, Panhandle filed an answer to the subject application stating that it has no objection to the granting of the requested order.

Due notice of the filing of the application and opportunity for hearing thereon has been given by publication in the Federal Register on July 3, 1963 (28 F.R. 6840). No protest or petition to intervene has been filed in this proceeding.

The Commission finds:

(1) Panhandle Eastern Pipe Line Company, a Delaware corporation having its principal place of business in Kansas City, Missouri, is a "natural-gas company" within the meaning of the Natural Gas Act, as heretofore found by the Commission in its order of October 17, 1945, in Docket No. G-254 (4 FPC 1081).

(2) Applicant, Central Illinois Public Service Company, is a public utility duly organized and existing under the laws of the State of Illinois and is authorized to engage in the business of distributing and selling natural gas within said State.

(3) It is necessary and desirable in the public interest that Panhandle be directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 310 Mcf of natural gas per day to Applicant, as set forth in the application and as hereinafter ordered and conditioned.

(4) Applicant should be prepared to receive natural gas from Panhandle within one year from the date of issuance of this order.

(5) The requirement that Panhandle serve Applicant, as proposed, will not place any undue burden upon Panhandle nor impair its ability to render adequate service to its existing customers.

The Commission orders:

(A) Panhandle Eastern Pipe Line Company be and it is hereby directed to establish physical connection of its natural gas transmission system with the proposed facilities of Applicant and to sell and deliver up to 310 Mcf of natural gas per day to Applicant, all as hereinbefore described and as more fully set forth in the application.

(B) Applicant shall be prepared to receive natural gas from Panhandle within one year from the date of issuance of this order.

(C) Panhandle shall report to the Commission in writing the date of commencement of service to Applicant within ten days thereof.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

FLORIDA GAS TRANSMISSION COMPANY, DOCKET NO. CP63-277

ORDER AMENDING ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1963)

On July 3, 1963, 30 FPC 27, the Commission issued an order in Docket No. CP63-277 in which it inadvertently described the proposed facilities to include "two miles of 4½-inch O.D. transmission pipeline", whereas, the application stated that Applicant proposed "a line tap and metering facilities."

The first and third paragraphs on page 27 of the order refers to Applicant's affiliate, the Florida Gas Transmission Company, whereas, the reference should have been to Applicant's parent, the Florida Gas Company.

The Commission finds:

It is necessary and appropriate in carrying out the provisions of the Natural Gas Act, and the public convenience and necessity require that the Commission's order, issued July 3, 1963, in Docket No. CP63-277 be amended as hereinafter ordered.

The Commission orders:

The Commission's order of July 3, 1963, in Docket No. CP63-277 is amended in the following manner:

(A) The first paragraph, line 3, to read "a line tap and metering facilities at . . ." instead of "two miles of 4½-inch O.D. transmission pipeline from . . ."

(B) Reference in the first and third paragraphs to Applicant's affiliate, the Florida Gas Transmission Company, is hereby changed to refer to Applicant's "parent, Florida Gas Company."

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

HARKINS & COMPANY (OPERATOR), ET AL., DOCKET NO. RI61-69

ORDER ACCEPTING OFFER OF SETTLEMENT AND TERMINATING PROCEEDING

(Issued August 15, 1963)

On July 12, 1963, Harkins & Company (Operator), *et al.* (Harkins) filed an Offer of Settlement in the above-designated rate suspension proceeding, pursuant to Section 1.18 of the Commission's Rules of Practice and Procedure. This proceeding relates to the jurisdictional sale of natural gas by Harkins under its FPC Gas Rate Schedule No. 3 to United Gas Pipe Line Company (United) from Goliad County, Texas (Railroad Commission District No. 2).

The following table sets forth the data pertinent to the proceeding involved herein.

Docket No.	Rate schedule No.	Supplement No.	Effective rate	Date effective subject to refund
RI61-69	3	2	[1] 14.5	2-1-61

[1] At 14.65 psia.

In its Offer of Settlement, Harkins proposes to delete from the contract the price redetermination clause and to limit future increases to 1.0 cent per Mcf on April 1, 1968, and an additional 1.0 cent per Mcf five years thereafter.[1]

United has joined in the Offer of Settlement and approves the proposed contractual amendments. No objection to the settlement has been received from any interested party.

Since the proposed settlement rate of 14.5 cents per Mcf, inclusive of tax reimbursement, is acceptable under the provisions of the Second Amendment to the Commission's Statement of General Policy No. 61-1 (18 CFR, Chapter I, Part 2, Section 2.56) issued December 20, 1960, for the jurisdictional sale of natural gas in Texas Railroad Commission District No. 2, it appears that the public interest will best be served by accepting Harkins' proposed settlement.

Because the settlement rate is the same as the increased rate in the above-designated proceeding there are no refunds involved herein.

We desire to make it clear that acceptance of this Offer of Settlement shall not be construed as approval of any future increased rates proposed by Harkins under the periodic escalation provisions or otherwise.

---

[1] The contract does not contain a favored nation clause.

The Commission finds:

The proposed settlement on the basis described herein, as more fully set forth in the Offer of Settlement filed by Harkins on July 12, 1963, is in the public interest and appropriate to carry out the provisions of the Natural Gas Act and should be approved by the Commission and made effective as hereinafter ordered.

The Commission orders:

(A) The proposed Offer of Settlement filed by Harkins with the Commission on July 12, 1966, is hereby approved in accordance with the provisions of this order.

(B) Harkins shall file, within 30 days from the date of issuance of this order, a contractual amendment to its FPC Gas Rate Schedule No. 3, which Harkins shall execute with United in conformity with Harkins' Offer of Settlement in all respects. The contractual amendment shall be submitted in accordance with Part 154 of the Commission's Regulations under the Natural Gas Act.

(C) Upon notification by the Secretary of the Commission that Harkins has complied with the terms and conditions of this order, the rate and charge of 14.5 cents per Mcf, inclusive of tax reimbursement, specified in the Offer of Settlement, shall continue in effect without obligation to refund as of the date of issuance of this order, the above-designated proceeding shall be terminated, and Harkins' refund obligation with respect to the above-designated proceeding shall be deemed to be discharged.

(D) The acceptance of this Offer of Settlement is without prejudice to any findings or determination that may be made in any proceeding now pending or hereafter instituted by or against Harkins.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

THE MONTANA POWER COMPANY, PROJECT NOS. 517 AND 1467

ORDER ACCEPTING SURRENDER OF LICENSES

(Issued August 15, 1963)

Applications were filed on June 10, 1963, by The Montana Power Company (Licensee) of Butte, Montana, for surrender of its licenses for transmission line Project Nos. 517 and 1467 affecting lands of the United States within the Deerlodge National Forest, Montana.

The application respecting transmission line Project No. 1467 [issued October 1938] was filed pursuant to Commission order issued November 1, 1961, 26 FPC 671, approving the transfer, among others, of the license for Project No. 1467, from Montana-New Jersey to the Licensee. The order recited that according to a staff study of the function of the lines, transmission line Project No. 1467, among others, is not a primary line or part of a "project" as defined in Section 3 (11) of the Federal Power Act.

Originally, the license for transmission line Project No. 517 was issued to the East Butte Copper Mining Company (East Butte) [in January 1925]. The line was 60 kv, extending a distance of about 4.84 miles from the end of the Licensee's

Boulder-Rodersburg (B–R) line to East Butte's mines and mills in the Elkhorn District. The Licensee acquired Project No. 517 and incorporated those facilities in its existing system. The B–R line is connected to the Licensee's non-licensed 60 kw East Helena-Butte line. The nearest source of power on the system is the Licensee's 17.0 mw Hauser Lake Project No. 2188 and the Bureau of Reclamation's 50.0 mw Canyon Ferry development. The Hauser Lake development is connected directly to the East Helena substation which apparently transmits all power received by Project No. 517. Available records show, however, that more power is transmitted over Project No. 517 from East Helena substation than is received from Hauser Lake, and that East Helena substation is also connected to several 110 kv transmission lines of the Licensee which transmit power from Canyon Ferry as well as many other hydroelectric sources.

Special use permits for Project Nos. 517 and 1467 were issued by the Forest Service effective as of January 30 and 31, 1963, respectively.

Annual charges under the licenses for Project Nos. 517 and 1467 have been paid for the calendar year 1962, and both license instruments have been returned by the Licensee.

The Commission finds:

(1) Transmission line Project Nos. 517 and 1467 are not primary lines or parts of a "project" as defined in Section 3(11) of the Federal Power Act.

(2) Acceptance of surrender of the licenses for Project Nos. 517 and 1467 is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the licenses for Project Nos. 517 and 1467 is hereby accepted, effective as of December 31, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP63–285

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 15, 1963)

On April 15, 1963, as supplemented on June 3, 1963, New York State Natural Gas Corporation (Applicant) filed in Docket No. CP63–285 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity to construct and operate approximately 10.5 miles of 30-inch loop line extending from the present terminus of its 30-inch loop line at the Dryden connection, in a northeasterly direction and parallel to Applicant's line No. 30, to the South Cortland connection, all in Cortland County, New York. Applicant states that the proposed construction is necessary to supply the increased requirements of its existing customers. Such requirements represent normal growth in residential and commercial space heating in the present market served with natural gas by Applicant.

The facilities to be constructed are estimated to cost approximately $1,373,000, to be financed from funds on hand and funds to be obtained from Applicant's parent corporation, Consolidated Natural Gas Company.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 5, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, New York State Natural Gas Corporation, a New York corporation with its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation and sale of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder should be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, New York State Natural Gas Corporation, to construct and operate the natural gas facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4) and (e) of Section 157.20 of such Regulations.

(C) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission Regulations, within 6 months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

PACIFIC GAS & ELECTRIC COMPANY, PROJECT NO. 2106

ORDER APPROVING REVISED PROJECT EXHIBITS

(Issued August 15, 1963)

On April 29, and May 9, 1963, Pacific Gas & Electric Company, licensee for Project No. 2106 [issued 26 FPC 399] filed a request for Commission approval of revised Exhibits L and M showing proposed changes and modifications to the proposed Pit Nos. 6 and 7 developments. As shown on the revised exhibits, the principal proposed changes are:

Pit No. 6 Development

1. Change the spillway gates from 2–60 feet wide by 40 feet high to 2–49 feet wide by 42 feet high (with spillway sill at same elevation as before);

2. The sluice pipes through the dam are increased in size from 7 to 8 feet in diameter, but are reduced in number from three to two;

3. The penstocks are redesigned so as to extend in two pipes from the intake structure at the upstream face of the dam and two gated outlets through the dam, rather than from the construction bypass tunnel;

4. The power plant structure has been changed from a conventional type to an outdoor type; and

5. The powerhouse installation has been increased in size from 73,800 kw (2 units of 36,900 kw each) to 79,200 kw (2 units of 39,600 kw each).

Pit No. 7 Development

1. Change the spillway gates from 2–60 feet wide by 40 feet high to 2–49 feet wide by 42 feet high (with spillway sill at same levation as before);

2. The sluice pipes through the dam are increased in size from 7 to 8 feet in diameter, but are reduced in number from three to two;

3. The penstocks are redesigned so as to extend in two pipes from the intake structure at the upstream face of the dam and two gated outlets through the dam, rather than from the construction bypass tunnel. They are also reduced in size from 18 to 15 feet in diameter;

4. The power plant structure has been changed from a conventional type to an outdoor type; and

5. The powerhouse installation has been increased in size from 99,900 kw (2 units of 49,950 kw each) to 104,400 kw (2 units of 52,200 kw each).

The proposed changes result from further flood studies made subsequent to the filing of amended applications for licenses for the proposed Pit Nos. 6 and 7 developments. The spillway for the Pit No. 6 development, as now proposed, is estimated to be capable of passing a maximum flow of about 100,000 c.f.s. with about four feet of remaining freeboard, is comparable to that provided at the constructed upstream Pit No. 5 development which has about the same drainage area (5,000 square miles), and is considered adequate. The spillway for the Pit No. 7 development, as now proposed is estimated to be capable of passing a maximum flow of about 100,000 c.f.s. with about four feet of remaining freeboard, is comparable to that to be provided at the upstream Pit No. 6 development which has about the same drainage area (5,000 square miles), and is considered adequate. The capacity of the sluice pipes as now proposed, for the

Pit Nos. 6 and 7 developments, has been estimated to decrease somewhat from that previously provided, but is considered adequate to permit sluicing and unwatering of the reservoirs. The changes in the penstocks and type of powerhouse to be used were occasioned by additional economic studies of plant layouts. The slight increase in rating of the generator units results from minor changes in effective head resulting from the modified penstock design, from revised efficiency data, and from rounding out when establishing name plate ratings.

The proposed changes will result in a substantial reduction in the cost of the Pit Nos. 6 and 7 developments and in a slight increase in the installed generating capacity.

Appropriate revision in the authorized installed capacity of the project for annual charge purposes and a revision of the description of the several developments comprising the project, to conform with the modifications authorized herein, will be made at a later date.

The Commission finds:

(1) The following described revised exhibits conform to the Commission's rules and regulations and should be approved as part of the license for the project:

Exhibit L–6 (FPC No. 2106–51) entitled "Dam and Penstocks";

Exhibit L–7 (FPC No. 2106–52) entitled "Power House";

Exhibit L–8 (FPC No. 2106–53) entitled "Dam, Penstocks and Afterbay Dam";

Exhibit L–9 (FPC No. 2106–54) entitled "Power House"; and

Exhibit M–1 entitled "General Descriptions and General Specifications of Mechanical, Electrical and Transmission Equipment, Pit No. 6 and Pit No. 7 Developments".

(2) The following described exhibits, now part of the license for the project and which have been superseded by the revised exhibits described in finding (1) above, should be eliminated from the license:

Exhibits L–1, L–2, L–1A and L–2A (FPC Nos. 2106, 36, 37, 45 and 46 respectively); and

Exhibits M insofar as they relate to the Pit Nos. 6 and 7 developments.

The Commission orders:

(A) The revised project exhibits described in finding (1) above are hereby approved as part of the license for Project No. 2106.

(B) The project exhibits described in finding (2) above as being superseded are hereby eliminated from the license for the project to the extent therein indicated.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

ARIZONA POWER AUTHORITY, PROJECT NO. 2248

ORDER REOPENING THE RECORD TO PERMIT THE SECRETARY OF THE INTERIOR TO FILE A PLAN FOR DEVELOPMENT OF THE COLORADO RIVER

(Issued August 16, 1963)

We have reviewed the supplemental briefs which we permitted the parties to file by our order issued June 21, 1963. In his brief the Secretary of the Interior states that soon after August 15, 1963, he will have formulated

a comprehensive plan for the development of the Colorado River for presentation to Congress in January 1964.

The Commission believes that it would be in the public interest to reopen the record to permit the Secretary to file his comprehensive plan of development and permit the other participants in the proceeding to comment thereon.

The Commission orders:

The record is hereby reopened to permit the Secretary of the Interior to file as soon as possible, but not later than January 15, 1964, 20 copies of his plan for development of the Colorado River, and to serve two copies on each participant of record in this proceeding. Each participant is granted 30 days within which to file a response thereto.

Commissioner Morgan *concurring.*

MORGAN, *Commissioner, concurring:*

For each of the reasons enumerated and explained in my dissent from the Commission's Order of November 2, 1962, 28 FPC 769, 773, wherein the Commission denied the Secretary of the Interior's motion to reopen the record in this proceeding to accept evidence from the Secretary regarding the plans of the Department of the Interior for the comprehensive development and utilization of the mainstream waters of the lower Colorado River,[1] I now concur with pleasure and gratitude in this Order reopening the record in this proceeding for that purpose.

My colleagues are to be commended for this action.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross and Harold C. Woodward.

ORDER DENYING APPLICATION FOR REHEARING AND CLARIFYING OPINION NO. 391

(Issued August 16, 1963)

On July 19, 1963, Cities Service Gas Company (Cities Service) filed an application for rehearing of the Commission's Opinion No. 391 issued June 20, 1963, 29 FPC 1216, in the above-entitled proceeding. By that opinion the Commission, in interpreting Section 154.91 of its Regulations under the Natural Gas Act, held that where Pan American Petroleum Corporation (Pan Am), which was selling

[1] 28 FPC 769–784.

natural gas to Cities Service under a contract dated June 23, 1950, had assigned various leases to certain assignees under "farmout" agreements as permitted by the contract, the farmout assignees may file for rate increases under the said Section 154.91, even though such assignees were not signatories to the contract between Pan Am and Cities Service.

We conclude that Opinion No. 391 adequately disposes of all the objections urged by Cities Service in its application for rehearing, except for one point. Concerning that point, Cities Service contends that the decision of the Supreme Court of Kansas in *Pan American Petroleum Corporation* v. *Cities Service Gas Company*, 191 Kan. 511, 382 P. 2d 645 (1963), decided immediately prior to the issuance of Opinion No. 391 and involving the contract there in issue, supports its position that only signatories to the contract can properly file rate schedules with the Commission under the section of the regulations cited above.

This contention is without merit. The decision cited by Cities Service involved an action by Pan American for a declaratory judgment determining the price for gas to be sold to Cities Service. A subsidiary issue was whether the farmout assignees were necessary parties to the litigation; and on this issue the court held that they were not, because the contract contemplated that controversies arising thereunder were to be determined and settled by the original parties thereto. The court's ruling on this "indispensable party" issue involved altogether different considerations than those involved in determining the proper application of our regulations under the Natural Gas Act. By no means does it suggest that we are precluded from interpreting those regulations in a manner we find appropriate to carrying out the provisions of the regulations and the Act. Accordingly, we affirm what we said in Opinion No. 391, that as a matter of contract law there is sufficient "privity of contract" between an assignor and assignee that we may treat an assignee as having attained signatory status within the meaning of our regulations. Apart from contract law, however, this interpretation is firmly grounded on the many administrative and regulatory considerations we discussed in the opinion.

For clarification, ordering paragraph (B) of Opinion No. 391 should be revised to read as set forth in paragraph (B) below.

The Commission finds:

The application for rehearing by Cities Service presents no factual or legal considerations which were not considered by the Commission when it issued Opinion No. 391, or which, having now been considered, warrant any change in or modification of the said opinion.

The Commission orders:

(A) The application for rehearing filed herein by Cities Service is hereby denied.

(B) Ordering paragraph (B) by Opinion No. 391 is revised to read as follows:

(B) In conformity with Opinion No. 391, all applications of public convenience and necessity, rate schedules, and all filings pertaining thereto made by the farmout assignees under the basic contract of June 23, 1950, between Pam Am and Cities Service, as described in the examiner's decision issued January 23, 1963, were and are acceptable for filing with the Commission, subject to the Commission's rules and regulations and the provisions of the Act; and any authorizations issued by the Commission in connection therewith are and shall remain, in full force and effect, subject to the Commission's rules and regulations and the provisions of the Act.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PAN AMERICAN PETROLEUM CORPORATION

ORDER DENYING APPLICATION FOR REHEARING

(Issued August 16, 1963)

On July 18, 1963, Pan American Petroleum Corporation (Pan American) filed an application for rehearing of the Commission's letter-order dated June 19, 1963, rejecting the Notice of Producer Rate Change[1] filed by Pan American on May 31, 1963, for a proposed rate increase from 15.0¢ per Mcf to 17.9¢ per Mcf for gas presently being sold by Pan American, pursuant to conditioned temporary authorizations issued in Docket No. CI61–1772, to Lone Star Gas Company from the East Durant Field, Bryan County, Oklahoma.

The basis for the rejection was that the proposed increase was not in conformity with the express conditions in the temporary authorizations that the 15.0¢ rate shall remain in effect until changed by further Commission order in the certificate proceedings in Docket No. CI61–1772.

Pan American relies principally[2] upon the fact that a similar condition has been held to be invalid by the Fifth Circuit Court of Appeals, *Hunt* v. *F.P.C.*, 306 F. 2d 334. However, the Commission is seeking review of this decision in the Supreme Court [see *F.P.C.* v. *Hunt*, certiorari granted, 375 U.S. 810; Fifth Circuit reversed, 376 U.S. 515 (1964).] and, pending such review, does not intend to accept the decision of the circuit court as binding, even with respect to new applications. *A fortiori* we cannot give effect to it here where (unlike *Hunt* which in accepting the temporary expressly reserved the right to seek review and did so after denial of a petition for rehearing) Pan American accepted the temporary authorization as tendered and allowed the Commission's letter-order granting the temporary to become final.[3]

The Commission finds:

The assignments of error and grounds for rehearing set forth in the application of Pan American present no new facts or principles of law which were not considered by the Commission when it issued its letter-order of June 19, 1963, or which having now been considered warrant any change or modification of said order.

---

[1] Supplement No. 6 to Pan American Petroleum Corporation, FPC Gas Rate Schedule No. 310.

[2] Pan American also appears to rely on the decision of the Tenth Circuit in *Texaco Inc.* v. *F.P.C.*, Case No. 7217, *et al.*, 317 F. 2d 796 (CA10, decided May 20, 1963). This decision, from which the Commission also intends to file a petition for certiorari, is completely inapposite. The authority of the Commission to adopt, through the procedures of Section 4 of the Administrative Procedure Act, binding substantive rules, which are generally applicable to future applications for certificates of public convenience and necessity without further hearing, has nothing to do with its authority to grant temporary or permanent certificates upon conditions which, if they are accepted by the applicant or are otherwise lawful, will bind the grantee in future proceedings.

[3] Pan American points out that in its acceptance it had stated its opinion that the condition was illegal and that it was only accepting the authorization "under compulsion of business reasons". Whatever the relevance of this statement to the question of the binding character of its acceptance, it may be noted that it was only because of these "business reasons" that a temporary authorization was granted Pan American at all prior to the time consumer interests could have an opportunity to challenge the in-lineness of the 15.0¢ price set by the Commission.

The Commission orders:

The application for rehearing filed by Pan American Petroleum Corporation on July 18, 1963, is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

PENNSYLVANIA GAS COMPANY, DOCKET NO. CP63-274

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 16, 1963)

On April 5, 1963, as supplemented on April 22 ,1963, Pennsylvania Gas Company (Applicant) filed in Docket No. CP63-274 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of an additional 440-horsepower gas compressor unit and connecting facilities within an existing storage area in Summit Township, Erie County, Pennsylvania, all as more fully set forth in the application as supplemented.

Applicant is presently operating an underground storage facility and connecting pipeline system known as the "Summit Storage", where it has installed one 440-horsepower vertical gas-driven compressor presently used to inject volumes of natural gas into the reservoir. Because of the heavy consumer demand during the past winter season, the reservoir must be refilled so as to be at optimum capacity for the 1963-64 winter demands. The single compressor now installed at Summit Storage does not have sufficient capacity to refill the storage during the relatively short summer period when gas is available. Applicant seeks authority to install the additional 440-horsepower compressor unit and connecting facilities to achieve a greater utilization of the storage capacity during the injection and withdrawal seasons and to provide an emergency unit in case of a breakdown of the existing compressor.

The estimated total cost of construction is $140,000 to be financed from depreciation accruals and retained earnings.

On May 29, 1963, Applicant was granted temporary authorization for the construction and operation of the proposed facilities.

Pursuant to due notice, a public hearing as held in Washington, D.C., on July 31, 1963, respecting the matters involved in and the issues presented by the application, as supplemented. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, Pennsylvania Gas Company, a Pennsylvania corporation having its principal place of business at 213 Second Avenue in the Borough of Warren, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission.

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and

the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the services proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) The maximum average storage pressure for the Summit storage reservoir should continue to be limited to a maximum of 800 psig.

(6) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(7) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necessity be and the same is hereby issued authorizing Applicant, Pennsylvania Gas Company, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application, as supplemented, in this proceeding, upon the terms and conditions of this order.

(B) The maximum average storage pressure for the Summit storage reservoir shall continue to be limited to a maximum of 800 psig.

(C) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(D) The facilities hereby authorized shall be constructed and placed in actual operation, as provided by paragraph (b) of Section 157.20 of the Commission's Regulations under the Natural Gas Act, within 4 months from the date on which this order issues.

OPINION NO. 381-A

PACIFIC POWER & LIGHT COMPANY, PROJECT NO. 2082

OPINION AND ORDER ON REHEARING AND DENIAL OF MOTION FOR STAY

Issued August 19, 1963)*

Syllabus

1. Recreational advantages which are by-products of Licensee's project of general public benefit, should not constitute an off-set to Licensee's responsibility to provide reasonable facilities to maintain fishery resource of river, in absence of prior agreement thereto or special circumstances. P. 501.

* Affirmed in part, *Pacific & Light Company* v. *F.P.C.*, 333 F. 2d 689; Cert. denied 379 U.S. 969 (1965). [See also opinion of the Court issued March 4, 1966 (CA9-No. 20435).]

2. As general rule, licensee is required to make full recompense for diminution of a natural resource resulting from power development on navigable stream. P. 501.
3. To eliminate any state participation in operating cost of Iron Gate Hatchery would be inconsistent with State's historical participation. P. 502.
4. To impose full cost of building and operating the hatchery on Licensee would assess costs that would over compensate for damage by project to fish population. P. 502.
5. Apportioning small share of operating costs to State will provide it with a financial incentive to insure economy of operation of fish facilities. P. 502.
6. Upon rehearing, Commission *denies* rehearing [except to extent prior order is amended] and *denies* motion for stay. PP. 502–504.

Commissioner O'Connor *concurring in result.*

Commissioner Ross *concurring in part; dissenting in part.*

Commissioner Morgan *dissenting in part.*

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

On April 10, 1963, Pacific Power & Light Company, licensee for Project No. 2082, applied for rehearing of the Commission's Opinion No. 381 and Order issued on March 14, 1963, 29 FPC 478, in the above-entitled proceeding. A second application for rehearing was filed April 12, 1963, by the Department of Fish and Game of the State of California. By order issued May 3, 1963, rehearing was granted for the limited purpose of affording opportunity for additional consideration. On examination of the rehearing applications we find that while the majority of points raised by Licensee and the Department are merely restatements of arguments raised in their exceptions which have been covered in our Opinion and Order and do not warrant further discussion here, certain aspects of our opinion require clarification.

Licensee urges that amended Article 49 of the license for Project No. 2082, as provided in ordering paragraph (A) of the order accompanying Opinion No. 381, is not in complete conformity with the July 20, 1962 stipulation and distorts the agreed upon provision limiting the number of king salmon eggs required to be accommodated at the Iron Gate hatchery in any one year. Item No. 1 of the stipulation provides in pertinent part:

> 1. If the Commission determines that fish hatchery facilities are required at Iron Gate, said facilities shall be sufficient to accommodate the incubation, hatching, and rearing of the following kinds and numbers of fish each year:
>
> (a) * * * *
>
> (b) * * * *
>
> (c) King salmon (*Oncorhynchus tshawytscha*) Rear up to 6,000,000 fingerlings to a total weight not to exceed 20,000 lbs., and release an additional 5,500,000 swim-up fry. Not more than 12,800,000 king salmon eggs are required to be accommodated in any one year by the Iron Gate hatchery facility; provided, however, if the total number of king salmon eggs taken at the Iron Gate egg collection facility in any one year is equal to or less than 15,800,000, the fish hatchery facilities described herein shall not be required to accommodate more than 81% of the total king salmon eggs taken during the year.

The clause omitted from Article 49 is the portion of Item No. 1(c) which provides that "if the total number of king salmon eggs taken at the Iron Gate egg collection facility in any one year is equal to or less than 15,800,000 the fish hatchery facilities described herein shall not be required to accommodate more than 81% of the total king salmon eggs taken during the year." The Department, in its application for rehearing, specifically acknowledged its responsi-

bility for the hatching and rearing of 19 percent of the king salmon eggs taken at the egg collection station up to 15,800,000 per year [1] as representing the number of eggs formerly reared by the Department in connection with the abandoned Fall Creek hatchery. It was not our intention, in determining the capacity of the hatchery to be constructed at Iron Gate and the number of king salmon eggs to be accommodated therein, to change or modify any of the provisions of the stipulation or to release the Department from a recognized responsibility. No finding was made that deletion of the proviso is required to effectuate the purposes of the Federal Power Act and no such finding could have been made on the record presented in this case. Accordingly, we shall amend our findings and Article 49 of the license to include all provisions contained in Item No. 1(c) of the stipulation.

The Department's exceptions raise objections to certain language in the Commission's opinion which we take this occasion to clarify. In our discussion of the reasons for assigning 20 percent of the operating and maintenance costs of the hatchery to the State, we commented as follows as to the impact of the construction of the Iron Gate Dam:

> * * * To this extent, the river and the enjoyment thereof by the people of the State of California will be enhanced over its original condition. Availability of the Iron Gate Reservoir to the public for lake fishing, boating, swimming, and other recreational activities likewise indicates that the advantages to be derived from Licensee's election to construct the Iron Gate Development are not all one-sided. [P. 485.]

The Department's exceptions suggest that the language carries implications which are far reaching and which go beyond our intentions. We therefore wish to restate the Commission's position on the questions raised in the above-quoted sentences to avoid any such misinterpretation.

We do not believe that recreational advantages such as lake fishing, boating and swimming, which are by-products of Licensee's hydroelectric project of general public benefit, should constitute an off-set to the Licensee's responsibility to provide reasonable facilities to maintain the fishery resource of the river, in the absence of prior agreement to that effect by all interested parties or special circumstances not present here. There is much to be said for cooperation by local, state and Federal agencies to provide non-power benefits from multi-purpose projects beyond those which could feasibly be imposed upon an applicant for a license, but this does not apply to the provision of facilities intended to correct for damage to existing resources created by the construction of a project.

As a general rule, a licensee is required to make full recompense for the diminution of a natural resource resulting from a power development on a navigable stream. The evidence presented by the parties established that the construction of Iron Gate Dam will result in a lessening of the anadromous fish resource in the upper Klamath River and that a hatchery is necessary to counter this effect. A licensee in such circumstances would normally be required to pay all costs involved in restoration of the fish resource, both as incurred in construction of the hatchery and in the yearly costs of operation and maintenance. In this case we shall require the licensee to construct the hatchery entirely at its cost, but there are special circumstances which persuade us that the State should assume 20 percent of the yearly cost of operation and maintenance of all fishery facilities at the development:

---

[1] The Department states that it will defray 100 percent of the cost of rearing any king salmon eggs in excess of 15,000,000 taken in any year.

(1) The history of this controversy cannot be ignored. The proper apportionment of the cost of operating and maintaining the hatchery should be considered in light of the prior relationship between the State and the licensee with respect to the operation of the Fall Creek Hatchery, in which the State assumed all the expenses of operation. In 1919 after construction was begun on COPCO 1 and COPCO 2, the Fall Creek Hatchery was conveyed to the State, and in 1925 the licensee added fish trapping and egg collecting facilities to the Fall Creek Station. The State operated the Hatchery at State expense until 1948 and the egg collection facility until 1961. Thus, to eliminate any State participation in the operating cost of the Iron Gate Hatchery would be inconsistent with this preexisting pattern.

(2) To impose the full cost of building and operating the hatchery on the Licensee would be to assess costs that would overcompensate for the damage by Licensee's project to the fish population. The evidence in the record suggests that the reregulation of the flow of Klamath River by the Iron Gate Dam combined with the construction and operation of the hatchery will result in a greater fish population than if Iron Gate had not been built. This would stem from the reduction or elimination of destruction of natural fluctuations and river levels which will follow from the construction of Iron Gate Dam and its operation in accordance with the year-round minimum releases required by Article 52 of the license. To impose on the Licensee the full costs of building and operating the hatchery would not merely restore the status quo but would actually require Licensee to pay for enhancing the fish production as compared with pre-Iron Gate conditions. Apportioning 20 percent of the operating costs to the State will more nearly result in restoring the status quo.

(3) Apportioning this small share of operating costs to the State will provide it with a financial incentive to insure economy of operation of the fish facilities.

The remaining assignments of error contained in the applications now before us do not convince us that we are incorrect in our determinations or, except for amending finding No. 4 and Article 49 to conform to the stipulation, that any further action is necessary on the rehearing other than to affirm our original decision and order.

Licensee had requested separately that it not be required to comply with the provision in the second sentence of Article 49 of the license for Project No. 2082 pending possible judicial review of the Commission's opinion and order. The sentence now provides: "Plans for the aforesaid facility shall be prepared by Licensee, in cooperation with the State of California Department of Fish and Game and the U.S. Fish and Wildlife Service, Department of the Interior, and shall be submitted to the Commission for approval within 60 days of the issuance of this order." In the alternative, Licensee requested that the time be extended for a short period, designating June 30, 1963. The 60-day period would have expired May 13, 1963, had the running thereof not been tolled by our decision to grant rehearing solely in order to afford additional time to consider the matters set forth in the applications. It does not appear that a brief stay will materially affect the time required for construction of the hatchery. Accordingly, we shall extend the time for Licensee's compliance with the requirements of the quoted provision to October 15, 1963, in line with the request made in the second part of the motion filed April 10, 1963. In all other respects, the motion will be denied.

The Commission further finds:

(1) The assignments of error set forth in the applications for rehearing present no new facts or principles of law which were not fully considered by the

Commission when it issued its Opinion No. 381 and Order, or which having now been considered, warrant any change in, modification, or rehearing of such Opinion and Order, except as stated above and specified below.

(2) There is no justification for, and the public interest would not be served by, granting a stay of the order accompanying Opinion No. 381, as herein amended, pending judicial review.

(3) Good cause exists for extending the time for compliance with the second sentence of Article 49, as amended, of the license for Project No. 2082 to October 15, 1963.

The Commission orders:

(A) The assignments of error set forth in the applications for rehearing in the above-entitled proceeding are hereby denied, except to the extent specified below.

(B) Finding No. 4 of Opinion No. 381 is amended to provide as follows:

(4) To compensate for the loss of the spawning areas described in Finding (3) hereof, a fish hatchery should be constructed, operated, and maintained at Iron Gate Development of a size and capacity to annually hatch and rear 200,000 yearling steelhead trout to a total weight not to exceed 20,000 pounds, 75,000 yearling silver salmon to a total weight not to exceed 5,000 pounds, 6,000,000 fingerling king salmon to a total weight not to exceed 20,000 pounds, and 5,500,000 king salmon swim-up fry; provided, not more than 12,800,000 king salmon eggs should be required to be accommodated in any one year at the Iron Gate hatchery facility; and provided further that if the total number of king salmon eggs taken at the Iron Gate egg collection facility in any one year is equal to or less than 15,800,000, the fish hatchery facilities described herein shall not be required to accommodate more than 81 percent of the total king salmon eggs taken during the year.

(C) Article 49 of the license for Project No. 2082, as amended by our opinion and order issued March 14, 1963, is further amended to provide as follows:

Article 49. The Licensee shall construct or arrange for the construction, at its expense, of a fish hatchery at Iron Gate Development, together with supplemental structures and ancillary equipment as detailed in the agreement filed with the Commission on August 17, 1962, by the State of California Department of Fish and Game and the Licensee, of a size and capacity to annually hatch and rear 200,000 yearling steelhead trout to a total weight not to exceed 20,000 pounds, 75,000 yearling silver salmon to a total weight not to exceed 5,000 pounds, 6,000,000 fingerling king salmon to a total weight not to exceed 20,000 pounds, and 5,500,000 king salmon swimup fry; provided not more than 12,800,000 king salmon eggs shall be required to be accommodated in any one year at the Iron Gate hatchery facility; and provided further that if the total number of king salmon eggs taken at the Iron Gate egg collection facility in any one year is equal to or less than 15,800,000, the fish hatchery facilities described herein shall not be required to accommodate more than 81 percent of the total king salmon eggs taken during the year. Plans for the aforesaid facility shall be prepared by Licensee, in cooperation with the State of California Department of Fish and Game and the U.S. Fish and Wildlife Service, Department of the Interior, and shall be submitted to the Commission for approval no later than October 15, 1963. The facility shall be constructed within one year from the date of approval of the plans by the Commission.

(D) The motion filed by Pacific Power & Light Company on April 10, 1963, is denied to the extent that stay is requested pending judicial review.

(E) In all other respects, the original opinion and order issued in these proceedings is affirmed.

Commissioner O'Connor *concurring* in result.

Commissioner Ross *concurring in part and dissenting in part.*

Commissioner Morgan *dissenting in part.*

Ross, *Commissioner, concurring in part and dissenting in part:*

I concur generally with the statement of Commissioner Morgan, and contend that California should defray only those costs to which it has agreed in the stipulation in this case. In view of the fundamental shift in the majority's approach to a licensee's obligation regarding comprehensive development, a few additional comments are required.

The majority is holding that construction and operation of the fish hatchery, which it alleges overcompensates for the damage inflicted by Licensee's project to the fish population, constitutes a basis for this Commission's imposition of user charges. This holding assumes that the Commission has the authority to allocate, and should allocate, a portion of the costs of these supposed benefits to the people of the State of California.

Such a position opens a Pandora's Box. It means that licensees hereafter have a legal basis for contending that the citizens of any state wherein a hydroelectric power project is constructed which produces nonpower benefits (e.g., flood control, recreation, irrigation, fish and wildlife) should bear some part of the costs of the project which are attributable to the associated nonpower benefits regardless of whether the citizens of a state desire or request such benefits. With the instant opinion as precedent, it is difficult to see how this contention could be rejected.

Adoption of this concept might well be required in the years ahead when relatively less economical hydro sites, from a power aspect, may be developed. However, in my opinion, this is an extremely important step and Congress must first act and provide a legislative basis for our imposing of part of the costs of such development upon anyone other than the licensee. Once Congress determines that comprehensive development of our water resources requires contributions from the users of nonpower benefits, than the Commission should make the required allocation.[1]

But in the absence of such legislation, we should continue to implement the policy, established by Congress, of requiring licensees to bear all the costs associated with the development of a navigable waterway. The Federal Power Act reflects the philosophy that any development must be consistent with a comprehensive plan of development, *i.e.*, that which provides the greatest benefits—power and nonpower alike. The framers of the Act wisely insisted on comprehensive development as the *quid pro quo* of granting the right to private parties to use our nation's water resources for commercial purposes. This Commission should not waive this hard fought concession to the public interest.

For these additional reasons, I respectfully dissent to the majority's decision to the extent that it allocates 20 percent of the operating costs of the Iron Gate fish facilities to the State of California.

Morgan, *Commissioner, dissenting in part:*

I dissent from my colleagues' denial of the remedial relief requested by the petition of the Department of Fish and Game of the State of California for

[1] In this connection, I believe that any user charges should be imposed upon a statewide or national basis, depending upon whether the benefits are limited to the residents of a particular state or are available to all citizens.

rehearing and, upon reconsideration, I must dissent from that portion of Opinion No. 381 which requires the Department to pay 20% of the total cost of operating and maintaining the Iron Gate fish facilities.

By its petition for rehearing the Department has made it clear that it only offered, in its stipulation with the Licensee, to bear the cost of rearing 19% of the king salmon eggs taken at the Iron Gate fish facilities; and not *an additional* 19% or 20% of the entire cost of operating and maintaining hatchery facilities for the rearing of the remaining 81% of the king salmon eggs plus the eggs of additional species. Yet this is what the majority has attempted to force the State of California to do.

I cannot say whether my colleagues' decision to order the Department to assume 19% (in round numbers, 20%) of the *full* cost of operating those facilities was based on the mistaken belief that the Department had volunteered to do so. But I must say that mine was. Nor can I say whether my failure to recognize the Department's specific limitation on that 19% was due to the truncated record in this case, or to failure by the Department to make its limitation clear, or to inadequate analysis of the Department's proposal and the record herein.[1]

I have never knowingly departed, as some of my colleagues here depart, from that principle of resource development (explicitly set forth as Section 18 of the Federal Power Act) which requires licensees to conserve or to compensate for all resource values impaired, damaged or diminished by their use of the Nation's streams for generating electric power. My apparent willingness to do so in Opinion No. 381 was based solely upon the belief that the State of California—by way of settlement and for reasons best known to itself and not shown upon the record—had agreed to pay 19% of the cost of offsetting the damage that Licensee's Iron Gate Dam caused to the fish resources of the Klamath River.

I considered and believed that the 20% figure selected by my colleagues and here reiterated by the majority was a departure of only a single percentile from an agreement entered into by the State of California with the Licensee and that the difference, while supported by no rational explanation whatsoever, was *de minimis*. Accordingly, and solely in order to reach a decision I believed to represent no significant departure from principle, I concurred in their arbitrary selection of that figure.

But, as the supplementary pleading filed by California now makes abundantly clear, my belief was mistaken. That pleading now leaves us with no alternative but to remedy our error by requiring the Licensee to compensate the public in full for the damage inflicted; and the majority's obdurate refusal to do so here requires my most respectful but total dissent. Although the amount of money involved is negligible, the majority's refusal to vindicate the principle involved is a policy aberration of alarming precedential significance.

[1] However self-evident the facts and the law on this point may have been to the Department, it is now clear that to obviate confusion in minds more hurried and less familiar with the background facts than their own, the Department should have continued the method of making the governing distinction that it used in its Reply Brief before the examiner. It there treated the matter as follows (at p. 23):

> Whenever maintenance and operation costs and hatchery costs have been mentioned in this brief, such expense excludes 19% of the king salmon eggs taken at Iron Gate. This was done for the sake of brevity, so that continual reference would not have to be made throughout this brief to the exception of 19%.

During its oral presentation before the full Commission, the Department did not similarly limit or qualify its response when asked if it maintained that Licensee should be required ". . . to pay the whole cost of this hatchery?" Although the limitation or qualification is implicit in the remainder of the Department's response, its reply nevertheless was specific: "We are only asking them to pay for 81 percent of it." (Tr., page 339.) It is now clear that this was mere ellipsis.

By themselves, the incidental flood control and recreation "benefits" that allegedly result from the existence of the Iron Gate Dam, although sharply disputed by the Department, essentially are nothing more than the inevitable results of the performance of licensee's duty to re-regulate stream flow fluctuations caused by its COPCO plant. As long as it was mistakenly assumed that the State had undertaken to defray a portion of the particular costs in question, the recital of those "benefits" in Opinion No. 381 (although objectionable to me) was in the nature of dicta and did not call for my dissent. However, those alleged, unsolicited "benefits"—"benefits" unwanted and unneeded prior to the building of Licensee's projects—are plainly no substitute for Licensee's duty to compensate for its impairment of Klamath *fish* resources; and I here dissent from any attempt to make them serve as such in law.[2]

The operative facts of this specific matter, the emergent issue, and the applicable law now are unmistakably clear. Since 1919 the existence of the barriers caused by Licensee's COPCO projects, together with Licensee's failure to shoulder its proper responsibility under Federal law, required the Department to maintain and pay the operating costs of an artificial hatchery facility to accommodate some 3 million king salmon eggs produced by Klamath River fish whose upstream passage had been blocked by those dams for more than 40 years. From 1919 until it was abandoned as uneconomical in 1948, the Department conducted this service at the Fall Creek hatchery. Since then, and by employing tank truck transport, the Department has utilized its hatchery at Mount Shasta to accommodate the eggs formerly propagated at Fall Creek, and it has voluntarily agreed to go on doing so. These eggs comprise an annual average of 19% of the king salmon eggs which will be taken below Iron Gate. However, the existence of the Iron Gate Dam (completed in 1962) now constitutes a barrier to the migration not only of the 3,000 king salmon which produce those eggs *but, in addition, some 12,800 additional king salmon as well as several other species!*

A new hatchery is needed to accommodate the eggs produced by these additional fish if the annual runs are to be preserved, and the State of California has no obligation whatever to pay any of the costs thereof. The obligation to defray *these* costs rests exclusively on the Licensee.

The record shows all this clearly, and because it does, we found and ordered that the Licensee must construct a hatchery to accommodate all fish runs impaired or blocked by Iron Gate, except those 3 million Fall Creek king salmon eggs that the Department historically has provided for and has voluntarily agreed to continue providing for. Responsibility for *operation* of this new Iron Gate fish hatchery follows a *fortiori* from the same reason and rule that compels us to require Licensee to *construct* that hatchery.

However, and intentionally or unintentionally, by distorting the Department's willingness to continue to provide for the 3 million Fall Creek king salmon eggs it has provided for historically—which comprise 19% of the total

[2] In Opinion No. 381 (at page 485) language appears which clearly shows that the Commission in that Opinion was balancing off alleged recreational "benefits" of Iron Gate to the State against the cost of remedial measures for the protection of fish resources to which the Licensee was obligated. In this present order the majority (at page 501) labors to assure us that it considers such a balancing to be improper and not to be contemplated under the Act. Yet here the majority reaches the same conclusion and the same division of costs between the parties as in Opinion No. 381! Can anyone explain these results? I think they can be explained, but it would be difficult to do so in a manner which lends stature to the majority's candor or objectivity.

The majority feels entirely free to abandon its original arguments. It does not feel at all free to abandon its original conclusion, even in the face of obvious difficulty in making that old conclusion square with the new or remaining arguments. We may be pardoned, I think, for asking what is going on here.

king salmon run impaired by Iron Gate—the majority rules that the State of California must pay 20% of the *entire cost* of operating the hatchery we have decided Licensee must build to accommodate the fish runs blocked by erection of Iron Gate. This, it is now clear, is *over and above* the outlay the State has voluntarily agreed to continue making in order to provide for the 3 million king salomn eggs discussed above.

No valid reason is given for this decision. The record before us cannot provide a reason for this decision—with the exception of the reason clearly illuminated by the briefs, arguments and petition of the State of California: that the terms, effect and purpose of the agreement entered into by the State of California and the License were misunderstood.

To misunderstand may be embarrassing, though it need not be so in this case: counsel for the State of California must bear some responsibility for the misunderstanding here. But to attempt to rationalize, defend and perpetuate a misunderstanding is inexcusable. And to do so in circumstances which produce a dangerous precedent adverse to a valuable principle is outrageous.

The majority now rests the conclusions it previously set forth in Opinion No. 381 on the following bases:

> 1. The history of this controversy cannot be ignored. The proper apportionment of the cost of operating and maintaining the hatchery should be considered in light of the prior relationship between the State and the licensee with respect to the operation of the Fall Creek Hatchery, in which the State assumed all the expenses of operation. In 1919 after construction was begun on COPCO 1 and COPCO 2, the Fall Creek Hatchery was conveyed to the State, and in 1925 the licensee added fish trapping and egg collecting facilities to the Fall Creek Station. The State operated the Hatchery at State expense until 1948 and the egg collection facility until 1961. Thus, to eliminate any State participation in the operating cost of the Iron Gate Hatchery would be inconsistent with this pre-existing pattern. [P. 502.]

Indeed we should not lose sight of the history of this controversy! But the use the majority opinion makes of that history in an attempt to justify its mistaken conclusions is little short of incredible.

"This controversy," Opinion No. 381 explains at page 479, involves the question of whether Licensee should be required "to erect and maintain a fish hatchery . . . to continue the runs of salmon and steelhead trout *which have been displaced by Licensee's construction of its Iron Gate Development on the Klamath River*" seven miles below COPCO No. 2 [emphasis added].

Iron Gate was licensed in 1957; its construction was completed in January 1962; and in Opinion No. 381 we found that it constitutes an impassable barrier to all fish that formerly spawned in the eight miles between Iron Gate and COPCO No. 2. There is no controversy here. Opinion No. 381 settled the matter.

Nor is there any controversy here over who will pay to hatch the eggs of the fish whose upstream passage was blocked by COPCO No. 2 in the past and which is now blocked eight miles downstream (along with the upstream passage of many other fish) by the new Iron Gate barrier. The State always paid to hatch the eggs of the fish formerly blocked by COPCO No. 2 and the State proposes to continue to do so. The eggs of the fish formerly blocked by COPCO No. 2 and now blocked by Iron Gate comprise 19% of the 15.8 million eggs of king salmon blocked by Iron Gate; so the State has volunteered to bear the expense of hatching 19% (or 3 million) of the 15.8 million eggs of king salmon blocked by Iron Gate. Plainly, the Federal Power Act never requested the State to defray the cost of hatching those 3 million eggs in the past: and plainly that Act does not require the State to do so now that the COPCO plants have been put

under license and made subject to the comprehensive development requirements of Section 10(a) and Section 18 of the Act. Nevertheless, the State has volunteered to pay the cost of hatching those 3 million eggs, and there is no question or controversy over that matter here.

This controversy only relates to who should bear the cost of operating and maintaining a hatchery big enough to hatch the eggs of only those fish that formerly spawned in the eight-mile stretch between Iron Gate and COPCO No. 2. There is not even any dispute as to the number and weight of fish that the hatchery must hatch: the parties have stipulated the size of a hatchery sufficient to hold the eggs of only those fish that previously spawned in "the lost spawning areas above Iron Gate" and below the COPCO No. 2 facilities (Examiner at pp. 490–491, Opinion No. 381 at pp. 482–483). We found that "since Licensee has created the situation which necessitates [a] fish hatchery" adequate to hold the eggs of (only) the stipulated number of fish that previously spawned in the gravels above Iron Gate, "it is no more than reasonable to require it to pay the cost of construction thereof." Thus there is no controversy with respect to construction of the hatchery.

Licensee argued that we should not require it to pay the cost of operating and maintaining the (stipulated) hatchery, because state law says the state will do so and because the state paid the cost of operating the old (3 million egg) COPCO hachery at another reach of the River. In Opinion No. 381 we said those historic matters are "wholly immaterial," because (a) "the Federal government, in its enactment of the Federal Power Act has occupied the entire field"; and (b) because "the Fish and Wildlife Coordination Act . . . contemplates that power companies operating under a federal license would be required to make adequate provision for fish conservation as a condition of the license." We did not feel it was necessary to explain that the comprehensive development standard of Section 10(a) of the Act means that if *Licensee's use* of the waters to develop electricity results in damage to fish or other resources, *Licensee* must pay for facilities to preserve them; and we did not feel it was necessary to point out that Section 18 of the Act says that "the Commission shall require the construction, maintenance and operation by a licensee at its own expense of . . . such fishways as may be prescribed . . ."

Now the majority contradicts itself. Contrary to its own exposition of the requirements of the Act, the majority now says that the State must help pay to preserve a resource damaged by a re-regulating hydroelectric plant licensed by us in 1957, because in the past and under a discredited, inapplicable state law, the State had to pay to preserve a different and separate fish resource impaired by an unlicensed plant, built before enactment of the Federal Power Act, in a different reach of the River.

I heartily dissent from this contradiction; and totally disassociate myself from the majority's attempt to obfuscate and conceal the operative facts of this controversy. The majority need not stoop to conquer.

The majority then proceeds to its next major point:

> 2. To impose the full cost of building and operating the hatchery on the Licensee would be to assess costs that would overcompensate for the damage of Licensee's project to the fish population. The evidence in the record suggests that the reregulation of the flow of Klamath River by the Iron Gate Dam combined with the construction and operation of the hatchery will result in a greater fish population than if Iron Gate had not been built. This would stem from the reduction or elimination of destruction of natural fluctuations and river levels which will follow from the construction of Iron

Gate Dam and its operation in accordance with the year-round minimum releases required by Article 52 of the license. To impose on the Licensee the full costs of building and operating the hatchery would not merely restore the status quo but would actually require Licensee to pay for enhancing the fish production as compared with pre-Iron Gate conditions. Apportioning 20 percent of the operating costs to the State will more nearly result in restoring the *status quo*. [P. 502.]

The stipulation entered into by the parties to this proceeding provides that: "(1) if the Commission determines that fish hatchery facilities are required at Iron Gate, said facilities shall be sufficient to accommodate . . ." the stated number of fish whose spawning grounds were blocked by Iron Gate.

The Commission, in Opinion No. 381, found that a fish hatchery was required at Iron Gate; and that a hatchery of the stipulated size will "preserve and maintain [the fish resources] *at a level approximately equal to that which existed prior to the construction of the Iron Gate Development*" [emphasis added].

The Commission failed to find that re-regulation of the River will improve the fish resource over its condition prior to Iron Gate, because the record contained no evidence whatsoever to support such a finding. It does not contain any now. Further, contrary to the majority's empty assertion here, the record does not even "suggest" that re-regulation and the hatchery combined "will result in a greater fish population than if Iron Gate had not been built."

Obviously, if the majority's present "reasoning" is to hold water, it must rest on findings of fact, and those findings in turn must be based on a preponderance of solid evidence in the record before us. Neither the findings nor the evidence upon which to base them can be pointed out.

Here again, therefore, the majority fails in its attempt to manufacture now a reason why—contrary to the record evidence, its own findings, and the requirements of the Federal Power Act—it ordered California to pay 20% of the cost of operating and maintaining the project facilities that the comprehensive development standards of the Federal Power Act require Licensee to maintain.

Finally the majority rests its order on the following:

> 3. Apportioning this small share of operating costs to the State will provide it with a financial incentive to insure economy of operation of the fish facilities. [P. 502.]

Here the majority discloses what it now insists was a central purpose underlying its imposition of 19% (rounded to 20%) of the O & M costs of the fish hatchery on the State of California. That purpose was to protect the Licensee from assumed extravagance on the part of the State. The question of the ethics of the State of California was not made an issue in the proceeding but apart from this the requirement that the State must pay 20% would *very likely* achieve the desired result. We may likewise assume that if the Commission were to require the State to pay 100% of the O & M costs it would *almost certainly* achieve the desired result. Better still, if the Commission were to require the State to pay the Licensee 200% of the O & M costs it would *certainly* achieve the desired result.

But this exhilarating vista of expanding Commission jurisdiction over the sovereign states (in order to protect Licensees from conjectural expense) evaporates when a simple question is asked: What is the statutory authority for the Commission to impose such a charge on the State? The answer is: No such authority exists in law.

I agree that the Licensee is entitled to protection against State extravagance, whether real or fancied. Such protection is afforded by the arrangement, which

has been operating successfully for years, between the Department of the Interior and California as well as a number of other States. Under this arrangement the Department builds hatcheries to correct damage to State fishery resources caused by its dams, turns those hatcheries over to the State and reimburses the State for operation and maintenance. Prior to the beginning of each fiscal year a budget conference between the State and the Department is held for the purpose of reaching agreement on operation of each hatchery during the coming year, and the hatchery is operated in accordance with that annual budgetary agreement.

Such an arrangement could properly be required as a license condition here, and the Commission could reserve the right to settle any dispute which prevents agreement in the unlikely event such a dispute were to occur. This is the pattern suggested by California during oral argument. It is the pattern we should have adopted here. It is equitable; it provides all the protection needed by the Licensee; and it does *not* require the Commission to exceed its statutory powers.

* * * * * * *

In sum, the majority defends its ruling that California should bear 19% (rounded to 20%) of the hatchery O & M costs by citing: (1) a history of the controversy which the majority clearly misunderstood and misapplied, (2) an hallucinatory claim that such costs would exactly balance an unproved "overcompensation" of the State by the Licensee, and (3) a claim that imposition of such costs is necessary to preserve California's virtue.

Let us examine item (2) at greater length, though the temptation is great to discourse further on all three.

If my reading of the majority's reason No. 2 is correct, it is as follows: The parties in this controversy have agreed upon the size of the hatchery to be built, but their agreement was in error. Further, the majority knows the nature and direction of the error: the hatchery agreed upon is not too small; it is too large. It is too large because that hatchery, in combination with future improved conditions in the spawning beds below Iron Gate will, in the course of time, result in the propagation of more fish in the future than before Iron Gate was built. Further, the majority knows exactly how many more fish will be propagated in the future than before Iron Gate was built, as well as the *value* of those additional fish. Therefore the majority feels able to correct, with precision, the error made by the parties to the agreement. It finds, on the basis of no evidence beyond the foregoing assertions, that experience *in future years* will demonstrate that Iron Gate re-regulation, plus a too-large fish hatchey, will overcompensate California by exactly the amount equal 19% (rounded to 20%) of the cost of operating and maintaining the stipulated fish hatchery!

I freely confess that I lack both the evidence and the expertise necessary to make such daring yet meticulous calculations involving the life and behavior of generations of fish yet unborn, and the operation of facilities yet unbuilt. If I possessed such expertise and evidence I might have been tempted to correct the (assumed) error of the parties by the simpler method of adjusting the size of the hatchery those parties had already agreed to.

If the majority really possessed this dazzlingly intuitive expertise I am confident they too would have made such a correction. But they did not. It matters little whether we conclude they failed to do so because they had neither the expertise nor the evidence on which to act, or because they are here merely attempting to rationalize a misunderstanding.

What is important is that they lacked the authority to do what they decided to do.

* * * * * * *

A clear understanding of and correct ruling on this matter can be achieved by the reading of a simple and undisputed statement of fact, plus the answers to two simple questions. The simple statement of fact is as follows: The fishery facility we have prescribed and have ordered Licensee to build is required in order to correct and repair damage inflicted on the fishery resource of the Klamath River in California by the Iron Gate Dam constructed by Licensee.

Question number one: How much of this damage resulted from activities of the people of the State of California? Answer: None.

Question number two: What proportion of the cost of repairing this damage should be borne by the people of the State of California? Answer: None.

The majority, by an indirect, oblique approach, attempts to lend the authority of this Commission to a new and alarming theory—that a Licensee, without the agreement or consent of a sovereign State, may impose charges on the State for asserted but disputed and unwanted "benefits" arising indirectly from Licensee's use of the Nation's rivers for the generation of electric power; and that this Commission, under the Federal Power Act, has the authority to force the State to bear those charges against its will.

If the majority seriously believes it lawfully has this power—which I maintain it does not—it should (attempt to) assert that power openly, citing statutory authority, rather than attempt to establish such power obliquely, as it does here, by entangling its new theory with a legitimate dispute over the proper responsibility of a Licensee to repair and correct damages it has inflicted upon a natural resource of the State of California.

I believe the majority's attempt to establish such a theory will fail, regardless of whether it is made openly or as in this proceeding, and I concur in the dissenting remarks of Commissioner Ross on this subject.

The one question properly before us is the responsibility of Licensee to protect and conserve the fishery resource of the Klamath River in California.

This Commission has committed a serious error, and in doing so has set a precedent dangerous to the rights of the several States and their citizens, by attempting to force the people of California to pay costs not rightly theirs, for damages not inflicted by them, upon a resource they have every right to enjoy unimpaired. There is an obligation to pay for correcting the damage inflicted on that resource by Licensee's project. But that obligation rests squarely on the Licensee. Not one iota of that responsibility rests upon the public.

If Licensee and the State of California *had* entered into an agreement to share the costs of meeting that responsibility in the manner mistakenly understood to be the case on first presentation of this matter before us, this Commission would have had adequate statutory authority to examine such an agreement and decide whether its impact *on Licensee's customers* did or did not serve the public interest. But, as is now clear, *there was no such agreement*, and we have not the slightest shred of statutory authority to concoct a substitute therefor and then proceed to force the State of California, against its determination of the public interest and against its will, *to accept it and require its taxpayers to pay for it.*

The majority's attempt to force the people of California to do more than they voluntarily agreed to do is wrong and cannot be supported by facts, by logic or by law. I am confident that on review their attempt will be struck down by the courts, as it should be.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

AREA RATE PROCEEDING, ET AL., DOCKET NO AR61–2, ET AL.

ORDER DENYING MOTIONS TO REVISE HEARING PROCEDURE

(Issued August 20, 1963)

Associated Gas Distributors (AGD), and Atlantic Seaboard Corporation, *et al.* (Atlantic),[1] filed on July 5, 1963, motions to revise the hearing procedure prescribed in the above-designated proceedings by order issued May 16, 1963, 29 FPC 981. The order prescribes simultaneous presentation of direct cases by all parties on December 3, 1963, followed by simultaneous presentation of rebuttal. Movants propose that the procedure be revised to permit the interveners to present their direct cases after the staff and Respondents have presented theirs. Answers and objections opposing the motions were filed by Newmont Oil Company and Continental Oil Company, Hunt Oil Company, *et al.*, Gulf Oil Corporation, Humble Oil & Refining Company, Shell Oil Company and Texaco Inc.

Movants contend that "fair procedure" dictates that they be permitted to see the staff's and Respondents' direct cases before presenting their own, claiming that they need more time because unlike the staff and most of the producer Respondents they do not have the benefit of prior experience under the area approach in the Permian proceeding. This argument is not persuasive. The movant interveners have been parties to this proceeding for over two years and have had ample opportunity to study the evidence in the Permian proceeding. Moreover, the basic data collected by the staff for use in the instant case were distributed in composite form to movants, as well as all other parties, on June 10, 1963, and the original data filings by individual Respondents were made available for examination at this time.

Movants also support their contention that their direct case should follow staff's by stating that this proceeding was instituted by the Commission on its own motion. However, it is not shown how this fact indicates that the staff should present its evidence before any other party even assuming *arguendo* that the Commission's action imposed a burden of proof on the staff.[2] The Commission unquestionably has the authority in discharging its duties to establish an appropriate hearing procedure. It has done so in this proceeding. Whether or not the staff or any of the parties has the burden of proof or the burden of going forward in no wise calls for any change in the requirement that simultaneous direct presentations be made.

The movants contend that *seriatim* presentation of the direct cases would further the announced goal of expeditious procedure by decreasing the likelihood of duplication of effort by the staff and interveners. There is no reason for such duplication under the prescribed procedures because staff will, within

[1] AGD and Atlantic represent groups of distribution and pipeline companies, respectively, which are interveners herein.

[2] The cases cited by AGD in its motion do not support the contention that, even in Section 5 proceedings, the staff should or must present its direct case before the interveners. The cited language from *Cities Service Gas Co.*, 14 FPC 134, 147 (which is dictum as a Section 7, not a Section 5 proceeding, was there involved), does not suggest that the staff precede the interveners in direct presentation. Neither are *Bel Oil Corp.* v. *Federal Power Commission*, 255 F. 2d 548 (CA5, 1958) or *Colorado Interstate Gas Company*, Docket No. G–1115, 11 FPC 324, any support for the contention. (See order issued July 24, 1963, Docket No. AR61–2, *et al.*, 30 FPC 400.)

the limits of its resources, keep the movants as well as the other parties advised as to the evidence it intends to present. The Examiner, we are sure, will exercise his broad pretrial powers to preclude any unnecessary withholding of information of this type by any of the parties. Surprise testimony obviously has no place in the proceeding.

Our prescription of simultaneous presentation of direct cases reflected our belief that, all things considered, it constituted not only the fairest but also the most expeditious procedure. It is argued by AGD that the revision in procedure which it seeks would not necessarily result in a prolongation of the entire hearing if the staff could present its direct case on an earlier date than December 3, and certain other changes might be made, all of which would reduce the periods for preparation of various presentations. However, the dates presently prescribed reflect the Commission's estimation of the time which all participants would require to prepare the direct, rebuttal and cross-examination presentations. The proposed change in the order of presentation of the evidence could therefore be made only at the expense of serious delay in the ultimate conclusion of the proceeding, which would be contrary to the public interest.

The subject motions set forth no new facts or points of law which were not considered by the Commission in issuing the order of May 16, 1963, or which, having been considered, require any modification of that order.

The Commission finds:

The motions filed by AGD and Atlantic to revise the hearing procedure prescribed for the proceeding Docket No. AR61–2, *et al.*, by order of May 16, 1963, should be denied.

The Commission orders:

The motions filed by AGD and Atlantic to revise the hearing procedure prescribed for the proceedings in Docket No. AR61–2, *et al.*, by order of May 16, 1963, are hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

HUGOTON PLAINS GAS AND OIL COMPANY, DOCKET NO. RI60–102

ORDER REJECTING OFFER OF SETTLEMENT

(Issued August 20, 1963)

Hugoton Plains Gas and Oil Company (Hugoton Plains) on July 25, 1963, tendered an offer of settlement in the above-entitled proceeding, proposing a 16.0¢ per Mcf settlement rate and agreeing to refund, with interest, any revenues collected in Docket No. RI60–102 in excess thereof.

The proceeding herein concerns the lawfulness of a rate increase from 9.2047¢ to 20.1626¢ per Mcf at 14.65 psia for the sale of gas by Hugoton Plains to Northern Natural Gas Company (Northern) from the Hugoton gas field in the States of Kansas and Oklahoma. The proposed rate was suspended by Commission order issued February 4, 1960, and became effective subject to refund as of April 7, 1960. Upon completion of hearing in this matter, the presiding examiner on March 12, 1962, issued his initial decision disallowing Hugoton Plains' increased rate. The matter is now pending before the Commission on exceptions by Hugoton Plains and Northern.

All of the parties involved in this proceeding, including staff, with the exception of Minnesota Valley Natural Gas Company (Minnesota Valley), have agreed to the proposed settlement. However, Minnesota Valley on August 5, 1963 filed an answer in opposition to the proposed settlement agreement requesting that the Commission reject the settlement proposal for various reasons set forth in its answer.[1]

Without determining the merits of the settlement agreement submitted by Hugoton Plains, we conclude that we must reject the offer of settlement in view of the lack of agreement among the parties to the proceeding. Our action herein is consistent with that taken by us in similar situations in the past. See, for instance, *American Louisiana Pipe Line Company, et al.*, Docket No. G–18419, *et al.*, 27 FPC 29.

The Commission orders:

For the reason set forth above, the offer of settlement tendered by Hugoton Plains on July 25, 1962 in the above-entitled proceeding is hereby rejected.

[1] Hugoton Plains filed a response to Minnesota Valley's answer on August 13, 1963.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

HUMBLE OIL & REFINING COMPANY, DOCKET NO. RI63–295

ORDER DENYING APPLICATION FOR REHEARING AND RECONSIDERATION

(Issued August 20, 1963)

Humble Oil & Refining Company (Humble) on July 17, 1963, filed an application for rehearing and reconsideration of the Commission's order issued herein on June 17, 1963. That order terminated the above-entitled suspension proceeding and permitted the proposed rate of 13.5¢ per Mcf contained in Supplement No. 4 to Humble's FPC Gas Rate Schedule No. 134 to become effective, without obligation to refund, as of June 17, 1963. Previously, the 13.5¢ per Mcf rate was suspended by order issued January 11, 1963, in Docket No. RI63–295 until June 19, 1963, and thereafter until such further time as the rate was made effective in the manner prescribed by the Natural Gas Act.

In its application for rehearing Humble contends that the Commission erred in the June 17 order in failing to vacate the suspension order and permit Humble's increased rate to become effective as of January 19, 1963. In support thereof, Humble claims that no valid reason was given for suspending the proposed increased rate.

Humble's FPC Gas Rate Schedule No. 134 contains a provision for maximum sulphur content of 500 grains total sulphur per 100 cubic feet of gas. If the gas sold under that rate schedule contained the maximum sulphur content permitted thereunder, the gas would be sour and would require treating before it might properly be considered as pipeline quality gas.[1] The cost of treating such gas would cause the proposed rate on a comparable basis to exceed the applicable increased rate ceiling of 14¢ per Mcf for the sale of pipeline quality gas as set forth in the Statement of General Policy No. 61–1, as amended.

Since Humble at the time it filed for an increased rate made no effort to advise the Commission as to the operative facts under its rate schedule, the sulphur

[1] The minimum standard proposed in Docket No. R–200 for pipeline quality gas is not more than 20 grains of total sulphur per one hundred cubic feet.

content of the gas sold by Humble was not known at the time of issuance of the suspension order. It was thus necessary to suspend Humble's rate because of the possibility that the gas was of non-pipeline quality, and, therefore, in excess of the applicable ceiling on a comparable basis. Thereafter, Humble presented additional information, not available to us at the time of suspension, which showed that the gas might properly be considered as pipeline quality gas. We, therefore, terminated the suspension proceeding in our order of June 17.

We did not determine in our June 17 order, as Humble contends, that there was no justification for suspending its rate. We merely decided on the basis of the additional information supplied by Humble subsequent to the suspension that there was no justification for continuing the suspension. In these circumstances there is no reasonable basis for vacating the suspension order.

The Commission finds:

The application for rehearing and reconsideration presents no new facts or principles of law which were not fully considered by the Commission in the order of June 17, 1963, or which, having been now considered, warrant any change in, vacation, or modification of that order.

The Commission orders:

The application for rehearing and reconsideration filed herein by Humble is hereby denied.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

KANSAS CITY POWER & LIGHT COMPANY, DOCKET NO. E-7111

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued August 20, 1963)

Kansas City Power & Light Company (Applicant), incorporated under the laws of the State of Missouri and qualified to do business as a foreign corporation in the State of Kansas, with its principal place of business at Kansas City, Missouri (Kansas City), filed an application on July 5, 1963, as supplemented on July 30, 1963, for an order, pursuant to Section 203 of the Federal Power Act, authorizing it to acquire and to merge or consolidate with its own facilities certain electric facilities owned by the United States of America (Government).

Applicant is engaged in the generation, purchase, transmission, distribution, and sale of electric power and energy in Kansas City and portions of the surrounding territory in the counties of Cass, Carroll, Chariton, Clay, Howard, Jackson, Johnson, Lafayette, Pettis, Platte, Randolph and Saline, all in the State of Missouri, and in the counties of Anderson, Bourbon, Coffey, Douglas, Franklin, Johnson, Leavenworth, Linn, Miami, Osage, and Wyandotte, all in the State of Kansas. Applicant also furnishes steam heating services in Kansas City. More specifically, Applicant's electric service territory consists of the following areas:

(1) Kansas City District, which includes Kansas City and contiguous areas in Missouri;

(2) Kansas District, which is contiguous to the Kansas City District and includes an area in eastern Kansas, west and southwest of Kansas City; and

(3) East District, which includes an area in western Missouri approximately 50 miles east of Kansas City.

Applicant's Kansas City District is interconnected with its Kansas District and its East District by transmission lines.

The electric facilities which Applicant proposes to acquire from the Government are as follows:

(1) A 115 kv three phase line extending 28.9 miles southwestward from substation POL 17 at Kansas City to the eastern boundary of the Sunflower Ordnance Works near DeSoto, Kansas;

(2) A 115 kv three phase transmission line extending 11.2 miles southeastward from a tap on the Sunflower Ordnance line near Shawnee, Kansas, to substation POL 319 at the Naval Weapons Industrial Reserve Plant (Westinghouse Plant) south of Kansas City;

(3) Substation POL 17; approximately 0.44 mile of double circuit 13.2 kv cable from POL 17 to Applicant's Grand Avenue substation; Government facilities in Grant Avenue substation; and Government leasehold on land on which POL 17 stands; and

(4) Government transmission line equipment in substation POL 319.

The facilities proposed to be acquired by Applicant were constructed by the Government during World War II and were interconnected with Applicant's electric utility system to provide electric service to the Sunflower Ordnance Works and the Pratt-Whitney Plant (now the Westinghouse Plant). After World War II, control of these facilities was transferred to the Department of the Navy and in 1951 the facilities were leased by the Navy to applicant for operation by it for an initial term ending in 1965 with an option to extend the term for an additional 15 years. In 1962 the Navy declared the leased facilities to be surplus and transferred control of the facilities to the General Services Administration (GSA) for disposal. Applicant's lease of the facilities is still in effect and the invitation for bids for the purchase of the facilities issued by GSA, referred to hereinafter, provided that the disposition of the facilties by the Government would be made subject to such lease. The leased facilities are an integral part of Applicant's electric utility system and are operated and ultilized by Applicant to transmit electric power and energy within its service territory and to provide an emergency interchange interconnection with The Kansas Power and Light Company at the Sunflower Ordnance Works. The electric facilities which Applicant proposes to acquire include all the facilities leased by the Navy to Applicant except the facilities located on the site of the Sunflower Ordnance Works. Applicant will continue to operate such excluded facilities under the lease. Upon consummation of the proposed transaction, the facilities acquired by Applicant will be operated and utilized by it in the same manner as at present.

The aggregate purchase price to be paid to the Government by Applicant for the facilities which it proposes to acquire is $1,150,000, payable in cash, subject to the terms of an agreement evidenced by Invitation For Bids No. N–Mo–442B issued by GSA on behalf of the Government for the purchase of those facilities, as supplemented by Addendum No. 1, dated June 20, 1963, the bid submitted by Applicant pursuant to that invitation, and the acceptance of Applicant's bid by the Administrator of General Services, dated June 28, 1963 (Purchase Agreement). The Purchase Agreement was filed as an exhibit to the application.

The application indicates that the records and other data relating to the original cost of the electric facilities which Applicant seeks to acquire from the Government are not available to Applicant and that Applicant has no knowledge of the whereabouts of such records and data as may exist. The application

indicates further that Applicant proposes to ascertain or estimate the original cost of the aforementioned facilities and to file with the Commission journal entries recording such original cost or estimated original cost within six months from the date of consummation of the acquisition in accordance with the provisions of the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, effective January 1, 1961, particularly the provisions of Account 102, Electric Plant Purchased or Sold, Account 114, Electric Plant Acquisition Adjustments, and appropriate Electric Plan Instructions, thereof. In the pro forma balance sheet submitted as a part of its application, Applicant used $1,750,000 as representing the original cost of the subject facilities and $600,000 as representing the accumulated depreciation applicable to those facilities. Applicant's total utility plant is recorded at original cost, which as of April 30, 1963 is stated to be $337,732,524, with an applicable accumulated provision for depreciation in the amount of $73,548,383.

Applicant represents that if it does not purchase the electric facilities described above from the Government there is a possibility that such facilities will cease to be an integral part of Applicant's electric system because of possible extinguishment of easements granting use of certain lands by the facilities or possible termination of the aforementioned lease of the facilities. The easements were granted on the condition that the facilities be used in the interests of national defense and therefore use of the facilities for any other purpose may result in the extinguishment of the easements. The lease, by its terms, is subject to termination by the Government in the event of any national emergency. Ownership of the subject facilities by Applicant will enable it to exercise its power of eminent domain to obtain whatever easements may be necessary for the continued operation of the facilities and to avoid construction of new facilities which would be required if the Government terminated the lease and repossessed the existing facilities. In addition, ownership of the facilities will permit Applicant to make substantial changes in the facilities which may be necessitated in the future by operating conditions on Applicant's electric system, which changes Applicant may not presently undertake because of restrictive provisions in the existing lease covering the facilities.

Written notice of the application has been given to the Public Service Commission of Missouri and the State Corporation Commission of Kansas and to the Governor of each of those States. Notice of the application was also published in the Federal Register on July 23, 1963 (28 F.R. 7488), stating that any person desiring to be heard or to make any protest with reference to the application should on or before August 1, 1963, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued May 14, 1957, *Interstate Power Company, Kansas City Power & Light Company*, Docket No. E-6737 (17 FPC 663).

(2) By the proposed transaction, as described above, Applicant will merge or consolidate its facilities subject to the jurisdiction of the Commission with those of the Government, another person, within the meaning and subject to the requirements of Section 203 of the Act.

(3) The proposed acquisition and merger or consolidation of the facilities of the Government by Applicant, as recited above, upon the terms and conditions specified in the application and subject to the provisions of this order will be consistent with the interest as expressed in Section 203 of the Act for the reasons set forth above.

(4) The period of public notice given in this matter is reasonable.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of the Government by Applicant, all as described above, is hereby authorized and approved upon the terms and conditions as set forth in the application, subject to the provisions of this order.

(B) This authorization is subject to the condition that Applicant shall determine the original cost and the amount of the applicable accumulated provision for depreciation of the electric plant involved in the proposed acquisition, as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, and shall file appropriate journal entries based upon such original cost and accumulated provision for depreciation within six months from the date of consummation of the transaction herein authorized.

(C) Applicant shall record the transaction herein authorized and the facilities and properties described above as provided in the Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees, particularly the provisions of Account 102, Electric Plant Purchased or Sold, Account 114, Electric Plant Acquisition Adjustments, and appropriate Electric Plant Instructions, thereof.

(D) This authorization shall expire unless the transaction herein authorized is consummated within 90 days from the date of issuance of this order.

(E) This authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any other matter whatsoever now pending or which may come before this Commission or any other regulatory body, and nothing herein shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

THE MONTANA POWER COMPANY, PROJECT NOS. 1501 AND 1676

ORDER ACCEPTING SURRENDER OF LICENSE

(Issued August 20, 1963)

Applications were filed on June 17, 1963 by The Montana Power Company (Licensee) of Butte, Montana, for Commission acceptance of surrender of its licenses for transmission line Project Nos. 1501 and 1676 affecting lands of the United States within the Helena National Forest and other lands of the United States.

The applications were filed pursuant to Commission order issued November 1, 1961, 26 FPC 671, approving the transfer, among others, of the licenses for Project Nos. 1501 and 1676 from Montana-New Jersey to the Licensee. The order recited that according to a staff study of the function of the lines, the lines

are not primary lines or parts of a "project" as defined in Section 3(11) of the Federal Power Act.

Project No. 1501 consists of the Galena Mine 4,000 volt, three-phase, single circuit transmission line extending in a generally southwesterly direction from a point on the Licensee's existing Madison-Butte transmission line in the NW¼ NW¼ Sec. 9, T. 3 S., R. 1 W., to the Galena Mine in the SW¼NE¼, Sec. 19., T. 3 S., R. 1 W., Montana Principal Meridian, in Madison County, Montana, a distance of 2.72 miles, 0.22 mile of which crosses lands of the United States.

Project No. 1676 consists of a 3,800 volt, three-phase transmission line extending from a point in the NE¼ Sec. 26, T. 8 N., R. 3 W., to a point in the SE¼ Sec. 30., T. 8 N., R. 2 W., Principal Meridian, in Jefferson County, Montana, occupying a 25-foot wide right-of-way for a distance of 2.39 miles across lands of the United States within the Helena National Forest.

According to the staff study referred to above: (1) the line comprising Project No. 1501 was constructed by Lake View Gold Mine, Inc. to serve its needs at the Galena Mine. The Licensee acquired title to the line on June 12, 1936. No information is available to indicate which line the project line taps from, but in any event the voltage was stepped down to the 4,000 volts to serve the needs, as a distribution line, of the Galena Mine; and (2) the line comprising Project No. 1676 was constructed by the Newburgh Mining & Milling Company and was acquired by the Licensee on February 1, 1937. The source of power for the line is from the Licensee's 69 kv subtransmission line and the voltage of the project line was stepped down to 3.8 kv to serve the needs, as a distribution line, of the Newburgh Mining & Milling Company.

A right-of-way for Project No. 1501 was issued to the Licensee by the Bureau of Land Management, Department of the Interior, effective as of December 3, 1962. A special use permit for Project No. 1676 was issued to the Licensee by the Forest Service, Department of Agriculture, effective as of January 3, 1962.

Annual charges under the licenses for Project Nos. 1501 and 1676 have been paid through the calendar year 1962, and both license instruments have been returned by the Licensee.

The Commission finds:

(1) Transmission line Project Nos. 1501 and 1676 are not primary lines or parts of a "project" as defined in Section 3(11) of the Federal Power Act.

(2) Acceptance of surrender of the licenses for Project Nos. 1501 and 1676 is appropriate, as hereinafter provided.

The Commission orders:

Surrender of the licenses for Project Nos. 1501 and 1676 is hereby accepted effective as of December 31, 1962.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7109

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued August 20, 1963)

Pacific Power & Light Company (Applicant), incorporated under the laws of the State of Maine and doing business as a qualified foreign corporation in

the States of California, Oregon, Washington, Wyoming, Montana and Idaho, with its principal place of business at Portland, Oregon, filed an application on June 17, 1963, for an order, pursuant to Section 203 of the Federal Power Act, authorizing it to acquire and to merge or consolidate with its own facilities certain electric facilities of the United States Bureau of Reclamation (USBR).

Applicant is engaged principally in the business of generating, purchasing, transmitting, distributing, and selling electric energy in California, Oregon, Washington, Wyoming, Montana and Idaho. Applicant also supplies water, steam-heating and telephone service in various communities in its service area.

The facilities which Applicant proposes to acquire from the USBR are as follows:

(1) The Rawlins substation and a 34.5 kv transmission line from Rawlins to the Sinclair substation, all in Carbon County, Wyoming.

(2) A Seminoe-Bairoil 34.5 kv line and metering facilities and the Lamont and Bairoil substations, all in Carbon and Sweetwater Counties, Wyoming.

An "Invitation for Bids" to purchase the property was issued by Government Services Administration (GSA) on April 5, 1963. A price of $60,000 for the Rawlins substation and the Rawlins-Sinclair line, and a price of $150,000 for the Seminoe-Bairoil line were negotiated between GSA and Applicant after the submission of a bid by the latter. Sale of Item 2 is subject to a requirement that Applicant will transmit for the USBR, through December 31, 1966, up to 15 kw of power to an REA customer at Miller Estate Tap 4 miles west of Seminoe Dam at the rate of one mill per kwh transmitted, plus seven percent of the power and energy transmitted to cover transmission losses.

The lines which are proposed to be bought by Applicant were constructed and have been operated and maintained by the USBR to supply electric energy to its customers. The Rawlins-Sinclair line and the Rawlins substation are at present used by Applicant, under a contract expiring December 31, 1965, to transmit energy to its customers. The Seminoe-Bairoil line is similarly used by Applicant, under a contract expiring December 31, 1965. The USBR decided to dispose of these lines and declared them surplus subject to the rights of the parties under the contracts. GSA, after offering to sell the facilities to preference parties, issued an "Invitation for Bids" as referred to above.

The acquisition of the lines will enable Applicant to make greater use of them. It plans to reinsulate the Seminoe-Bairoil line for 57 kv operation to take care of its anticipated increases in loads. Since the lines are in its service areas, it will be able to tap them or make extensions to serve customer loads without entering into special arrangements with the USBR in each case. The terms of the sale provide that the REA customer referred to above will contine to get service from the Seminoe-Bairoil line till the end of 1966 when the REA contract expires.

The USBR has informed the Applicant that the facilities have a total original cost of $414,065 but that the USBR records do not contain an amount for accrued depreciation. The Applicant, however, has made an estimate of $113,673 for accrued depreciation. On the basis of this estimate, the original cost less accrued depreciation ($414,065–$113,673) will be $300,392. The consideration of $210,000, which Applicant will pay for these facilities plus $3,000 for estimated expenses incidental to the acquisition will result in a total acquisition cost of $213,000. Thus, the total acquisition cost of $213,000 will be $87,392 less than the $300,392 for original cost less estimated accrued depreciation.

The Applicant proposes to record the transaction as follows:

	Debit	Credit
Account 101, Electric Plant in Service	$414,065	
Account 108, Accumulated Provision for Depreciation of Electric Plant in Service		$201,065
Account 131, Cash		213,000

The credit of $201,065 to Accumulated Provision for Depreciation of Electric Plant in Service will include $113,673 for the Applicant's estimate of accrued depreciation plus $87,392 for the difference between $300,392 for original cost less estimated accrued depreciation and the total acquisition cost of $213,000.

Written notice of the application has been given to the California Public Utilities Commission, the Public Utility Commissioner of Oregon, the Washington Public Service Commission, the Public Service Commission of Wyoming, the Board of Railroad Commissioners of Montana, and the Idaho Public Utilities Commission, and to the Governor of each of those States. Notice of the application has also been given by publication in the Federal Register on July 3, 1963 (28 F.R. 6841), stating that any person desiring to be heard or to make any protest with reference to the application should on or before July 17, 1963, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, Docket No. E-7025 (27 FPC 620).

(2) By the proposed transactions, as described above, Applicant will acquire and merge or consolidate its facilities subject to the jurisdiction of the Commission with facilities of the USBR, another person within the meaning and subject to the requirements of Section 203 of the Act.

(3) The proposed acquisition and merger or consolidation of facilities of the USBR with its own facilities by Applicant will be consistent with the public interest for the reasons set forth in the recital above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of the USBR with those of its own by Applicant, as described above, is authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Applicant shall account for the proposed transaction in accordance with the provisions of this Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transactions herein authorized are consummated within 90 days from the issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever which is now pending or may come before this Commission, and nothing in this order shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

PACIFIC POWER & LIGHT COMPANY, DOCKET NO. E-7110

ORDER AUTHORIZING ACQUISITION AND MERGER OR CONSOLIDATION OF FACILITIES

(Issued August 20, 1963)

Pacific Power & Light Company (Applicant), incorporated under the laws of the State of Maine and doing business as a qualified foreign corporation in the States of California, Oregon, Washington, Wyoming, Montana and Idaho, with its principal place of business at Portland, Oregon, filed an application on June 17, 1963 for an order, pursuant to Section 203 of the Federal Power Act, authorizing it to acquire and to merge or consolidate with its own facilities certain electric facilities of Eastern Oregon Electric Cooperative, Inc. (Eastern Oregon).

Applicant is engaged principally in the business of generating, purchasing, transmitting, distributing, and selling electric energy in California, Oregon, Washington, Wyoming, Montana and Idaho. Applicant, also supplies water, steam-heating and telephone service in various communities in its service area. Eastern Oregon is an electric cooperative which serves a large part of the rural areas of the northeastern Umatilla County in Oregon.

Pursuant to an agreement entered into on April 4, 1963 between Applicant and Eastern Oregon, the facilities which Applicant proposes to acquire are distribution facilities including transformers and service drops but not meters, in two areas, in Umatilla County, near the city of Pendleton, Oregon, designated in the agreement as Areas C and D, in which Eastern Oregon serves 19 customers. The consideration which Applicant will pay for these facilities is $68,812. The depreciated original cost of these facilities is $66,506.

The agreement between Applicant and Eastern Oregon, referred to above, is for the purpose of eliminating the duplication of facilities by Applicant and Eastern Oregon in Umatilla County, Oregon in which they both have the right to supply electric service and thereby avoid future unnecessary construction of facilities. In this connection the agreement also provides for the sale by Applicant to Eastern Oregon of distribution facilities in Areas designated in the agreement as Areas A and B in which Applicant serves 73 customers, for a consideration of $26,303. The depreciated original cost of these facilities is $17,960. However, the disposition of these facilities by Applicant does not require approval by the Commission by virtue of the exemption pursuant to Section 203 of the Act.

The proposed exchange of properties will result, after Applicant's estimated cost in connection with the transaction of $5,000, in Applicant acquiring net plant of $48,546 for a net consideration of $47,509, a net different of $1,037, which Applicant proposes to eliminate by a credit to Account 108, Accumulated Provision for Depreciation of Electric Plant in Service.

Applicant represents that after it has acquired the aforementioned facilities of Eastern Oregon there will be no change in the use of these facilities, and that such acquisition will not, to the Applicant's knowledge, have any affect upon any contract for the purchase, sale or interchange of any electric energy.

Written notice of the application has been given to the California Public Utilities Commission, the Public Utility Commissioner of Oregon, the Washington Public Service Commission, the Public Service Commission of Wyoming, the Board of Railroad Commissioners of Montana, and the Idaho Public Utilities Commission, and to the Governor of each of those States. Notice of the applica-

tion has also been given by publication in the Federal Register on July 3, 1963 (28 F.R. 6842), stating that any person desiring to be heard or to make any protest with reference to the application should on or before July 24, 1963, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant, a corporation, is a public utility within the meaning of Section 203 of the Federal Power Act, subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued March 28, 1962, *Pacific Power & Light Company*, Docket No. E–7025, (27 FPC 620).

(2) By the proposed transactions, as described above, Applicant will acquire and merge or consolidate its facilities subject to the jurisdiction of the Commission with facilities of Eastern Oregon, another person within the meaning and subject to the requirements of Section 203 of the Act.

(3) The proposed acquisition and merger or consolidation of facilities of Eastern Oregon with its own facilities by Applicant will be consistent with the public interest for the reasons set forth in the recital above.

The Commission orders:

(A) The proposed acquisition and merger or consolidation of the facilities of Eastern Oregon with those of its own by Applicant, as described above, is authorized and approved upon the terms and conditions set forth in the application, subject to the provisions of this order.

(B) Applicant shall account for the proposed transaction in accordance with the provisions of this Commission's Uniform System of Accounts Prescribed for Public Utilities and Licensees.

(C) This authorization shall expire unless the transactions herein authorized are consummated within 90 days from the issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuations, estimates or determinations of cost, or any other matter whatsoever which is now pending or may come before this Commission, and nothing in this order shall be construed as an acquiescence by this Commission in any estimate or determination of cost or any valuation of property claimed or asserted.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

SOUTH CAROLINA ELECTRIC & GAS COMPANY, PROJECT NO. 1894

ORDER APPROVING REVISED PROJECT EXHIBIT

(Issued August 20, 1963)

On June 27, 1963, South Carolina Electric & Gas Company, licensee for Project No. 1894, filed for Commission approval, pursuant to Commission order issued May 9, 1962, 27 FPC 926, revised Exhibit M describing the automatic, remote controls which have been installed on the Parr Shoals Hydro Plant. Also filed was a revised Exhibit Q requiring no Commission approval.

The Commission finds:

Revised Exhibit Exhibit M, in two sheets, filed June 27, 1963, and entitled "General Description of Mechanical and Electrical Equipment", conforms to

the Commission's rules and regulations and should be approved as part of the license for the project, and Exhibit M filed September 14, 1942, now part of the license, and which has been susperseded, should be eliminated from the license.

The Commission orders:

The revised Exhibit M described in the above finding is hereby approved as part of the license for Project No. 1894, and the exhibit described in the same finding as being superseded is hereby eliminated from the license for the project.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.

DUKE POWER COMPANY, DOCKET NO. E-7122

ORDER TO SHOW CAUSE

(Issued August 21, 1963)

Duke Power Company, Charlotte, North Carolina (Duke), a corporation organized under the laws of the State of New Jersey, has been determined to be a public utility within the meaning of the Federal Power Act, Order issued August 1, 1962, Duke Power Company, Docket No. E-7041, (28 FPC 255), and has filed with the Federal Power Commission, from time to time, rate schedules for service to investor owned electric utilities, cooperatively-owned electric utilities, and municipalities, including those listed below and in the attached appendices.

Some of those filed rate schedules embody contracts containing one or more provisions which may have the effect of restricting the investor owned and cooperatively owned electric systems and municipalities from reselling to certain classes of potential customers or for particular uses, power purchased from Duke under the filed rate schedules.

Rate schedules providing for service under Duke's "Standard Schedule No. 10, Class 1, Municipal Resale Service"—entire power requirements—contain the following restrictions limiting the uses for which power may be purchased, and, in many cases, the size of load which may be served by the customer:

> The electric power delivered hereunder shall be delivered for the purpose of its being used by the Consumer for lighting the streets and public buildings, and for furnishing electricity for lighting, heating, and motive power to the inhabitants of the [name of city or town], and vicinity, and for other municipal purposes at said [name of city or town].[1]
>
> None of said power to be resold to any one customer in excess of ——— kilowatts:[2]

[1] The wording of this provision varies slightly in each rate schedule.

[2] The following restriction is included in Rate Schedule FPC Nos. 28 and 29, City of High Point, North Carolina:

> The electric power delivered hereunder shall be delivered for the purpose of its being used by the Consumer for lighting its streets and public and private buildings and for other municipal purposes and for resale to the inhabitants of the Consumer and its customers along West Burton Street outside of the municipal limits for residential and commercial purposes, and the Consumer agrees not to use or apply said electric power or any part thereof, in any place, or in any manner, or for any purposes other than as provided for in this contract; and agrees not to sell or deliver said electric power to any one customer for any one motor in excess of 5 horsepower capacity, except by written agreement of the parties hereto.

Rate schedules containing the restriction on use and the kilowatt limitation are listed in Appendix A.

In addition the following provisions are contained in rate schedules on file with the Commission, as designated in Appendix B.

Standard Schedule No. 11–A, Rural Resale Service (cooperatives);
Standard Schedule No. 11, Rural Resale Service (cooperatives with high load factor).

ARTICLE FOURTH

. . . The electric power delivered hereunder . . . shall not be . . . sold or offered for sale by the consumer to anyone who is receiving electric service or whose premises are capable of being served by the existing facilities (including additional secondary lines not exceeding 300 feet in length) of any municipal or other distribution system to which the Power Company sells electric power for resale, except where such municipality or other distributor refuses to furnish such service.

These provisions of the 11 and 11–A rate schedules may not be unduly restrictive. They are included as a part of this proceeding to permit Duke to submit a written explanation of those provisions for further Commission consideration of the purpose and effect thereof.

The provisions set out above may have the effect of restricting the investor owned and cooperatively owned electric utilities and municipalities from reselling to certain classes of potential customers or for certain uses power purchased from Duke under the rate schedules. They constitute rates, charges or classifications or rules, regulations, practices or contracts affecting rates, charges or classifications within the meaning of Sections 205 and 206 of the Federal Power Act and may be unjust, unreasonable, and, therefore, unlawful.

The Commission further finds:

(1) It is necessary and appropriate for the purposes of the Federal Power Act, particularly Sections 205, 206, 307, 308 and 309 thereof, that Duke Power Company be directed to show cause in writing why the Commission should not find and determine the above-mentioned provisions in Duke Power Company's filed rate schedules to be unjust or unreasonable.

(2) In the event that the above-mentioned provisions are found to be unjust or unreasonable it may be appropriate for purposes of the Federal Power Act, particularly Sections 205, 206, 304, 307, 308 and 309 thereof, for the Commission to order a hearing to determine and fix the just and reasonable rates, charges, classifications, rules, regulations, practices or contracts to be thereafter observed and in force for service by Duke Power Company to investor owned and cooperatively owned electric utilities and municipalities.

The Commission orders:

(A) On or before September 30, 1963, Duke Power Company shall respond to this order through Answer as provided in Section 1.9(c) of the Commission's Rules of Practice and Procedure, 18 CFR 1.9(c).

(B) Notices of intervention or petitions to intervene in this proceeding may be filed with the Commission on or before September 13, 1963, in accordance with the Commission's Rules of Practice and Procedure (18 CFR 1.8).

NEW YORK STATE NATURAL GAS CORPORATION, DOCKET NO. CP63-302

FINDINGS AND ORDER ISSUING CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY

(Issued August 21, 1963)

On May 10, 1963, New York State Natural Gas Corporation (Applicant) filed in Docket No. CP63-302 an application pursuant to Section 7(c) of the Natural Gas Act for a certificate of public convenience and necessity authorizing the construction and operation of 15 additional wells and 3,000 additional compressor horsepower at the existing Sabinsville Storage Field, Tioga County, Pennsylvania, all as more fully set forth in the application.

The existing Sabinsville storage facilities include a 7,500 horsepower compressor station and 25 active wells. Applicant proposes to drill 15 additional wells and to supercharge 5 engines at the compressor station which will increase the horsepower of each of the engines by 200. Applicant also proposes to add a new 2,000 horsepower engine. The resulting total horsepower will be 10,500.

The proposed facilities will not increase the total capacity of the storage field but will enable Applicant to cycle approximately 5,500 MMcf of gas now required to be maintained as cushion gas. Applicant estimates that this will reduce its investment in cushion gas by $2,065,250.

The storage field has been operating at a maximum inventory of 33,450 MMcf and has been drawn down to an inventory of 22,500 MMcf. Additional withdrawal of gas is prevented by the inability of the present facilities to maintain the desired deliverability levels at a lower inventory. The proposed facilities will enable Applicant to meet the normal growth in its market requirements for the 1963-64 heating season by withdrawing gas down to an inventory of 17,000 MMcf, thus enabling Applicant to cycle an additional 5,500 MMcf of stored gas.

The estimated cost of the proposed facilities is $1,900,000 which will be financed from company funds and funds obtained from Applicant's parent company, Consolidated Natural Gas Company.

Pursuant to due notice, a public hearing was held in Washington, D.C., on August 8, 1963, respecting the matters involved in and the issues presented by the application herein. No petition to intervene or protest to the granting of the application has been received. Staff counsel moved orally at the hearing that the intermediate decision procedure be omitted and that the Commission render a decision herein pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission finds:

(1) Applicant, New York State Natural Gas Corporation, a New York corporation having its principal place of business in Pittsburgh, Pennsylvania, is a "natural-gas company" within the meaning of the Natural Gas Act as heretofore found by the Commission in its order of October 27, 1942, in Docket No. G-312 (3 FPC 844).

(2) The facilities hereinbefore described, as more fully described in the application in this proceeding, are to be used in the transportation of natural gas in interstate commerce subject to the jurisdiction of the Commission, and the construction and operation thereof by Applicant are subject to the requirements of Subsections (c) and (e) of Section 7 of the Natural Gas Act.

(3) Applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Natural Gas Act and the requirements, rules, and regulations of the Commission thereunder.

(4) The construction and operation of the proposed facilities by Applicant are required by the public convenience and necessity, and a certificate therefor should be issued as hereinafter ordered and conditioned.

(5) Public convenience and necessity require that the certificate issued hereinafter and the rights granted thereunder be conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), (c)(4), and (e) of Section 157.20 of such Regulations.

(6) A request during the public hearing by staff counsel for omission of the intermediate decision procedure herein was unopposed by any party of record and, not having been denied by the Commission, is granted pursuant to Section 1.30(c)(1) of the Commission's Rules of Practice and Procedure.

The Commission orders:

(A) A certificate of public convenience and necesity be and the same is hereby issued authorizing Applicant, New York State Natural Gas Corporation, to construct and operate the proposed facilities as hereinbefore described, all as more fully described in the application in this proceeding, upon the terms and conditions of this order.

(B) The certificate issued by paragraph (A) above and the rights granted thereunder are conditioned upon Applicant's compliance with all applicable Commission Regulations under the Natural Gas Act and particularly the general terms and conditions set forth in paragraphs (a), (b), (c)(3), and (c)(4), and (e) of Section 157.20 of such Regulations.

(C) The construction authorized by paragraph (A) above shall be completed and the facilities placed in actual operation within three months from the date on which this order issues.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., and Charles R. Ross.

KENNETH J. BOLLES, PROJECT NO. 1815

ORDER ISSUING NEW LICENSE (MINOR)

(Issued August 22, 1963)

Application was filed on October 25, 1962, by Kenneth J. Bolles (Applicant), of Troy, Montana, for a new license under the Federal Power Act (Act) for constructed minor Project No. 1815, located on a creek commonly known as Mahoney Springs, tributary to the Kootenai River in Lincoln County, Montana, and affecting lands of the United States within the Kootenai National Forest.

The second and last 10-year license for the project was issued to Applicant, without charge, and expired March 23, 1962.

The Department of the Interior has advised that it has no objection to the issuance of a new license for the project, and that no fishways or license conditions are necessary for the protection of fish and wildlife resources.

The Forest Service, Department of Agriculture, has advised that it has no objection to the issuance of a new license for the project.

Although we invited the Department of Fish and Game of the State of Montana to comment respecting the application for new license, no comments have been received to date.

The Commission finds:

(1) Applicant is a citizen of the United States and has submitted satisfactory evidence of compliance with the requirements of all applicable State laws insofar as necessary to effect the purposes of a new license for the project.

(2) No conflicting application is before the Commission.

(3) The project does not affect any Government dam, nor will the issuance of a new license therefor, as hereinafter provided, affect the development of any water resources for public purposes which should be undertaken by the United States.

(4) The issuance of a new license for the project, as hereinafter provided, will not interfere or be inconsistent with the purposes for which the Kootenai National Forest was created or acquired.

(5) The installed capacity of the project is 5 horsepower and the energy generated thereby is used for domestic purposes.

(6) The exhibit described in paragraph (B) below conforms to the Commission's rules and regulations and should be approved as part of the new license for the project.

(7) It will be in the public interest to waive the terms and conditions contained in the following sections of Part I of the Act:

> Section 4(b), except the second sentence thereof; 4(e), insofar as it relates to approval of plans by the Chief of Engineers and the Secretary of the Army and to public notice; 6, insofar as it relates to public notice and to the acceptance and expression in the license of terms and conditions of the Act which are hereinafter waived; 10(a); 10(c), insofar as it relates to depreciation reserves; 10(d); 10(f); 11; 12; 14, except insofar as the power of condemnation is reserved; 15; 18, except insofar as it relates to fishways; 19; 20; 22; and 23(a), insofar as it relates to the determination of fair value.

The Commission orders:

(A) This new minor license is hereby issued to Kenneth J. Bolles of Troy, Montana, without charge, under Sections 4(e) and 15 of the Federal Power Act, for a period of 10 years, effective as of March 24, 1962, for the operation and maintenance of Project No. 1815 on Mahoney Springs, a tributary to Kootenai River, and effecting lands of the United States within the Kootenai National Forest, subject to the terms and conditions of the Act insofar as not expressly waived herein, which Act is hereby incorporated by reference as a part of this license.

(B) The project consists of:

(i) All lands constituting the project area and inclosed by a project boundary or the limits of which are otherwise defined;

(ii) Project structures, consisting of a diversion dam, 4 feet wide and 2 feet high, 730 feet of 3-inch pipe line, a 6x12-foot frame powerhouse having a 5 horsepower Pelton wheel, operating under a static head of 250 feet, an electric generator, and a 300-foot transmission line;

(iii) All other structures, fixtures or facilities used or useful in the maintenance and operation of the project and located on the project area, and all rights and interests, the possession of which is necessary or appropriate in the maintenance and operation of the project; which lands and project works are more specifically shown and described by a certain map which formed a part of the application for license, and which is designated and described as follows:

Exhibit C (FPC No. 1815–1), a map in one sheet entitled "Mahoney Springs Minor Power Project," filed with the Commission December 27, 1940.

(C) This license is also subject to the terms and conditions set forth in Form L–7, December 15, 1953, entitled "Terms and Conditions of License for Minor Project Affecting Lands of the United States", which terms and conditions are attached hereto and made a part thereof.

(D) The terms and conditions contained in the sections of Part I of the Act set forth in finding (7) above are hereby waived.

(E) The exhibit described in paragraph (B) above is hereby approved as part of this new license.

(F) This order shall become final 30 days from the date of its issuance unless application for rehearing shall be filed as provided in Section 313(a) of the Act, and failure to file such an application shall constitute acceptance of this license. In acknowledgment of the acceptance of this license, it shall be signed by the licensee and returned to the Commission within 60 days from the date of issuance of this order.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

COMMUNITY PUBLIC SERVICE COMPANY, DOCKET NO. E–7116

ORDER AUTHORIZING ISSUANCE OF PREFERRED STOCK

(Issued August 22, 1963)

Community Public Service Company (Applicant), incorporated under the laws of the State of Texas and doing business as a qualified foreign corporation in the State of New Mexico, with its principal place of business at Fort Worth, Texas, filed an application on July 22, 1963, and amendments thereto on August 9 and August 12, 1963, for an order pursuant to Section 204 of the Federal Power Act, authorizing the issuance of 60,000 shares of 4.65% Cumulative Preferred Stock, Series B, par value $100 per share or an aggregate par value of $6,000,000. Applicant requests that the proposed issuance of Preferred Stock be exempted from the Commission's competitive bidding requirements.

By Commission letter dated May 13, 1963, Docket No. IN–960, the Applicant was authorized to engage in negotiations for the sale or underwriting of the Preferred Stock. Pursuant to that authorization, Applicant employed Stone & Webster Securities Corporation (Stone & Webster) for the purpose of engaging in negotiations for the placement of the proposed Preferred Stock. The application states that Stone & Webster discussed the possible sale of the Preferred Stock with 29 prospective institutional purchasers. As a result of such discussions, informal commitments have been obtained from 18 institutions to purchase the 4.65% Preferred Stock at $100 per share pursuant to a Purchase Agreement dated July 31, 1963. Applicant proposes to pay a finder's fee of 65¢ per share or .65% of the sale price, which is $39,000, in the aggregate, in payment for Stone & Webster's services in finding buyers for the new Preferred Stock.

The net proceeds from the sale of the new Preferred Stock, estimated at $5,931,050 after provision for all issuance expenses, will be used for the redemption of Applicant's outstanding 30,000 shares of 5.72% Preferred Stock, Series A, at a redemption cost of $3,244,200, and the balance will be used to finance in part Applicant's 1963 construction program. The redemption of the 5.72% Preferred Stock and replacing it with the new 4.65% Preferred Stock will result in an annual decrease in dividends of $32,100.

Applicant, pursuant to the Purchase Agreement proposes to issue and sell the 60,000 shares of the 4.65% Preferred Stock in two lots. The first lot of 30,000 shares, called "First Delivery Preferred Stock", is to be issued and sold on or about the week of August 18 or 25, 1963; the remaining lot of 30,000 shares, called the "Second Delivery Preferred Stock", is to be issued and sold on or about the week of October 20 or 27, 1963. Immediately after the sale of the First Delivery Preferred Stock, Applicant will call for redemption of all of its outstanding 30,000 shares of 5.72% Preferred Stock, Series A.

Because of the time that will elapse between the commitment date and the date of the Second Delivery Preferred Stock, the Applicant will pay to the purchasers a commitment fee of ½ of 1% (on an annual basis) of the purchase price for those shares from the date of the purchase agreement to the date of the sale. The commitment fee is estimated at $3,125, and when adjusted for taxes, the net cost will be about $1,500.

Applicant's estimates of cost of proposed additions to its utility properties during 1963 are $5,745,000 for electric facilities and $94,000 for gas facilities. The expenditures for electric facilities include $100,000 toward the construction of a 12,500 kw gas turbine electric generating unit for installation in the Lordsburg plant of its Silver City, New Mexico system, the total cost of which is estimated at $1,250,000; $839,000 for transmission facilities; $3,963,000 for distribution facilities and $843,000 for general facilities.

Applicant states that the sale and issuance of 60,000 shares of the New Preferred Stock in a single transaction presents a special situation which is not adaptable to competitive bidding. Redemption of the outstanding 5.72% Preferred Stock with proceeds of the First Delivery 4.65% Preferred Stock is desirable. Applicant has negotiated for the sale of the entire 60,000 shares of the New Preferred Stock, but issuance of the Second Delivery Preferred Stock will depend on approval by the necessary ⅔ds of common and preferred stockholders as classes. Applicant states that it could hardly be justified in calling the necessary special meetings of stockholders on any basis other than a negotiated confirmed sale and purchase. Furthermore, the issuance of the 30,000 shares of Second Delivery Preferred Stock is desirable to continue Applicant's construction program in a manner which will not increase Applicant's debt capital.

Written notice of the application has been given to the Texas Railroad Commission and to the New Mexico Public Service Commission and to the Governor of each of those States. Notice of the application was also published in the Federal Register on July 31, 1963 (28 F.R. 7800), stating that any person desiring to be heard or to make any protest with reference to the application should on or before August 15, 1963, file with the Federal Power Commission, Washington 25, D.C., petitions or protests. No petition or protest or request to be heard in opposition to the granting of the application has been received.

The New Mexico Public Service Commission by order issued August 6, 1963, authorized Applicant to issue the 60,000 shares of Cumulative Preferred Stock, Series B, bearing a dividend rate of 4.65%.

The Commission finds:

(1) Applicant, a Texas corporation, is a public utility within the meaning of Section 204 of the Federal Power Act subject to the jurisdiction of the Commission as heretofore described and set forth in the Commission's order issued April 24, 1963, *Community Public Service Company*, Docket No. E–7084, 29 FPC 829.

(2) The proposed issuance and sale of 4.65% Cumulative Preferred Stock, Series B, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State commission within the meaning of Section 204(f) of the Act, and the proposed issuance of securities, is, therefore, not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The price per share of the 4.65% Cumulative Preferred Stock, Series B to be received by Applicant, the dividend rate, the finder's fees to be paid Stone & Webster, and the commitment fee to be paid the purchasers, all as described above, are not unreasonable.

(5) There is no affiliation, direct or indirect, through directors, officers or stockholders, or otherwise between Applicant and Stone & Webster.

(6) Under the circumstances set forth above, sufficient cause has been shown for exempting the proposed issuance and sale of 4.65% Cumulative Preferred Stock, Series B from the competitive bidding requirements of Section 34.1a(b) and (c) of the Commission's Regulations under the Federal Power Act.

(7) The proposed issuance of 4.65% Cumulative Preferred Stock, Series B, as hereinafter authorized, will be for a lawful object, within the corporate purpose of the Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by the Applicant of service as a public utility and which will not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of 4.65% Cumulative Preferred Stock, Series B, upon the terms and conditions and for the purposes specified in the application, as described above, is hereby authorized, subject to the provisions of this order.

(B) The proposed issuance and sale of 4.65% Cumulative Preferred Stock, Series B, as described above, are hereby exempted from the competitive bidding requirements of Section 34.1a(b) and (c) of the Commission's Regulations under the Federal Power Act.

(C) This authorization shall expire unless the transaction hereby authorized is consummated within 120 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of costs, or any other matter whatsoever which is now pending or which hereafter may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

GULF PACIFIC PIPELINE COMPANY, DOCKET NO. CP63-223

ORDER ON MOTIONS TO EXPEDITE HEARINGS

(Issued August 22, 1963)

On June 7, 1963, Gulf Pacific Pipeline Company (Gulf Pacific) filed a "Motion For Commission Order Giving Public Notice and Request For Early Hearing On Certificate Application" in this Docket. This motion was renewed as a part of the "Motion of Gulf Pacific Pipeline Company For Prompt Consolidated Hearing and Continuance" filed on June 21, 1963, in this Docket and in *Trans-*

western Pipeline Company, Docket No. CP63–204, and *El Paso Natural Gas Company*, Docket No. CP63–296.

On July 12, 1963, we issued Opinion No. 393 in *El Paso Natural Gas Company, et al.*, Docket No. G–16235, *et al.*, 30 FPC 77, where we announced that "we shall institute a proceeding to determine how the long term needs for natural gas deliveries to Southern California may be met in manner which is most desirable from the standpoint of the public interest" (p. 92). We there indicated that the Gulf Pacific application in this Docket will be made a part of that proceeding and will be consolidated "with any other applications for major pipeline construction for the supply of gas to the Southern California a market filed within three months * * * of July 12, 1963 (*Ibid*).

On August 2, 1963, Gulf Pacific filed its most recent motion, a "Motion to Expedite Procedure" in Docket Nos. CP63–204, CP63–223, and CP63–296. That motion requested us to issue immediately an order giving public notice of Docket No. CP63–223 and fixing an early date for the filing of petitions to intervene and also requested that we concurrently, or promptly thereafter, issue an order consolidating Docket Nos. CP63–204, CP63–223, and CP63–296 for hearing. We were also requested to issue concurrently an order specifying procedure in the consolidated dockets which would declare that applications, amendments, or supplements in these or other competitive dockets must be filed on or before September 16, 1963; that no application, amendment, or supplement to these or competitive dockets be considered until after final decision in Docket No. CP 63–223; that direct evidence in support of the three dockets be in the hands of all interested parties by October 1, 1963; that a pre-hearing conference be held no later than October 10, 1963, to fix procedure for hearings on the consolidated dockets; and that no evidence be admitted regarding methods or plans to render service competitive with any of the consolidated dockets unless made part of an application, amendment, or supplement filed on or before September 16, 1963. Answers opposing this motion were filed on August 12, 1963, by El Paso Natural Gas Company; jointly by Pacific Lighting Gas Supply Company, Southern California Gas Company and Southern Counties Gas Company of California; and by Transwestern Pipeline Company.

Gulf Pacific's latest motion does not provide adequate basis for us to depart from our deadline of October 12, 1963, for the filing of all applications to be considered in the consolidated proceedings. That date was selected as a result of our deliberations in *El Paso Natural Gas Co., et al.*, Docket No. G–16235, *et al.*, Opinion No. 393, where we rejected the applications for the Rock Springs project primarily upon grounds that California's needs for gas could be met by existing supplies through 1968 and that other potential means of providing the additional service necessary after that date (which did not include that of Gulf Pacific, which had not been referred to in the Rock Springs record) showed promise of providing gas at substantial savings in price.

However, in the light of these determinations, and our conclusions based on our experience with the Rock Springs and Pemex (*Southern California Edison Co., et al.*, Docket No. CP61–172, *et al.*) proceedings that separate hearings in several major proceedings to serve the same area had led to greater delays than if they had been consolidated, it appears that the fastest way of bringing the question of new service to Southern California to a proper conclusion, as well as the best way of insuring that we reach the best resolution of these difficult matters, would be to provide a limited period of time for the filing of applications by other interested groups and then consolidating those applications for early and expedited hearing with the pending application of Gulf Pacific. We believed, and still believe, that the three months afforded to other parties for filing such

applications was, on balance, a reasonable one, i.e. it was the shortest feasible period in which to file completed applications of the type we had referred to in the Rock Springs Opinion.

We are in full agreement with Gulf Pacific that any such comparative proceeding must be conducted according to a firm schedule, subject to deviation only in extraordinary circumstances, and that such schedule should be geared to bringing the proceeding to a conclusion at the earliest possible moment. We consider, however, some of the scheduling dates proposed by Gulf Pacific (even if they are set back to allow for the October 12 date we are adhering to for filing competing applications) to be unrealistic if potential competitors are to have a real opportunity to prepare an adequate case. We shall now announce for the benefit of all present and potential participants the hearing schedule and basic procedures.

1. At the time Gulf Pacific and any other competitive applications are noticed for hearing we will provide a period of 15 days for filing petitions to intervene and notices of interventions. Such notice of hearing will be issued as soon after October 12, 1963, as we can determine what applications, if any, acceptable for filing are to be consolidated with Gulf Pacific's. Applications not substantially complete within the meaning of our Regulations will be rejected.

2. In the notice we will also provide that the consolidated hearing is to commence, within the meaning of Section 157.11 of our Regulations under the Natural Gas Act, at a date approximately 10 days after the expiration of the period within which petitions or notices of intervention may be filed, at which time the examiner will convene a hearing conference looking toward the expedition of further proceedings in accordance with the provisions of Section 1.18 (b) of our Rules.

3. All direct testimony and exhibits in support of, or in opposition to, an application by any applicant, intervener or the staff will be required to be served in writing on all participants, including 10 copies to staff counsel of record, and the presiding examiner within 90 days from the date of termination of the hearing conference. All testimony and exhibits on rebuttal will be required to be served in writing on the same persons within 45 days thereafter.

4. The oral portion of the hearing (which the Commission expects will start not later than June 1, 1964) will be scheduled to commence forty-five days after receipt of the rebuttal and will be limited to cross-examination, plus the introduction of such additional evidence as the examiner may permit upon being satisfied that it was not reasonably available to the offerer at the time of submitting his direct case, or is in response to material submitted on rebuttal and could not properly be anticipated at the time of introduction of the submitter's direct case, and would be of substantial value in resolving the issues in the proceeding. Cross-examination of direct or rebuttal witnesses should be scheduled to continue to the extent possible without hearing recesses between witnesses and/or parties.

5. Parties should be advised that except in extraordinary circumstances and for good cause shown the Commission will not look with favor upon the filing of any substantive amendments to their applications within five days of the commencement of, or during the hearing, and that the Commission may, if in its judgment to do so would be in the interest of orderly procedure and fairness to all parties, accept such amended applications only for consideration subsequent to the disposition of the remaining applications in the proceeding (see Section 1.11(a) and 157.11 of our Regulations).

6. Gulf Pacific has asked that we now rule that evidence as to any alternate means of bringing service to Southern California not part of a filing made

prior to the last date for filing, be excluded from the record. We cannot so foreclose parties in interest from introducing relevant evidence which they might believe shows that none of the applications should be granted. See, e.g., *El Paso Natural Gas Co., et al.*, Docket No. G–16235, *et al.* Opinion No. 393, issued July 12, 1963.

7. Many of the issues which will be involved have already been presented in two recent lengthy proceedings, the Rock Springs and the Pemex proceedings, in which most of the participants who will be actively involved in the consolidated proceedings were active participants. While we recognize that the issues in the consolidated proceeding will not be identical and that some new issues will be involved, we nonetheless expect that the familiarity of the major participants with the presentations in the two previous proceedings will be a significant factor in expediting hearings.

The Commission orders:

Except to the extent set forth above, the motions of June 7, 1963, June 21, 1963 and August 2, 1963 filed by Gulf Pacific in the above docket are hereby dismissed.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

IOWA PUBLIC SERVICE COMPANY, DOCKET NO. E–7115

ORDER AUTHORIZING THE ISSUANCE OF FIRST MORTGAGE BONDS

(Issued August 22, 1963)

Iowa Public Service Company (Applicant), incorporated under the laws of the State of Iowa and qualified to do business as a foreign corporation in the States of South Dakota and Nebraska, with its principal place of business in Sioux City, Iowa, filed an application on July 19, 1963, for an order pursuant to Section 204 of the Federal Power Act authorizing the issuance and sale at competitive bidding of $12,000,000, principal amount of First Mortgage Bonds, Series due 1993.

Applicant proposes to issue the Bonds under its Mortgage and Deed of Trust, dated as of June 1, 1946, as heretofore supplemented, and as to be further supplemented by a Ninth Supplemental Indenture to be dated as of September 1, 1963.

On or about August 27, 1963, Applicant proposes to invite sealed written bids for the purchase of the proposed issuance. All bids, whether from a single bidder or group of bidders, must be for the purchase of all the Bonds and must be submitted on the Form of Bid furnished by Applicant. Each bid for the proposed issuance of Bonds must specify (1) the interest rate to be borne by the Bonds, which rate shall be a multiple of ⅛th of 1% and (2) the price to be paid to Applicant for the Bonds, which price shall be not less than 97¼% nor more than 102¾% of the principal amount thereof, plus accrued interest on the Bonds from September 1, 1963, to the date of payment therefor and delivery thereof.

Unless postponed, all bids for the proposed issuance of Bonds must be presented to Applicant before 11 a.m., New York Time, on September 5, 1963, at the Office of Chemical Bank New York Trust Company, 10th Floor, 20 Pine Street, New York, N.Y. Unless Applicant shall reject all bids for the proposed issuance of securities (which it reserves the privilege to do) or shall exclude

a bid or bids for reasons specified in the statement of terms and conditions, it will accept the bid for purchase of the Bonds which results in the lowest annual cost of money to it. Each bid for the proposed issuance must be accompanied by a certified or official bank check or checks, payable in New York Clearing House funds, in the aggregate amount of $300,000.

Applicant states that the proceeds to be obtained from the proposed issuance of Bonds will be utilized to (1) repay temporary bank loans incurred and to be incurred prior to the sale of the new Bonds to secure funds for construction purposes (which are not expected to exceed $4,100,000) and (2) to provide a portion of the funds required for the construction or acquisition of permanent improvements, extensions and additions to the Applicant's property. Present plans, as indicated in the Company's application call for the expenditure of approximately $17,200,000 in 1963 for the construction or acquisition of property additions. The 1963 expenditures include an estimated $10,573,000 on the first unit of 138,700 kw rated capacity of the George Neal electric generating station now under construction along the Missouri River near Sioux City and scheduled for operation in May 1964 (total estimated cost $23,727,000); $1,529,000 for electric transmission line and substation additions; $2,725,000 for electric distribution line and substation additions; $1,183,000 for additions to gas properties; and $1,190,000 for miscellaneous additions.

Written notice of the application has been given to the South Dakota Public Utilities Commission, the Nebraska State Railway Commission, and the State Corporation Commission of Iowa, and to the Governor of each of those States. Notice has also been given by publication in the Federal Register on July 30, 1963 (28 F.R. 7736), stating that any person desiring to be heard or to make any protest with reference to the application should file a petition or protest on or before August 15, 1963, with the Federal Power Commission, Washington 25, D.C. No protest, petition or request to be heard in opposition to the granting of the application has been received.

The Commission finds:

(1) Applicant is a corporation organized and existing under the laws of the State of Iowa. It owns and operates facilities, among others, for the transmission and sale at wholesale of electric energy which is generated in Iowa and consumed in Nebraska, for the transmission of electric energy generated in Iowa and consumed in South Dakota, and for the transmission and sale at wholesale of electric energy generated in South Dakota and Nebraska and consumed in Iowa. All of these facilities are in addition to and do not include facilities used for the generation of electric energy, facilities used in local distribution or only for the transmission of electric energy in intrastate commerce or facilities for the transmission of electric energy consumed wholly by the transmitter; and Applicant is, therefore, a public utility within the meaning of that term as used in Section 204 of the Act.

(2) The proposed issuance and sale of Bonds, as described above, will constitute an issuance of securities within the purview of Section 204 of the Act.

(3) Applicant is not organized and operating in a State under the laws of which the security issue here involved is regulated by a State Commission within the meaning of Section 204 (f) of the Act; and the proposed issuance of securities, therefore, is not exempt by virtue of that Section from the requirements of Section 204 of the Act.

(4) The proposed issuance and sale of Bonds, as hereinafter authorized, will be for a lawful object, within the corporate purposes of Applicant and compatible with the public interest, which is appropriate for and consistent with the proper performance by Applicant of service as a public utility and which will

not impair its ability to perform that service, and is reasonably appropriate for such purposes.

The Commission orders:

(A) The proposed issuance and sale of Bonds, upon the terms and conditions and for the purposes specified in the application, all as described above, are authorized subject to the provisions of this order.

(B) The proposed issuance and sale of Bonds at competitive bidding shall not be consummated until:

(i) Applicant shall have amended its application pursuant to the requirements of Section 34.2(g) of the Commission's Regulations under the Federal Power Act relating to compliance with competitive bidding requirements, and Section 34.2(h) of those Regulations relating to affiliations, and shall have either filed such amendments or shall have mailed them and advised the Commission by telephone and telegraph, as contemplated in Section 34.9 of the Regulations;

(ii) The Commission, by a further order, shall have approved the price to be received by Applicant for the proposed issuance of Bonds and the interest rate thereof.

(C) The authorization contained herein to issue Bonds shall expire unless the transaction thus authorized is consummated within 90 days from the date of issuance of this order.

(D) The foregoing authorization is without prejudice to the authority of this Commission or any other regulatory body with respect to rates, service, accounts, valuation, estimates or determinations of cost, or any matter whatsoever which is now pending or may come before this Commission.

(E) Nothing in this order shall be construed to imply any guarantee or obligation on the part of the United States in respect of any securities to which this order relates.

Before Commissioners: Joseph C. Swidler, Chairman; L. J. O'Connor, Jr., and Charles R. Ross.

IROQUOIS GAS CORPORATION, DOCKET NO. CP61-276

ORDER GRANTING EXTENSION OF TIME FOR COMPLETION OF FACILITIES

(Issued August 22, 1963)

The order of the Commission issued August 31, 1961, 26 FPC 451, in Docket No. CP61-276 granted a certificate of public convenience and necessity to Iroquois Gas Corporation (Iroquois) authorizing the construction and operation of facilities necessary for the development of underground natural gas storage in the Perrysburg Storage Field in western New York State. Said authorization was conditioned upon the completion and placing in operation of the subject facilities within twenty-eight months of the issuance of the order, or by the limiting date of December 31, 1963.

On July 5, 1963, Iroquois filed a petition for modification of the subject order by extending the prescribed completion date from December 31, 1963, to December 31, 1964, showing that construction of the authorized facilities has proceeded but that it is now apparent that the full development will not be needed during the year 1963.

The storage project is stated to be approximately 50 percent completed at this time and will be approximately 80 percent completed by December 31, 1963. The remaining work consists mainly of well drilling, reconditioning and reclaiming

operations and connecting pipe lines. It is stated that the extension of time proposed herein will enable the balance of the work to be completed in an orderly manner as needed.

The Commission finds:

It is appropriate in carrying out the provisions of the Natural Gas Act and the public interest will be served by granting the extension of time for completion of facilities as hereinafter ordered.

The Commission orders:

(A) An extension of time of one year, from December 31, 1963, to December 31, 1964, within which all facilities authorized by the Commission's order issued August 31, 1961, in Docket No. CP61–276 shall be completed and placed in actual operation be and the same is hereby granted.

(B) In all other respects, said order issued August 31, 1961, in Docket No. CP61–276 shall remain in full force and effect.

Before Commissioners: Joseph C. Swidler, Chairman; Howard Morgan, L. J. O'Connor, Jr., Charles R. Ross, and Harold C. Woodward.
